Dear Miss Friedman:

Thank you for your recent note and for the enclosed letter from Dr. Salk, which I have forwarded on to Mr. Murrow as you requested.

For your information, Mr. Murrow expects to be at the Erawan Hotel in Bangkok from March 10th to 14th and at the Peninsula Hotel in Hong Kong for several days thereafter.

Sincerely yours,

Gabrielle Wachsner

Dear Ed:

I am in complete accord with your sentiments about administration. The decision has been made and much to my satisfaction we are to receive the land as a gift. The matter will be known publicly on 15 March when the proposal is to be submitted to City Council in San Diego.

I would like to write much more but will reserve my thoughts and sentiments about some of those you touched upon in your letter, and a great many others, until I see you--I hope that will be very soon.

My very best to you, Janet, and Casey.

Sincerely,

Jonas

Pawling, N.Y.

Dear Jonas:

Belated thanks for sending me a copy of your letter to O'Connor. I am naturally curious for more news as to what is happening.

I am off to the West Coast to see my mother next week, but will then be here or in New York until late August. Meanwhile I labor on the London piece on "Television and Politics". Both occupations appear to me to be increasingly ridiculous!

As ever yours,

Mr. Basil O'Connor
The National Foundation
800 Second Avenue
New York 17, New York

Dear Mr. O'Connor:

I have prepared this letter to outline the present state of our discussions on the establishment of an institute.

As you know, I have discussed with a number of colleagues, and with others whose opinion I value, the idea that we have been considering together, of an institute that will be concerned with problems of man as these can be approached by the methods of the natural sciences. The consensus, emerging from these discussions, is the existence of a need for an institute for those who are interested in man's problems, especially for study of their fundamental aspects, and as this may shed light on the processes and organization of life.

The time seems to be opportune for considering questions relevant to synthesis, growth, and adaptation in living systems. Deeper understanding of these biological phenomena is basic in consideration of problems created by malignant disease, virus infections, abnormal functioning of genetic and immunologic mechanisms, and problems in human development and behavior. Emphasis should change from time-to-time, and consideration should be given to important practical questions where new knowledge may be required or there is need to point the way for solutions that may not otherwise be undertaken.

An institute so oriented would provide an opportunity for close association of persons, in more or less related fields, who have demonstrated their ability to work productively in independent investigation but who share a common interest in the development

of man's potential. Such an institute would afford a further opportunity for the encouragement of selected young persons who have similar interests and show promise.

As we have considered together, and I have found many who concur, this institute should be self-governing but with closest intellectual affiliation with a university where there is likely to be interest in problems and questions of common concern.

The few to whom I have mentioned the desire of The National Foundation to support this idea have had a most favorable reaction. I have mentioned your intent that The National Foundation provide a minimum of one million dollars annually, over a period without limit, and contribute additionally at least one million dollars per year to a capital fund, until the fund has reached an adequate amount to be agreed upon. While it is contemplated that primary support will come from The National Foundation, it is understood that the institute will not be precluded from receiving support from other sources, either for its annual activities or for its capital fund.

The aspects that have evoked the warmest response have been The National Foundation's desire to help provide opportunity for selected individuals to pursue their own thoughts with respect to the problems of man, and its regard less for the immediate and more for the ultimate influence that the activities of the participants of this undertaking may have.

It is anticipated that in addition to those who would be in residence at the institute others would be joined as visiting members, in those instances in which affiliation would be of value but where the individual concerned would be of greater value in his own place of work. There should be, also, an advisory board of scientists and others who have distinguished themselves in areas related to the institute's interests.

You can appreciate that I cannot, at this time, give you names of people who will join actively in one capacity or another. However, I am sure you would like to know the names of persons whom I have in mind for those in residence; if they cannot join in such capacity at this time they would be asked to become visiting members and others would be considered. These are Puck (Colorado), Benzer (Purdue), Crick (Cambridge) and/or Watson (Harvard), Medawar (London); each would be expected to have his own group of associates and promising young people of his own selection. I should add that I expect to have an active laboratory myself. At this time I would prefer not to present

alternates to the above. The absence from the list of certain names, or of representation for certain areas of activity, is due to the possibility being considered of establishing this institute at Stanford where several basic areas are so very well represented.

If the idea grows and develops as we have discussed, and it becomes possible to consider problems in human development, behavior, and adaptation, I would hope that, in addition to persons working basically in neurobiology, that others like John Benjamin (Colorado) and Konrad Lorenz (Germany), or men with their orientation, might be willing to join at a later time.

I can assemble a list of persons from whom to select visiting members; however, for final selection, this would be influenced by the members in residence and by the questions under consideration. For illustration I will mention:

Burnet (Melbourne)
Dubos (Rockefeller)
Dulbecco (Cal Tech)
Heidelberger (Rutgers)
Horsfall (Rockefeller)
Hotchkiss (Rockefeller)
Klein (Stockholm)
Luria (MIT)
Mannot--Jacobs--Wollman (Paris)
Muller (Indiana)
Pauling (Cal Tech)
Sonneborn (Indiana)
Szilard (Chicago)
Tatum (Rockefeller)
Tiselius (Upsala)

The above is merely to illustrate the kind of persons desired. I discussed with Niels Bohr my desire that he join in some way and he expressed keen interest if he is still active. There are others, such as Huxley, whom it would be good to have come as visitors for as long or as frequently as they would deem profitable. We would also ask, as visitors, persons who are regarded as humanists, or have other special interests, but who are fundamentally concerned with the problems of man.

As you know, I have talked with Robert Oppenheimer, as well as with Bohr, and also with Puck, Benjamin, Medawar, George Klein, and a number of others, all of whom expressed great interest in the idea and encourtgement for its implementation.

I will be very happy to discuss the next steps with you as soon as you are ready to do so.

Sincerely,

Jonas E. Salk, M. D.

Mr. John Aaron
Person-to-Person
CBS
Madison Avenue
New York, New York

Dear Mr. Aaron:

I deeply appreciate Mr. Murrow's desire to do a Person-to-Person program with me. I will be very honest and sincere when I tell you that my personal feelings for Mr. Murrow make me desirous of doing this. But, after a year that has been anything but the kind that isconducive to contemplation and research, I have had granted to me a year when I am free from curricular and extra-curricular activities at the University--this to permit me to formulate and begin the development of a program of investigation that I hope will carry us into deeper and more interesting problems than ones with which we have been concerned. I know that people would like to know what these new problems are and since they are not sufficiently well formulated nor explored, I will, for the time being at least, try to remain out of the public eye to give me the necessary time to do what needs to be done before I once again take advantage of the kind of opportunity that Mr. Murrow has provided.

I am sure that you will convey this to Mr. Murrow and because I think you will do so I want to convey a message more directly by saying that I hope to have an opportunity to see him some time soon and will try to arrange to do so on one of my next trips to New York.

Sincerely,

Jonas E. Salk

22 February 1956

Dear Ed:

I would love to hear about your trip to Israel. Judging from your language I am not sure you may not also have been converted. I think the piece is "kosher" but it has a little "schmalz" and a little "bone" that could be trimmed away with good effect.

There are a few sentences or phrases that belong in the department of "things probably never said." Poetic license, to the contrary, notwithstanding, I would be tempted to draw my pencil through the following on page 5:

LANDSTEINER: This is only 1909. It may take another century to develop.

NARRATOR : Their aim: to cultivate a virus that can be safely used for a polio vaccine.

I think, also, that the text reads more smoothly.

On page 6, at the top, I changed the word bottom to walland for Enders' second speech on that page, I would convey the idea not merely of attachment to a living cell but the idea of getting inside a living cell.

On page 7, it is probably a typographical error, the first word should be Weller.

On page 8, in the doctor's speech near the bottom of the page, I changed the word only to primarily. The reason I am saying this is that it has

already been shown that the vaccine also prevents a certain proportion of non-paralytic polio and, after three doses will have been given, of proper vaccine, properly spaced, I think we will find still more evidence of the effect of vaccine not only on the paralytic disease but the non-paralytic disease, as well.

The thing referred to as the "bone" is in the doctor's speech that begins in the middle of page 9. If I were the doctor I would say the following:

> DOCTOR: Well, as with everything else, we're always striving for improvements. The full effect of this vaccine has never been tested with all three doses given over a proper interval. Since the effect with one dose, in 1955, was better than the three doses close together, in 1954, you can see that the vaccine is getting better every year. What we have now is the only protection we have against paralytic polio. We know that it is safe. We know that it is highly effective. So we ought to take advantage of it, don't you think?

Enders' speech on page 10 belongs in the same department of things I referred to on page 5.

I am a layman in these matters and if I have been of any help to you on this then I hope you will take those of my comments that are appropriate and disregard those that are not.

Sincerely,

Jonas E. Salk, M. D.

Dr. Jonas Salk
University of Pittsburgh
Pittsburgh, Pennsylvania

rh

April 19, 1955

The following is from Miss Friedman in Dr. Salk's office:

Dr. Salk has been asked what he will do next, but before he can answer that he has asked for our help. He is disturbed because he is unable to reply promptly and personally to the many communications he has received; many invitations from those who would do him honor have had to be declined. These have been decisions of neccessity and not of choice. Certain moneys have been sent to Jonas Salk and to various instruments of communication. All these he regards as warm feeling, expressed each in their own way, to him they all have the same meaning. Of these he says he shall keep and cherish the spirit of the giving and will keep, but only in trust, the substance given. You have heard his philosophy, he is saying now what he said before the tests were completed. The polio vaccine came about as a result of contributions made one upon the other.
(Here is where Dr. Salk went 'blank')
He is examining his new problems with characteristic caution. Salk the scientist and Salk the man are but two sides of the same coin. He may have lost his anonymity, but not his humanity.

FIRST DRAFT Adners ??

DR. SALK

Dr. Salk has told us that he has been unable to respond to the many communications he has received. He has, of neccessity, declined many invitations from those who would do him honor. He has refused an automobile because he already has one. In short, he is determined not to receive a personal benefit as a result of his contribution and that of his colleagues and predecessors to this lightening of the load of fear. Certain moneys have been sent to Dr. Salk and to various instruments of communication. This has been a voluntary gesture of gratitude, just as the participation of the children and their parents in the mass tests was a voluntary gesture.

Dr. Salk's interest, training, and achievements lie in the field of preventive medicine, in achieving a position where such diseases as heart, cancer, and mental disease are no longer regarded as inevitable. Dr. Salk contemplates the creation of a National Foundation for Preventive Medicine, and such funds as may be received either directly or indirectly by him will be devoted to that purpose. He has lost his anonymity but not his humanity and continues to recognize the importance of the voluntary cooperation of an enlightened citizenry. Both in financial

and personal terms it is essential for the prevention of those diseases which continue to take such a fearsome and unnecessary toll.

As Jonas Salk said before the tests were completed, the polio vaccine came about as a result of contributions made one upon the other and the desire of people to help themselves. It is ~~the~~ his hope that ~~the~~ a National Foundation for Preventive Medicine may contribute to the continuation of that process.

New York, New York

Dear Mr. Murrow,

This is not a fan letter, although I do enjoy your work on both radio and television and miss you when you are not on.

I am seeking information about Carl Sandburg and understand that he is a friend of yours. I enjoyed your interview with him and know that you must have studied a lot about him before that time for I know one does not do that kind of thing without lots of preparation.

I am preparing for college teaching, and am finishing my work now by writing a thesis on Sandburg's Humanitarianism. I am covering three aspects: the roots and growth of it, evidences of it in his life and works, and its effect on his choice of materials. A fourth section of the thesis will be a collection of paragraphs about what others say about his humanitarianism. I am contacting many of the celebrities who have worked with him and have interviewed a number of poeple here in Illinois who know him. A similar thing was done in 1952 by the Illinois Historical Society, but on a more general basis. This work included tributes by Adlai Stevenson, Fanny Butcher, Robert Sherwood, and many others. I am trying to contact mainly those people who have worked with him since 1952.

If you have any information in the way of incidents, comments he has made, or other things pertaining to his love of common people, I would appreciate hearing of them. I would like to invite you to write a paragraph for the concluding section if you would care to do so. If this work is published, I will give full credit and promise to be completely accurate in any quotes, etc.

Should you be able to help me in any way, I will really appreciate it. I know I can never thank you properly unless, perhaps, you would consider my helping future college students in a similar way a means of showing gratitude.

Very respectfully yours,

Ella Mentzer

Cordial greetings from the Carl Sandburg Association!

You may know that the Centennial Celebration of the Lincoln-Douglas debate is to be on the Knox College campus October 7 this year. October 6 has been designated "Carl Sandburg Day". That day his home-town will especially honor Lincoln's great poet-biographer, now in his 80th year.

If you have visited Sandburg's restored three-room birthplace at 331 E. Third St., Galesburg, as have thousands of people from distant places, you know what a landmark it has become, what a storehouse of Lincoln and Sandburg treasures it is, and how important it is that it should be preserved for future generations.

And that brings us to the reason for writing you at this time. To protect and maintain the Sandburg birthplace, there should be a caretaker living nearby. Across the street, a cottage at 348 E. Third is suitable; we have an option on it. If we can buy it and furnish rent-free to Mr. and Mrs. Lauren Goff, who are interested and competent, they will serve as caretakers for many years, with no other compensation.

The price of the cottage is $8000, of which amount $1275 is already on deposit in the Bank of Galesburg in an account named "Sandburg Fund-in-Bank-of-Galesburg". Will you help us complete this fund now? Gifts of any sizes will be welcome, and the names of all donors will be recorded on the walls of the birthplace. The names of those giving $100 will be placed on a permanent panel there headed "Patrons". Please send your check made to "Sandburg Fund-in-Bank-of Galesburg" in care of Mrs. Fred Robertson, Secretary, 860 N. Cedar, Galesburg.

We hope to see you here on October 6 and 7; and we hope to hear from you soon in regard to the caretakers' cottage. By early June we hope that the cottage will be a functioning part of the Sandburg birthplace project, made possible by the generosity of people like yourself.

With great appreciation for your consideration, I am
Most sincerely yours,

Adda George

Adda George
258 N. Academy St., Galesburg

Dear Mr. Murrow,

How many times I've wanted to tell you how much your presence on radio and television have meant to me! And now I do so when asking a favor.

May we see your name on the walls of the little Sandburg birthplace ~~cot~~ in connection with this project? And/or as a Sustaining Member of the birthplace? (The latter pay 2, 5, or 10 dollars a year in January.)

Would that your life could be prolonged as long as there is radio and television!

Sincerely,

Adda George

My dear Mr. Murrow:

It was nice seeing you at Rosie Netcher's dinner party. I also enjoyed meeting Mrs. Murrow and your associates, John Aaron and Jesse Zousmer and their spouses. It was a delightful evening.

Incidentally, I thought you might be interested to know that the quotation by Carl Sandburg "shrouds have no pockets" may have been written originally by John Alexander Joyce in a poem which reads as follows:

You must leave your many millions
And the gay and festive crowd;
Though you roll in royal billions,
There's no pocket in a shroud.

Carl Sandburg may have added to this famous quotation in his own inimitable and philosophical way.

With kindest personal regards, I am,

Very cordially yours,

Jerry Riker

Dear Mr. Murrow,

Our hearty thanks for your generous gift to the Sandburg Fund in the Bank of Galesburg. It became evident before our option expired on the caretaker's cottage, that a better long-time protection for the birthplace would be an endowment fund, the interest of which would pay directly for services rendered. So with the consent of donors, the money already raised will be transferred to an account for an Endowment Fund for Sandburg Birthplace. We hope this meets your approval. We shall assume it does, unless you protest.

Our endless gratitude for your radio and TV programs. The only reason I have a TV is to see and hear you. You make life worthwhile even for a very old, old lady.

Sincerely,

Adda George (Mrs. J. E.)

Bruce

REPORT ON THE CARL SANDBURG LIBRARY

BY

LESLIE DUNLAP AND BRUCE WEIRICK

July 4, 1955

REPORT ON THE CARL SANDBURG LIBRARY
BY
LESLIE DUNLAP AND BRUCE WEIRICK

SETTINGS; IMPRESSIONS; LOCAL COLOR

Flat Rock and Hendersonville, North Carolina, are lovely adjoining resorts some twenty-five hundred feet up in the Carolina mountains. They were founded before the Civil War by wealthy Charlestonians who came there summers from South Carolina to escape malaria and typhus. Connemara Farms, where Carl has lived since 1945, is the old Memminger estate. Memminger, a very picturesque figure, was Treasurer of The Southern Confederacy; and Carl's daughter, Margaret, if her health permits, has some notion of writing his life. The place is some two hundred and fifty acres of mountain, pine, and pasture, with a lovely view from the front porch of Mt. Mitchell and its range some ten miles away on the road to Asheville. The mansion is a rambling old white house of twenty some rooms, and there are perhaps ten out-buildings for laborers and stock down the road a piece. It is about three miles up a rather rugged road from Flat Rock, and there are no neighbors nearer than town.

The house is full of easy chairs, of tables piled high in great disarray with books, magazines, and what have you. It has an indefinite number of bed rooms, a civilized amount of modern plumbing, books everywhere from cellar to garret, filing cabinets everywhere; and, as one of the Southern ladies who drove us up one morning from our Inn remarked with horror, "no curtains" at any of the hundred and some windows. One room has the goat and cattle library, of which Mrs. Sandburg is master, and everywhere else is Carl's library. And in the dining room on the east wall from the floor to the twenty foot ceiling, are a thousand volumes of Carl's literary collections; and by the south windows, looking out on a mountain of enormous pines, Carl has a reclining chair and a record player, where after lunch he lets Beethoven or Bach encourage a brief siesta; a Lincoln hat and an old slave whip on a shelf just above him.

Connemara Farms is now a goat and cattle ranch taken over by perhaps the most picturesque invader in the State's history. There are about five laborers to keep things going, including the cook and house maid, Ella. Carl calls her "Eller," and

says she came "right out of the hills." Her hill-billy sturdiness alone enables her to cope with the Sandburg menage; and the goat-herder's wife has Titian hair. At eighty-five cents a quart these laborers keep the goat's milk flowing to the market; and on demand, Hendersonville sends up a truck for a cow to process it into steaks for the Sandburg freezers, and Connemara makes money. Mrs. Sandburg and the two girls now at home know by name and disposition each of the fifty goats, and Janet can even distinguish one kid from another, a feat Margaret envies. Mrs. Sandburg, with her Phi Beta Kappa key, has a highly professional eye for disease, breeding, and births, and may be up all night with the Vet. in time of sickness or trouble in the barns.

The day after we arrived there was a Goat Show at Tryon. Mrs. Sandburg and Janet were up most of the night currying, brushing, and loading, and looking after an inconveniently sick cow; and at dawn they took off with thirty-nine goats (in the truck), and a dozen kids (in the station wagon). At sundown they returned, tired but happy, with a silver bowl for the "best udder," (best color, best shape, and best attachment fore and aft), and with an indefinite number of blue ribbons for I know not what other goatish distinctions. We visited these prize animals on a tour of the farm one afternoon, and I found myself the object of embarrassing attentions from most of them. Mrs. Sandburg surmised that it was not love, but only the dacron suit I had on that they found good nibbling. She remarked, a little late I thought, that one must be careful what one wears in the goat pasture, or one may return wearing less than he entered with. I soon disengaged myself from the goat's caresses, and was content on the other side of the pasture gate to just watch. Goat butting, seemingly an endless occupation of goats, Dunlap noted, is done in a kind of ritual, but is, Mrs. Sandburg says, "only their form of play." Yet to the uninitiated, the way they draw back, rear up, take aim and charge, looks very dangerous. We feared that even with their nubs of horns they might injure each other; but Mrs. Sandburg reassured us by remarking that a mere sledge such as is used to knock out cattle, has no visible effect on goats.

Fortunately they usually confine their buttings to their own species. Bright eyed and friendly creatures, on the whole; though the Oregonian Dunlap, confessedly

shy of all animals, admitted privately that he did not like them much. But the unpasteurized goat's milk at the Sandburg's table we drank copiously at lunch and dinner, and in spite of mid-west warnings to the contrary, found it very tasty, and, we hoped, healthy. Let it be noted that Connemara milk does get pasteurized each day down in Hendersonville, but the portion reserved for the family receives no such effete attention. We will learn about two weeks hence, I learn from Senator Douglas, who is now he hopes recovering from similar unpasteurized drinkings, whether we too are to have undulant fever.

The Sandburgs are all animal lovers. Carl "likes to have them around." It is a real farm they have at Connemara; it takes work and intelligence, and is no rich poet's toy. They got started at it because Margaret as a child wanted a cow. "Why not a goat?" said Mrs. Sandburg, "they are so much cleaner," and so goats it was. The cattle are to afford a pleasing background for Carl's evening walks, and to supply meat for the table. I could not find that the cows had names, or were like the goats, a part of the Sandburg social life. The doberman pinscher and the Siemese cat find it tough going to get much of a play among these goat fanciers, and they strove eagerly for our more domestic attentions.

We slept and breakfasted at Woodfield's Inn, a beautiful plaything of Mrs. Joe Clemens who with her Yankee husband makes some of the money to keep it going from their three Miami restaurants. Mr. C. is said to dislike the place, and sticks usually to Florida, leaving her to the follies of Flat Rock for the summer. The season was just beginning, but there were a number of charming southern ladies who took us in, and made over us delightfully. I remember Mrs. Saunders remarking, after Dunlap had taught her the Yankee game of Red Dog, that she "didn't know that college professors could be so much fun." This was during an hour's leisure after a hard day with Carl in his library, when we were in need of relaxation.

Woodfields, taken over by these Floridian Yankees, had for ten years, so Mrs. Saunders told Dunlap, a difficult time in getting "received" by the Flat Rock-Hdnersonville aristocracy. But finally, Mrs. Robert E. Lee the Third sent over her negro butler with a note to Mrs. Clemens asking if it would be convenient if she came to dinner. Undaunted, Mrs. Clemens sent her own negro in livery back with a note

expressing her pleasure at this unprecedented honor; and Woodfield's Inn was no longer "off limits." Then Carl put up Ed Murrow and his gang at Woodfields, a blow that really shook with envy some of the older and more established Inns.

But not even Murrow could get Carl himself to the Inn for dinner. So when we called up and asked "if it would be convenient" if we brought the whole Sandburg family for a Sunday night dinner, the Inn, which serves dinner only at noon on Sundays, at once decided on that day to serve two Sunday dinners! Except to go to the Little Theatre, and to play his guitar and square-dance at the Goat Herders Festival, it seems that Carl has made no public appearance in Flat Rock. He appeared at the Inn in roust-about slacks and a colorful Bing-Crosby wind-breaker, with only a tie to show that he was "fixed up." But the guests were lined up to receive him, and the courtesy and charm with which he thanked Mrs. Clemens for being so kind to Mr. Murrow would have delighted even Mrs. Robert E. Lee the Third. We had mountains of fried chicken with all the fixin's, and Carl ate with his fingers. If Mrs. Clemens needed the money, she could now remove her Duncan-Hines sign, and simply substitute "Carl Sandburg Ate Here," and raise her prices.

Dunlap suspected the ladies of the Inn of thinking Carl important chiefly because such a great man as Ed Murrow thought it worth while to spend all those thousands to make a film of him. "How do they do it?" Dunlap remarked. "They never read a book. They don't know a line of Sandburg; and how they acquire their culture and charm God knows; but God knows they have it!" We lent them my book From Whitman to Sandburg in American Poetry, and showed them some of Carl's poems; doing our professorial best to instruct them in rudimentary Sandburgiana. But we had no confidence that our instructions "took," and somehow at the Inn, it didn't seem important. In all that charm, "Chicago, hog-butcher to the world" seemed much farther away even than Connemara.

This contrast of the Old South at the foot of the mountain with the life of goats, literature, and Lincolniana at Connemara, Dunlap, who doesn't know his Southerners as I do, found fabulously diverting. He soon became torn between the two loyalties. Suffice to say, it was a rich experience. Mrs. Saunders or Mrs. Clemens drove us each morning after breakfast up the mountain in spite of that

"awful road," and I don't believe that even Ed Murrow could have been more kindly treated. We were very grateful; and I hope that these few pages of introduction will give our readers some slight notion of the mood and setting of our four days visit. But let us turn now to the report we were sent to get.

INTRODUCTORY REMARKS ABOUT THE LIBRARY:

The four days we spent with Carl at Connemara going over his library, letters, manuscripts, and mementos, were, as may be imagined, a somewhat stunning experience. The first two days I took some fifty pages of notes. After that we just listened, retired to our hotel at night, and tried to sum up what we had learned,--an impossible task. Here in Washington we spent a day outlining a report. Dunlap has now gone back to his family and a well earned vacation, and has left me holed in here at the Roger Smith to, he says, "put some meat on those bones."

I do not know which was the more overwhelming, the library, or the man it represents, with his running-fire comment on this or that memo, letter, manuscript, and the fifty years of America there revealed. The gloat in Dunlap's librarian's eye at such a haul of loot was pleasing to behold. Let me say at once that after the second day we have had no reservations in recommending that the University buy it. The agreed price of $30,000 is, we feel certain, very much less than its worth in the open market, perhaps a third to a fourth what it might bring. Fortunately Carl can afford the loss, and he feels, as we do, that there would be a great lessening of its value if it were broken up; and that if it is to be kept together, the University of Illinois is the place to keep it. That a poet, ballad collector, singer, and biographer should have had the patience and foresight to collect and sort so much material,--a task to daunt ten librarians--reveals another side of Carl's genius. Dunlap suggests that there must be somewhere in him a strain of the pack-rat to account for it.

Without wishing to pay ourselves any undue compliments, we felt ourselves not unintelligent in listening to Carl: Dunlap in Lincolniana, and Weirick in literature. We were rather proud of being able to "get" Carl's short-hand discussions without having to ask for too many footnotes. Four days of going along with

Carl over his Lincoln library and manuscripts without getting lost is no mean feat. Though a bit more than an amateur in the field, I got lost very early. But Dunlap, who according to Dunlap, "professes no great knowledge of Lincolniana," the University may like to hear, "kept up," and Carl told me he was delighted and surprised at his learning. I doubt that there are many who have not spent their lives in the field who could have done it. I confess it left me somewhat flabbergasted! Since the Lincoln part of Carl's library is about two-thirds of the business, perhaps this stress on the competence of our Lincoln representative will not be thought out of place; and since Dunlap is gone on vacation, I can pay him this justified tribute if I want to.

DESCRIPTION OF THE LIBRARY:

It should be said at once that we both feel that we have only a cursory idea of what is in the library. It will take years to find out. We both doubt if even Carl knows. But after four days of looking and listening, we can say this:

I. BOOKS

A. Perhaps ten thousand volumes of Lincolniana, biography, history, political philosophy, encyclopedias, files of rare and important magazines, etc.

Along with these should be mentioned countless filing cabinets full of notes, memos, collections of things dug from odd places, files of old newspapers, the results of countless hours of leg-work and digging.

Carl says, and we see no reason to doubt him, that it contains the best working Lincoln library any where to be found; with many important things not to be found in one place elsewhere.

B. Probably five thousand volumes of literature; criticism, biography, poetry, essays; many of them signed by the authors, and some of them containing comments and informal racy criticism by Carl in the margins and in the front.....a mine of material for some future biographer.

II. MANUSCRIPTS:

A. Lincoln Manuscripts.
Complete typewritten copies, with corrections and changes for the printer of:
1. The Prairie Years (2000 pp.)
2. The War Years (6000 pp.)
3. The One Volume Lincoln (1500 pp.)

B. Manuscripts of Poems:
A file of manuscripts (about two feet thick) of various versions of his poems, with revisions, corrections, etc., and probably some two or three hundred poems never published, and some of them as good as anything he has printed!

(This section alone will keep Flanagan and his students busy for years.)

NOTE: The printer's copies of the following do not exist. (Carl hadn't learned their value that early): CHICAGO POEMS; SMOKE AND STEEL; CORN HUSKERS; SLABS OF THE SUNBURNT WEST; AND THE ROOTABAGA STORIES.

IMPORTANT CONSIDERATION: Carl will make us copies in his own hand writing of some forty of his best known poems for display, on especial paper with a broad feather pen. Only a half dozen of his peems so done have been made! Comment: WHAT A DISPIAY THAT WILL MAKE!

C. The Helga Collection

Manuscripts of the following books typed for the printer have been put in possession of Carl's daughter, Helga. He offered to buy them back for $10,000; but she refused--thinking them worth $50,000--probably wrongly; but who knows? Carl thinks their lack in his library will be "regrettable, but not crucial"; as we will have all the preparatory and revisionary manuscripts on which they are based; manuscripts of much more value than the final typed copies for the printer. Those books are:

GOOD MORNING, AMERICA; THE AMERICAN SONG-BAG; THE PEOPLE, YES; EARLY MOON; REMEMBRANCE ROCK; POTATOE FACE; LINCOLN COLLECTOR; MARY LINCOLN; THE COMPLETE POEMS; ALWAYS THE YOUNG STRANGERS.

(Note: We will have about half of the poems in the above section in early and revised manuscripts; and any collector would rather have these than the final typed printer's copies--so Carl says.)

GENERAL COMMENT ON II--the above section: We get the Prairie Years and the War Years and the One-Volume Lincoln complete-Oprobably the largest manuscript in existence. We get no printer's manuscripts of the final version of his poetry; but we do get what is more valuable, the early and revised manuscripts of about half of his poems since those of the first four volumes; that is, about half of those in the Helga collection.

D. MANUSCRIPT OF A NEW SONG-BAG never printed, and about as big as the original; some of them omitted from the original for lack of space, and some of them since collected. Such a "haul" speaks for itself.

E. LETTERS: No one knows how many letters Carl has, not even Carl; but they are a collector's paradise. He has reserved in files some of the more obvious show letters: those of Lincoln and his cabinet, none, perhaps very important, but originals and rare. A good many literary letters: one from Robert Frost which I read that is a gem, and a whole biography of Frost in little; one from Billy Sunday in his own helter-skelter hand calling down God's vengeance on Carl for his poem TO A CONTEMPORARY BUNK-SHOOTER. (And by the way, Carl has the original manuscript of that poem before the publisher toned it down. THAT must be a Lu-Lu!) Letters from Lindsay, Masters, Amy Lowell, Ezra Pound (some very amusing ones from St. Elizabeth's. I fear he is mad only Nor' Nor' West). Letters from Menken in his best gaudy vein; letters from Max Eastman of the NEW MASSES vintage; letters from FDR, Hopkins, and the World War II crowd; letters from "Stevie" Benet, from Wm. Lyon Phelps; letters and unpublished poems from Eddie Guest--the poem I saw a rather charming tribute to Carl--and several groups of letters from unknowns who attached themselves to Carl over a period of years, some of them very touching and poetic, and of great value to a biographer as showing Carl in intimate and helpful relations with persons he met only casually. Letters from his publishers with the usual arguments, most of which Carl won--an especially good one about keeping the one-vol. Lincoln distillation of the six volumes of the Prairie Years and the War Years to a limit of 250 pages! One shudders to think of the catastrophe of yielding to that blandishment!

Probably that volume alone will outsell and out pay all of Carl's other works. A gold mine! And only Carl's stubborn insistence gave it birth! Some family letters (perhaps) and most revealing, but which I do not care here to describe. Letters from Ben Hecht, Harry Hansen, Harry Justin Smith, Victor Lawson, and the Chicago crowd. Needless to say, we could only skim this field; but we saw enough to realize that it is a mine of rich ore. And one amusing item: two poems by Masters and Dreiser in regular verse form waving the flag for the Spanish-American War! They are poems that they both kept rigorously out of their "published" volumes; but Carl has "rescued" them. Also letters from Hemingway; letters from Faulkner. Name them, and probably Carl can produce. And somewhere or other is evidence showing that the Republican Party's High Brass had a meeting with Carl to get him to run instead of Wilkie! Needless to say, Carl pointed out that his record was sufficiently "subversive" from a Republican point of view to make that a mere fantasy. Result: they were stuck with Wilkie. I confess that this revelation rather stunned Dunlap and me! I do not believe that the Republican Party will like to remember that episode! Letters from Stevenson--very gay and human, and in his usual finished style. A gross of material on that election, and on Carl's part in it. But enough! I note just here on re-reading Carl's one page description of his own library, that he has mentioned many letters not here included--Truman - Harriet Monroe - Eric Sevareid - Ed Murrow - Bob Sherwood - Amy Lowell - Ida Tarbell - Helen Keller - a wonderful letter! and all the Lincoln crowd. But, as I said before, ENOUGH!

F. TO GO UNDER LOCK AND KEY: Lincoln stories and remarks, some private, and some in law courts, of a Rabelaisian nature, with the sources of their authenticity. Some of these have the true Lincoln ring; and as is usual with Lincoln stories, they are told more for the anecdotal moral, than for the mere desire to be off-color. Also, a large group of Rabelaisian ballads from bar-rooms, bar-racks, and labor camps that are most revealing of the common man released from respectability. Also, unpublished poems of some of our most respectable poets on their days off. The indefatigable historian in Carl evidently drove him to preserve these--"for the record." Though I do not ordinarily "go" for such anecdotes, I confess some of the Lincoln stories are still hilarious--especially those in court. And indeed, some of the ballads show more than a touch of genius.

May I add here a personal note. Carl, too, is none too fond of such material. He once spent a week or ten days with a group of Doctors fishing. They reveled in rather jejune pornographia. Carl "took it" as a good fellow, but thought them rather naive. Be it noted, that he did not loosen up and let them have "the real stuff" from his mine of, shall we say, superior pornographia. What that proves, I leave to the reader. Perhaps that even in pornographia there is a matter of good taste. The Doctors, I happen to know, thought Carl a "good fellow" and did not sense his boredom. I suppose this just shows what a poet of "the common man" may find himself up against now and then. Though I guess it is necessary to point out that he wouldn't cringe in the presence of such goings on among the common laborer--or from an evening with Lincoln and his gang. One wonders what Robert Frost's reactions would be to such shenanigans. Probably that too is down in Carl's records--somewhere.

G. RARE AND DE LUXE EDITIONS: Some hundreds of volumes of Carl's works that can go to make up a show corner, and can be exchanged to book sellers and other libraries for items we need. A mine of gold for a shrewd librarian--like, say, Dunlap, who knows what Lincolniana is worth. I divine that several of such "deals" are already cooking in his mind.

H. UNPUBLISHED ODDS AND ENDS: Carl estimates that he has more things lying around that are unpublished than those he has published. Every book, as we all know, is a distillation from about ten times its volume. Boswell used

only a fraction of his material, and recently Yale has been digging for gold in the remains. Carl's "complete" writings are here; including not only the above, but a large number of things he has just never offered for publication. Without writing a new line, I suspect he could keep in the ring easily for ten years more. Our University Press will undoubtedly be busy publishing Sandburgiana for some time.

I. FILING CABINETS; BOXES: MANILA FOLDERS. There must be hundreds, perhaps thousands of these; and what they contain will take several years to discover. We saw enough of their contents to realize something of their worth. They are a grab bag of literary and historical treasures. There are even magnums of liquor stached away in some of them, twenty years old--though whether the University inherits this treasure, we could not quite discover. Dunlap thought Carl knew perfectly wellwhere he had stowed such liquid sunshine; but I am of the opinion that he came on them as he did on a letter of Frost or Seward, quite by accident. But seriously, these folders and cabinets are stunningly impressive. When he ever found time to collect and sort them, and also to publish all his books, sing all those ballads, and engage in all his activities, was a constant source of wonder bo both of us.

J. MEMENTOS; DIARIES; MEMORABILIA. These begin with Carl's diaries, smudged and sweaty from his hobo days in Colorado; and include cartoons, thousands of pictures, some 200 sets of stereoptican views, rare poster displays, honorary decorations, slave canes, Lincoln hats, a bloody hair from Lincoln's head saved by Lincoln's negro servant and given to Carl by the negro that "inherited" it in a fine case, a piece of Lincoln's shawl, framed, perhaps a hundred walking canes, a goat library, with prizes and pictures, (very valued possessions in the Sandburg family), gifts and decorations from Sweden, a complete file of Carl's royalties--guess how much--Spanish War reliques and records, perhaps a hundred albums of musical recordings, Bach, Beethoven, and Boogie Woogie; many recordings of unpublished ballads by Carl; three guitars--very valuable type--Lincoln coins; a Volk Lincoln in bronze; hundreds of Steichen photographs; (we lacked the time to see much of this highly valuable collection. It deserves a place of its own; but neither of us would have been photographic conscious enough to estimate its worth); a slave whip; items by Henry Ford and Charlie Chaplin; in short, a whole museum of interesting and often valuable items.

K. INTERESTING LETTERS AND THEIR ANSWERS: this includes, I would guess, about a thousand letters, separated out and placed together in a unit. We didn't have time to look at them, but Carl thinks them some of the most interesting parts of his collections. I gather there is a book in them.

L. Rare EARLY PUBLICATIONS: including IN RESTIESS ECSTASY, pamphlets on Labor Riots, college publications, etc....material Carl keeps stored in a vault at the bank.

III. PRICE CONSIDERATIONS:

There was some wavering about a proper price. Carl had first suggested $30,000. Then he had, I guess in an expansive mood over the telephone said that he thought, maybe $25,000. For a day or so he played around with "what theywere really worth"--say, one hundred thousand; and wondered what the University might think of forty or fifty thousand. We did not argue; but Dunlap pointed out that processing and housing his library was going to cost the University quite a bit; details that seemed to surprise Carl. Then the third day of our visit, he greeted us with the final offer of $30,000, and "let's forget it." He did point out that the University of Indiana bought the Oak Leaf collection for $50,000; and that it was a far inferior collection to his. With this Dunlap agreed. So, if we want it, $30,000 is the price.

I think too it should be added that Carl made no stipulations as to when he was to be paid. Our suggestion that he take it in installments, with, say, five thousand dollars to "clinch the deal" met with his approval. Both Dunlap and I had the distinct impression that he cared far more about setting up the library as a going concern, than he did about the thirty-thousand. There is no question that his love of Illinois, its past, its future, and his being in a position to tie up so many significant ideals for the future of the region he loves, is what chiefly concerns him. He is about as much interested in his "fee" as Lincoln was. I gathered that he accepted the thirty-thousand more as a sign that the University really cared, and was not accepting just loot, than as the idea of getting more money in the bank.

SUMMARY

I fear that this attempt to sum up Carl's library is growing too long. I hope I have given some notion of its monumental size and variety. With the Lincoln collection, the library of literature, the manuscripts published and unpublished, with the great volume of letters, it has impressed Dunlap and me as the best buy of its kind any library has had an opportunity to secure. It not only has the Lincoln appeal, and the Sandburg appeal, but is in itself a kind of history of America on its imaginative side for the last fifty years. Illinois has had many famous sons; but few or none who can leave us so great and so significant a monument. The catching excitement of Senator Douglas and Scotty Reston, for example, when I mentioned its possibility is I think but a foretaste of what will come if we do go ahead with the project. And it will be no mean tribute to President Morey's wisdom and foresight that he has thought fit to initiate and encourage its purchase for the University of Illinois and for the inspiration and learning of generations to come. Without his encouragement, it is probable that there would have been no such venture.

But it may be said, granted we buy it, what will we do with it? We discussed this a good deal with Carl, and came to the following conclusions:

1. A stunning SANDBURG ROOM, or WORK-SHOP LIBRARY could be arranged from all the material. The displays could be varied almost endlessly. There could be State Days for this and that program, with speakers and guided tours; an inspiration to student and scholarly visitors, and a rare opportunity for University Showmanship of something more than the usual athletic lures with which we are somewhat dubiously over blessed. Carl has many ideas for its use, and has offered freely of his time and energy in helping us to fix it up

and plan its programming. Also, I have no doubt that Steichen will lend us his good offices in decoration and display. One suggestion of Carl's was to have now and then a Lloyd Lewis corner, a Barrett corner, etc., illustrated with books, pictures, manuscripts and letters recalling their roles in American life, as a happy way to remind ourselves now and then of a greatness gone by.

The public has heard so much about this famous library, out of which came those Lincoln biographies, that for decades people will like to get acquainted with the books that produced such a monumental work. There they will be, with the 300 biographies read and reread some of them several times, on view, and available for examination. And one happy consideration about Carl's library is that he has always been content with a "true copy," and for the most part didn't think it necessary to collect "untouchable" treasures. His is therefore, not only the most complete working library on Lincoln, but the most useable. I assure my readers that the impact of such a tour will be unforgettable. Dunlap, who is used to such collections, can still hardly believe what we saw.

The LITERARY part of the room should prove almost as interesting. It will contain most of the important books of poetry, criticism, essays, and biography of the last fifty years; and it may surprise the critics, also a very complete collection of classic and traditional authors before the nineteenth century. Not only are they there, but they show signs of being read, Manuscripts and letters will from time to time go on view, as well as some thirty or forty of Carl's best known poems written out in his own hand: CHICAGO; FOG; WASHINGTON MONUMENT AT NIGHT; a gift that will be the envy of all libraries. One display of TO A CONTEMPORARY BUNKSHOOTER with Billy Sunday's angry holograph answer, for instance, should excite a lot of visitors. Such a room with its varied displays and programs will undoubtedly get and retain national interest. It will be something that everyone of

intelligence will HAVE to see. Compared with the Amy Lowell-Keats Room at Harvard, or the Harriett Monroe Room at the University of Chicago, the Sandburg Room at Illinois will be vastly more interesting, more varied, and more significant. It will be something that Illini all over the world will come to be proud of. I can not see how it should be otherwise.

2. Another very important aspect of the library will be its possibilities for research and publication. Not only will theses and articles come out of it, but I foresee many fresh programs for WILL, and any number of books for the University Press. For instance, Carl now has the material for his autobiography arranged in six sections. This we will get when Carl is finished with it--and may that be many years away! THAT is an autobiography, says Senator Douglas, that you are to tell Carl I am waiting to read; as, of course, who isn't? But once Carl has taken a shot at himself, others will want to survey the field, and the Sandburg Room is where they will have to come to do it. Dunlap, may I say, at first was dubious as to the research value of the library; but by the second day of exploration, he had gone all out in seeing the possibilities of its use. Lincoln, of course, is an endless mine for reinterpretative delving, and for that, Sandburg's library will save many steps. And what is in all those letters will call for many hours of research and discovery.

LEGAL AND OTHER PROBLEMS OF TRANSFER:

The legal arrangements for the transfer of all this material will be the traditional ones. Mrs. Sandburg and Alfred Harcourt, Carl's publisher, are designated in Carl's will as his literary executors. They will retain the publication rights. The University will own the rights of display and possession. These, I am told, are the usual arrangements, and there should be no problem as to the legal uses of the material. I should suppose that our Legal Department in conjunction with Carl, Mrs. Sandburg, and Harcourt will be able to draw up an agreement that will satisfy everyone. I know nothing about such things, but Dunlap and Carl seemed to take it for granted that there would be no hitch there. Mrs. Sandburg, who, by the

way, once spent a year as a student at Illinois, be it noted, is in enthusiastic agreement with the plans to establish Carl's library at the University.

TIME OF TRANSFER: If the deal is to go through, Carl would like to have it do so at once. He wants the books, letters, manuscripts, and mementos that he isn't apt to use, and that means almost everything, to come to Illinois as soon as possible. There is for one thing, the danger of fire. They live in the midst of a pine forest. Then, big as the Memminger house is, it isn't big enough, and books are spilling all over it, from the huge basement where a dehumidifer is not too satisfactory, to various Swedish Houses and out-buildings of the estate. Carl spoke several times of "so little time," and I gather that he wishes to clear the decks for his autobiography. Indeed, we both felt quite guilty in consuming so much of his time and energy in our instruction. Probably we are the only ones ever to receive such a privilege; and Carl remarked that much as he too had enjoyed it, under no circumstances would he ever again submit himself to such an effort. Another consideration in getting the transfer over soon is so that Carl may be around to help in its planning. And one can understand that so large a possession might finally become more of a burden than a pleasure. "Eller," who makes a stab at keeping the books dusted, will, I think I may say, feel no regrets.

METHODS AND DETAILS TO BE CONSIDERED. Dunlap has suggested that early September might be a convenient time to start packing, labelling, annotating, and shipping. That, we found, will fit Carl's schedule. Dunlap will, I suppose, be asked to superintend it, and he has expressed his willingness to do so. As he already knows his way around in the library, he will certainly be less trouble to Carl than any one we could send. He has, too, suggested that he wants me along to help with the memos of explanation needed to make clear the significance of thousands of items that we have become familiar with, and that might otherwise remain a kind of Chinese puzzle. As I am retiring in September, there seems to be no reason for refusing, and I will, if asked, be glad to do so. It will, Dunlap estimates, be about a three weeks job; but if he gets it completed in that time, I shall be surprised. I shudder a little to think of the work involved. Carl and Mrs.

Sandburg and the girls, I am glad to say, felt kindly enough toward us, to wish us a speedy return.

Bringing that library to Illinois will, of course, cost something, and Dunlap has warned me to stress the necessity of some sort of appropriation to cover it; whether five or ten thousand he couldn't say. The books will have to be wrapped, boxed, the boxes inventoried and labeled, and insured trucks hired to bring them out; Dunlap thought three or four truck loads. He has the place in the library basement already in mind where they can be stored and locked up. He discussed with Carl the possibility of housing his library in a room adjoining the Horner collection. It seems that there are two adjoining rooms on the first floor of the library that could be so used, and a single custodian could look after both--but of that more--no doubt a good deal more--later. Carl is planning to be out here in late October--Iowa (Oct. 25th, a secret); Bement, perhaps; Don Brown's High School convention (800 of them) perhaps (Oct. 22); and, if we wish, a University convocation some time about then. He will be glad to give the University people concerned whatever time they wish in going over tentative plans for setting up the room; and, of course, if we are going to buy it, we should avail ourselves of that opportunity.

CONCLUSION:

In closing this report both Dunlap and I wish to express to the University, and especially to President Morey our gratitude for the privilege of this mission. The experience has been, even more than we could have anticipated, exciting and inspiring. Carl's wit and wisdom, seeing him unroll the panorama of the years from his hobo and socialistic days up to the present, when, as Senator Douglas remarked, "Carl has been famous so long that he has become respectable," and the chameleon changes of mood that enlivened it all, left Dunlap, who hasn't known Carl as long as I have, gasping. I am afraid that the experience will make his future library conventions seem very dull.

We both came away feeling more than ever that Carl is a truly great American, an original, whose genius we should not willingly let die. The purchase of the Sandburg Library will be a great venture. But it has been greatly conceived, and should be greatly used. We both feel that it is an opportunity that it would be incredible for us to reject.

Sandburg, Carl

September 1, 1955

Dear Miss Holleman:

I am deeply in your debt for the Report on the Carl Sandburg Library. I only spent three days there, but the Report took me back again to one of the most amazing and delightful spots I have ever visited.

Again, many thanks.

Sincerely yours,

Miss Emmit C. Holleman

July 27, 1955

Dear Miss Holleman:

Your letter of July 15th arrived in Mr. Murrow's absence on vacation.

This is merely a note to tell you that I do not expect Mr. Murrow back until early fall, but will be glad to bring your letter to his attention at that time.

Sincerely yours,

Florence Crissan

Edward R. Murrow, Esq.,
Columbia Broadcasting Company,
New York N.Y.

Dear Mr. Murrow,

I enclose the attached at the request of Professor Bruce Weirick "so that he can read of his conquest at Woodfields. 'Oh, such a fine man! And that Mr. Friendly, too!'"

Yours sincerely,

Emmit C. Holleman

REPORT ON THE CARL SANDBURG LIBRARY

BY

LESLIE DUNLAP AND BRUCE WEIRICK

July 4, 1955

REPORT ON THE CARL SANDBURG LIBRARY
BY
LESLIE DUNLAP AND BRUCE WEIRICK

SETTINGS; IMPRESSIONS; LOCAL COLOR

Flat Rock and Hendersonville, North Carolina, are lovely adjoining resorts some twenty-five hundred feet up in the Carolina mountains. They were founded before the Civil War by wealthy Charlestonians who came there summers from South Carolina to escape malaria and typhus. Connemara Farms, where Carl has lived since 1945, is the old Memminger estate. Memminger, a very picturesque figure, was Treasurer of The Southern Confederacy; and Carl's daughter, Margaret, if her health permits, has some notion of writing his life. The place is some two hundred and fifty acres of mountain, pine, and pasture, with a lovely view from the front porch of Mt. Mitchell and its range some ten miles away on the road to Asheville. The mansion is a rambling old white house of twenty some rooms, and there are perhaps ten out-buildings for laborers and stock down the road a piece. It is about three miles up a rather rugged road from Flat Rock, and there are no neighbors nearer than town.

The house is full of easy chairs, of tables piled high in great disarray with books, magazines, and what have you. It has an indefinite number of bed rooms, a civilized amount of modern plumbing, books everywhere from cellar to garret, filing cabinets everywhere; and, as one of the Southern ladies who drove us up one morning from our Inn remarked with horror, "no curtains" at any of the hundred and some windows. One room has the goat and cattle library, of which Mrs. Sandburg is master, and everywhere else is Carl's library. And in the dining room on the east wall from the floor to the twenty foot ceiling, are a thousand volumes of Carl's literary collections; and by the south windows, looking out on a mountain of enormous pines, Carl has a reclining chair and a record player, where after lunch he lets Beethoven or Bach encourage a brief siesta; a Lincoln hat and an old slave whip on a shelf just above him.

Connemara Farms is now a goat and cattle ranch taken over by perhaps the most picturesque invader in the State's history. There are about five laborers to keep things going, including the cook and house maid, Ella. Carl calls her "Eller," and

says she came "right out of the hills." Her hill-billy sturdiness alone enables her to cope with the Sandburg menage; and the goat-herder's wife has Titian hair. At eighty-five cents a quart these laborers keep the goat's milk flowing to the market; and on demand, Hendersonville sends up a truck for a cow to process it into steaks for the Sandburg freezers, and Connemara makes money. Mrs. Sandburg and the two girls now at home know by name and disposition each of the fifty goats, and Janet can even distinguish one kid from another, a feat Margaret envies. Mrs. Sandburg, with her Phi Beta Kappa key, has a highly professional eye for disease, breeding, and births, and may be up all night with the Vet. in time of sickness or trouble in the barns.

The day after we arrived there was a Goat Show at Tryon. Mrs. Sandburg and Janet were up most of the night currying, brushing, and loading, and looking after an inconveniently sick cow; and at dawn they took off with thirty-nine goats (in the truck), and a dozen kids (in the station wagon). At sundown they returned, tired but happy, with a silver bowl for the "best udder," (best color, best shape, and best attachment fore and aft), and with an indefinite number of blue ribbons for I know not what other goatish distinctions. We visited these prize animals on a tour of the farm one afternoon, and I found myself the object of embarrassing attentions from most of them. Mrs. Sandburg surmised that it was not love, but only the dacron suit I had on that they found good nibbling. She remarked, a little late I thought, that one must be careful what one wears in the goat pasture, or one may return wearing less than he entered with. I soon disengaged myself from the goat's caresses, and was content on the other side of the pasture gate to just watch. Goat butting, seemingly an endless occupation of goats, Dunlap noted, is done in a kind of ritual, but is, Mrs. Sandburg says, "only their form of play." Yet to the uninitiated, the way they draw back, rear up, take aim and charge, looks very dangerous. We feared that even with their nubs of horns they might injure each other; but Mrs. Sandburg reassured us by remarking that a mere sledge such as is used to knock out cattle, has no visible effect on goats.

Fortunately they usually confine their buttings to their own species. Bright eyed and friendly creatures, on the whole; though the Oregonian Dunlap, confessedly

shy of all animals, admitted privately that he did not like them much. But the unpasteurized goat's milk at the Sandburg's table we drank copiously at lunch and dinner, and in spite of mid-west warnings to the contrary, found it very tasty, and, we hoped, healthy. Let it be noted that Connemara milk does get pasteurized each day down in Hendersonville, but the portion reserved for the family receives no such effete attention. We will learn about two weeks hence, I learn from Senator Douglas, who is now he hopes recovering from similar unpasteurized drinkings, whether we too are to have undulant fever.

The Sandburgs are all animal lovers. Carl "likes to have them around." It is a real farm they have at Connemara; it takes work and intelligence, and is no rich poet's toy. They got started at it because Margaret as a child wanted a cow. "Why not a goat?" said Mrs. Sandburg, "they are so much cleaner," and so goats it was. The cattle are to afford a pleasing background for Carl's evening walks, and to supply meat for the table. I could not find that the cows had names, or were like the goats, a part of the Sandburg social life. The doberman pinscher and the Siemese cat find it tough going to get much of a play among these goat fanciers, and they strove eagerly for our more domestic attentions.

We slept and breakfasted at Woodfield's Inn, a beautiful plaything of Mrs. Joe Clemens who with her Yankee husband makes some of the money to keep it going from their three Miami restaurants. Mr. C. is said to dislike the place, and sticks usually to Florida, leaving her to the follies of Flat Rock for the summer. The season was just beginning, but there were a number of charming southern ladies who took us in, and made over us delightfully. I remember Mrs. Saunders remarking, after Dunlap had taught her the Yankee game of Red Dog, that she "didn't know that college professors could be so much fun." This was during an hour's leisure after a hard day with Carl in his library, when we were in need of relaxation.

Woodfields, taken over by these Floridian Yankees, had for ten years, so Mrs. Saunders told Dunlap, a difficult time in getting "received" by the Flat Rock-Hdnersonville aristocracy. But finally, Mrs. Robert E. Lee the Third sent over her negro butler with a note to Mrs. Clemens asking if it would be convenient if she came to dinner. Undaunted, Mrs. Clemens sent her own negro in livery back with a note

expressing her pleasure at this unprecedented honor; and Woodfield's Inn was no longer "off limits." Then Carl put up Ed Murrow and his gang at Woodfields, a blow that really shook with envy some of the older and more established Inns.

But not even Murrow could get Carl himself to the Inn for dinner. So when we called up and asked "if it would be convenient" if we brought the whole Sandburg family for a Sunday night dinner, the Inn, which serves dinner only at noon on Sundays, at once decided on that day to serve two Sunday dinners! Except to go to the Little Theatre, and to play his guitar and square-dance at the Goat Herders Festival, it seems that Carl has made no public appearance in Flat Rock. He appeared at the Inn in roust-about slacks and a colorful Bing-Crosby wind-breaker, with only a tie to show that he was "fixed up." But the guests were lined up to receive him, and the courtesy and charm with which he thanked Mrs. Clemens for being so kind to Mr. Murrow would have delighted even Mrs. Robert E. Lee the Third. We had mountains of fried chicken with all the fixin's, and Carl ate with his fingers. If Mrs. Clemens needed the money, she could now remove her Duncan-Hines sign, and simply substitute "Carl Sandburg Ate Here," and raise her prices.

Dunlap suspected the ladies of the Inn of thinking Carl important chiefly because such a great man as Ed Murrow thought it worth while to spend all those thousands to make a film of him. "How do they do it?" Dunlap remarked. "They never read a book. They don't know a line of Sandburg; and how they acquire their culture and charm God knows; but God knows they have it!" We lent them my book From Whitman to Sandburg in American Poetry, and showed them some of Carl's poems; doing our professorial best to instruct them in rudimentary Sandburgiana. But we had no confidence that our instructions "took," and somehow at the Inn, it didn't seem important. In all that charm, "Chicago, hog-butcher to the world" seemed much farther away even than Connemara.

This contrast of the Old South at the foot of the mountain with the life of goats, literature, and Lincolniana at Connemara, Dunlap, who doesn't know his Southerners as I do, found fabulously diverting. He soon became torn between the two loyalties. Suffice to say, it was a rich experience. Mrs. Saunders or Mrs. Clemens drove us each morning after breakfast up the mountain in spite of that

"awful road," and I don't believe that even Ed Murrow could have been more kindly treated. We were very grateful; and I hope that these few pages of introduction will give our readers some slight notion of the mood and setting of our four days visit. But let us turn now to the report we were sent to get.

INTRODUCTORY REMARKS ABOUT THE LIBRARY:

The four days we spent with Carl at Connemara going over his library, letters, manuscripts, and mementos, were, as may be imagined, a somewhat stunning experience. The first two days I took some fifty pages of notes. After that we just listened, retired to our hotel at night, and tried to sum up what we had learned,--an impossible task. Here in Washington we spent a day outlining a report. Dunlap has now gone back to his family and a well earned vacation, and has left me holed in here at the Roger Smith to, he says, "put some meat on those bones."

I do not know which was the more overwhelming, the library, or the man it represents, with his running-fire comment on this or that memo, letter, manuscript, and the fifty years of America there revealed. The gloat in Dunlap's librarian's eye at such a haul of loot was pleasing to behold. Let me say at once that after the second day we have had no reservations in recommending that the University buy it. The agreed price of $30,000 is, we feel certain, very much less than its worth in the open market, perhaps a third to a fourth what it might bring. Fortunately Carl can afford the loss, and he feels, as we do, that there would be a great lessening of its value if it were broken up; and that if it is to be kept together, the University of Illinois is the place to keep it. That a poet, ballad collector, singer, and biographer should have had the patience and foresight to collect and sort so much material,--a task to daunt ten librarians--reveals another side of Carl's genius. Dunlap suggests that there must be somewhere in him a strain of the pack-rat to account for it.

Without wishing to pay ourselves any undue compliments, we felt ourselves not unintelligent in listening to Carl: Dunlap in Lincolniana, and Weirick in literature. We were rather proud of being able to "get" Carl's short-hand discussions without having to ask for too many footnotes. Four days of going along with

Carl over his Lincoln library and manuscripts without getting lost is no mean feat. Though a bit more than an amateur in the field, I got lost very early. But Dunlap, who according to Dunlap, "professes no great knowledge of Lincolniana," the University may like to hear, "kept up," and Carl told me he was delighted and surprised at his learning. I doubt that there are many who have not spent their lives in the field who could have done it. I confess it left me somewhat flabbergasted! Since the Lincoln part of Carl's library is about two-thirds of the business, perhaps this stress on the competence of our Lincoln representative will not be thought out of place; and since Dunlap is gone on vacation, I can pay him this justified tribute if I want to.

DESCRIPTION OF THE LIBRARY:

It should be said at once that we both feel that we have only a cursory idea of what is in the library. It will take years to find out. We both doubt if even Carl knows. But after four days of looking and listening, we can say this:

I. BOOKS

A. Perhaps ten thousand volumes of Lincolniana, biography, history, political philosophy, encyclopedias, files of rare and important magazines, etc.

Along with these should be mentioned countless filing cabinets full of notes, memos, collections of things dug from odd places, files of old newspapers, the results of countless hours of leg-work and digging.

Carl says, and we see no reason to doubt him, that it contains the best working Lincoln library any where to be found; with many important things not to be found in one place elsewhere.

B. Probably five thousand volumes of literature; criticism, biography, poetry, essays; many of them signed by the authors, and some of them containing comments and informal racy criticism by Carl in the margins and in the front.....a mine of material for some future biographer.

II.MANUSCRIPTS:

A. Lincoln Manuscripts.
Complete typewritten copies, with corrections and changes for the printer of:
1. The Prairie Years (2000 pp.)
2. The War Years (6000 pp.)
3. The One Volume Lincoln (1500 pp.)

B. Manuscripts of Poems:
A file of manuscripts (about two feet thick) of various versions of his poems, with revisions, corrections, etc., and probably some two or three hundred poems never published, and some of them as good as anything he has printed!

(This section alone will keep Flanagan and his students busy for years.)

NOTE: The printer's copies of the following do not exist. (Carl hadn't learned their value that early): CHICAGO POEMS; SMOKE AND STEEL; CORN HUSKERS; SLABS OF THE SUNBURNT WEST; AND THE ROOTABAGA STORIES.

IMPORTANT CONSIDERATION: Carl will make us copies in his own hand writing of some forty of his best known poems for display, on especial paper with a broad feather pen. Only a half dozen of his peems so done have been made! Comment: WHAT A DISPLAY THAT WILL MAKE!

C. The Helga Collection

Manuscripts of the following books typed for the printer have been put in possession of Carl's daughter, Helga. He offered to buy them back for $10,000; but she refused--thinking them worth $50,000--probably wrongly; but who knows? Carl thinks their lack in his library will be "regrettable, but not crucial"; as we will have all the preparatory and revisionary manuscripts on which they are based; manuscripts of much more value than the final typed copies for the printer. Those books are:

GOOD MORNING, AMERICA; THE AMERICAN SONG-BAG; THE PEOPLE, YES; EARLY MOON; REMEMBRANCE ROCK; POTATOE FACE; LINCOLN COLLECTOR; MARY LINCOLN; THE COMPLETE POEMS; ALWAYS THE YOUNG STRANGERS.

(Note: We will have about half of the poems in the above section in early and revised manuscripts; and any collector would rather have these than the final typed printer's copies--so Carl says.)

GENERAL COMMENT ON II--the above section: We get the Prairie Years and the War Years and the One-Volume Lincoln complete-Oprobably the largest manuscript in existence. We get no printer's manuscripts of the final version of his poetry; but we do get what is more valuable, the early and revised manuscripts of about half of his poems since those of the first four volumes; that is, about half of those in the Helga collection.

D. MANUSCRIPT OF A NEW SONG-BAG never printed, and about as big as the original; some of them omitted from the original for lack of space, and some of them since collected. Such a "haul" speaks for itself.

E. LETTERS: No one knows how many letters Carl has, not even Carl; but they are a collector's paradise. He has reserved in files some of the more obvious show letters: those of Lincoln and his cabinet, none, perhaps very important, but originals and rare. A good many literary letters: one from Robert Frost which I read that is a gem, and a whole biography of Frost in little; one from Billy Sunday in his own helter-skelter hand calling down God's vengeance on Carl for his poem TO A CONTEMPORARY BUNK-SHOOTER. (And by the way, Carl has the original manuscript of that poem before the publisher toned it down. THAT must be a Lu-Lu!) Letters from Lindsay, Masters, Amy Lowell, Ezra Pound (some very amusing ones from St. Elizabeth's. I fear he is mad only Nor' Nor' West). Letters from Menken in his best gaudy vein; letters from Max Eastman of the NEW MASSES vintage; letters from FDR, Hopkins, and the World War II crowd; letters from "Stevie" Benet, from Wm. Lyon Phelps; letters and unpublished poems from Eddie Guest--the poem I saw a rather charming tribute to Carl--and several groups of letters from unknowns who attached themselves to Carl over a period of years, some of them very touching and poetic, and of great value to a biographer as showing Carl in intimate and helpful relations with persons he met only casually. Letters from his publishers with the usual arguments, most of which Carl won--an especially good one about keeping the one-vol. Lincoln distillation of the six volumes of the Prairie Years and the War Years to a limit of 250 pages! One shudders to think of the catastrophy of yielding to that blandishment!

Probably that volume alone will outsell and out pay all of Carl's other works. A gold mine! And only Carl's stubborn insistence gave it birth! Some family letters (perhaps) and most revealing, but which I do not care here to describe. Letters from Ben Hecht, Harry Hansen, Harry Justin Smith, Victor Lawson, and the Chicago crowd. Needless tc say, we could only skim this field; but we saw enough to realize that it is a mine of rich ore. And one amusing item: two poems by Masters and Dreiser in regular verse form waving the flag for the Spanish-American War! They are poems that they both kept rigorously out of their "published" volumes; but Carl has "rescued" them. Also letters from Hemingway; letters from Faulkner. Name them, and probably Carl can produce. And somewhere or other is evidence showing that the Republican Party's High Brass had a meeting with Carl to get him to run instead of Wilkie! Needless to say, Carl pointed out that his record was sufficiently "subversive" from a Republican point of view to make that a mere fantasy. Result: they were stuck with Wilkie. I confess that this revelation rather stunned Dunlap and me! I do not believe that the Republican Party will like to remember that episode! Letters from Stevenson--very gay and human, and in his usual finished style. A gross of material on that election, and on Carl's part in it. But enough! I note just here on re-reading Carl's one page description of his own library, that he has mentioned many letters not here included--Truman - Harriet Monroe - Eric Sevareid - Ed Murrow - Bob Sherwood - Amy Lowell - Ida Tarbell - Helen Keller - a wonderful letter! and all the Lincoln crowd. But, as I said before, ENOUGH!

F. TO GO UNDER LOCK AND KEY: Lincoln stories and remarks, some private, and some in law courts, of a Rabelaisian nature, with the sources of their authenticity. Some of these have the true Lincoln ring; and as is usual with Lincoln stories, they are told more for the anecdotal moral, than for the mere desire to be off-color. Also, a large group of Rabelaisian ballads from bar-rooms, bar-racks, and labor camps that are most revealing of the common man released from respectability. Also, unpublished poems of some of our most respectable poets on their days off. The indefatigable historian in Carl evidently drove him to preserve these--"for the record." Though I do not ordinarily "go" for such anecdotes, I confess some of the Lincoln stories are still hilarious--especially those in court. And indeed, some of the ballads show more than a touch of genius.

May I add here a personal note. Carl, too, is none too fond of such material. He once spent a week or ten days with a group of Doctors fishing. They reveled in rather jejune pornographia. Carl "took it" as a good fellow, but thought them rather naive. Be it noted, that he did not loosen up and let them have "the real stuff" from his mine of, shall we say, superior pornographia. What that proves, I leave to the reader. Perhaps that even in pornographia there is a matter of good taste. The Doctors, I happen to know, thought Carl a "good fellow" and did not sense his boredom. I suppose this just shows what a poet of "the common man" may find himself up against now and then. Though I guess it is necessary to point out that he wouldn't cringe in the presence of such goings on among the common laborer--or from an evening with Lincoln and his gang. One wonders what Robert Frost's reactions would be to such shenanigans. Probably that too is down in Carl's records--somewhere.

G. RARE AND DE LUXE EDITIONS: Some hundreds of volumes of Carl's works that can go to make up a show corner, and can be exchanged to book sellers and other libraries for items we need. A mine of gold for a shrewd librarian--like, say, Dunlap, who knows what Lincolniana is worth. I divine that several of such "deals" are already cooking in his mind.

H. UNPUBLISHED ODDS AND ENDS: Carl estimates that he has more things lying around that are unpublished than those he has published. Every book, as we all know, is a distillation from about ten times its volume. Boswell used

only a fraction of his material, and recently Yale has been digging for gold in the remains. Carl's "complete" writings are here; including not only the above, but a large number of things he has just never offered for publication. Without writing a new line, I suspect he could keep in the ring easily for ten years more. Our University Press will undoubtedly be busy publishing Sandburgiana for some time.

I. FILING CABINETS; BOXES: MANILA FOLDERS. There must be hundreds, perhaps thousands of these; and what they contain will take several years to discover. We saw enough of their contents to realize something of their worth. They are a grab bag of literary and historical treasures. There are even magnums of liquor stached away in some of them, twenty years old--though whether the University inherits this treasure, we could not quite discover. Dunlap thought Carl knew perfectly wellwhere he had stowed such liquid sunshine; but I am of the opinion that he came on them as he did on a letter of Frost or Seward, quite by accident. But seriously, these folders and cabinets are stunningly impressive. When he ever found time to collect and sort them, and also to publish all his books, sing all those ballads, and engage in all his activities, was a constant source of wonder bo both of us.

J. MEMENTOS; DIARIES; MEMORABILIA. These begin with Carl's diaries, smudged and sweaty from his hobo days in Colorado; and include cartoons, thousands of pictures, some 200 sets of stereoptican views, rare poster displays, honorary decorations, slave canes, Lincoln hats, a bloody hair from Lincoln's head saved by Lincoln's negro servant and given to Carl by the negro that "inherited" it in a fine case, a piece of Lincoln's shawl, framed, perhaps a hundred walking canes, a goat library, with prizes and pictures, (very valued possessions in the Sandburg family), gifts and decorations from Sweden, a complete file of Carl's royalties--guess how much--Spanish War reliques and records, perhaps a hundred albums of musical recordings, Bach, Beethoven, and Boogie Woogie; many recordings of unpublished ballads by Carl; three guitars--very valuable type--Lincoln coins; a Volk Lincoln in bronze; hundreds of Steichen photographs; (we lacked the time to see much of this highly valuable collection. It deserves a place of its own; but neither of us would have been photographic conscious enough to estimate its worth); a slave whip; items by Henry Ford and Charlie Chaplin; in short, a whole museum of interesting and often valuable items.

K. INTERESTING LETTERS AND THEIR ANSWERS: this includes, I would guess, about a thousand letters, separated out and placed together in a unit. We didn't have time to look at them, but Carl thinks them some of the most interesting parts of his collections. I gather there is a book in them.

L. Rare EARLY PUBLICATIONS: including IN RESTIESS ECSTASY, pamphlets on Labor Riots, college publications, etc....material Carl keeps stored in a vault at the bank.

III. PRICE CONSIDERATIONS:

There was some wavering about a proper price. Carl had first suggested $30,000. Then he had, I guess in an expansive mood over the telephone said that he thought, maybe $25,000. For a day or so he played around with "what theywere really worth"--say, one hundred thousand; and wondered what the University might think of forty or fifty thousand. We did not argue; but Dunlap pointed out that processing and housing his library was going to cost the University quite a bit; details that seemed to surprise Carl. Then the third day of our visit, he greeted us with the final offer of $30,000, and "let's forget it." He did point out that the University of Indiana bought the Oak Leaf collection for $50,000; and that it was a far inferior collection to his. With this Dunlap agreed. So, if we want it, $30,000 is the price.

I think too it should be added that Carl made no stipulations as to when he was to be paid. Our suggestion that he take it in installments, with, say, five thousand dollars to "clinch the deal" met with his approval. Both Dunlap and I had the distinct impression that he cared far more about setting up the library as a going concern, than he did about the thirty-thousand. There is no question that his love of Illinois, its past, its future, and his being in a position to tie up so many significant ideals for the future of the region he loves, is what chiefly concerns him. He is about as much interested in his "fee" as Lincoln was. I gathered that he accepted the thirty-thousand more as a sign that the University really cared, and was not accepting just loot, than as the idea of getting more money in the bank.

SUMMARY

I fear that this attempt to sum up Carl's library is growing too long. I hope I have given some notion of its monumental size and variety. With the Lincoln collection, the library of literature, the manuscripts published and unpublished, with the great volume of letters, it has impressed Dunlap and me as the best buy of its kind any library has had an opportunity to secure. It not only has the Lincoln appeal, and the Sandburg appeal, but is in itself a kind of history of America on its imaginative side for the last fifty years. Illinois has had many famous sons; but few or none who can leave us so great and so significant a monument. The catching excitement of Senator Douglas and Scotty Reston, for example, when I mentioned its possibility is I think but a foretaste of what will come if we do go ahead with the project. And it will be no mean tribute to President Morey's wisdom and foresight that he has thought fit to initiate and encourage its purchase for the University of Illinois and for the inspiration and learning of generations to come. Without his encouragement, it is probable that there would have been no such venture.

But it may be said, granted we buy it, what will we do with it? We discussed this a good deal with Carl, and came to the following conclusions:

1. A stunning SANDBURG ROOM, or WORK-SHOP LIBRARY could be arranged from all the material. The displays could be varied almost endlessly. There could be State Days for this and that program, with speakers and guided tours; an inspiration to student and scholarly visitors, and a rare opportunity for University Showmanship of something more than the usual athletic lures with which we are somewhat dubiously over blessed. Carl has many ideas for its use, and has offered freely of his time and energy in helping us to fix it up

and plan its programming. Also, I have no doubt that Steichen will lend us his good offices in decoration and display. One suggestion of Carl's was to have now and then a Lloyd Lewis corner, a Barrett corner, etc., illustrated with books, pictures, manuscripts and letters recalling their roles in American life, as a happy way to remind ourselves now and then of a greatness gone by.

The public has heard so much about this famous library, out of which came those Lincoln biographies, that for decades people will like to get acquainted with the books that produced such a monumental work. There they will be, with the 300 biographies read and reread some of them several times, on view, and available for examination. And one happy consideration about Carl's library is that he has always been content with a "true copy," and for the most part didn't think it necessary to collect "untouchable" treasures. His is therefore, not only the most complete working library on Lincoln, but the most useable. I assure my readers that the impact of such a tour will be unforgettable. Dunlap, who is used to such collections, can still hardly believe what we saw.

The LITERARY part of the room should prove almost as interesting. It will contain most of the important books of poetry, criticism, essays, and biography of the last fifty years; and it may surprise the critics, also a very complete collection of classic and traditional authors before the nineteenth century. Not only are they there, but they show signs of being read, Manuscripts and letters will from time to time go on view, as well as some thirty or forty of Carl's best known poems written out in his own hand: CHICAGO; FOG; WASHINGTON MONUMENT AT NIGHT; a gift that will be the envy of all libraries. One display of TO A CONTEMPORARY BUNKSHOOTER with Billy Sunday's angry holograph answer, for instance, should excite a lot of visitors. Such a room with its varied displays and programs will undoubtedly get and retain national interest. It will be something that everyone of

intelligence will HAVE to see. Compared with the Amy Lowell-Keats Room at Harvard, or the Harriett Monroe Room at the University of Chicago, the Sandburg Room at Illinois will be vastly more interesting, more varied, and more significant. It will be something that Illini all over the world will come to be proud of. I can not see how it should be otherwise.

2. Another very important aspect of the library will be its possibilities for research and publication. Not only will theses and articles come out of it, but I foresee many fresh programs for WILL, and any number of books for the University Press. For instance, Carl now has the material for his autobiography arranged in six sections. This we will get when Carl is finished with it--and may that be many years away! THAT is an autobiography, says Senator Douglas, that you are to tell Carl I am waiting to read; as, of course, who isn't? But once Carl has taken a shot at himself, others will want to survey the field, and the Sandburg Room is where they will have to come to do it. Dunlap, may I say, at first was dubious as to the research value of the library; but by the second day of exploration, he had gone all out in seeing the possibilities of its use. Lincoln, of course, is an endless mine for reinterpretative delving, and for that, Sandburg's library will save many steps. And what is in all those letters will call for many hours of research and discovery.

LEGAL AND OTHER PROBLEMS OF TRANSFER:

The legal arrangements for the transfer of all this material will be the traditional ones. Mrs. Sandburg and Alfred Harcourt, Carl's publisher, are designated in Carl's will as his literary executors. They will retain the publication rights. The University will own the rights of display and possession. These, I am told, are the usual arrangements, and there should be no problem as to the legal uses of the material. I should suppose that our Legal Department in conjunction with Carl, Mrs. Sandburg, and Harcourt will be able to draw up an agreement that will satisfy everyone. I know nothing about such things, but Dunlap and Carl seemed to take it for granted that there would be no hitch there. Mrs. Sandburg, who, by the

way, once spent a year as a student at Illinois, be it noted, is in enthusiastic agreement with the plans to establish Carl's library at the University.

TIME OF TRANSFER: If the deal is to go through, Carl would like to have it do so at once. He wants the books, letters, manuscripts, and mementos that he isn't apt to use, and that means almost everything, to come to Illinois as soon as possible. There is for one thing, the danger of fire. They live in the midst of a pine forest. Then, big as the Memminger house is, it isn't big enough, and books are spilling all over it, from the huge basement where a dehumidifer is not too satisfactory, to various Swedish Houses and out-buildings of the estate. Carl spoke several times of "so little time," and I gather that he wishes to clear the decks for his autobiography. Indeed, we both felt quite guilty in consuming so much of his time and energy in our instruction. Probably we are the only ones ever to receive such a privilege; and Carl remarked that much as he too had enjoyed it, under no circumstances would he ever again submit himself to such an effort. Another consideration in getting the transfer over soon is so that Carl may be around to help in its planning. And one can understand that so large a possession might finally become more of a burden than a pleasure. "Eller," who makes a stab at keeping the books dusted, will, I think I may say, feel no regrets.

METHODS AND DETAILS TO BE CONSIDERED. Dunlap has suggested that early September might be a convenient time to start packing, labelling, annotating, and shipping. That, we found, will fit Carl's schedule. Dunlap will, I suppose, be asked to superintend it, and he has expressed his willingness to do so. As he already knows his way around in the library, he will certainly be less trouble to Carl than any one we could send. He has, too, suggested that he wants me along to help with the memos of explanation needed to make clear the significance of thousands of items that we have become familiar with, and that might otherwise remain a kind of Chinese puzzle. As I am retiring in September, there seems to be no reason for refusing, and I will, if asked, be glad to do so. It will, Dunlap estimates, be about a three weeks job; but if he gets it completed in that time, I shall be surprised. I shudder a little to think of the work involved. Carl and Mrs.

Sandburg and the girls, I am glad to say, felt kindly enough toward us, to wish us a speedy return.

Bringing that library to Illinois will, of course, cost something, and Dunlap has warned me to stress the necessity of some sort of appropriation to cover it; whether five or ten thousand he couldn't say. The books will have to be wrapped, boxed, the boxes inventoried and labeled, and insured trucks hired to bring them out; Dunlap thought three or four truck loads. He has the place in the library basement already in mind where they can be stored and locked up. He discussed with Carl the possibility of housing his library in a room adjoining the Horner collection. It seems that there are two adjoining rooms on the first floor of the library that could be so used, and a single custodian could look after both--but of that more--no doubt a good deal more--later. Carl is planning to be out here in late October--Iowa (Oct. 25th, a secret); Bement, perhaps; Don Brown's High School convention (800 of them) perhaps (Oct. 22); and, if we wish, a University convocation some time about then. He will be glad to give the University people concerned whatever time they wish in going over tentative plans for setting up the room; and, of course, if we are going to buy it, we should avail ourselves of that opportunity.

CONCLUSION:

In closing this report both Dunlap and I wish to express to the University, and especially to President Morey our gratitude for the privilege of this mission. The experience has been, even more than we could have anticipated, exciting and inspiring. Carl's wit and wisdom, seeing him unroll the panorama of the years from his hobo and socialistic days up to the present, when, as Senator Douglas remarked, "Carl has been famous so long that he has become respectable," and the chameleon changes of mood that enlivened it all, left Dunlap, who hasn't known Carl as long as I have, gasping. I am afraid that the experience will make his future library conventions seem very dull.

We both came away feeling more than ever that Carl is a truly great American, an original, whose genius we should not willingly let die. The purchase of the Sandburg Library will be a great venture. But it has been greatly conceived, and should be greatly used. We both feel that it is an opportunity that it would be incredible for us to reject.

Sandburg, Carl

June 3, 1955

Dear Carl:

We both know there is a vast chasm between Corporate and personal loyalty. I would be incapable regarding anything you said or wrote about television or radio as being in any way derogatory to myself. I am against silence, particularly silence by Sandburg.

Being just back from London I can contribute to you only one phrase which impinges a little upon radio. That ancient and venerable phrase-maker, Sir Winston Churchill in talking about a "female" who was permitted to broadcast doubting the existence of God informed me that he had informed the responsible officials at BBC that they were probably filled with a sense of well being and would have "given the same time to Jesus as to Judas."

I hope to bask in the sunshine of your countenance soon.

As ever yours,

Mr. Carl Sandburg
Connemara Farms

CONNEMARA FARMS
FLAT ROCK, N. C.

May 20, 1955

Dear Ed:

Often in my life, you should know, I have done foolish things with no bitterness about them. But when there is a color of treachery and betrayal in a foolish action of mine, I am in no health about it. When I wrote the F. C. C. a letter I was foolish enough (and why I can't fathom) to think it would be one more of many reposing in their files . My cue, if only out of loyalty to you, was silence. But a mood was on me about TV, from the only three stations we can receive here, and their steady deterioration from low standards to begin with. For a short time we did get Person-To-Person, Eric Sevareid, Chronoscope, Doug Edwards, to name a few that we like and want, but these are out, not shown, for a year and a half. In substitution has come a series of local shows or "features" with local advertising. I can name only three features of each week that we never fail to see: See-It-Now, You Bet Your Life, Ford Omnibus, if and when...Of course, I know that TV toll can lead to plenty of experiments and disasters. Meantime we feel helpless here about the many excellent things on a marvellous medium that we can't get. Also meantime, in the toll controversy my cue is complete silence though in the commencement address at the University of North Carolina June 6 I shall make more than passing reference to you and Fred. Also meantime, I expect on occasion to do foolish things with a low minimum of bitter aftermath.

Lochlair, Wriston

The Charlotte Observer

"THE FOREMOST NEWSPAPER OF THE CAROLINAS"

Charlotte, N. C.

March 29, 1955

Dear Mr. Murrow:

I was up at Flat Rock Thursday to pick up Mr. Sandburg for a lecture at Davidson College, about 20 miles from Charlotte.

One of the first things Mrs. Sandburg showed me was the recent note and picture from you, of Mr. Carl as President Eisenhower! He had gotten a good laugh from it.

And he had very warm words of admiration for you. He said, among other things, that you were working for the only network with a soul, and that, year in and year out, your broadcasts were the most stimulating in radio. He raised hell with the local CBS affiliate, WBTV, for not getting your "Person-to-Person" show!

I was able to get an exceptional story from Sandburg, for he was in a frame of mind to talk and to be sociable. I thought you might like to glace at a few paragraphs of it, and I took the liberty of quoting from your letter about the picture caption.

The Charlotte Observer

"THE FOREMOST NEWSPAPER OF THE CAROLINAS"

Charlotte, N. C.

I would like to say, too, that I admire so much your approach to the news and your evaluation of it.

It would seem a slight chance that you'd remember me, but you granted me a 15-minute interview in your office--about 5 p.m.--two years ago. We hope you'll be able to visit down this way sometime in the future. I believe you did stop long enough to change planes, after you did the Flat Rock interview with Sandburg.

Sincerely,
Wriston Locklair

CARL SANDBURG . . . Arrives At Davidson

SANDBURG TALKS AND TALKS

Four Hours With A Poet

By WRISTON LOCKLAIR
Observer Staff Writer

Carl Sandburg usually gets up about 2:30 o'clock in the afternoon. Yesterday, at his goat farm near Flat Rock, he got up at 1 o'clock to ride down to Davidson College—140 miles away — for a lecture.

About 1:30 o'clock, he stuck his head out a third-floor window and called: "You fellows from Davidson? Be down in 10 or 15 minutes. Just shaving."

The "fellows" were Donald Plott, chairman of the Davidson Artist Series, and Shaw Smith, director of the Davidson Student Union. They had gone up to drive him to the campus.

Earlier, the visitors had been cordially greeted by Mrs. Sandburg, by a daughter, Janet, and by a servant-cook, Ella Blackwell. "I been working for 'em since they come 10 years ago," Ella said. "When they first come, they stayed at Morley's Tourist Camp. I worked there 'til Miz. Morley dropped dead. The Sandburgs' nice people to work for."

THOUSANDS OF BOOKS

There were books everywhere—by the thousands. Every room in the large house looks like a library. There were pictures of famous men and women, awards and tributes to the celebrated Pulitzer Prize winner and Lincoln historian.

And letters. Edward R. Murrow enclosed a newspaper photo of Sandburg which, somehow, appeared with President Eisenhower's name underneath. "This from your underpaid press agent. I still hope to get you listed as Pope," Murrow quipped.

A member of the "Wordweavers" in Oregon sent the following letter: "I want to give a program on successful poets and to what they attribute their inspiration. If you could put into words, I would appreciate so much your opinion on from where you think your inspiration comes.

"Do you attribute your success in being able to express poetically to education, training, experience, technique, people, travel, nature, inate talent, the Infinite God, or what?"

Magazines and newspapers, including Variety, are in stacks. Many of the books are personally inscribed. On the fly leaf of "The Grapes of Wrath," John Steinbeck has written: "This book is one bound specially at the request of John Steinbeck for presentation to Carl Sandburg in memory of a good day and a bad horseshoe game. Received payment, 15 cents.

GOAT FARM TOUR

Guests are always taken on a tour of the goat farm. Goats are all over the house. There were a dozen or more in the basement. There is also a chicken house in the basement. It is probably the only chicken house in the world with four oil paintings on its walls. They were done by a Sandburg daughter.

The Sandburgs have 60 goats milking now. One of the buildings in the yard had more than 100 white Leghorns. There were some books with the chickens in the basement.

About 30 or 40 minutes after he yelled, Mr. Sandburg came down stairs carrying a guitar (he calls it a "gee-tar")' several briefcases and a raincoat. He was in a friendly, relaxed mood.

After settling in the back seat of a Cadillac, he suddenly looked out the window: "Oh, look at that Japanese quince. Isn't that something! A fine day."

He worked until 3 or 4 a. m. His breakfast had been left outside the door. One thing people at the farm do not do is disturb Mr. Sandburg in the morning. He has fresh tomato juice, orange juice, grapefruit, bread and butter, and milk. He drinks goat milk three times a day.

"Let me look at my mail," he said, to no one in particular, as the car moved into Hendersonville. He was wearing a black suit, blue bow tie, white shirt, and a hat that had been out in some March mountain weather. He opened his letters with a pocket knife.

LETTERS

He was willing to share the mail.

A letter from New York began, "Could I send you some of my poems and you could tell me your opinion on them as to improving my thoughts of writing." A student in the third year at a high school in Baltimore announced, "I have chosen you as my subject for my English paper. I do not mean to be presumption but it would be of great assistance to me to have any impressions or recollections you could send.

"I will appreciate hearing from you at your earliest convenience. I am very anxious to add to the material I already have."

Sandburg looked out the window at the streets. "Hendersonville. Hendersonville. A pretty orderly town in the main. Tourists sort of give it a Pasadena atmosphere."

He returned to the mail. "Questions and information. It never stops. Somebody is always writing did this or that happen to Lincoln? Was this in his life? The least they could write down at the bottom would be "I have read through your books on Lincoln and do not find this information,'" he said, and laughed, appreciately.

"My new one-volume Lincoln is 440,000 words. Cut from more than a million words in the other books." He cut a cigar in half and stuck a piece in his mouth without lighting it. He got around to a match 60 miles later.

STILL TIME TO WORK

"Let's see, now," he mused. "If I begin at 8:15 o'clock, I'll be through by 9:25. That means I can start back at 10 p. m. Can you arrange that? We'll get home about 1 a. m., and I can work for three hours or so."

The Davidson party had arranged for Mr. Sandburg to stay overnight in the guest house. But it was felt the return trip could be taken care of, if that was what Mr. Sandburg wanted.

Suddenly benevolent, he said, to no one in particular, "I like your car and I like the land and sky God has given us for today."

His attention for a while was divided between his briefcase and the scenery. "So many interesting cabins. You don't get that in the Midwest . . . Nearly everywhere these days there's a faint whisper of something coming along. You

See FOUR Page 21B, Col. 1

Four Hours With Poet Carl Sandburg

Continued From Page 1B

see a faint pink in the trees, here and there.

"At 77, you know what you want to do. I'm on a piece of drudgery. A lot of accumulated things. For the past few weeks I've been going through hundreds of letters from 1915 to 1925, and things I had forgotten. There was a letter from a convict, whos name I had seen in a prison paper. Robbed some grocery store of 24 dollars. Not a hard case but a good story.

"I want to use part of them to follow 'Always the Young Strangers.' This is the kind of drudgery I went through on the Lincoln book But it has a payoff," he allowed.

"Chimney Rock," he announced with pleasure. "I'm comin' up here sometime and buy a dime's worth of something in every store. Encourage them! My, they have a long main street. Because they can't have a cross-street," he opined.

Lake Lure had to be identified for him. "All sorts of conventions and gathering places, I guess. Tourists and filling stations can mess up a place," he grumbled.

The talk turned to Cornelia Otis Skinner's visit to Davidson last fall. Sandburg said "I recently came across some old records by Otis Skinner. Gee, what a ham! A classical ham! But I saw him on the stage and he wasn't too bad."

Next, Edward R. Murrow: "He apparently works for the only network with a soul. He started McCarthy on the downhill road. I guess, throughout the year, Murrow is the best you can find," Sandburg said, wrapping a silk handkerchief around his throat.

He admired a country church. "They have a Baptist church in West Asheville that's a monstrosity."

After a pause, Sandburg had a kind word for South Carolina. "I never had better friends in the North than Charlestonians. They come up to Flat Rock by the droves in summer, you know. Wonderful, kindly."

"Are we leaving the mountains now?" he asked, child-like His hair, the color and consistancy of cornsilk, was being rearranged by the wind from the window.

MORE ON ARCHITECTURE

He wanted to return to architecture. "The Catholics do better. Dr. Harry Emerson Fosdick says the Protestants are shamed in comparison to Catholic architecture."

Later, Sandburg described himself as "a mystic beyond definition."

Further down the road, he said, tongue in check, "I must not forget tonight to pay my compliments to the motion picture industry and their propaganda over Europe."

More serious, he continued: "We've not made any picture that can compare with the ones the Russians have sent over. The Russians and Chinese have united in a circus. All the classical acts — horseback, clowns, half-Chinese half-Russian. Very well done, good propaganda. Every once in a while, they'll show a well-dressed Chinese or well-dressed Russian.

"The interest in Hollywood is gangsters, matters of sex, Westerns, crime and swank interiors. We're shown materialistic, living high on the hog.

Many of the movie makers, only several generations over here, are now millionaires. And yet they don't have the good sense to make a decent picture as to how this country came about."

"STILL STRONG'

He observed a beaten but still-used barn. "Look at it It seems to be saying, 'You see, I'm still strong. The sun and the rain ain't got me yet. Wanna see my Social Security card?" and he laughed.

He was in high spirits from then on. "I read the other day where Billy Graham says only 10 per cent of the people are playing golf. If Ike is gonna consider runnin' in '56 it might do him good to have a couple of pictures of himself made on his Gettysburg farm, driving a manure spreader."

The name of Archibald Rutledge poet laureate of South Carolina, was introduced by someone. "He's against the Declaration of Independence," Sandburg pronounced quietly. "He doesn't go along with the part about all men being created free and equal. But his nature writings are pretty good."

Gastonia was not far away. "Who's that fellow on the radio in Charlotte? Grady Cole? So stuck on the way he delivers Stuck on the way his mind works First time I heard him I thought he was drunk. I tune him in about once every six weeks to see if he's still as bad a case as he was the last time. He always is."

UNC ADDRESS

"I've been invited to come to Chapel Hill June 6 to give the commencement address. I think the man said it should be 20 minutes long. That's better than an hour-long baccalaureate. I haven't decided yet what I'll do," he said.

He said he knew something about the new owner of The Observer. "I know the Chicago Daily News. That's the milk train of the Knight newspapers. I haven't seen The Observer in years. But I know the Knights: lots of white space, no sentences longer than 19 words."

The car was out of Cornelius and into Davidson. "Pretty campus," the visitor observed. "Look how the windows are spaced. Not like that Baptist church we saw."

He posed for a picture as he left the car and talked to some radio and television people. As he prepared to get back in the automobile, a woman came charging breathlessly to the door, a thick volume in her hands.

"Mr. Sandburg Mr. Sandburg! Will you please sign this life of Lincoln please!"

Mr. Sandberg, unperturbed, looked up. "Dearie, you're irresistible. Gotta pen?"

March 8, 1955

Dear Mr. Wyatt:

Very many thanks for your letter of January 18 and for your thoughtfulness in sending me the clipping from the COURIER-JOURNAL's report on Carl Sandburg's visit to Louisville.

As you know, I am a great admirer of his and enjoyed reading this report very much.

Sincerely yours,

Mr. Wilson W. Wyatt

POET CARL SANDBURG AT STANDIFORD FIELD

Poet Sandburg Is Here And He Has A Secret

Writer Says He's 'Graduated' From Lincoln; He'll Probably Discuss It at U. L. Tomorrow

By PHIL HARSHAM

Poet-biographer Carl Sandburg arrived at Standiford Field last night tousled and seemingly aglow with some inner secret.

He's "graduated" from Abraham Lincoln, said the best-known Lincoln biographer.

But he'll probably make "a few passing references" to the Great Emancipator during his two talks tomorrow—morning and night—at the University of Louisville.

"After all," he said, "Lincoln's a rather well-known Kentuckian."

'Behold Yon Prologue'

And while he's waiting to make the speech, he'll be working on a prologue to accompany a photographic exhibit being prepared for New York's Museum of Modern Art by Edward Steichen.

"You know what a prologue is," said the white-haired individualist with a wry grin. "I'll say something like, 'Behold yon easel on which you'll see . . .'"

The Steichen exhibit, Sandburg said, will attempt to show that "the world is made up of people who are more alike than different."

"You know," he said, "there are people who still think the Chinese are not bipeds."

Sandburg Has Said It

The Steichen theme—the exhibit will be titled "The Family of Man"—might well have been suggested by Sandburg. A line in a Sandburg poem published in 1953 reads:

"There is only one man in the world and his name is All Men."

Steichen, who is to photography what Sandburg is to Lincoln, is Sandburg's brother-in-law.

"There are only three men who can tell me what to do," the poet said, "and he's one of them."

The other two, he said, are Adlai Stevenson, the Democratic presidential nominee in 1952, and Edward R. Murrow, a Columbia Broadcasting System official and news commentator. "They're great men," Sandburg said. "And they can tell me what to do. But I don't listen very well when anybody else tries to tell me."

Guest of Wilson Wyatt

The 77-year-old two-time Pulitzer Prize winner is the guest here of Wilson Wyatt, chairman of the University of Louisville board of trustees.

He'll address a U. of L. student convocation in the university's Playhouse at 11 a.m. tomorrow. He will speak again at 8:30 p.m. in the Playhouse. The evening address, part of the university's

Poet Sandburg Arrives For Lectures

Continued from First Page

distinguished-lecture series, will be free to the public.

Sandburg, whose casual conversation suggests that he's composing poetry all the while he's talking, said he'll probably "tell the people at the university" how one goes about editing six long volumes on Lincoln down to one volume on Lincoln.

Actually, it was just such a job that kept him from appearing here last year. The finished condensation is "Abraham Lincoln—The Prairie Years and The War Years."

If Lincoln were faced with the presidency today, Sandburg said, he probably would remark:

"If we could first know where we are and whither we are tending, we could better judge what to do and how best to do it."

Lincoln made that statement in June, 1858, Sandburg said, when he had a few problems of his own.

Sandburg's convocation address was scheduled for Tuesday morning. It was changed to tomorrow after his arrival here.

He is the seventh speaker in the lecture series set up in 1952 by a grant from The Courier-Journal and Louisville Times and WHAS.

U. of L. President Philip Davidson said Sandburg asked for the change in the convocation date, "pleading greatness and old age." There were also indications that he was eager to finish the Steichen prologue in New York and then return to his goat farm at Flat Rock, N. C.

CONNEMARA FARM
FLAT ROCK, N. C.

January 6, 1955

Dear Ed:

It was like traveling with fine and keen companions last Sunday when you had your Liberty Boys around the table. The pleasant but definite little riffle between Schonbrun and Hottelot was pretty and like history. And what faces! There must have been some good folks saying, "Till now I have only seen overseas correspondents in the movies and I wasn't sure what they looked like. Now I know they look decent and thoughtful and they are good actors but no actors could talk so intelligent right off the cuff." Mobile faces, marked individual voices, what a ball team, Casey Stengel! Thank you for putting them on the phone for a lone Tar Heel down here. Ever yours -

Carl

Please send me script of your newscast Jan. 3 where you have both of Ezra Benson's shoulders pinned to the mat. You had him reductio ad absurdum.

Sandburg, Carl

CONNEMARA FARM
FLAT ROCK, N. C.

November 11, 1954

Dear Ed:

forget it: I'll arrive a day or two in advance & be seeing you: Your letter of Nov 5 came after this was written:

Try and be sure to remember me with all possible data on the overseas correspondents program. Miss McCarthy phones me that your office says the program is dated now for December 13. When I came home there was about a bushel of mail on our program. What interested me on going through it was the high percentage of housewives who apologized for not being able to write well and then going ahead and writing more vividly and keenly than most newspapermen and better than the average author. I am sure that the haystack of letters you received from the McCarthy telecast has here and there some wonderful writing. Not that you need it perhaps but we pray for you at our house.

Yrs,

Carl

November 8, 1954

Dear Carl:

About the Overseas Press Club Memorial Dedication the date has been firmly fixed for December 13th 8:00 to 9:30 pm in color -- NBC -- everybody working for AFTRA minimum scale including Bob Hope, Sinatra, Dick Rodgers, Bob Sherwood; probably Bing Crosby, Marian Anderson and last and best on the program about four to five minutes of real rare vintage Sandburg, you to do the actual dedication of the plaque bearing the names of correspondents killed in World War II and in Korea. You will talk, I hope, about the importance of news, the need for integrity, the responsibility of those who control and use the mass media. In short, the whole climax of the hour and a half will be Sandburg talking a little about the boys who were less lucky than the rest of us and about the need of an informed public.

I could send you a lot of dope about the individual casualties, but I don't think it will be of any help to you. The whole membership of the Club was unanimous in wanting you to do this, and I am personally deeply grateful to you for being willing to take it on. Please convey my warmest regards to everyone at Connemara Farm.

As ever yours,

Mr. Carl Sandburg

IN TRIBUTE

IN a time of world storm more wild and vast than ever before known to mankind, those who print and publish for readers, those who broadcast for listening millions, have a responsibility beyond calculation. This goes too for the new and strange breed of men and women who in global war gather the round-the-earth news.

TO the immense populations who read and listened, to the American homes of the more than eleven million young men and women who went into war service, the overseas correspondents reported, subject to censorship, national security and communications conditions, the struggles, slaughters, defeats, victories, the deaths of men and how they died and their names. They wore army and navy uniforms with their personal insignia. They were not marked "Expendable" but in the strictest meaning of that word they were It —Expendable. The record shows them having a high percentage of heroes, this in the sense that a hero goes over and beyond the expected toil and risk in the performance of assigned duty; they gave, in Lincoln's phrase at Gettysburg, "the last full measure of devotion."

THE meaning of this deepens in us when we look at the multiple mirrors of the changing chaos of global war, facts, flying rumors, official communiques, guesses, probabilities and possibilities, weaving crazy and dizzy patterns. "Never," wrote one, "never was there a war with so many known factors over-balanced by the unknown." A French marshal in the first World War said, "The controlling factor in war is the Unknown."

IN all weathers and on all continents and seas, the overseas correspondents sought the controlling factors, scented and hunted the dark Unknown. From winding and tortuous paths where the known faded into fogs of the unknown they did their best at sending home to press and radio the story of what was happening from day to day.

VALOR is a gift. Those having it never know for sure whether they have it till the test comes. And those having it in one test never know for sure if they will have it when the next test comes. No one knows better than the tested overseas correspondent how a brave man can be rash, can take such chances that he goes down and never lives to file what might have been his greatest story. The toll of those who took death, wounds, disease, suffering in rain, in cold and heat, in foul prisons — their names have a definite somber majesty.

WHAT some of them did is far past any flowers of tribute or wreaths of verbal salutation. The dust of these vanished men we memorialize tonight can be termed sacred. To name two or ten of them now would be unjust to scores of others. After calling the roll of their names let them have remembrance and the reverence of silence. To long sleep and deep silence they have gone, deep among the never forgotten.

Dear Ed:

The sustained excellence of "See It Now" brings about a sort of casual acceptance of the splendid things that you and Fred Friendly are constantly giving us. We come to take things like this for granted.

Perhaps because I know Carl Sandburg better than I know any of those you have ever before handled in this program, I want to give you my warmest praise for a superlative job. Not only did you put Carl at his peak but you went right along with him.

I am going to Chicago tonight to be present at the luncheon given to Carl tomorrow by his friends. I shall take great pleasure in telling him personally that hereafter on all such occasions he should team up with Murrow.

Sincerely,

Carl Haverlin

I have agreed with Carl Sandburg that Fred Friendly and I will go to Flat Rock, North Carolina, the fourth week in July. We will do a record album for CRI--Jim Conkling has agreed to this--and we will prepare at least one television program for SEE IT NOW.

I have undertaken to provide Sandburg, as soon as possible and in the simplest language, the terms and conditions of payment for the album and the SEE IT NOW program, and for any subsequent use that may be made of the film we shoot.

Could you have someone prepare the document.

Dear Mr. Murrow:

Re: Carl Sandburg,
Tape Recordings

I called your office last week and learned you were out. Due to a sudden death in my family, I had to go out of town and could not follow through on my call.

Inasmuch as Mr. Carl Sandburg holds you in great esteem, I would like to talk with you about the many hours of magnetic tape recordings I have made with him, over a period of several years.

They include readings from:

The People, Yes
Complete Poems
Rootabaga Stories
Remembrance Rock
Abraham Lincoln
and
Songs from The American Songbag
Miscellaneous Songs

The greater portion of these tape recordings have never been recorded elsewhere.

I would appreciate an appointment, at your convenience, to discuss my ideas with you.

Sincerely,

Mari Jinishian

Sandburg, Carl

November 20, 1952

Dear Margaret Ligon:

It would require the eloquence of the ancients and Carl Sandburg to respond adequately to your request for some words of comment or tribute to Carl Sandburg.

I have, by accident and by design, had occasion over the last twenty years to meet a not inconsiderable number of men whose names make headlines as well as a few scholars and writers. It is part of a reporters duty to be no man's disciple and to inoculate himself frequently against the disease known as hero-worship. So far as Sandburg is concerned I am a disciple with the disease and regard my lot as most fortunate.

It would be possible, I imagine, for me to write at great length about this great man, but he would not approve for we both understand that "brevity is good both when you are and are not understood". Carl understands the depth and degree of my respect and affection for him, and he understands that I have insufficient command of the language for adequate expression.

Sincerely yours,

Miss Margaret H. Ligon

8/10

18 Jan 52

Dear Carl Sandburg,

To put our phone conversation down on paper:

1. We invite you to be in Washington, Sunday, 10 February, to appear on "See It Now," Ed Murrow's show. Air time is 3:30 - 4 PM, eastern time. Your portion will run about three minutes.

Program tentatively is this:

Murrow will talk of Lincoln's birthday. He will say we asked Carl Sandburg, where would Sandburg take us for memorable places in Lincoln's life. Thereupon film will be shown of: a) log cabin, Hodgenville, Kentucky, birthplace. b) New Salem, restoration, store Lincoln kept. We'll pick the Offut store. c) Springfield, Illinois, Lincoln's home, house he lived in. d) White House, looking from Lincoln's room to Potomac.

Behind these pictures will be Sandburg's voice which we will record ahead of time, possibly when you're in Chicago. A few words on each place. For instance, the birthplace picture ... "So came the birth of Abraham Lincoln the 12th of February in the year 1809, in silence and pain from a wilderness mother on a bed of corn husks and bearskins ..." Or, also from your Prairie Years, the commentary on the New Salem Offut store, Offut's remarks: "Some day he will be President of the United States ... he can outrun, outlift, outwrestle and throw down any man in Sangamon County." You may of course wish to write new commentary for eadh place. This is merely illustration.

2. For the actual broadcast time, we are thinking of having you speak some of your Lincoln poetry from the Lincoln Memorial

statue hall as our cameras pick up the statue and yourself. You may of course wish to write completely new lines.

3. Mr. Murrow's people have agreed that for your services they are to pay you five hundred dollars for the broadcast, plus travel expenses to and from Washington - Charlotte, North Carolina, plus hotel expenses here in Washington. I assume the method of payment will be worked out before broadcast time.

We will call you with complete details in sufficient time. Meantime, if you could work up four brief lines to describe the four places you've chosen, we could then arrange to record your voice speaking these lines, and dub the voice behind the film.

Take good care of yourself and we'll be seeing you.

Affectionately,

Joe Wershba

PSALM OF THE BLOODBANK

And hath made of one blood all nations
of men for to dwell on all the face of
the earth. -- The Acts, 17-26.

Scarlet the sunset, crimson the dawn,

Rising moongold red curves

through the night

to sinking moongold red.

Poppy red a singing woman's lips.

Ruddy red the blush of true love's rose.

Fleeting the flash of a birdwing red.

Red the cardinal's hat.

Red the communist flag.

Token red the corpsman's right sleeve cross.

Red the emblem cross

of surgeon, nurse, ambulance,

of hospital tent and ship--

crimson blood streams poured

together and together

blended into one likeness,

mingled in mute communions,

Catholic in flow with Protestant,

Nordic in flux with Negro.

Scoffers, sinners, denyers, in strength and rest

from blood of Christian believers.

Help and quiet to Christian believers from blood

of thieves, harlots, blasphemers.

Deep, oh deep, brother,
Deep, oh deep, sister,
The scarlet and crimson,
The human bloodbank red.

A PRAYER

By Roark Bradford

Excuse me kindly, King Jesus, for settin' in dis cheer 'stid er gittin' on my knees when I'm tawkin' to You. But my back hurts and my knees is plum weary; I been washin' all day, tryin' to make a piece er change to pay de lawyer gem'man.

Jee-hoovah, dat lawyer man is a mighty kind gem'man. So please pleasure him good when Gabriel toots his trumpet. He de onliest man, white or black, which had a happy word for me when de Law got my little Henry dat time he kilt Brown Chawlie. So pleasure him heavy, Lawd; he was pyore good to my Henry.

And Henry? Well, Lawd, You know, Henry, he was kind er reckless. And traveled wid de wrong kind, too, drinkin' and totin' a pistol. Gamblin' wid spot cyards and dice, and pleasurin' hisse'f wid a strumpet. But Great-I-Am, I ain't hyar to low-rate my flesh and blood. Dat boy is good in he heart; he jest got wild and reckless.

Some say hit was de woman's fault, but I ain't blamin' Della. She wa'n't nothin' but a alley bat, and I don't see how he loved her.

Well, when Della up and quit and tuck up wid Brown Chawlie, hit pyore busted Henry's heart, so dat chile tuck his pistol and laid Brown Chawlie cold in death, full six feet on de marble! And dat's whar Mister Law comed in, and so I hired de lawyer.

Well, I swear, Lawd! Hyar I set, a-tawk-tawkin' and a-jawin'! Tellin' You what You knowed all de time! And bofe er us is busy! I ought to be in de house a-gruntin' and a-ironin', and cookin' stuff to take to jail for my boy's farewell breakfus'!

But what I meant to ax You, Lawd -- not tellin' You Yo' business -- jest cast Yo' eyes down twarge de jail at sun-up in de mawnin'. And when dey leads my Henry out and stands him on de gallows wid dat black bonnet on he haid and de rope around his goozle -- look down, Lawd. Look down and watch. And when dey trips dat trigger and snatch de floor f'm under his feet, den You reach down and grab him!

Don't let him hit de bottom, God. Jest snatch him to Yo' busom and keep him to my time is out, and I kin come and watch him.

Dat's er da is dey! I ought to be in de house a-churchin' and a-ironin', and cookin' stuff to take to jail for my boy's farewell breakfus'!

But what I meant to ax You, Lawd -- not tellin' You Yo' business -- just cast Yo' eyes down twarge de jail at sun-up in de mawnin'. And when dey leads my Henry out and stands him on de gallows wid dat black bonnet on he haid and de rope around his goozle -- look down, Lawd. Look down and watch. And when dey trips dat trigger and snatch de floor f'm under his feet, den You reach down and grab him.

Don't let him hit de bottom, God. Just snatch him to Yo' bosom and keep him to my time is out, and I kin come and watch him.

Cher Monsieur Murrow,

Vous êtes bien aimable de me faire l'honneur de vouloir me faire parler sur les choses africaines. Mais, j'ai le principe de ne pas parler en public sur les ces choses là. Je suis un simple médecin qui vis depuis plus de 50 ans dans la forêt vierge, et qui travaille. Ce que j'ai eu à dire, je l'ai dit dans mon récit de mes activités Du Reste Lambaréné et Forêt vierge, il y a des longues années. Il me faut rester dans mon rôle d'homme de médecin et de ne pas parler des politiques et des [illegible] de partis. Excusez-moi, je vous prie.

Votre dévoué Albert Schweitzer

Veuillez excuser aussi le retard de mon réponse. J'étais en voyages et pendant des semaines et tout mon courrier est devenu un chaos.

Par principe je ne pose pas non plus pour la télévision et je ne fais pas enregistrer des discours. Je suis vieux et veux simplifier

Schweitzer, A

THE ALBERT SCHWEITZER FELLOWSHIP

156 FIFTH AVENUE

NEW YORK 10, N.Y.

February 10, 1956

Edward R. Murrow, Esq.
Columbia Broadcasting System, Inc.
485 Madison Ave.
New York 22, N. Y.

Dear Mr. Murrow:

With the warm assent of Albert Schweitzer I enclose herewith a booklet entitled "The Stature of a Man", by Addison A. Vestal, published by The Albert Schweitzer Fellowship with the cooperation of The Grant Foundation, a Pennsylvania corporation.

The booklet deals with the Hôpital Albert Schweitzer now under construction at Deschapelles, Haiti. More important, it deals with the story of how Albert Schweitzer and his life work in Africa have inspired Dr. and Mrs. William L. Mellon, Jr. to attempt to follow in his footsteps.

This address by Mr. Vestal has already generated many requests for copies. It seemed likely that others might also like to read what he had said in simple and sincere words.

If the booklet interests you, would you perhaps wish to send it, or have it sent, to others? Copies are available without charge.

Both as treasurer of The Albert Schweitzer Fellowship and as a trustee of The Grant Foundation I feel natural interest in the support of Dr. Schweitzer's work in Africa and of the ultimate success of this Christian hospital in Haiti. The two have no organizational connection whatever, but it is clear that Albert Schweitzer's life has directly influenced the creation of this new hospital in Haiti, the only one established thus far directly under such influence and for which Dr. Schweitzer has graciously permitted the use of his name.

This Haiti hospital gives fresh tangible evidence that Schweitzer's spirit of service for others, of reverence for life, is a high influence for good. Perhaps similar establishments may spring up elsewhere in the world.

The Grant Foundation seeks to develop its own direct contacts with as many interested persons as possible and is prepared to supply any further information that may be desired. Inquiries may be addressed to The Grant Foundation, 257 Fourth Avenue, New York 10, N. Y.

Sincerely,

Emory Ross

Emory Ross
Treasurer,
The Albert Schweitzer Fellowship

The Stature of a Man

by

ADDISON A. VESTAL

John Lord King, Architect, San Francisco

Hôpital Albert Schweitzer
at
Deschapelles, Haiti

THE ALBERT SCHWEITZER FELLOWSHIP
156 Fifth Avenue, New York 10, N. Y.

Visible evidences are to be seen in different parts of the world of the influence of Albert Schweitzer's philosophy, and of his quiet, modest, life-long efforts himself to carry out that philosophy in daily action.

It is a philosophy which, in its simple Christian directness, can be carried out in any circumstances, however modest, by any person who wishes — a reverence for life beginning with one's own life and what that life can be and do and mean for itself and for all other life. The powers of *life*, under God, are indeed limitless, are everlasting.

Addison Vestal tells simply herein the story thus far seen of the influence of Albert Schweitzer's philosophy and life upon Larimer and Gwen Mellon, and of what, for the last seven years, they have been preparing themselves to do with their own lives in quiet service for the lives of others.

On the initiative of the Albert Schweitzer Fellowship and with the aid of The Grant Foundation (a Pennsylvania Corporation) this address is now printed for such distribution as those interested in Dr. Schweitzer's philosophy and work may desire.

THE ALBERT SCHWEITZER FELLOWSHIP
156 Fifth Avenue, New York 10, N. Y.

The Stature of a Man

Today, I want to tell you a story. It is a story of giving and sharing. In the past two years, you have heard Dr. Parks (*) refer to the life and works of Dr. Albert Schweitzer on numerous occasions. We know, of course, that Dr. Schweitzer is now 80 years of age; that he was awarded the Nobel Prize for 1952, which amounted in money to about $35,000.00 and that he dedicated the entire sum to his hospital at Lambarene, French Equatorial Africa. We also know that the people of Norway set out to match this sum, dedicated to Dr. Schweitzer's use. There can be no doubt about it, Dr. Schweitzer is one of the great men living in the world today.

Prior to November 1947, only seven years ago, I had never heard of Dr. Schweitzer and I doubt if many of you had either. At that time, though, the editors of LIFE Magazine published a picture story of him and his hospital in the African jungle. It was a simple, factual story, showing something of the work of this man and his associates in Africa. It spoke of him as a philosopher, theologian, musician, physician, and scholar. I read the story and so did several million other people, I suppose. I thought it was a wonderful story. I probably wondered why a man of his age, who was already a world figure in music before he became a missionary, would give it up and start a hospital in Africa. With that mental notation, I passed on to something else.

A Man of Decision

There was another man who read the story, though, who did not pass on to something else. He stopped dead in his tracks. He was gripped by the story. He thought it over and decided to do something about it. His name is William Larimer Mellon, Jr. He

(*) Dr. E. L. Parks, Minister of the Ingomar Community Methodist Church, Ingomar, Pa., was on a preaching mission in Cuba, as a part of the International Missionary Crusade, on February 20, 1955, and Mr. Vestal delivered this address at both the 9 o'clock and 11 o'clock services.

was 37 years of age at the time and lived on a ranch in Arizona. It was a pretty good sized ranch and everyone connected with it was working hard, trying to build up the quality of the cattle and make it an efficient operation. I had been connected with the management of the ranch while he was overseas during the War. All of a sudden, I received word from him that he was going to sell the ranch and move to New Orleans, Louisiana, to enter Tulane University as a pre-medical student. He did just that!

He started to work immediately. It was difficult for him. He had left Princeton University after his freshman year to work for the Mellon National Bank and later the Gulf Oil Corporation before entering the ranching business in 1937.

His wife was just as interested. She sought no medical degree, but worked just as hard studying nursing and laboratory technique, hospital organization and hospital administration. Their four children continued their education, but I am sure they worked a little harder as a result of their parental example.

In Quest of an Opportunity

During the summers, he and his family traveled to South America, Africa, and Haiti, where he studied tropical diseases. During their trip to Haiti, he and his wife were impressed with the opportunity to be of service to humanity and with the need for a modest but adequate hospital for both clinical and teaching work with emphasis on community health and preventive medicine. The location was the Artibonite Valley. In the entire valley, with a half million population, or more, there was only one small hospital. Malaria and tuberculosis took a heavy toll of the people who lived in that valley. Here was the place they had been looking for. They decided to build a hospital and devote their lives to helping these people. It would be a Christian-spirited institution with the blessings and cooperation of the Republic of Haiti. It would be destined for eventual absorption by the local community, but in the mean-

time, it would be privately built, privately endowed, and privately operated.

The plan was approved by Haiti's President, Paul Magloire, and the proper governmental agencies. Plans were drawn up, funds were provided (at least in part), and construction was started. By 1956, it is hoped that the hospital will be in full operation. Haitian nurses, trained in the United States at the expense of The Grant Foundation, will be ready to assume their responsibilities by that time.

It was my pleasure to attend the cornerstone-laying ceremony on December 11th, 1954, at Deschapelles, Artibonite River Valley, Haiti, and to hear the hospital christened "Hôpital Albert Schweitzer." Every speech that was made and every official word that was spoken was in French. I don't know any French, so I mixed things up good by using my Texas accent.

Dr. Schweitzer could not be present at the ceremony, but sent the following message, and I quote in translation from the French: "Let me tell you how touched I am that your hospital carries my name. I am truly moved, more than I can tell you, at this expression of understanding. I send you my best wishes for your opening. The beginnings are always difficult. But you are courageous."

"The Miracle of the Fresh Opened Mind"

Dr. Emory Ross, Treasurer of the Albert Schweitzer Fellowship, New York, and one of the five trustees of The Grant Foundation which is building the hospital, delivered the dedicatory address. The last two paragraphs of his address seem to me to state very forcefully the Christian spirit that underlies the project. He stated it this way: "In all this, there is a miracle, nothing less. But it is a miracle of a nature which all may share, indeed which all may perform, with their Lord. There will be no workman, no patient, no doctor, no nurse, no friend of this beginning work but who can

in his own life perform the miracle of the fresh opened mind, of the lifted spirit, of the re-directed life, of serving better both one's self and others, the miracle of love, of Christian love, in the service of mankind."

He continued by saying: "He who gives, receives bountifully. Pressed down and running over is his portion. The changed, goodly life is the never ending miracle, the all powerful miracle. For in it God multiplies portions of His own divine power."

There you have the factual background, very briefly.

Now, at this point, I would like to raise a few questions about the hospital that people have asked me repeatedly — and then answer them. These are not the only questions that have been asked — far from it — but I believe they are asked most frequently. They are as follows:

Questions and Answers

Question 1 — How big will the hospital be?

Answer: Approximately 50 beds.

Question 2 — What will it cost?

Answer: Approximately $1,000,000.00.

Question 3 — Is it to be underwritten by the Republic of Haiti?

Answer: It is not. It is being built by The Grant Foundation of Pittsburgh, a non-profit corporation organized under the laws of the Commonwealth of Pennsylvania. Dr. W. L. Mellon, Jr., is President of The Foundation. The Republic of Haiti provided the land on which the hospital is being built and granted tax exemption on materials, equipment and supplies that will be used in the erection and operation of the hospital.

Question 4 — Will it be self-supporting?

Answer: I am afraid not. We estimate that it will cost The Grant Foundation between $150,000.00 and $200,000.00 a year to operate it.

Question 5 — How did I get mixed up in it?

Answer: I am secretary-treasurer and a director of The Foundation. My main function is to help provide funds for use by The Grant Foundation as economically as possible — after taxes.

Question 6 — Are Dr. and Mrs. Mellon really serious about going to Haiti to live and devote their lives to this work?

Answer: They certainly are. I would like to give you the answer to that question in Dr. Mellon's own words. In closing his dedicatory address on December 11, 1954, after outlining the aims and purposes of the hospital, he said, and I quote: "To this task my wife and I humbly dedicate ourselves. May the spark of 'reverence for life' which came to us from across the Atlantic Ocean (meaning Dr. Schweitzer, of course) continue to burn until it has consumed us with the real and deep concern for every living creature that suffers."

Question 7 — What will Dr. and Mrs. Mellon get out of it?

Answer: The answer to that question is something that one will either understand thoroughly or he will not understand it at all. The answer is an inner peace — a peace in their hearts. I suppose, when you come right down to it, that one of the most comforting things on this earth is that inner peace that I just spoke of — the peace that one feels in his heart. I remember when I was a student at Baylor University we had one of the old grads return to the campus to address us at one of our regular chapel exercises. I do not remember his name now, but I do remember his message. He was a man who had made a lot of money in drilling for oil and then had lost it all, and had gone hopelessly into debt, trying to recover his losses. The President asked him to tell us what, in his opinion, was the greatest objective a man could have in life. He said, "That's easy. It is peace in one's heart. If one can have peace in his heart, that is the thing that really matters when all else is gone."

Question 8 — Why did Mr. Mellon insist on going through medical school? Why couldn't he be responsible for the hospital

and hire some outstanding doctors? He will have to do that anyway before it is over. He cannot personally treat everyone who comes to the hospital.

Answer: My answer to that question is this: When we are gripped deep in our hearts, with the idea of doing something to help others, we do not think in terms of short cuts. When Dr. Mellon stated in his dedicatory address on December 11, 1954, "To this purpose my wife and I dedicate ourselves," I am sure that he and his wife had not been thinking in terms of short-cuts. At this point, I would like to add, with all the emphasis that I have at my command, that I feel the same way about it. I am not looking for any short-cuts either.

Question 9 — Mr. Vestal, you are an experienced tax man, you are trained in investments. I assume that you are a practical-minded businessman. What do you think of this project as a practical matter?

Answer: First, let me say this. I hope that I am experienced enough to do a good job of this assignment. I hope I have the necessary experience, the technical knowledge, the patience, and the determination to do this job the way I think it should be done — but that isn't the point. If that is all there is to this project, we ought to drop it right now. Of course, a knowledge of economics, banking, accounting and Federal income taxation are all helpful tools in working out the details of this project. So are engineering, architecture, medicine, ranching, dairy farming, and a lot of other things. But they aren't very helpful when it comes to evaluating the possibilities of success of an idea such as this one. The only place you will find the answer to that question is in your Bible. It is a matter of faith. At Mark 9:23, the Lord promised us that "All things are possible to him that believeth." Nothing could be more clearly stated than that. In other words, we must have faith. Faith is one of the most powerful forces in all the world. We do not simply believe in ourselves. We have faith in God and He gives us power over ourselves and our problems. When you come right down to it, we do not change our lives

very much by our own efforts. A good environment and a good education may help us to become more respectable citizens, and vice versa, but the point I am trying to make is that the really basic and lasting changes that take place in our lives are brought about by faith in Jesus Christ. He tells us that He can do wonderful things for us if we have faith in Him, and we know that He can do and does do what He promises. We must also have the humility to realize that we can't do everything ourselves, and have faith enough to realize that the Lord will help us when we need help.

Question 10 — This seems like a tremendous undertaking. Isn't there a chance that the delays and disappointments and hardships and the threat of tropical disease may dampen the enthusiasm of these people and those associated with them in a few years?

Answer: I don't think so. Again, the Bible gives us an answer to that question that is good enough for me. At Luke 10:19, God tells us "Behold, I give you power to tread on serpents and scorpions and over all the power of the enemy and nothing shall by any means hurt you." Of course, that is stated in the picturesque language of the Bible, but the message is clear. Power over serpents and scorpions — that is, power over such things as fear and selfishness and indecision.

That does not mean that we will not suffer difficulties and disappointments and possibly sickness. It does not mean that we will not encounter a lot of day-to-day problems, because we will. We are already encountering them and have been for some time. Those things come to all of us and they are not to be minimized. You can be sure, though, that with this power which God has promised us, nothing will ever ruin us. No disappointment, no difficulty, no opposition will ever defeat us. Time and time again, I have been faced with a problem and at first glance have felt that there never was a problem like it. Everyone has experienced that feeling. It often carries with it the feeling that whatever decision one makes is going to be wrong. But

then, when I finally get myself collected and get down to business and think, it begins to clear up. It is then that you realize that no one ever has a problem that cannot be solved. God doesn't give us problems that we can't solve. The only question is whether we are big enough to face them squarely and with a firm belief that we can do the job. We all have a tendency to become neurotic on occasions and want to lean on someone else when we can. When we are finally forced to settle down, though, and face our problems squarely we find that we can solve them. Just don't get excited and panicky about them. Take things in stride. Put the matter in God's hands and practice calmness and in His own good time, He will give you the help you need. Don't think for one minute that I don't need that thought with me up here this morning. If you think that you don't need a little help in a situation like I am in right now, you ought to try it some time.

And now, if I may, I would like to add just one personal reaction to all this. It is this: God gives all of us a job to do. The question is: Are we willing to meet the challenge head on and see to it that nothing, absolutely nothing, interferes with our getting that job done? It may take a long time to discover the exact nature of the job, and the job itself may come as a terrific surprise to us, but that isn't the point. The point is this: Are we willing to settle down and get that job done?

In our own church, for instance, we get requests for World Service. Most of us don't know much about it. We do not think we know what is going on, and it all sounds so far away. I feel sure, however, that if each one of us could become well informed on just one project, such as this one — and I repeat, just one project — I am sure that a miracle would be performed in our hearts and in our thinking. The story that I have told you today shows what can happen when one acts on his own faith and his own convictions. Entirely too often, we ask ourselves, "What can religion do for me?" Well, it can do plenty — but that is another

story. The point that I am making here is that a far better approach would be, "What can I do for someone else? What can I do to extend the spirit of Jesus Christ to a needy and troubled world?"

I think the answer to that question boils down to our own personal situation. Everyone of us has challenges for clear Christian witness among our fellow men every day. Dr. and Mrs. Mellon will need help. Whether we help them or follow their inspiration in ways of our own, we can do our part and get a great inner reward out of doing it. That reward, my friends, is "Peace in our hearts."

Let us pray:

Heavenly Father, help us to realize that there is a lot that each one of us can do in our daily lives to extend the spirit of Jesus Christ, if we will only think in terms of helping others. Help us to think earnestly about these things and to realize that if we do not measure up to the proper standards it is our own fault. There is plenty that each one of us can do and that we ought to do. We thank Thee for these simple truths. Help us to practice them through Jesus Christ our Lord. Amen.

He saw NO!

September 29, 1955

Dear Dr. Schweitzer:

This is a formal invitation, to accompany Dr. Bunche's letter, for you to participate in the ninety-minute documentary film on Africa for the television program SEE IT NOW. Specifically, I ask to come to Lamberene when you return there, or to Gunsbach, to sit down with you before a camera and talk with you informally about your work and your philosophy. This would become part of our presentation of the Africa of today, already being filmed by our camera-men in many parts of the continent. We believe our film will make a real contribution to an understanding by Americans of their African fellow-men, and of their difficulties and needs.

I know from Dr. Bunche and others how completely you are absorbed by your work, and must weigh every request for your time in the scales of its usefulness. Since our program will show Africa sincerely and soberly, I feel sure it would be an appropriate medium for a discussion of your work, with its hazards and triumphs.

But even more important, I think, is that you would have a vast and receptive audience, eager to learn of your philosophy. It would be an audience that would be touched by your spiritual leadership and respond to it.

As Dr. Bunche has said, I should be honored, in appreciation of your cooperation, to make a substantial payment to any of the enterprises to which you so usefully have dedicated yourself.

Hoping you will continue to be blessed by years of health and service, and in great respect, I remain,

Faithfully yours,

Dr. Albert Schweitzer

Call Bunch

Dear Dr. Schweitzer,

My pleasant visit with you last month remains extraordinarily fresh and vivid in my memory and I take this opportunity to thank you once more for your friendly hospitality, the vast wisdom of your words and the inspiring experience of sitting beside you as you brought such beauty from the organ.

Knowing how full is your programme I would not intrude upon you now were the matter other than of unusual importance.

It may be that you have heard of Edward R. Murrow. He is America's outstanding telecaster - a man of complete integrity and of great wisdom and courage, who presents his television programmes with impressive restraint and dignity. The two current programmes for which he is best known are "Person to Person" and "See It Now". In these programmes he makes reporting, analysis and documentation artistic expressions while being faithful always to the truth.

I have been informed by Mr. Murrow and his associate in the "See It Now" programme, Mr. Fred Friendly, that at sometime during the next four months Mr. Murrow through his "See It Now" programme - a remarkably effective documentary presentation reaching a huge viewing audience - will do an hour and a half documented report on Africa. Indeed, I am told that the camera crews for this purpose are already on the African continent. The report will include Egypt, Ethiopia, the Anglo-Egyptian Sudan, the Central African Federation, Kenya, the Belgian Congo, French Equatorial Africa, the Gold Coast and French Morocco.

It is the objective of Mr. Murrow and Mr. Friendly to make an honest, unsensational examination of and report upon the characteristic problems of Africa today with a view toward creating a maximum of understanding of Africa, its people, their life and their outlook.

Dr. Albert Schweitzer,
Gunsbach pres Munster,
Alsace, France.

FILE NO.:

Mr. Murrow and Mr. Friendly in speaking to me of their African project, which has greatly excited their interest, have emphasized that such a report on Africa would be grossly incomplete and in fact a failure without adequate representation of you and your philosophy - in view of the world-wide recognition of your greatness and of your identification with Africa in your lifelong work. This view, you may be sure, I heartily share.

Mr. Murrow and Mr. Friendly, as personal friends, have asked me to approach you on this matter in their behalf. The suggestion is that as part of this report on Africa Mr. Murrow would come to Lambarene when you return (or to Gunsbach if you prefer it) to chat with you quite informally about your work in Africa, your hopes for Africa and your general outlook and philosophy - just as we chatted at lunch that fine day. The filming could be done out of doors, thus avoiding the use of lights. The programme would, of course, gladly make a substantial financial contribution to any cause you might wish to indicate.

I write to you in this vein only because I believe, as I stressed in our conversation, that it is vitally important for the lesson of moral philosophy which you express so well and live so uniquely to reach the largest possible number of people in our troubled world. The "See It Now" programme would be an unrivalled medium for achieving this purpose with a minimum of burden for you or disruption of your busy schedule.

I enclose with this letter a more formal invitation to you from Mr. Murrow himself.

With all good wishes,

Sincerely yours,

Ralph J. Bunche

September 16, 1955

Dear Dr. Bunche:

Ed and I were in Philadelphia last night working at Independence Hall, and talked long into the night about the idea of a Schweitzer-Bunche conversation. He thinks it's a terrific idea - certainly I do.

These are some of the details about the program, and what you may want to cover in your letter to Dr. Schweitzer.

Sometime in the next four months, SEE IT NOW (you may want to amplify the stature of SEE IT NOW and Murrow, and I would not presume to furnish the language for this) will do an hour and a half documented report on Africa. We already have camera crews on the continent, and the report will include Egypt, Ethiopia, Anglo Egyptian Sudan, Central Africa Federation, Kenya, Belgian Congo, French Equatorial Africa, the Gold Coast, and French Morocco. It is our intention to make it an unsensational but honest examination of the many problems which contribute to making Africa one of the most complicated and, at the same time, fascinating issues of our time. The running undercurrent of these under-privileged people seeking their place in the sun and at the dinner table, their battle for their civil rights, and their battle against depression, will be the dominant thing.

Such a report would be incomplete and, in fact, a failure without the representation of Dr. Schweitzer. There is more interest and genuine curiosity about him than about any other single man in the continent. He is the great man of Africa and, of course, one of the great men of our time. We would want him to chat with you about his work, his plans, his purpose, and his general philosophy. We could do it out of doors, which would make it possible without lights.

We are prepared to make a sizeable contribution to whatever cause Dr. Schweitzer may direct. We are also prepared to pay all of the expenses of Dr. Bunche (and his wife, if desired) in making the expedition.

Ed was quite prepared to make the trip himself, but makes the point that the Bunche idea is a natural. First, you speak better French and German than he does; but more important, there is something almost inspirational about Albert Schweitzer and Ralph Bunche and humanity sitting on a bench in Lambarene.

Ed is quite prepared - more than that - anxious to discuss this further with you, should you have any questions, as am I.

Respectfully,

Fred Friendly

Dear Mr. Friendly,

Enclosed is a copy of the letter I propose to send to Dr. Schweitzer. I invite any suggestions for change which may occur to you and Ed.

You will note at the end of the letter my reference to the enclosure. I think it would be useful to have your formal invitation in his hands at the time he reads my letter.

Frankly, I am none too optimistic about his response. He indicated to me his very great reluctance to do things which interfere with his work programme.

Sincerely yours,

Ralph Bunche

Dear Mr. Murrow:

I have been catching up in my reading of back numbers of The Reporter, and have only just now run across your wise, witty, and soul-searching "A Broadcaster Talks To His Colleagues." Bravo!

I believe the Center, and the type of material it is able to assemble, could play a part in the renaissance period for television, if such a period is ever to dawn in its history. May I talk to you about this? If you would care to suggest a date at your convenience, which might be after the first of the year, may I confer with you in New York?

With the season's greetings,

Sincerely yours,

my Townsend Scudder.

Dear Mr. Murrow:

As you will see from the back page of this current VITAL ISSUES, our next one, scheduled for release on the first of December, will be on the railroads. Knowing how greatly this topic interests you, I shall get galleys or an advance copy off to you just as soon as possible.

I go on hoping something can be worked out in the form of an arrangement for use of some of Center's materials in connection with television.

With regards,

Yours most sincerely,

Townsend Scudder

A service of the
CENTER FOR INFORMATION ON AMERICA
WASHINGTON, CONNECTICUT
Volume VIII, Number 1

THE COST OF EDUCATION

Drawings by C. P. Meier

HOW MUCH? CAN WE AFFORD IT?

"The whole problem of education is one of its cost in money."

This puts it rather crudely.

Yet the remark was made by no less a person than Henry Adams, brilliant historian and commentator on America, and member of a family which has given the U. S. A. two Presidents.

Of course Adams didn't mean that all we have to do is fork out cash. He was well aware that education is a complicated process, a key to life and living that cash alone can't buy.

But teachers, a basic ingredient in the educating process, have to eat, and paying them costs money. If we pay our two million and a half teachers better, as many recent studies such as the Rockefeller Report on Education insist we must, the price of education is bound to rise.

This increase must be added to the other mounting costs. Why are they mounting?

In the first place, we are educating far more people. Everybody knows about our rising birth rate and has seen calculations that the student population is likely to double within a very few years. Furthermore, especially at the college level, courses undreamed of in the horse and buggy age need to be taught. Courses built around advances in science and technology are apt to be more expensive in teaching equipment. And we'll need more and better guidance courses and advisors if our young people are to make the most and best of themselves in this complicated age. Good guidance programs—now woefully scarce—come high.

Furthermore, as a recent issue of *Business Week* points out, inflation has about doubled the price of everything.

Most states and communities that have taken the trouble to figure ahead on their educational needs anticipate a staggering rise in costs.

Should we and can we pay more? In this respect, it's interesting to note that only around 3.5 percent of our gross national product (the value of what we produce) goes into education, and that this percentage has just recently started going up after a considerable period of actual decline.

A distinguished group of Americans, headed by Dr. Edward Litchfield, Chancellor of the University of Pittsburgh, recently returned from taking a look at Russian education. This is what impressed them most: "First, . . . an almost universal belief . . . in the value of higher education. Second, . . . willingness to pay the very high costs that are involved in money, in plant, in human effort."

For many years we have practiced the principle of free and universal education through high school, with continuing educational opportunity beyond that point.

The Russians have only just recently caught on to this idea. But what they already have been able to do with it comes

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, Department of the Army, Washington, D. to many Americans as a decided shock which began with the sputniks.

In the struggle between our cherished way of life and the ambitions of the U. S. S. R., we need to pay special heed to Dr. Litchfield's warning: Russian efforts, especially as to higher education, must "give very serious pause to any nation which finds itself in a competitive position." If we have not already done so, we had better wake up to the fact that the survival and well-being of our nation depend no less on the strength of our educational system than on that of our military defenses.

Sticking to our own educational ideals, we must do better than the U. S. S. R. The price may come high, but we still are a much richer nation than Russia.

How pay the costs to give Americans the best possible education? That's a vital issue which we need seriously to ponder.

WHAT WE'VE GOT

Before considering costs, let's see what we've got.

One of the characteristics of American education—and it has grown right out of our belief in individual freedom and each person's right to choose—is its great diversity. Diversity is an important safeguard against stifling uniformity. We have no rigid system, as Russia does, dictated from the top. Our tax-supported and gift-supported or "independent" schools and colleges function side by side. This is a real source of strength. As a competitive situation it helps keep education on its toes.

Public and Private Schools. At the broad base of our educational pattern are our locally run free public schools, started years ago in the traditional American belief that every youth, rich or poor, not only should have the opportunity to get an education but should attend school till reaching an age variously specified in different states. Russia now has this same system, but operated from the top. With us, control has always been vested in the people through local Boards of Education.

Increasing expenses of public education impose a considerable burden, and that's where state aid to local communities comes in.

There's also the possibility of more Federal aid. But American belief in the freedom of the individual, and our emphasis on private enterprise, make us distrustful of having the Federal Government assume too large a share of responsibility in the education of our children. There's an old story about an Arab who, one cold night, invited his camel to sleep with its head inside the warm tent. Pretty soon the whole camel had crawled in.

Paralleling the public schools, but serving a very small percentage of the total school population, are the private schools. They aim for high quality in education, and have a good record in helping prepare men and women who have later become leaders in various fields. The tuition they charge is rarely enough to keep them running, so they bank heavily on endowments and on gifts.

Junior Colleges. Free education in America stops at the twelfth grade, but the demand for education continues through life.

The number of junior or two-year colleges has increased greatly, and the increase seems likely to go on. These municipal, two-year institutions offer one means of taking care of the mounting surge toward college. Of the six to seven million students expected in college by 1970 or so, some two million should be found in the junior colleges.

But the growth of these two-year colleges and schools for technical training makes a further demand on the education dollar. The tax-supported ones—now over half the total, and increasing—naturally compete with the elementary and secondary public school system since they also draw on local taxes.

They are doing a major job, and are therefore an important part of our national responsibility.

Colleges and Universities. The four-year liberal arts college is a peculiarly American institution. Sometimes such a college is on its own. Sometimes it is part of a university. The liberal education it provides is as fundamental to American tradition as individual liberty itself. Seeking a liberal education means continuing the study of the basic subjects we took in school and adding others—English, foreign languages, mathematics, history, the natural sciences, and the arts—only in a more mature and thoughtful and comprehensive way. The aim of liberal education is to develop one's intellectual and spiritual values so that one may bring to both one's career and life the greatest possible assets of intelligence, resourcefulness, judgment, and character. It is interesting that a very large number of America's leaders in all fields and occupations are the products of colleges of liberal arts. Yet despite this, the 600 or so privately supported liberal arts colleges which are performing such an excellent service, faced as they are with rising costs and inflation, are having a tough time.

Our colleges and universities are the sources of America's greatest gains. They have become our principal gateway to opportunity, opening out on roads that lead toward good life and good living.

Judged strictly on the practical side, these statistics are illuminating—

At age 25, the earnings of the average college graduate have caught up with his non-college schoolmate who has been working all along. At age 30, he is 40% ahead. At 40 he is 85% ahead. At 50 he is 130% ahead. At age 60, because his earning power has not declined, he is 150% ahead.

Judged by non-material values, there's also the intangible contribution toward greater richness of life.

In accordance with the aims and ideals of a free people, our colleges and universities perform a role that is great, growing, and varied. Familiar examples of the tax-supported type are the state universities. They have grown enormously over the past seventy-five years. Thus they have brought educational service closer to the needs of many people in all walks of life. They have generally kept tuition and other fees low to let large numbers attend, notwithstanding sharply increased operating costs. No other nation in the world offers such opportunities for higher education. Most state universities make a very direct contribution to the welfare of their own citizenry. One example is the University of Wisconsin, whose scientists have greatly improved the dairy industry which has so much to do with the prosperity of that state.

But all this is expensive. Not all legislatures can keep up the pace. So land-grant colleges rely considerably on Federal funds as well as funds from the state. And often the difference between a fair educational program in a state university and an excellent one is brought about by private contributions from individuals, industry, and foundations.

Private colleges and universities, because they are not owned by the people—not supported by tax—feel they have greater freedom for action. Such freedom, at every educational level, is a stimulus to experimentation and improvement capable of conferring its benefits on all types of education both public and private. Most of our oldest institutions and many of our best known are privately controlled. They furnish a bulwark for freedom of enterprise in the U. S. A.

Fundamental research, the pursuit of knowledge, is central to the idea of a university. That is why some of the basic discoveries later applied to nuclear power were made in the laboratories of our great universities both public and private.

Research for its own sake is sometimes thought of as a luxury. But bear in mind Professor Michael Faraday's remark, one hundred years ago, when the Prime Minister of England asked him what practical uses his discovery of electricity might have. "Who knows?"—said Professor Faraday—"Perhaps some day you may tax it!"

Running a great university or a great technical school costs a great deal. All of them, public and private, find themselves hard pressed.

THE COSTS

There's little doubt about the fact that the pursuit of knowledge has become big business. Our annual expenditure for education in 1956 was fifteen billion as compared with thirteen billion for new automobiles. "Even allowing for considerably greater efficiency in the use of educational funds" —warns the Rockefeller Report—"it is likely that ten years hence our schools and colleges will require at least *double* their present level of financial support to handle our growing student population."

For the Soviet dictatorship such a prospect as a large increase in the cost of education presents no particular problem. As John Gunther remarks in his book, *Inside Russia Now,* the Kremlin regards education as of the utmost importance in order to make the most of this technological age. It therefore takes the cash it needs for education out of the product of the labors of the people, since the Russian people, because of the Soviet theory that they exist for the state, have nothing to say about it. "A few years after the Communists took over," says former Senator William Benton in his recent book about Russia, *This Is The Challenge,* "they threw themselves into the task of education with fervor. Their slogan seems almost literally to have become 'Education instead of butter.'"

But for us, because it is we the people who decide, the rising costs of education present a far more direct and complicated problem and responsibility. It's our right and privilege to figure out what education we need and want. Then we must make up our minds whether we're willing and prepared to raise the needed amount of money. Because of the many-sided nature of our educational effort, and the many sources from which our support of it comes, financing education in the U. S. A. has always been a confusing and intricate process. It's easy, also, to underestimate costs. The local community, with an eye on state and Federal aid, tends to pass part of the buck. When it comes to education beyond high school, the long established practice of charging less for tuition than the individual's education actually costs tends to keep us ill informed on the real price of educating people.

In this matter of costs, let's look for a moment at teachers' salaries, since the need to do something about them is given top priority by such recent surveys as the Rockefeller Report. In comparison with the rest of us, how have we treated our teachers? For the past several years, the cost of living has gone higher and higher. Teachers' pay hasn't in like degree. In fact teachers are among the nation's lowest paid professional groups.

During the prosperous period following World War II, the teacher's income—in terms of what it can buy—has actually gone down. During this time, real income for doctors has gone up over 80%. Lawyers have not done badly, either, with an increase of at least 10%. In terms of purchasing power, the teacher during this period has seen the "real wages" of industrial workers go up some 55%. But the teacher himself, who has played a major role in training each generation which thus reaps the rewards, gets a slimmer harvest. Most of the rest of us have done pretty well with the greatly increased opportunity to improve on our standard of living. Not only have we been able to buy lots of the things we require but probably we've also enjoyed plenty of things we did not really need. For instance, the total spent by the people of the U. S. A. on the recreation of fishing is greater than the total we spend for higher education. As Walter Lippman, well-known newspaper man and writer, remarks: "There is an enormous margin of luxury in this country against which we can draw for our vital needs."

Not all teachers are underpaid. But the carefully prepared career teacher who is seeking to do a good job can be seriously handicapped by insufficient pay. If this forces him to take a second job, such "moonlighting" tends to affect the quality of his teaching. He can't study in the summer, or afford to learn more about America and the world through investigation and travel, or write about his specialty, or do other things to improve his teaching and contribute to his professional advancement. The love of teaching is not enough to keep able men and women in the profession. Many quit because they can't afford to teach and are lured away by better pay. The odds also are against gaining capable recruits to enter teaching as a career.

Where We Raise the Money for Education, and Is the Effort Enough? Here are the many sources we now draw on. Could they and should they yield more? Are there other resources as yet untapped? These are questions, at the local, state, and national level, that we'll wish most seriously to think about, discuss, and act on after we've gone through the list.

Support for the Free Public Schools. As we've seen it is our theory and practice to regard public schooling as the responsibility of the locality from which each school's children come. This is based on our belief that the people themselves should decide what education they want at the public school level, and what they're willing to pay. With rising educational costs, as well as of costs of other local services, many communities are reexamining their tax structure. Should the property tax—the present chief local source of school revenue—be supplemented by other devices such as a local sales tax, the receipts from parking meters, or a local tax on admissions and amusements? Even the idea of lotteries has been suggested.

It has often been pointed out that it is easier for the state to decide on and collect most taxes than for the local community to do so. Should local proceeds of taxes for school support be collected by the state, then turned back to the local school unit? Is the administration of the local property tax in our community fair and efficient?

There are apt to be local debt ceilings imposed by the state, and other barriers that cut down what a local community can raise for its schools. Though they may have many children, some poorer communities haven't got the wherewithal to provide anything like adequate education.

There are many problems like these that we need to look into.

State aid is a considerable and increasing factor. The present average contribution by states to local school support is slightly better than forty percent. The amount varies substantially from state to state. Some states, like some communities, maintain they are unable to go higher. Yet many of the poorer states are spending more for education in proportion to their income than are the wealthier ones.

This unevenness in support means that the quality of public school education varies drastically, with plenty of underprivileged schools suffering from such ills as overcrowding, double sessions, and a general shortchanging of our children.

With an eye on all this, there's bound to be pressure for more support from the Federal Government. Should we revise our views that paying the costs of public education is mostly a local concern? Federal aid to education is no new thing. It goes back as far as the days of the Continental Congress. The Ordinance of 1785 bountifully helped the public schools.

Later land grants aided state colleges to get under way and led directly to many of our great state universities. But when the subject of Federal aid comes up, it brings with it the fear, mentioned earlier in this guide, that the bureaucracy of central government may take over. In the opinion of many people, the safest form Federal aid might assume, keeping its hands off such things as the curriculum, would be help with local school construction and with scholarships and fellowships. Through grants from such organizations as the National Science Foundation the Federal Government already is contributing considerable amounts toward the education of our top talent.

Education Beyond the High School. Beyond the line where our system of free education stops, the dual system of tax-supported and gift-supported institutions becomes especially noticeable. Remarks already made with regard to tax-supported secondary schools apply also in general beyond. These points, and the whole general question, deserve our continuing careful consideration.

The so-called "independent" institutions derive their income mostly from tuition, endowment, and gifts. But tuition, as we have seen, rarely meets the cost of educating the student. For those institutions that have endowment, the purchasing power of income from it has been cut in half by price inflation. Very heavy reliance therefore has to be placed on gifts. It stands to reason that in order to receive such gifts, each institution should see to it that it runs itself as economically as possible consistent with doing its job of providing the best in education.

Unrestricted gifts are the most helpful, since they permit free choice on the part of administration as to where the money can do the most good. Scholarships and fellowships from outside are exceedingly helpful to both student and institution if accompanied by a supplementary grant to the institution itself to make up the difference between tuition and the actual cost of educating the student. Grants from government or industry to do special jobs, like nuclear research, product testing, agricultural experimentation, unless they include also an allowance for overhead, can act as a drain on educational institutions, rather than a help.

The most obvious source of gifts is each institution's alumni. Because of our tendency to undercharge tuition, a gift to one's alma mater can be looked on as helping balance the score. The Yale Alumni Fund—the nation's oldest—annually pours in more than a million dollars as an unrestricted gift. But we have far from realized the full potential of alumni giving. At least half our colleges have no systematic plan of trying to get regular financial help from their own alumni. What's the situation in institutions that we, as individuals, are familiar with? What should be done?

Other sources of gifts include churches, service clubs, labor unions, and industry. In the past, churches have been an important source of support and seem likely to continue as such. Service clubs and similar organizations are a growing channel of scholarship support. Labor unions also are a source for such support, mostly with scholarship programs for children of their own membership, though their interest in general support of education is increasing. Support from industry represents a source with very important possibilities.

Through taxes, industry has always contributed the lion's share to publicly supported schools and colleges. Because companies can now deduct five percent of their income before taxes for charitable and educational contributions, their gifts to independent institutions of learning are on the rise. There's good reason for this. As *Business Week* remarks in a recent article urging industry to contribute more freely: "Corporations are directly dependent on higher education to staff their growing, increasingly complex, and exacting operations. And the private liberal arts colleges, hardest hit financially, are playing a key part in supplying trained men and women for business."

"Business"—reads a resolution passed by the Board of Directors of the National Association of Manufacturers—"must find a way to support the whole educational program, effectively, regularly and now."

This means, of course, that business should do what it can to supplement, not to replace, support which institutions are already receiving. Up to now, the aggregate corporate contribution amounts to only three percent of the total costs of higher education.

We stand on the threshold of what could be mankind's greatest opportunity for richness of life, at the dawn of an age of tremendous scientific and technological progress which demands the best in education if we are to make the most of it. In all its diversity, such education requires money—lots of money.

What shall we do about Henry Adams's remark, "The whole problem of education is one of its cost"?

In preparing this guide, the publications of the Council for Financial Aid to Education, Inc., 6 East 45th Street, New York City, have been heavily drawn on, as have those of the National Citizens Council for Better Schools, 9 East 40th Street, New York City, particularly its ***How Do We Pay For Our Schools?*** *and* ***Financing Public Education in the Decade Ahead.*** *As a start on further investigation, write these organizations for their lists of publications.*

Mr. Townsend Scudder
Center for Information on America
Washington
Connecticut

Dear Mr. Scudder:

Thank you very much for your letter of July 9 and the enclosed papers on Alaska and Hawaii.

Mr. Murrow is at present away on vacation, but I shall ask him to read this correspondence as soon as he returns in the autumn so that it can be borne in mind when future plans are made.

Very truly yours,

Secretary to Mr. Murrow

July 9, 1958

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

There was one cheering note in the public announcement which the Times ran on the ending of the "See It Now" series: namely, that you and Mr. Friendly might do a few longer documentaries, nevertheless, in the same general style. I can think of no accomplishment in television which has done more to give real stature and importance to the medium than this series, and I know that in saying so I am echoing the sentiments of hundreds of thousands of other viewers.

When it comes to doing those "few longer documentaries," I am wondering if you might be considering Hawaii, now that it seems more than likely this remaining territory may achieve statehood next year? Last year VITAL ISSUES dealt with statehood in its number on Alaska, and this year in the January number on Hawaii. Copies of both are enclosed, just to recall what this organization has done about this subject.

With thanks for a wonderful series, and the hope that, at some future date, it may be resumed in full,

Most sincerely yours,

Townsend Scudder

HAWAII--
New Star for the Flag?

Two thousand miles off the California coast, on a cluster of small Pacific isles, a half million Americans think they have found a second Garden of Eden.

Every year more than a hundred thousand other Americans drop in to check this claim. Clearly the word is spreading that Hawaii *is* something of a paradise.

But every year Hawaii's residents are also interested in something besides the praise of tourists. They want to see an end to what they call their "second-class" citizenship. They want their islands to become a full-fledged State.

The Hawaiian Islands have been a part of the United States since 1898. Their inhabitants speak English, salute the stars and stripes, serve in our armed forces, and pay taxes to Uncle Sam.

Yet they cannot vote for President. They have no representatives in the Senate. Their one Delegate in the House of Representatives can make speeches but has no vote. And their chief local officials and judges are appointed from Washington.

All this is because Hawaii is still a Territory and not a State.

Back in 1763 American colonists on the Atlantic seaboard challenged King George III with the slogan, "No taxation without representation!" Hawaii's complaint today is somewhat the same. But Hawaii's Americans don't want independence. Nor do they seem to want tax exemption. On the contrary, they want to join up — to become a member of the Union on equal terms with the other states.

They want a star in the flag for the Garden of Eden.
How good is their claim to it?
What sort of a place is this island group?
How "close" to us is it, in every sense of the word?
And how did we get involved with it, anyway?

Geography. Look at a map of the Pacific. A third of the way across that vast ocean, just south of the Tropic of Cancer, is a string of islands stretching 1500 miles to the northwest. They are literally the crossroads of the Pacific. Shipping routes from our West Coast to both Australia and the Far East touch at Hawaii. So do routes from South America. Sailors from the Americas have stopped at this island outpost for nearly two centuries.

The Hawaiian Islands are actually the summits of an enormous underwater mountain range, belched up from a great fissure in the earth's crust. Originally they were all volcanic. Even the thousand miles of rocks, reefs, and shoals which lie to the northwest of the eight larger islands like the tail of a comet are the remains of eroded mountains.

But today only the newer of these mountain tops are inhabited. Together they make up the largest group of

islands in the central Pacific—6,423 square miles of land, or more territory than that of Connecticut and Rhode Island combined.

And they also boast the highest peaks in the Central Pacific area. Indeed, Mauna Kea, Hawaii's 13,764-foot giant, can be said to be the highest mountain in the world. It rises

from a great plain 18,000 feet below the sea and thus soars 32,000 feet from its actual base.

Technically, the Territory of Hawaii also covers the uninhabited westerly islands as well as a coral atoll far to the south. Most of these reefs are an ornithologist's paradise, and they were declared a bird sanctuary in 1909. One big exception is the Midway Island group which is under separate management because of its vital importance as a cable station and air base.

But when people speak of Hawaii they are usually referring to the eight major islands. That is where Hawaii's 551,537 residents live.

These are the islands, too, where the original Polynesian explorers landed and settled some fourteen hundred years ago.

They called the biggest and easternmost island Hawaii — and so the archipelago got its name. It is the island of Hawaii which boasts the great Mauna Kea as well as the world's largest active volcano, Mauna Loa. This island combines the grandeur of snow-capped mountains with tropical beaches and the weird lava formations of the Hawaii National Park. Its port of Hilo is the second city of the Territory.

Across a 27-mile channel from Hawaii lies Maui, the second biggest island, which forms a close pattern of land dots with the smaller islands of Molokai, Lanai, and Kahoolawe.

Maui's extinct volcano, Haleakala, has the world's largest crater, 20 miles in circumference, full of awesome reddish cinder cones some of which are nearly a thousand feet high. Nature blessed all these islands with fantastic rock formations and breath-taking views.

Molokai is also mountainous, but it is sparsely populated. Lanai is a privately owned pineapple plantation with a model city in its interior. And Kahoolawe, the forbidding "Island of Death," was once a penal colony and is now used only as a target for naval and air bombardment.

It is the island of Oahu, with the territorial capital at Honolulu, which contains four-fifths of the Territory's people. Here you find many of the landmarks which history and picture books have made famous — the naval base at Pearl Harbor, the surf of Waikiki Beach, the jutting Gibraltar-like rock of Diamond Head, and the windswept Pali — the precipitous pass which connects one side of the island with the other.

Honolulu is a commercial metropolis, a thriving port, and an international air station. It is also the home of the University of Hawaii, with over 7,000 students. The city itself, with a population of 292,179, is about the size of Rochester, N. Y.

The last two islands are separated from Oahu by a 63-mile channel. Kauai, the oldest and most disintegrated of these mountain summits, is also the lushest in vegetation. Time has eroded its rock, producing rivers, waterfalls, precipices, and a colorful canyon of vast proportions. Kauai is the fourth of the islands in terms of population, while neighboring Niihau is a privately owned sheep ranch once fabled as the original home of the Hawaiian fire goddess Pele.

Climate. When we think of Hawaii, we think of coconut palms, surfboards, hula skirts, and *leis* — the flower garlands people wear around their necks. All these things mean sun. And Hawaii gets plenty of that.

On the map these islands clearly lie in the same latitude as Havana, Cuba, and Calcutta, India. Considering this, what is surprising about Hawaii's climate is its relative coolness.

Here is where the mountains come into the picture again. They serve to break up the face of the land and make for a great deal of diversity in temperature and humidity. This means, for instance, that the average rainfall at Honolulu can be 28 inches a year while four miles away (and a thousand feet higher) the average is 155 inches.

Another thing that gives Honolulu a mean annual temperature of 74.6 degrees is the prevailing northeast trade wind from cool ocean currents which breathes across the island chain.

Such a climate sounds ideal for man and his agricultural needs. Sun, rainfall, and rich soils have made for a tremendous variety of flowers and plants — many of them unique to Hawaii. There are more than four hundred different kinds of ornamental trees. Hibiscus is the Territory's official flower. In a recent year the islands earned $1.5 million from marketing its orchids.

The Territory's fruits read like a mouth-watering excerpt from a tropical gazetteer — coconut, breadfruit, banana, avocado, mango, papaya, guava, grape, and fig, to name a few. And one can't overlook, of course, Hawaii's fabulous wealth in sugar cane and pineapples.

History. What is man's history in these islands?

The question takes us back to about 500 A.D. Polynesia, on whose outer fringes the Hawaiian Islands lie, was the last habitable part of the globe to be occupied by man. Its original settlers were brown-skinned people of a mixed Aryan make-up from the continent of Asia.

The Polynesians were insatiable sailors who traveled across the expanses of the south Pacific from Malaya by literally island-hopping in great sea-going canoes.

For five hundred years these first Hawaiians lived in relative peace and seclusion. They fished and gardened. They lived in wood-frame, thatched-roof houses with stone, mat-covered floors. They pounded the root of the taro plant into a paste called *poi* which they cooked as their main food.

From the beginning, religion played a dominant part in their lives. They worshipped such gods as Kane, Kanaloa, Ku, and Lono. The life of the Hawaiians became increasingly regimented through complex religious tabus. As late as 1819 women were put to death for eating bananas, coconuts, pork, turtles, or certain fish.

But the Hawaiians had a lust for their life in the richness of sub-tropical nature. They made decorative use of the islands' exotic flowers. They developed an expressive kind of dance, the *hula,* which later shocked the missionaries of the 19th century. They fashioned musical instruments and passed

on folklore through chants and songs. They swam, boxed, wrestled, and competed in every form of athletic contest.

The first recorded discovery of Hawaii by the outside world did not come until a January day in 1778, when Captain James Cook, an Englishman searching for a passage through America to the Atlantic, sighted the islands of Oahu and Kauai.

The natives who greeted Cook and exchanged food for iron nails were certain that he was the god Lono. His reception was jubilant, and he made friends with the island chieftains. Unfortunately Cook's return visit the next year was marred by a misunderstanding with islanders during one landing expedition, and in the ensuing foray he was killed.

Cook's visits coincided with the rise of a native leader named Kamehameha, who learned much from the ways of the white men.

Oppressive political and religious rule had brought much bloodshed and civil war in the preceding decades. It was Kamehameha — "The Lonely One" — who gradually emerged as Hawaii's first great unifier and brought order out of chaos.

Hawaii's tough old king was able to do this despite a large influx of foreign influence in the wake of Captain Cook's discovery. Foreign influence was not necessarily good influence. Whaling vessels and trading ships soon began to make the islands a regular port of call for provisioning. They brought with them the multiple scourge of disease, pirates, convicts, and firearms. Still, Kamehameha more than held his own against the men of the West.

Hawaii's history in the 19th century is just what one would expect of such a busy crossroads. Thousands of people of every race and nationality passed through it. First came the whalers and fur traders. Later came the sandalwood shippers — who rapidly depleted the islands of their supply — and the missionaries. Later still came imported laborers from Europe and Asia to work in the sugar and pineapple fields.

Many stayed briefly, some much longer. One of the world's most homogeneous populations was destined to become the Pacific's most diversified melting pot.

A crossroads could hardly escape political importance. The result was inevitable: Hawaii's independence was threatened successively by the Spanish, the Russians, the British, and the French. Meanwhile, America's involvement deepened as we began to look westward and follow what seemed to be our "manifest destiny."

Against such a background of turmoil the first Kamehameha and his successors fashioned a surprisingly stable island state. They did this sometimes through the aid and advice of trusted foreign assistants, most of them Americans. Sometimes, less successfully, they did it through anti-foreignism and an attempted return to traditional Hawaiian ways.

Meanwhile, great changes were taking place in the once quiet and isolated islands. One of the century's most important dates was 1820, when the first shipload of Congregational missionaries from New England arrived.

Their imprint was great. Within two years they had set the Hawaiian language in writing for the first time in history. In the 1830's the Bible was translated, and the islands experienced a religious "revival." Significantly, the first convert was Kamehameha's head queen herself.

The missionaries found Hawaii a fertile field and soon stimulated public education through mission schools — a tradition which has given Hawaii today one of the nation's finest school systems.

The effect of the missionaries on the government itself was probably greatest of all. The Hawaiian kings persuaded several able Americans to detach themselves from the mission and become government advisors. One key result was a Declaration of Rights and an Edict of Toleration, both issued by Kamehameha III in 1839, and the island's first constitution in 1840 — modeled on American democratic precedents.

These first steps towards revolutionizing the Hawaiian government were followed by much activity in the next fourteen years. New law codes for the islands were carefully compiled, and in 1852 a more up-to-date constitution was promulgated. The liberal revolution, in fact, went so far and so fast under Kamehameha III and his American advisors that a treaty of annexation to the United States fell through only because of the King's death in 1854.

In the 1870's Hawaii concluded a trade treaty with the American mainland which made the islands' economy very much geared to the American market. A decade later a new treaty gave the U. S. exclusive rights to the use of Pearl Harbor as a naval coaling and repair station.

It was the attempt by King Kalakaua and his sister and successor, Queen Liliuokalani, to re-establish an absolute monarchy which caused some descendants of the missionaries, banded together as a "Committee of Safety," to depose the Queen in 1893 with the help of a U. S. military force. Then they applied for outright annexation to the mainland.

When President Cleveland learned that the "revolution" had been something of a put-up job, he withdrew the annexation treaty prepared under his predecessor. Thereupon Hawaii declared itself a Republic under the presidency of Sanford B. Dole.

Not until the Republicans returned to power in 1897 was Dole's renewed offer accepted by President McKinley, who defended the annexation by bluntly asserting, "It is manifest destiny." On August 12, 1898, Hawaii became a part of the

United States by joint resolution of the Congress. And in 1900 it was officially organized as the Territory of Hawaii under Governor Dole.

Population. Polynesians and missionaries were the only two elements in Hawaii's expanding population during the 19th century. Today their descendants are so mixed in with a score of other peoples that it is possible to find forty to fifty races or interracial mixtures represented in some Hawaiian schools.

How did all these people get there? Mainly, it seems, as a result of conscious attempts by plantation owners to find men to work in the sugar cane and pineapple fields. Sugar cultivation got under way on a large-scale basis as early as 1835. By 1859 plantation owners were interested in introducing a new labor force. They tried all sorts of experimental immigration schemes. From each new group a good many stayed, and their descendants make up a large part of the Hawaiian Americans of today.

They live together in an extraordinary degree of harmony. The Territory's largest racial group is the 37 percent who are U. S. citizens of Japanese ancestry. The so-called white Caucasian group has risen from 17 percent in 1900 to 23 percent in 1950. Other racial blocs are the native Hawaiians (17 percent), the Filipinos (12 percent), and the Chinese (6 percent).

Through various instruments — the English language, fine schools, a commonly shared history and future — these people of every race and color have all become Americans — 84 percent of them by birth, much as millions of children of immigrants from all parts of the world have become Americans throughout the mainland. They buy American cars from Detroit, they wear American clothes from New York and Los Angeles. They go to American movies and read American books.

Furthermore, they fight in American wars. In World War I, for example, the record of Hawaii's American troops had been first rate. But it took World War II and the Korean War to offer the most vivid proof of Hawaii's devotion to the common cause of the 48 states.

America's participation in World War II began in Hawaii's front yard — with the Japanese attack on Pearl Harbor. If there was to be a time for Hawaii's citizens of Japanese descent to show their disloyalty, this would be it. The Army and Navy imposed strict martial law, and Hawaii's Japanese-Americans, under heavy suspicion, received some pretty harsh treatment despite their citizenship.

Yet after the war U. S. authorities had to admit that "not a single act of sabotage was committed by any resident of Hawaii before, during, or after the attack on Pearl Harbor." Furthermore, the war record of the Japanese-American soldiers — the "Nisei" — was phenomenal. The 100th Infantry Battalion and the 442nd Combat Team fought with great heroism — and appalling casualties— first in Italy, then in France.

When the Nisei soldiers got back to America, the 100th Infantry Battalion had become the most decorated unit of its size in American military history. The President, reviewing the great victory parade at Washington, had this to say to the survivors of both Nisei outfits: "You are now on your way home. You fought not only the enemy, but you fought prejudice — and you have won."

Later, during the Korean War, the Army's Chief of Staff, General J. Lawton Collins, was moved to comment that "the splendid part played by Hawaii in the Korean War is entirely in keeping with the distinguished record it established in World War II."

Industries. It is not surprising, with its luxuriant plant life, that Hawaii is something of an agricultural gold mine. Nor is it surprising that some of the more canny American missionaries soon changed vocations and headed for the life of the plantation owner. A gentle climate and shrewd management have established the unchallenged supremacy of two of Hawaii's agricultural industries — sugar and pineapples.

Sugar boomed first. Unlike pineapples, there was no need to create a mainland market. It was already there. Sugar has led the field ever since, with its first great rise after the reciprocity treaty of 1876. Today Hawaii's average sugar yield is 7¼ tons per acre — the highest in the world. In 1957 the islands produced over a million tons, earning the whopping total of $148.5 million from all the products of the sugar cane.

For sugar, as well as most other products, the mainland is by far Hawaii's best customer. Sugar is a big business in every sense. It requires a great deal of heavy machinery and an intricate system of irrigation. Nor is much cane wasted. The fibrous residue of the stalks — bagasse — is used both as fuel for the sugar factories, as the basis of a kind of wallboard, and as chicken feed.

The Territory's second great source of wealth is the pineapple industry, with an annual crop worth well over a hundred million.

For some years Hawaii's third great industry has been the tourist business. In 1956, however, tourism was displaced, appropriately, by a thriving construction industry worth more than $94 million. The appropriateness comes from the fact that one major item of construction has been hotels and houses to accommodate the rising tourist tide.

Other contributors to Hawaii's annual income are such products as coffee, fruit, nuts, and vegetables, and livestock and poultry products.

Against such a background, it is no wonder that Hawaii is a billion-dollar enterprise, that its per capita personal income compares favorably with that of the states, and that Hawaiians pay more than one hundred and fifty million dollars annually in taxes to the U. S. Government. As a Congressional committee report commented in 1955, "These figures make it plain that, as a business associate, the 48 States could take in no more responsible partner than Hawaii."

Transport and Communications. The air age has transformed Hawaii in more ways than one. In the 19th century Honolulu was twenty days from San Francisco, 146 days from New York.

Today the plane trip from the West Coast takes 7½ hours, and air travel has been boosted 50 percent by the inauguration of tourist fares.

Honolulu's International Airport has become to airlines what Honolulu's port has long been to shipping. In 1955 it was the tenth busiest airport in the nation. Seven international airlines connect it with the mainland, Canada, Australia, and the Far East. And four more lines fly among all fifteen of the archipelago's airports on inter-island service.

Airplanes may have cut into the passenger liner traffic between Hawaii and the West Coast. But the freight volume carried by the many steamship lines which regularly stop at Hawaii increases every year. Trans-Pacific steamers to the Orient and the South Seas make Honolulu a steady port of call.

As for communications, the islands are much like any other American state. Last year they supported seven daily newspapers and fourteen weeklies; fourteen commercial radio stations and one non-commercial one; and three TV stations at Honolulu, with three satellite stations on other islands.

The Statehood Question. The first petition to change the Territory into a State was sent to Congress in 1903 after passage by both the upper and lower chambers of the Legislature of Hawaii.

Ever since, Hawaii has been knocking at the door that leads to statehood.

In 1950, the people of Hawaii took a big step towards final preparation for admission to the Union. They ratified, by a 3 to 1 margin, a proposed state constitution drawn up by 63 elected delegates the year before—a constitution which the National Municipal League of New York said "set a new standard in the writing of a modern state constitution by convention."

We can be sure that proponents of statehood for Hawaii will intensify their efforts as never before during the next sessions of Congress. Since statehood is an irrevocable and final act, their case as well as the case for the opposition should be carefully examined.*

What should Congress do?

Volume VI, Number 6

ALASKA- 49th State?

Art. by C. P. Meier.

Alaska, in Aleut language, means "The Great Land."

It's just that.

It is twice the size of Texas, with enough over to make a couple of dozen Delawares. Alaska has seven major river basins, with the Yukon the largest. It's got America's tallest mountain—Mt. McKinley. Its coast line is longer than that of "Stateside" U.S.A.—longer than the Atlantic, Pacific, and Gulf coasts combined.

The latest U.S. census check gives Alaska 209,000 inhabitants. In the past ten years Alaska has lead all States percentagewise in population gains. That's not a new situation. Between 1929 and 1939, Alaska also beat out all except Florida and New Mexico. Thousands of homes recently built show Alaska's growth.

But the elected representatives of these U.S. citizens—two Senators and a Congressman—still wait to be seated by Congress.

Alaska is so big and there are so many things to think about concerning it that we better duck preliminaries and get down to business.

Geography. Look at the map. There's Alaska's huge interior, largely undeveloped, but with natural resources in rich abundance. This interior is known as the Central Area, with the city of Fairbanks, Alaska's second in size, serving as supply point.

There's the Southeastern Area, the Panhandle, which, besides its mainland, is made up of hundreds of islands—the channel between forming the Inside Passage familiar to tourists from U.S. West Coast ports and Canada's British Columbia. At the start of the Panhandle is Alaska's third largest town, Ketchikan, with its new 55 million dollar pulp plant and its fleet of 2,000 fishing vessels which supply the nine canneries of this salmon canning capital of the world.

In the Panhandle are such other towns as Sitka, capital during Russian ownership, and Juneau, capital now.

Westward, where the Panhandle joins the pan, lies the South Central Geographic Area, where Anchorage, Alaska's largest city, is located. The South Central Area includes the Alaska Peninsula and Aleutian Islands, stretching in a nine hundred mile crescent between Bering Sea and the North Pacific. The end of the chain is near enough so that Japan had little trouble, at the start of World War II, in taking over Kiska and Attu Islands, the only part of the American Continent to suffer occupation. It cost 2,500 American lives to drive the invaders out.

Fourth and final area is the Northwestern, facing the Arctic Ocean at the top, and with Siberia, to the west across Bering Strait, only fifty-four miles away. Nome, former gold rush town, is the major port for the Arctic Region, being accessible by sea from June to October. Point Barrow, northernmost community on the American Continent, can be

reached from the sea for only a few summer weeks, but defense, needs, particularly the installing and operating of DEW-line sites—units in our radar Distant Early Warning system to guard against air attack—have created something of a boom for Barrow as supply point for the icy, windblown arctic coast.

Climate. Three-fourths of Alaska lie in the north temperate zone. Only one-fourth is beyond the Arctic Circle. Thanks to the Japan Current, which flows along the western coast, most of Alaska's principal towns have the same sort of winters as Maine, Vermont, and much of Massachusetts. Sitka's and Ketchikan's winter averages approximate those of Philadelphia and Washington; Juneau's those of New York City. Mean average January temperature for Anchorage is 20° above, which puts it on a par with Concord, New Hampshire. Fairbanks and the region around it are the only substantially populated areas where the thermometer occasionally dips to 60 or more below. But like many parts of the U.S.A., Fairbanks can be warm in summer, cold in winter. Scotland, Norway, Sweden and Denmark lie in similar latitudes and have similar climatic conditions, yet manage to support prosperous populations. The only novelties which new residents have to get used to are long hours of summer sunlight and short winter days. In this land of the midnight sun, at the height of summer, there are from 18 to 24 hours of daylight. With 20 hours of night in mid-winter, residents of Fairbanks are thankful for their municipal street lighting system.

Life in Alaska. It is perhaps surprisingly like what we're used to. In the towns, where most Alaskans live, think of Main Street, U.S.A. A glance at the Fairbanks *Daily News Miner** shows that the P.T.A. will meet at 3:30 P.M. at the Aurora School. There'll be a food sale of the American Legion Auxiliary on Thursday. The American Association of University Women is to hold its annual meeting. The Community Presbyterian Church will conduct a Bazaar at the University. There's a little theater group, Service Clubs—Lions, Kiwanis, Rotary, etc.—Boy and Girl Scouts, and 4-H.

Cost of living is high, because many of the necessities have to come from far away, and transportation is expensive. A differential of 25% isn't unusual compared with prices "Stateside." But Alaskan wages help balance things up.

Though they have fun, and ways to get recreation, Alaskans work hard. Work is essential in order to build homes, local communities, and a State.

Alaska's people have been drawn from every State of the Union. There's a great deal of the pioneer spirit. A considerable number of recent settlers are former soldiers, sailors, and airmen who were stationed in Alaska, grew to like the North, and settled there after their tour of duty. These days, at Tok Junction, site of the U.S. Customs Station on the Alaskan Highway, it is not uncommon to see family cars and trailers piled high with personal belongings. These newcomers are looking for the same kind of government which they lived under in the States. They'd like to help elect the President, have representatives in Congress to look after their interests, and keep as free a hand as possible in running their own affairs. Like previous settlers, they have to get used to the fact they're denied these privileges—since a territory is in many ways like a colonial possession.

Alaska has its Indians and Eskimos too—some thirty-thousand in all. They've come a long way in learning to take part in the white man's plan of living. Eskimos at Point Barrow, along with fishing and hunting, get good jobs in defense work. Indians and Eskimos have served with distinction in the Alaska legislature.

Cities and towns. Alaska's towns—small by Stateside standards—tend to think of themselves not in actual population but in terms of the area they serve as marketing, business, and education centers. Thus Anchorage, the largest, likes to measure its size not according to its 27,500 inhabitants but according to the 60 to 90 thousands in addition which it serves as a trading center. These include U.S. armed forces personnel from nearby Fort Richardson and Elendorf Air Force Base.

Anchorage, overlooking Cook Inlet and with the spectacular Alaska range, including Mt. McKinley, to the North, planned carefully for its wide streets. It has several fine hotels, good shops, and modern stores. Two daily papers supply news. It has three radio and two TV stations.

Anchorage dreams of itself as the air crossroads of the world. The shortest flight distance from New York to Tokyo passes over Alaska.

The town first came into existence in 1914 as a transportation center—the tidewater base of the railroad planned for the Interior. Since then, for motor travel, the 330 mile Glenn Highway has come, linking Anchorage, via Tok Junction, to the rest of the U.S.A. In 1923, when its airfield was started, the whole town turned out to help—men, women, and children. They cleared sixteen acres of stumps and undergrowth in a single day. Now Anchorage has a multi-million dollar international airport. It has a fine modern library—gift of a pioneer Anchorage businessman—and a five million dollar High School.

Alaska's school population is 28,000, predicted to double within the next five years. Two-thirds of Alaska's territorial budget go to education. Alaska prides itself on one of the best school systems anywhere. The level of pay recognizes the worth and importance of teachers.

Fairbanks, second largest city, is thus far Alaska's only important community not on salt water. It's on the Chena River, and the Tanana, which flow into the mighty Yukon. It is the interior railhead of the Alaska Railway. Fairbanks also has an international airport that rivals Anchorage's claims.

The citizens of Fairbanks have had to tackle many tough problems in their wish for comfortable year-round living. Temperatures tumble, here in the interior, and how keep water mains from freezing? The city fathers met the dilemma by installing a loop system which keeps the water circulating.

Alaskans show keen interest in municipal government, with council sessions well attended. Fairbanks is working fast to clear away the shacks of its earlier pioneer past. Its urban redevelopment program includes commercial and residential areas and a city park. The ten story Polaris Building, with apartments and offices above and stores below, is the city's particular pride.

Servicemen from nearby Ladd Field and Eielson Air Base help keep the tills jingling on pay days. Near-by University of Alaska has an on campus population of close to six hundred, with an increasing non-Alaskan enrollment. Its community branches serve thousands.

Information about Alaska's other towns may be obtained by writing to the local Chambers of Commerce, or the Alaska Resources and Development Board, P.O. Box 2391, Juneau, Alaska. Among them are Seward, named for the man most influential in getting Alaska. Seward serves as the southern terminus of the Alaska Railroad and base for the Alaska Steamship Company operating from Puget Sound in the State of Washington. Besides Ketchikan, there are such fishing and lumbering towns as Haines, which also has a newly completed thirty million dollar oil pipeline waiting for interior development. There's Kodiak, one of Alaska's richest canning areas, headquarters for the U.S. Navy in Alaska. And there's Palmer, in the Matanuska Valley, where the annual Alaska State Fair is held.

**The* Daily News-Miner, *on Wednesday, November 7, 1956, published its seventh annual Progress Edition. Copies of this 144 page issue on Alaska have been sent to college and community libraries all over the U.S.A., and may be looked at there. For detailed, 600 page, well and interestingly written study of Alaska, see* The State of Alaska, *by Ernest Gruening, 1954. Former Governor, and pending Senator Elect, it should be borne in mind for judicious reading that the author favors statehood.*

Agriculture. Visitors from Stateside to the country fairs held at Palmer, Fairbanks, Homer, Skagway, and Juneau are apt to be surprised at the size and quality of the produce. Agriculture isn't easy and, as true elsewhere, there are special conditions that have to be studied and met. In favorable regions like Matanuska practically all crops of the northern states can be grown. Good vegetables include potatoes, cabbages, and broccoli. The shorter season is made up for by longer hours of daylight. The Matanuska-Tanana Valley Farmers Co-operative advertises home produced homogenized and chocolate milk, ice cream, cottage cheese and other dairy products. Experts maintain there are hundreds of thousands of acres which, if opened for homesteading, could support an agricultural industry in Alaska. Since Alaska today imports 90% of its perishable produce—adding considerably to living expense—the promise of agricultural development is great.

But it is industrial development which holds the largest potential.

Industries. Alaska's traditional sources of income have been mining and fishing. The Klondike Gold Rush, which presently spread to Alaska, soon petered out. But gold still is mined and by modern methods—great dredges that do the job of hundreds of men—though the pegged price of the metal cuts sharply into profits. Other mineral resources, virtually untapped—uranium, iron, coal, nickel, limestone, copper, oil—are waiting. Lack of ways to get at them and high transportation costs are among the difficulties. But another problem, almost without realization on the part of those in charge in Washington, has been growing through the years. It is summed up like this in a recent Congressional Report from the House Committee on Interior and Insular Affairs, recommending statehood for Alaska: "Federal policies of the last half century . . . have withdrawn . . . from public use many of the more valuable resources of the Territory through . . . creation of tremendous Federal reservations . . . It appears to the Committee that this tremendous acreage . . . might well embrace a preponderance of the more valuable resources needed by the new State to develop flourishing industries with which to support itself and its people." The Committee recommends that Statehood legislation should work out ways to correct ". . . the present distorted land ownership pattern . . . under which . . . the Federal Government owns over 99% of the total area . . ."

By 1925, Alaska had become the world's top salmon producer—but this wasn't a cause for rejoicing among Alaskans. Alaska's canneries were owned and operated by Stateside companies, and as the official U.S. Census Report remarked as early as 1890, "the vast sums paid out every season by the salmon canning companies . . . fall . . . almost entirely into the hands of non-residents of the territory." Stateside companies found it cheaper and easier to import and board help—both white and Chinese—than to hire resident labor. This wasn't Alaskans' only gripe. Right from the start, the Stateside companies set fish traps in Alaskan rivers that threatened the extinction of the crop—since salmon spawn upstream. Because the Federal Government controlled such matters in the territory, Alaskans found themselves powerless to resist, except through protests of their voteless delegate to Congress. "The whole policy of these fish trusts"—said delegate James Wickersham—"is to take everything out. . . . They are robbing the territory."

When Federal regulations were presently set up designed to let some fish past the traps, a distant Congress, not able to see the problem at first hand, failed to appropriate enough funds for adequate enforcement. California, Oregon, and Washington, as States, soon passed laws of their own abolishing fish traps. Alaska, as a Territory, lacked the right to do so. When the 1953 salmon catch skidded to its lowest point in thirty-two years, President Eisenhower found it necessary to declare Alaska a "disaster area."

Since then, the salmon crop has again started up. But Alaskans feel that only the powers of Statehood can serve to safeguard the industry.

Meanwhile, the manufacture of pulp promises to become an Alaskan major industry, with year-round plants talked about for Juneau, Sitka, Wrangell, and Petersburg to keep pace with the one at Ketchikan.

Alaska's timber resources, both for pulp and lumber, are very great, and responsible Alaskans mean to keep them an asset to the forty-ninth State through foresighted modern techniques and conservation.

Alaska's power resources are huge. With its imposing mountain ranges and abundant water, Alaska has hundreds of sites for industrial hydroelectric power.

Transportation. That's always a problem in pioneering, and for big and rugged and distant Alaska, in the earliest days, it was particularly rough. Once dog teams were the chief reliance. Today, thanks to aviation, not a village in the remotest region lacks transportation.

Since the start, Alaska has depended on supplies by sea. For quite some time, certain parts of the interior have been served by rail. And, as a highway system develops, following Alaska's recent incorporation into the Federal highway program, there should also be more transportation by car and by truck.

Alaskans have long been sensitive about the relationship between cost of living and cost of transportation. Therefore the monopoly in Alaskan shipping long held by a single Stateside company, with resulting high freight rates, has led to repeated protests. In 1947 the Alaska Legislature told Congress: "High freight rates have obstructed Alaska's development for over thirty years." As a territory, Alaska could do nothing about it. What's more, this situation, adverse to Alaska but profitable to the company, had been made possible through laws passed by Congress and by Supreme Court decision. Today, the situation is a good deal better, with two companies—Alaska Steamship and Alaska Freight—carrying supplies from Puget Sound. There are Canadian ships from Vancouver and excursion steamers from the U.S. Pacific coast. There's a new combination truck van and sea piggyback route. Very presently, the same sort of thing will be moving railroad cars to Alaska from Stateside and Canadian lines. And, providing increasing competition, there are planes.

Air transport has proved a Godsend to Alaska. Everything from dog teams to mining equipment for remote developments goes by plane. Practically all major Alaskan cities receive year-round perishable foodstuffs from Stateside by air. Alaskans are amazingly airminded. They fly from thirty to forty times as much as other Americans—measured either by flights or by passenger miles. Many own planes.

It all started with the bush pilots. They carried supplies anywhere. They flew in medicine or took the injured and sick to hospitals. Their landing places were river sand bars, lakes, and any small clearing. Equipped with skis in winter, they needed only a patch of snow. What bush pilots lacked in navigation aids they made up through skill—for Congress did not at once extend to Alaska help in the form of radio range stations and beacons which the Air Commerce Act of 1926 brought to Stateside aviation. Presently, through its own pilots and its own financing, Alaska had a commercial transport network that was all its own. Wien Alaska Airlines maintains service to Point Barrow, farthest north, daily except Sunday and Monday. You can go to Chalkyitsik—Eskimo village—every third Saturday of the month on regular schedule. Wien and competing airlines fly to practically every inhabited point.

Requiring substantial capital and counting on Federal support, Alaska's air link with the forty-eight states lagged behind territorial enterprise. In June, 1940, regular scheduled flights began from Seattle.

Testimony at hearings before the U.S. Civil Aeronautics Board presently brought up the fact that because of competition between Stateside lines, freight and passenger rates to Alaska are being kept at reasonable levels.

In the Fall of '56, Pan American World Airways assigned double decker Strato Clippers to its regular daily Fairbanks

run. In 1957, Scandinavian Airlines plans to open its Oslo to Tokyo route with a flight stop at Anchorage.

Past, Present and Future. From dog-sled days to jets—past, present, and future play a part in the question of the forty-ninth State.

Let's take a quick scamper through Alaska's history.

1741 — discovered by Vitus Bering, a Dane by birth and officer in the Imperial Russian Navy.

1867 — sold by Russia to the United States for $7,200,000. Five weeks after purchase, U.S. citizens at Sitka held town meetings, drew up a charter, elected a city council and mayor, started a school, and established a court. But Uncle Sam had failed to take any Congressional action to provide for government. So what Sitka's citizens did was strictly on their own, and with no certified legality. Actually a settler couldn't acquire title to land or be sure his marriage was legal. Though Secretary Seward, visiting Sitka, recommended Congress give Alaska government, nothing happened. Under these circumstances, Sitka's pioneering boomlet wheezed out. Petitions asking Washington to take notice got lost in the Congressional Committees to which referred.

1884 — Congress passed the Organic Act giving Alaska a government. The laws of the State of Oregon—said the Act—were to apply. Federal district courts were to be formed, a governor appointed by the President, and the capital moved to Juneau from Sitka. The fact that not all the laws of Oregon fitted Alaska's circumstances was something Alaskans were left to face. The Act specifically prohibited a legislative assembly or delegate to Congress, and excluded Alaska from Stateside general land laws. There could be no homesteading, yet.

1885 — Governor A. P. Swineford, the President's appointee, called the attention of Congress ". . . to the unjust withholding from Alaska of political rights never before denied to any section of territory or any fraction of the American people since the adoption of the Federal Constitution."

1903 — Homestead Act extended to include Alaska. Catch was that regulations O.K. Stateside not suitable to Alaskan conditions.

1906 — Congress authorized Alaska to send a delegate to Congress—but voteless and not to serve on committees.

1912 — Congress allowed Alaska to elect a legislature—but with no say as to resources, and with such laws as it passed subject to cancellation by Congress or Governor's veto.

1914 — Railroad, Seward to Fairbanks, authorized by Congress.

1923 — Railroad—470 miles of track—almost completed. Warren G. Harding, first President to visit Alaska, drove the gold spike. His death, soon after, lost Alaska probable support for statehood.

1935 — Matanuska Valley Federal Settlement project, with colonists assisted by government loans. Experiment started agriculture as practical industry there.

1940 — U.S. begins construction of Alaskan military bases, bringing fresh impetus to Alaska's growth. Defense also brought assistance through federal funds to help communities near bases build utilities like sewer and water works. Prior to 1940 nothing in the way of defense really done. Proposal for Naval Station on Kiska Island, as early as 1902, never acted on, so Japanese invaded and occupied Attu and Kiska in '41. Today Alaska recognized as strategic defense barrier for Canada and U.S.

1949 — Legislature sets up a basic tax program, making Alaska better able to take care of activities State must carry on in behalf of its people. Alaska's income tax geared closely with Federal, licking problem of having yearly to compute two widely different forms. As Territory, Alaska long been paying Federal taxes without representation, a practice which "Senator Elect" William A. Egan, in 1957, has pointed out "our forefathers found . . . distasteful."

1955 — Congress puts Alaska under Federal Aid Highway Act, Territory having previously been excluded. As Governor Heintzleman pointed out, "This great forward step assures a sustained program for the construction of the roads and highways we so badly need."

1956 — Alaska's Constitution ratified by its people. It awaits our O.K.

Alaska—Forty-ninth State? Alaska's new Constitution is considered by experts a model document. Constitutional Convention delegates, in writing it, bore in mind America's one hundred and eighty years experience in self-government. Their aim was to incorporate the best features of America's most adequate State Constitutions, and at the same time take into account Alaska's special problems and needs. The end result, Alaskans hope, will foster the growth, development, and welfare of the forty-ninth state and its people.

A recent House Interior and Insular Affairs Committee report says that "The committee is convinced that statehood for Alaska at the earliest possible date will promote the best interests of the nation as a whole as well as those of the Territory," and adds that, "by historical standards, Alaska is ready and qualified for statehood now." These standards it lists as:

(1) Belief by the inhabitants in the principles of democracy as exemplified by the U.S.A.
(2) Wish for Statehood.
(3) Sufficient population and resources to support State government, and at the same time carry a fair share of the cost of Federal Government.

But since 1916, when the first Alaskan Statehood Bill was introduced, Congress hasn't fully opened the door. After all, admission to the Union is a serious matter and not to be lightly bestowed. The minority declaration of the recent report of the House Committee on Interior and Insular Affairs, differing from the favorable majority report, has advocated this:

"Statehood for both Hawaii and Alaska should be deferred pending the adoption of an appropriate constitutional amendment to provide for representation in the United States Senate on a basis proportionate to population."

"Statehood for both Hawaii and Alaska should be deferred pending some other satisfactory solution of the problem . . ."

President Eisenhower, referring to statehood in his January 16, 1957 budget message said: "I . . . recommend the enactment of legislation admitting Hawaii into the Union as a state, and that, subject to area limitations and other safeguards for the conduct of defense activities so vitally necessary to our national security, statehood also be conferred upon Alaska."

For the Alaskan part of the statehood question, what should the answer be? Shall Alaska be admitted to the Union and

its elected representatives seated? "The basic arguments for and against have been presented," says E. L. Bartlett, voteless delegate from Alaska, "over the years." We have plenty of comments and statements by public officials to help us decide. We have a crop of bills before Congress. What should Congress do? Why?

Dear Mr. Murrow:

Of course I am disappointed that, because of an alteration in the format of SEE IT NOW, it will not be possible to go forward with the collaboration involving VITAL ISSUES which we discussed.

I shall await with keen anticipation news from you, in the autumn, as to whether something can be worked out in connection with a new program that is being contemplated.

With thanks and regards,

Sincerely yours,

Townsend Scudder

Scudder, Townsend

June 3, 1958

Dear Mr. Scudder:

I regret to tell you that the format of SEE IT NOW is to be altered in such fashion that it will not be possible to go forward with the collaboration we discussed.

It may be that something can be worked out in connection with a new program that is being contemplated, but I won't know about that until autumn.

Sincerely,

Mr. Townsend Scudder

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Thanks again for the opportunity to discuss with you the possibility of using VITAL ISSUES in conjunction with your television presentations. We have placed "The Problem of the Railroads" on our list for Volume VIII, starting in September, and, as I remarked, our schedule is sufficiently flexible to fit in with any plans you may decide to make. The same thing goes for "Latin America," which already was on our list for the coming year.

I shall look forward with keen anticipation to hearing from you toward the end of June, when I understood you to say a decision might be ready.

Meanwhile, I take pleasure in enclosing herewith our most recent number, on the subject of Exchange of Persons.

With regards,

Sincerely yours,

Townsend Scudder

EXCHANGE OF PERSONS-
Back Door to Peace?

An American theatrical troupe puts on "Porgy and Bess" in Moscow and wins enthusiastic ovations.

An American pianist gains top honors in a Soviet musical contest and is wildly applauded.

A Soviet ballet company performs Russian folk dances before packed and approving audiences at the New York Met, and, by way of encore for its American tour, swings into the Virginia reel to the tune of "Turkey in the Straw."

That's "exchange of persons."

International exchange—a chance for better understanding based on closer acquaintanceship—takes place, too, when a U.S. farm boy or girl lives and works for a time with some farm family abroad in Denmark, in France, in India, or wherever it may be, and the son or daughter of that household comes to America for a similar experience.

Exchanging students, exchanging teachers, exchanging athletes for international contests, exchanging scientific missions are all parts of the same idea.

In the broad sense, a very important element is made up also of ordinary tourists. "As you travel abroad"—suggests President Eisenhower to the several million Americans expected to be touring during 1958—"the respect you show for foreign laws and customs, your courteous regard for other ways of life, and your speech and manner help mold the reputation of our country. Thus, you represent us all in bringing assurance to the people you meet that the United States is a friendly nation and one dedicated to the search for world peace and to the promotion of the well-being and security of the community of nations."

During this same year, around seven hundred thousand visitors will be within our borders.

It seems likely that exchange of persons will exert an increasing influence on the course of international relations. That's one reason why the idea has become a part of U.S. foreign policy.

"The most fabulously successful investment ever authorized by the United States Congress"—that's how a Government official has described the U.S. State Department's exchange of persons program which in the last ten years has sponsored exchange of more than 50,000 people between this country and eighty foreign nations.

The number is swelled by other U.S. programs and by the thousands of exchanges conducted by private organizations. In 1955-56, according to a count by the Institute of International Education, there were over 36,000 foreign students in the U.S.A.

We've been participating in exchange of persons programs not just to step up the flow of scientific or technical knowledge. Our recently signed agreement on exchanges with the Soviet Union states that the primary purpose is "the improve-

ment of mutual understanding between the peoples of the United States and the U. S. S. R."

Can greater progress toward better understanding and a more peaceful world be made in the atmosphere of meetings among ordinary people from all walks of life than in the rarefied diplomatic air of "the Summit"?

How well does the idea work? What advantages, what disadvantages or dangers are involved?

What about the backgrounds and foregrounds of the entire movement?

It's a vital issue, all right, since each of us, as an individual American, may play a role, either at home or abroad, in this approach to world peace.

EXCHANGE BETWEEN EAST AND WEST

While negotiations for a Summit conference have sputtered and stalled, the few months since the signing of the U.S.-Soviet agreement on cultural exchanges have seen a startling upsurge of unofficial and non-diplomatic good will between East and West. Speaking of Van Cliburn, who won the Tschaikovsky International Competition in Moscow, correspondent William J. Jorden, in his dispatch to *The New York Times,* wrote that "A young pianist from Texas has done more to promote good relations with the Soviet people than any American for a long time."

"According to reports from New York," the *Times* correspondent added, "Moscow's Moiseyev Dance Company are creating the same sort of good will for their country in the United States."

"You have done better than the politicians," remarked Soviet Deputy Premier Anastas I. Mikoyan, as the young pianist was receiving the congratulations of Prime Minister Nikita Khrushchev himself.

Track squads, weight lifters, chess teams, and wrestlers are swelling the list of participants meeting this year in East-West competition. The basketball squads we sent over played before enthusiastic standing room only crowds who applauded as the Russian men's team lost to the visitors and the Russian women's team won.

Before the year is out, there'll be further exchanges, including students, delegations of industrialists, scientists, farmers, college professors, and others in many fields. American experts on East-West relations, without discounting the importance of such individual triumphs as young Cliburn's, feel that group exchanges will in the long run prove more steadily effective in producing good relations between the peoples of the two countries.

That's why it is worth watching the start of student exchanges this year.

Three separate groups thus far are taking part. More are anticipated for 1959. During May, five student editors and their Russian counterparts exchanged visits. This summer, forty Americans and twenty Russian students are visiting each other's countries. The major part of the program begins in September, with an exchange of twenty students from each country for the entire academic year.

And this year there'll be something else added. For the first time since 1947, a U.S. Cabinet officer will visit the U.S.S.R. There may be other Government officials, too, along with Senators and Congressmen who, in increasing numbers, are planning to take a personal look at the Soviet Union. Secretary of Agriculture Ezra Taft Benson, accepting an invitation first extended by Vladimir Matskevich, Soviet Minister of Agriculture, when Mr. Matskevich was touring here in 1955 with a delegation of Russian farm experts, plans to visit agricultural research centers and farms in the Soviet this summer, with a look also, during his ten day stay, at the All-Union Agricultural Exhibition in Moscow.

Why this surge of interest?

One reason is that for a long time there has been an almost complete lack of normal communication between the two countries. Nearly twenty years ago Winston Churchill described Russia as "a riddle wrapped up in a mystery inside an enigma." The intervening years have not measurably improved the puzzle. The simple fact is that Americans don't know very much about the people of the U.S.S.R., and the Russian people have had almost no opportunity to learn about us except through their government's controlled propaganda.

If we are to deal realistically with the challenge that the Soviet Union poses we need to know more about the U.S.S.R.

As for Russian knowledge of us, we'd like to break through the Soviet curtain of censorship and propaganda designed to distort for the Russian people the picture of America.

The Immediate Background

Negotiations for exchange of persons with the Soviet Union date back to the period during which the United States and Russia had been allies in World War II. But American efforts to maintain this wartime friendship were frustrated by the Soviet "cold war" policy of the later 'forties, and by the hot war in Korea during the 'fifties. After Stalin's death, hopes were renewed at the Geneva Summit meeting in 1955 that the U.S.S.R. might change its uncompromising tactics and take a more liberal attitude toward exchanges. Secretary of State John Foster Dulles summed up American policy in a seventeen point proposal on the subject. Among the things the U.S. wanted were removal of travel restrictions, a free exchange of printed matter, the halting of censorship and jamming of American radio broadcasts, and "freer exchange of information and ideas."

A few exchanges did result. One was of medical missions. The other was the well publicized exchange of farm delegations.

The medical mission exchange grew out of a request made by the Soviet Government for a visit by U.S.S.R. doctors to study our methods of combating polio. The Russian delegation arrived on January 18, 1956. Among places visited was the University of Pittsburgh, where the Soviet doctors conferred with Dr. Jonas Salk. On February 25—the day the Russians left for home—an American delegation of medical men set out for a month's visit to Russia. After their return, they made a report:

"Members of the American Medical Mission . . . believe that it would be arrogant, stupid, and even dangerous for the United States to ignore Soviet medicine and research. They recommend that all appropriate steps be taken to develop channels of communication between the medical scientists of the Soviet Union and the United States by exchange of . . . literature, materials, and personnel. . . .

"It should be remembered that our ignorance of the Russian medical literature is not entirely due to language barriers; even more important is the psychological barrier of considering this literature not worthy of attention. . . .

"There seems no risk of consequence to the United States involved in getting a clear picture of Soviet medicine and medical research. The benefits to the United States seem real."*

Further U.S.A.-U.S.S.R. negotiations on exchange were

*Quoted from Public Health Monograph No. 50, 1957, U. S. Department of Health, Education, and Welfare.

interrupted by the strained relations rising out of Russian suppression of the Hungarian revolution in 1956. In the fall of 1957, negotiations were formally resumed. On January 27, 1958, the exchange agreement was signed.

What advantages, what disadvantages or dangers are involved in exchange of persons with Russia?

Russia's reasons in consenting to the exchange agreement are of great interest and importance to us in our quest for peace and security. They present a problem deserving careful thought. What conjectures can we make as to Russia's motives?

THE EXCHANGE OF PERSONS IDEA

Exchange of persons, or as it is sometimes called, "cultural exchange," is nothing new. Whenever trade between nations is carried on, whenever students study abroad, whenever people travel in foreign countries, then cultural exchange takes place.

What is new is the idea that such exchanges might be used, not just to gain specific knowledge or to promote trade, but to build international understanding.

The United States, with its citizenry composed as it is of a number of nationalities, owes a great deal to cultural exchange. We have never been "isolated" from the rest of the world. Our heritage includes what we've gotten from the people of many lands.

One of the first formal exchange programs is that of the Rhodes Scholarships. For more than fifty years these scholarships have enabled Americans and the citizens of the British Commonwealth to study at Oxford. It is noteworthy that Cecil Rhodes, a private citizen of Great Britain, in setting up the program, specified that the scholarships were to go to young men who were not merely scholars but all around persons and potential leaders who would truly represent their countries and would benefit from personal contact with English culture.

The first step by the U. S. A. to foster international exchange was taken in 1908 when President Theodore Roosevelt authorized an act enabling Chinese students to study in this country.

World War I and the experience of global conflict greatly

emphasized the need for international understanding.

In 1921, Herbert Hoover, who had been administrator of Belgian War Relief, sponsored an exchange of students between Belgium and the U. S. By 1929 there were in Europe alone over 700 organizations, both national and international, that fostered exchange of persons. This post World War I period also saw a great increase of exchange programs in the United States. In 1923, the University of Delaware started the Junior Year Abroad program, since adopted by other colleges. By 1925, there were 115 U. S. exchange programs. The great majority were non-governmental. They were designed more to give opportunities for foreign study than to promote the cause of peace and understanding.

But awareness of the need of exchange programs as an instrument of our foreign policy was also growing. In 1938, on the eve of World War II, our representatives in Congress passed the Act For Cooperation With Other American Republics. This act was designed to cement the ties between this country and our neighbors in the hemisphere through a program of cultural exchange. It was the first to emphasize international cooperation as its primary goal and was the forerunner of the present exchange program administered by our State Department and other governmental agencies.

It was after World War II that the cornerstones of the present U. S. exchange program were laid.

The first came in 1946 when Congress passed the Fulbright Act. This act provides that the proceeds from the sale of surplus war materials abroad be used to finance the education of

American students in foreign universities and also enable foreign students to come for study to the U. S. A. This act was supplemented by the G. I. Bill, under which some 50,000 American veterans studied abroad.

The second cornerstone was laid in 1948 when Congress passed the Smith-Mundt Act. The general goals—to quote from this Information and Educational Exchange Act itself—are to "create a better understanding of the United States abroad, to develop a greater knowledge of other countries in the United States, and to advance the frontiers of learning through the exchange of knowledge."

Assistant Secretary of State William Benton, part of whose job it was to set the program up, felt that ". . . exchange . . . is the most important single activity . . . for the long pull. There is greater long-range value out of face to face contacts, and the intimate knowledge that comes through exchange of professors, students, technicians, than in the more transitory or temporary results gained through information activities."

The program centers around the interchange between the U. S. A. and other countries of persons who, by virtue of their interests and careers at home and their activities and contacts while abroad, can best explain our institutions and be of mutual benefit to us and to peoples in participating countries.

The tenth anniversary of the Smith-Mundt Act was celebrated in January, 1958, by the signing of the exchange agreement with the Soviet Union. At the ceremony, President Eisenhower referred to the Smith-Mundt Act as "the basic legislation of our Government's overseas information and cultural exchange programs" and added that "these programs are an important part of our effort to convey to everybody in the world a simple, basic truth: America wants peace."

Support from the People

Though part of a national program, a very large share of what's being done is carried on and paid for by private organizations and people.

For example, Van Cliburn and Joyce Flissler, an American violinist who placed seventh in the now famous Moscow competition, traveled to the U. S. S. R. on a grant from the Martha Baird Rockefeller Aid to Music Program. A third American contestant paid his own way. Once inside Russia, the Soviet Government took care of contestants' expenses. Bob Hoffman, an American bar bell manufacturer and enthusiast for the sport, is underwriting the $20,000 cost of staging the U.S.-Soviet weight lifting competitions going on in this country and is coaching the American team. The visit of the Soviet farmers to Iowa and elsewhere in 1955 was sponsored by a newspaper, *The Des Moines Register.* A group of American veterans of the Elbe River crossing during World War II have annually raised their own funds for reunions with Russian veterans of the same historic campaign and meeting.

The American part of this summer's exchange of forty American and twenty Russian students is under the auspices of the Council of Student Travel. The Council is made up of five sponsoring agencies,† paying about one-third of each student's costs, with the individual student responsible for the rest. Costs of the visit by the Russian students are being taken care of by their government.

A statement included in the U.S.-Soviet exchange agreement comments as follows on the differences in situation in either country:

". . . On the United States side, the exchanges will, for the most part, be carried out by private persons and organizations. In the United States, private persons cannot, of course, be directed to participate in such activities. During the course of the negotiations the various persons, firms and corporations concerned with the proposed exchanges were consulted, and they have expressed their willingness and desire to participate."

This statement expresses our fundamental philosophy as a nation and our belief in the right of individual freedom. But it also indirectly brings up the problem as to whether our government should foot more or less of the bill for the exchange program. Should costs be borne mostly by private organizations and individuals, or by the Federal Government? What are the advantages, what the disadvantages, either way?

Private Enterprise Doing a Job

There are a great number of private organizations on the job. Most of their programs are described in the two handbooks listed in the box on this page.

Programs are being sponsored by such organizations as the Boy Scouts, Kiwanis, Rotary International, and the National Federation of Women's Clubs. Several American copper companies with large holdings in Chile provide fellowships for Chilean students in this country. Several air lines offer free travel for certain scholarship winners coming to America. Virtually every American university offers scholarships for foreign students, as do such foundations as the Rockefeller, Ford, Guggenheim, and Carnegie. Foundations also sponsor foreign study grants for Americans, thus supplementing the Government's Fulbright program.

In the limited space of this guide, it is possible to mention only a handful as examples of the rest:

The Institute of International Education, 1 East 67th Street, New York 21, New York, a private organization which acts as a clearing house for different programs, both governmental and private. It coordinates and administers these programs at home and abroad.

The International Farm Youth Exchange (IFYE), conducted by The National 4-H Club Foundation, 8561 Fenton Street, Silver Spring, Maryland, enables 150 young people to come to the U.S. to live and work on farms for four to six months, while sending 150 young American farmers abroad for a similar period.

The American Field Service International Scholarships, 113 East 30th Street, New York 16, N.Y., enable several hundred foreign teen-agers each year to spend a year in the U.S., living with American families and attending American high schools.

The Experiment in International Living, Putney, Vermont, sends American students abroad for summer visits in a foreign country, including up to a month's stay in a private home.

The American Friends Service Committee, 20 South 12th Street, Philadelphia 7, Pennsylvania, undertakes public service projects in foreign countries with the help of American teen-agers. Typical projects have included repairing earthquake damage in Greece and aid to flood devastated countries in North Europe.

The English Speaking Union, 19 East 54th Street, New York 22, N.Y., supports a program whereby American and English students are exchanged for a year of study in preparatory schools.

ANTA International Exchange Program, ANTA, 1545 Broadway, New York City, sponsors tours of American stage plays abroad, and participates in international drama festivals.

People-to-People, Inc., 45 West 45th Street, New York, N.Y., concerns itself with the friendly reception of foreign visitors and with what Americans can do to cultivate friendliness abroad.

†Sponsors are the Committee on Friendly Relations, the Experiment in International Living, the Lisle Fellowship of the University of Michigan, the National Student Councils of the YMCA-YWCA, and the Ecumenical Voluntary Service of the United Student Christian Council.

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Your and Mr. Friendly's program on Atomic Fallout was wonderful and should make a tremendous contribution toward the understanding, and the thinking based on understanding, which we so desperately need if we are to survive and prosper and not become victims of our scientific progress misapplied.

As I watched the program, I trust you will forgive me if I say again that I was reminded that the Center's VITAL ISSUES, in many of the subjects it treats, could and should lend itself well to the same sort of presentation on television.

I keep thinking that such presentation could render interesting and valuable service in itself, and I know full well that once VITAL ISSUES gets on the television screen, we will have the means of getting the discussion guide itself widely known for both school and adult use. I don't mind saying that, with our necessarily very limited budget for promotion, the struggle, otherwise, is pretty heartbreaking!

I am uncertain how to proceed, and would like to turn to you for your suggestions and advice. Would you be so kind as to let me see you at your convenience? I feel that getting VITAL ISSUES on television offers perhaps the very best chance for the Center's present continuance and could give it that opportunity for growth which, in the opinion of its many well-wishers, can make it, through its various programs, a truly significant factor in American education and in the cause of good citizenship.

With regards,

Sincerely yours,

Townsend Scudder

AIR AND SPACE TRAFFIC:

What's the Problem?

Traffic control beyond earth's atmosphere may seem like the least of the many problems we face as mankind begins venturing into outer space.

But a look at what's happened in the atmosphere between earth and space since 1903, when the Wright brothers had the air all to themselves, should convince us that outer space, too, will have its traffic hazards.

As for regulating flight traffic within the earth's atmosphere, news stories about collisions should be proof enough that our present airways traffic management system hardly seems geared to cope with what's to come.

Statistics on near misses, quite aside from collisions, indicate that under present conditions the air already is overcrowded.

What will the situation be by 1975, when it is estimated that ten times as many aircraft will be in operation?

For a variety of reasons, our methods of handling air traffic haven't kept pace with enormous advances during the past ten years made by our Air Force and our aviation industry. In this age of automation, our system of air traffic control still remains to a considerable extent in the primitive "control tower to pilot" conversational stage of guidance and direction. The system is virtually unchanged in its essentials from what was in operation in the '30's to take care of the far slower planes of that day. Existing and future technological advances for air traffic control, and the governmental set-up for managing national aviation affairs, will need to get more closely together if we're to use our vanishing air space with greater safety and efficiency.

The present chief cause of overcrowding is not just because there are more and more planes. Patterns of traffic concentration tend to follow population patterns. Thus congestion builds up over large metropolitan areas and on the routes connecting their air traffic hubs. In addition, adding to the hazards, military air bases tend to be located almost exclusively near communities with air line stops because of the need for civilian support for the military facility.

Who's to control space, and air traffic control, are all parts of a vital issue.

First let's consider air traffic control.

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, Department of the Army, Washington, D. C.; Dr. Allan Nevins, Professor of American History, Columbia University, President of the Society of American Historians; Dr. Robert E. Spiller, Chairman of the Department of American Civilization, University of Pennsylvania, former President of the American Studies Association, a national society for the study of American civilization.

Editor: Townsend Scudder, President of the Center.

First Printing, April, 1958

Copyright 1958 by The Center for Information on America

WHO'S IN CHARGE?

Congress has assigned to the Civil Aeronautics Administration the job of seeing that air traffic shall flow in safe and orderly fashion. The Federal airways system set up by the Civil Aeronautics Administration consists today of a network of visual and electronic aids to navigation marking over

158,000 miles of airways. There are also supporting air-ground and point-to-point communications systems. For approach to airports, and for landing, facilities include radar, approach lights, and air traffic control systems at large airports and on charted airways. A number of large airports also have instrument landing systems.

Flying is governed by two alternative sets of rules enforced by the Civil Aeronautics Administration. Under Visual Flight Rules, the pilot, to avoid collisions, relies solely on what he sees. This is normal flight procedure for most planes in good weather. Under Instrument Flight Rules, which go into effect automatically when visibility falls below certain minimums, air traffic control takes over the responsibility of assuring "positive separation" — longitudinal, lateral, and vertical — to each plane under its surveillance. Under IFR conditions, the pilot is assigned a specific altitude which he must maintain.

Instrument flight is possible and traffic control service available along all the nation's established airways, in areas around terminals, and in broad areas where intersecting routes create problems in air control. When IFR go into effect, this designated controlled airspace is specifically reserved for controlled flight.

But present air traffic control facilities haven't merely got more planes to cope with. They're also trying to provide

guidance for planes flying faster and faster. Beginning in 1959, civil jet airliners with cruising speeds of 600 miles per hour and better will join the thousands of military jets already using the airways. By 1975, it is figured that turbojet and turboprop planes will account for 90% of the domestic airline fleet. Supersonic carriers may arrive between 1970 and 1975. At the same time, and for most of the next two decades, large quantities of piston engine aircraft will operate along with the jets.

Higher speeds require a larger block of protective airspace around each plane. Faster closure rates call for faster action to eliminate collisions. The mixture of fast and slow aircraft produces special problems. And traffic is building up in areas where airspace is still uncontrolled.

More than anything else, higher speeds are creating a need for traffic control in good weather as well as bad. Human eyesight is doubtful protection against collision at jet speeds. As of December 1, 1957, the Civil Aeronautics Administration initiated a program to control all airspace — but not all traffic — above 24,000 feet. This floor lowers to 15,000 feet in the spring of 1958.

One highly complicating factor faced by air traffic control is the difference in civil and military requirements. It's always been our national policy that there shall be a common system of navigation and traffic control for all users. But air traffic controllers have to cope with such military operations as getting interceptors up through traffic, large scale training missions, and the like.

HOW WE'RE DOING

To its credit, the present system of traffic control manages to insure a very high margin of safety. Between 1948 and 1956, there was a total of 140 mid-air collisions involving civil aircraft. Of these, only two were between air carriers in passenger service, and only 17 involved any carrier aircraft. But the Grand Canyon disaster on June 30, 1956, which took 128 lives, graphically illustrates the fearful potential for fatalities in mid-air collisions. As traffic and speed increase, so does the danger.

In order to maintain a high safety level under present methods of traffic control, restrictions on traffic movements are frequently imposed to the point where they defeat the very purpose of an airways system. They slow things up and cause exasperating delays. The control apparatus covering high density areas becomes saturated and many planes are daudling

and kept circling in the air, or never get off the ground.

To meet an increasingly critical situation, the Civil Aeronautics Administration, with the approval of Congress, launched a six-year modernization program in 1957 to meet the most urgent deficiencies of the present system. One of the key objectives of the Civil Aeronautics Administration plan is the integration of the civil and military electronic short-range navigation systems into a common network to serve both civil needs and military tactical requirements, providing track guidance and aircraft position information at all times. Resulting improved navigational accuracy should considerably increase air traffic capacity. Plans also call for a 75% increase in the number of instrument landing systems.

Another major aim of the Civil Aeronautics Administration program is the installation of a far larger amount of radar equipment to perform a variety of jobs, such as permitting closer spacing of aircraft or enabling a plane to make a landing under conditions of poor visibility.

Though an ambitious and expensive plan, the Civil Aeronautics Administration program does not go beyond 1962. By general agreement it is at best a stopgap and a "catching up" process.

WHAT NEXT?

The crucial question remains: what next?

As a help in considering it, we might take a look at recent history in an effort to find out why the nation's Federal airways system finds itself in such an antiquated condition. One explanation seems to be that there's a lack of clearly defined Federal responsibility for the management of our aviation affairs. And underlying this indecisiveness, there's the phenomenon of repeated conflict of interest between military and civil authorities.

In passing the Civil Aeronautics Act in 1938, Congress specified that "the Administrator shall give full consideration to the requirements of national defense." But in that pre-war era, military air operations were insignificant and uncomplicated. With the growth of the air services by the end of World War II, a Federal airways system capable of meeting military requirements, along with those of civil aviation, became of crucial importance. The need for a military voice in common system development was felt.

In 1946 came the first of several attempts to improve the situation. By executive order, the President set up the Air Coordinating Committee. This Committee was to facilitate communication between the nine government agencies with a major interest in aviation so that conflicts could be ironed out and joint decisions taken on mutual problems. The Committee succeeded in resolving thousands of controversies, but mostly on a local level, concerning such things as airspace use and navigation facilities. Because unanimous consent of the Committee members was required for action, many major policy problems, however, never got satisfactorily settled.

In 1956, President Eisenhower appointed Edward P. Curtis, an Air Force General in World War II, as Special Assistant for aviation facilities planning. His assignment was to conduct a long-range study of the nation's requirements and to draw up recommendations and a comprehensive plan.

Mr. Curtis and his group reached the conclusion that the chief reason for previous failure to modernize aviation traffic facilities lay not in any lack of scientific ideas or promising technical developments but in the inadequacy of "organizational arrangements . . . intended to set the goals, and to develop and to select the systems and methods which will meet these goals."

Legislation was drafted for the immediate creation of an Airways Modernization Board "to develop, modify, test, and evaluate systems, procedures, facilities, and devices, as well as to define the performance characteristics thereof, to meet the needs for safe and efficient navigation and traffic control of all civil and military aviation except for those needs of military agencies which are peculiar to air warfare and primarily of military concern, and select such systems, (etc.) . . . as will best serve such needs and will promote maximum coordination of air traffic control and air defense systems."

On August 14, 1957, the bill became law.

Let's keep alert for the Board's findings, and be prepared to exercise our citizenship through informed thinking, discussion, and decision.

GRASS ROOTS AIRPORTS

Though an integral part of the national aviation facilities system, airports are designed, financed, built, and operated by local authorities. Many will need lengthened and strengthened

runways to handle long-range jets. Equally important will be special fueling facilities, revamped loading areas, and greatly expanded passenger accommodations. It is estimated that airport capacity must be doubled by 1975.

Mr. Curtis, in his report, suggests that the Federal Government should conduct an airport research program as a guide to sound local planning.

What's our opinion as to that?

IS A NEW FEDERAL AVIATION AGENCY NEEDED?

The Curtis report also favors the creation of an independent Federal Aviation Agency. Within it, according to the Curtis plan, would be consolidated "all the essential management functions necessary to support the common needs of the military and civil aviation of the United States." These are now scattered here and there. As Mr. Curtis puts it, "The Government and the public should be able to look to one agency for the management and the responsibility for our national aviation affairs." If the plan goes through, the present Civil Aeronautics Administration would be absorbed within the new agency. Several other functions important to the national aviation facilities system, but now located in other organizations, would be transferred to the new Federal Aviation Agency.

The Curtis report feels that the creation of such an agency could be of particular importance in improving civil-military cooperation for the solution of mutual problems. Chief among these is competition for airspace. To quote Stuart G. Tipton, President of the Air Transport Association, "Airspace restrictions, largely imposed by real or fancied — and that is the issue — military requirements, are blocking off altitudes to the point where it is very difficult for civilian operators to move." As an editorial in *Aviation Week* puts it, what rankles is not the fulfilling of legitimate military requirements, which no one begrudges, but the attitude of the military that it has top priority over any and all airspace which it fancies.

What are our views as to the advisability of setting up a new Federal Aviation Agency, and what are our reasons for holding them?

AND NOW — SPACE!

The conquest of space is perhaps not yet far enough along for us to do much more than think about it. Yet as Senator Lyndon Johnson said, in proposing a Senate special committee to frame legislation concerning the development of outer space, such exploration "will dominate the affairs of mankind

just as the exploration of the Western Hemisphere dominated them in the 16th and 17th centuries."

When senatorial debate on such legislation begins — doubtless with measures for space traffic regulation included — we'll wish to follow it closely.

The immediate question facing our legislators is: Who's to handle America's space development program?

Should the Defense Department do it? We know that proficiency in space could be absolutely essential to national survival. Space ships armed with devastating, annihilating weapons and equipped with cameras, television, and electronic devices to keep tabs on other military activities could enable any one nation to control the world. It is imperative to have defenses against attack from space — and defense is the primary duty of our armed forces.

But ever since the founding of our Republic, we've had a fundamental belief in civilian control, and this belief is sure to play an important part in the ultimate decision as to who's to have charge of our program in space.

Should the Atomic Energy Commission be given the job? Present liquid and solid fuel for propelling rockets and space ships may soon seem as primitive as the sails that drove the ships of early navigators like Columbus, Americus Vespucius,

and Magellan on their pioneering explorations. Atomic power seems far more likely to have what it takes if we are to explore the trackless distances of space. Therefore, should the Atomic Energy Commission, already skilled in the potentialities of this titanic force, be put in charge of our development of space? Or should some brand new agency, perhaps along the lines of the Atomic Energy Commission, be set up instead?

Which alternative, if any, do we prefer, or what else would we suggest?

The Senate Special Committee that was voted into existence with only one Senator dissenting has set June 1, 1958, as the date on which to have legislation on space policy ready. In helping it to shape such legislation, it will seek to draw on the best available knowledge and advice. This will include the counsel of the National Science Foundation. It will include the findings of the Special Committee that has been set up by the Administration under the chairmanship of Dr. James Killian, President Eisenhower's scientific advisor. It will include testimony and suggestions brought out by closed and public hearings.

But meanwhile, there's a problem — a huge question mark — involved which we've been painfully aware of since the first beep of the original Russian Sputnik.

Is a struggle for sovereign control of space about to break out among the nations of the earth — a struggle which, if it resorts to force, would be suicidal to the human race? Or will peaceful development of the potentialities of these vastly expanded horizons bring the benefits of great achievements and advances to all mankind?

How high up does the present sovereignty of a nation go? The major indication as to that which we have right now seems to be the first article of the ICAO agreement which declares that each signatory nation has "complete and exclusive sovereignty over the airspace above its territory."

ICAO stands for International Civil Aviation Organization, which is an agency of the United Nations. It was started in 1944, when representatives of twenty-six nations met and agreed that, for the sake of greater safety and more efficient and beneficial use, there should be an international code of air traffic control. Each signing nation agreed to abide by certain rules of the sky. The International Civil Aviation Organization, as the supervisory body, was set up in 1947. Today some seventy nations belong — but they don't include the USSR or Red China.

The ICAO agreement, however, in its comment on sovereignty, doesn't define what is actually meant by "airspace." The generally accepted idea seems to be that "airspace" consists of the blanket or envelope of atmosphere which surrounds the earth to a height of fifty miles. Within this envelope there's enough density of air to allow for flight by winged aircraft. So the first article of the ICAO agreement would seem to imply that the bounds of each nation's sovereignty lie within this atmospheric envelope.

Beyond lies outer space — which, up till very recently, has received little attention from experts in international law, or from the officials of government who will make the decisions as to what's to be done about space.

In this new age of space, John C. Cooper, legal consultant to the International Civil Aviation Organization, has suggested that the sovereignty of each nation should extend upwards 600 miles. But there's plenty of disagreement as to that. In 1956, before the launching of the first Sputnik, two Soviet lawyers, A. Kislov and S. Krylov, unofficially declared that "there's no limit to the height. The USSR has the right of the skies over their country to infinity." There are people in all nations, including the U.S.A., who also feel that way about space over their own particular country.

President Eisenhower, in a letter to Nikolai Bulganin, Chairman of the Council of Ministers of the Union of Soviet Socialist Republics, has made this suggestion: "I propose that we agree that outer space should be used only for peaceful purposes. We face a decisive moment in history in relation to this matter. Both the Soviet Union and the United States are now using outer space for the testing of missiles designed for military purposes. The time to stop is now." Chairman Bulganin's reply was noncommittal. Consideration of the matter, he indicated, should be part of the whole question of limitation of armaments.

Rocket development, as Secretary Dulles has remarked, is still in an elementary enough stage so as to be "readily subject to be controlled." But once a rocket armament race really gets going, control, as Secretary Dulles points out, becomes increasingly "impossible."

Sir Leslie Munro, of New Zealand, President of the UN General Assembly, has indicated that the next General Assembly meetings will devote much time to the question of international control of outer space. Dr. Oscar Schachter, legal director of the UN, has also warned, "the time to act is now. Questions about space rights are not far-fetched — they're immediate and practical."

What are our views and what are our reasons for holding them, as to whether the right to space should be exercised by each nation individually or should go under some form of international control?

URBANIZATION--

Cover by Stuart Judd, Jr.

Blight or Blessing?

It's still within our power to choose which it shall be.

But our chances of being able to do anything constructive about it, without prohibitive cost, get smaller and smaller with every moment of our countryside's enormous and haphazard growth.

There's nothing wrong about growth, especially when quality accompanies it. In fact it's an American characteristic to take pride in it.

Our faith in the future is shown by the big families we go in for. On the average, there is a new baby born every seven and one-half seconds. Houses to live in, schools to get educated in, factories and offices to work in, buildings to worship in, are all part of the overall picture of our expanding industrial civilization.

We work from specifications and blueprints when we build a church, factory, or school. Individual units are carefully planned. There's a tendency, too, toward extending such forethought to include particular areas.

But how about the whole picture? Take a journey by plane, and what we'll find ourselves flying over is a panorama of runaway growth.

Below sprawls the spreading city. Very likely it is already merging with neighboring cities and towns. In the distance we glimpse the downtown business area, where tall buildings rise from old-fashioned narrow streets which once served residential areas many of which long since have turned into swarming slums. Our attention is caught by intricate cloverleafs and other traffic devices which daily pour their streams into the already congested heart of the metropolis.

Like a patchwork quilt, the vast panorama of urbanization stretches far and wide. Over there is a hodgepodge of suburban expansion with older towns and villages imbedded in it. We see block after block of little houses that look all alike. Mile after mile, along established highways, lie uneven ribbons of haphazard growth—filling stations, restaurants, garages, factories, junk yards, shopping centers, schools, dwellings, and so forth. New, low, landscaped factories are springing up in what used to be cornfields.

Already the eastern coastal region has become so urbanized between Boston, Massachusetts, and Newport News, Virginia, that this six hundred mile stretch is, in short, one gigantic strip city—a "megalopolis," if we want a fancy name for it. Other regions are heading in the same direction. Every year we are converting over a million rural acres into built-on land.

Thus most Americans, present and future, seem destined to live their lives in an urban environment.

That being so, it makes sense to see to it that urban life shall be pleasant and rewarding.

That's not likely to happen if we simply permit our explosive urbanization to go on spreading helter-skelter. If we intend to make the best and most of what's ahead, there are

political, economic, and social problems to be studied and met.

Because it is bound to affect so many lives, now and in future generations, there's no domestic issue more critical, challenging, or vital.

BACKGROUNDS

In 1800, only 6% of the U.S. populace lived in urban places—in towns of any size. We were mostly farmers, and lived on the land. Since then, we've shifted. A major reason is industrialization, which has played so important a part in making us a mighty nation.

Contrasted with what's happening today, the original city pattern was simple enough. It's been compared to a solitary fried egg in a pan. The yolk was the central city with its dwellings, tenements, factories, and shops. Shops and factories could be reached on foot, by trolley-car, or later, by subway. The egg white surrounding the yolk held the suburbs. Beyond lay the countryside with its villages, farms, and woodlands.

But what happens when several eggs—several metropolitan areas—are dropped into the pan and jiggled around?

In the first quarter of the twentieth century, the automobile brought a spectacular change. People could get to where they worked from much further away. Trucks, too, made industry more independent of older methods of distribution like railroads or shipping by water. Factories could move to the nearby countryside where they had more room. Inevitably, housing followed the factories. Old roads not necessarily suited to motor traffic got heavier and heavier use.

The fried egg pattern was shifting to scrambled eggs.

Mostly this change hasn't been part of a plan. It just more or less happened. It's a change which, in some of its features, has been welcome; in some, not so good. For example, take one of the older suburbs. Probably it was first settled by city people well-enough off to afford the higher cost, those days, of suburban living. The work hours of relatively few persons fitted in with commuting by train. Suburban living of this sort was almost like country living, permitting escape from city tensions and crowds.

Then the auto brought the suburbs more nearly within everyone's reach.

These new suburbanites, too, are looking for fresh air and room to stretch in. They want to live not far from their work yet have homes of their own to improve through do-it-yourself puttering.

They also expect to find services to which the city had accustomed them. New stores move in. Shopping centers spring up. More and more cars on the roads mean more and more people. Mass housing extends urbanization far beyond municipal lines. Nearly half the urban population now lives outside the central city.

Thus the basic character of suburban living is being threatened by the suburb's rapid and largely haphazard growth. When there's mass construction without enough provision for getting around, for local recreation, for schools, sanitation, and so forth, something's got to give.

Some suburbs, of course, manage to avoid getting drowned under a tide of urbanization. In these, children are safer than they were on congested city streets. They go to better schools in up-to-date buildings. Life is more relaxed; neighbors more friendly. There are locally-based interests—civic, social, and educational—in which to take part.

But the luck of many a suburbanite isn't that good. Standup commuting adds an extra strain. Or there's the traffic jam, morning and night. There's also added expense. On top of payments due on the house, property taxes keep mounting. Yet often a rising mill rate doesn't mean better schools. Unable to cope with the flood of youngsters, they remain understaffed and forced to hold double sessions.

If not guarded against, all the ills that plague cities move also to the suburbs.

Meanwhile, cities run further into trouble. In addition to such problems as dwindling water supply, below-par schools housed in ancient buildings, air pollution, and narrow streets choked with traffic, there's the matter of slums. Vacated housing deteriorates as city dwellers become suburbanites and lower-income groups move in—sometimes whole families to a single room. Such low-income groups are apt to require outlays for welfare out of all proportion to the meager tax returns which a slum brings in.

Urban decay spreads like a fungus growth. In some cities, despite renewal programs in cooperation with the state and Federal governments, new slums form faster than old, rundown areas can be put in shape.

As Luther Gulick, President of the Institute of Public Administration, remarks, "up till about the beginning of 1954, nobody would admit that America had a 'metropolitan problem.'" But recently we've been waking up to the fact "that the problem is serious and growing, and that something effective must be done about it, and fast." Otherwise we shall be past the point of no return as the haphazard spread of urbanization intensifies problems which old-fashioned municipal government is less and less able to solve.

PLANNING FOR THE FUTURE

It seems no longer a question of "Is planning necessary?" but of "How best shall such planning be done?"

Where planning takes place, it is apt to be piecemeal, so that a community may suddenly wake up to the fact that what its neighbors are doing tends to wreck its own intentions.

Planners—it should be added—are by no means in accord on how to get best results. But probably most would agree that the main idea, for our own and future generations, is to bring useful, usable order to the metropolis, livability to the suburb, and satisfactory land-use to the rural areas left.

An obstacle to all this is human indifference.

If we are to get anywhere, it must be through consent of the people. Consent is based on an understanding of what needs to be done. This means that we owe it to ourselves and future generations to look into the problems of urbanization* in order to meet them with the power of our broad resources and with the backing of our good will. Through the many studies being made from the local small-town level right up to the White House, we are already working toward much greater understanding. Many universities are taking part, besides civic and government agencies. Where metropolitan problems cross state lines, as has happened with New Jersey, New York, and Connecticut, an interstate commission is likely to be formed.

The most striking examples of what's being done are to be found in big cities—though some of the smallest communities may be working on their problems, too, in ways that other towns might follow.

New York is doing a spectacular job—although as Robert Moses, Chairman of its Committee on Slum Clearance, says: "It is unrealistic to imagine that the worst slums . . . can be absolutely cleared and entirely new structures substituted in a foreseeable time. The cost would be simply staggering."

We might also take a look at Penn Center in Philadelphia, or the Back Bay area of Boston. Milwaukee, Baltimore, Denver, the Fort Worth Redevelopment, Detroit, are among other examples.

But perhaps the best way to see how the problems of urbanization can be met is to turn to some city of moderate size.

New Haven's redevelopment program has been called by

**Further reading might begin with "Metropolis in Ferment," the November, 1957, issue of* The Annals *of the American Academy of Political and Social Science.*

Albert M. Cole, U.S. Housing and Home Finance Agency Administrator, "a model for urban renewal in the cities of America . . . spectacular, imaginative, exciting, comprehensive."

The New Haven idea took shape in 1941 when Professor Maurice E. H. Rotival, of Yale University, drew up original plans. These proved too ambitious for the times, but their influence still is felt and the University's cooperation continues.

Mayor Richard Lee sparked the present program into action after the war.

Mayor Lee knew how important to success popular support of the program would be. He wanted it examined and discussed by the largest possible number of people. Presently a Citizens Action Committee shaped up, non-partisan and representative of as many interests in the town as could be drawn in. The Committee's 600 members set themselves the job of finding out why New Haven, seventh oldest city in the United States, was on the skids, and how it could be brought back. They split up into sub-committees and set to work. The population, they found, had shifted to the suburbs, letting the core of the town decay. Shops were strangling on narrow streets cluttered with traffic. With commerce and industry running down, New Haven's importance as a city—not just as the site of a famous university—was on the way out. More and more old residential districts were degenerating into rat-riddled slums. So the Committee and the local officials pitched in. They got busy on all phases of rehabilitation—slum-clearance and housing, industrial construction and renewal, traffic improvement, health, recreation, more efficient public service and government.

A campaign of redevelopment like that can cost plenty, but New Haven's is being managed with only slight added expense to the local taxpayer. This is because most of the money comes from federal programs for rehabilitation, and from private funds. As in other places, investors have become convinced that New Haven is a good risk and that its reconstruction will bring in worthwhile returns. The city, too, expects to gain through considerably increased tax returns when impoverished areas again become productive. There will also be returns to the city through improved parking facilities—several within easy walking distance of the downtown shops—and other services for which users are willing to pay.

The State, too, has helped. From its new turnpike along the shore, it is building an eight-lane, $14,000,000 connecting link. Besides eliminating bottlenecks, this unit seems likely to gain increasing use as the city's crop of modern office buildings goes up on more spacious blocks, and its new housing, new schools, shopping centers, new playgrounds, and parking areas are completed.

Nearly all former residents of slums so far torn down, which are providing much of the space for the reborn city, have already been taken care of in public or low-cost housing that's attractive yet rents at figures often lower than those of the slums.

Thus New Haven, with more adequate housing, improved services, and a revitalized downtown business area, seeks to live up to its name. It can look forward to tomorrow with interest and faith.

A glance at that tomorrow is worth taking, bearing in

mind what risky business prophecy is and how readily upset—particularly by such catastrophies as depressions, or, infinitely worse, another world-wide war.

IN THE CRYSTAL SPHERE

It is no longer so fashionable to predict that big cities are on their way out. Men have made cities since earliest times and cities seem likely to continue as a manifestation of our characteristics and needs. But since change is a law of life, and improvement is what man hopes for, we may expect our great cities of the future to take on a new look.

To reach them we shall pass swiftly through or over suburban satellite towns with up-to-date housing, recreational and educational facilities, shopping centers, and industrial parks.

The metropolitan living of the future may be less urban and more spacious, including farms, forests, and recreational areas. As we approach the central city, we'll be apt to see beautiful landscaping. There is likely to be grandeur and unity to the city itself—perhaps a varied, park-like pattern of super-blocks, eliminating former miles of narrow streets. The main effort will be toward furthering the greatest enjoyment of urbanism's social, cultural, and economic advantages without the crowding, unhealthiness, congestion, danger, and ugliness which characterize too many present-day cities.

The shift from jet-propulsion, wings, or wheels to feet, once we reach the city, will be smoothly and readily made. The present primitive idea that human bodies need to compete with swiftly moving machines through use of the same areas will be done away with. For short hauls, such devices as belt walkways, moving at various speeds, will supplement sidewalks. City transit systems will be greatly expanded and improved with little resemblance to present noisy, uncomfortable, jam-packed subways. Street, highway, and airway collisions will be almost eliminated by automatic radar brakes and other engineering improvements. For longer family trips, a combination air-ground vehicle, with vertical take-off, is likely to be the thing.

People will want to come to or live in the cities for much the same reasons as today. Besides offering the widest opportunity for making a living, the city will continue to have concentrated facilities for culture and fun. This should prove increasingly so as automation cuts into the working day and allows for more leisure. Such proposals as New York City's Lincoln Square Project for the Performing Arts show what's probably coming. A spacious concert hall, a music school and opera house, a play and ballet theater, can thus all be grouped conveniently in landscaped surroundings.

The city of the future may well become a living and dynamic symbol of civilized man.

IN THE MEANTIME

But before any such hopeful prospects can be realized, we must settle down to solving the quandaries of urbanization. Laws and methods to facilitate good government and permit constructive action by private enterprise, by civic organizations, by public agencies are the basic tools through which the citizens of a democracy get things done. We need to study local political institutions to see which are still adequate and where political innovation seems called for to handle the problems which increasing urbanization keeps bringing up. For instance, long-established official boundaries may have very little relationship to area needs. This circumstance alone can throw the proper functioning of local government out of kilter.

Here is a quick run-down of some of these major problems demanding our action:

Housing. This involves slum clearance, relocation of residents, new developments, the fight against blight, and a multitude of factors including enormous costs. These may grow lower through improved building methods including prefabrication.

Congestion. Here we face one of the gravest problems, particularly where metropolitan areas overlap to form vast urban complexes where homes, factories, and commerce seem hopelessly intermingled. In residential areas, this situation breeds slums. In old-fashioned downtown business districts, it causes traffic strangulation.

Schools. We are still being swamped by a rising birth-rate and not enough teachers. Inadequate schools are also the direct result of congestion and overcrowding. They are products of stagnation and decay—whether of the urban, suburban, or country variety.

Water. We have been receiving plenty of warning that presently there won't be enough water. This could amount to a colossal disaster. One remedy would be changing salt water into fresh by methods cheap enough so as not to wreck the economy.

Sanitation. An especially critical problem in suburban areas where an over-concentration of septic tanks produces a costly mess. Here's a threat to health, as well.

Air Pollution. Air currents and smog are no respectors of municipal boundaries. Dangerous gases and smoke can wander far from their source, blighting vegetation, discoloring paint, and sometimes causing death through respiratory and other ailments.

Transportation. Whether by car, plane, truck, ship, or city and suburban transit system, transportation presents plenty of woes. One trouble is that in spite of studies designed toward integrating all forms of mass transportation into a cohesive network, each type still tends to operate as though off by itself. There's an intricate criss-cross of movement that causes delays and a general slow-up. Traffic jams, it's been figured, cost the nation over five billion dollars a year. Constructive thinking and better highway engineering are needed at every level—federal, city, and state. Airdromes capable of handling greatly increased air traffic are a must.

Recreation. Recreation is of considerable importance to life, liberty, and the pursuit of happiness. The better kinds help to keep us mentally and physically fit. Yet the National Recreation Association reports that picnic, boat, and playground facilities are "very inadequate" in the vicinity of most cities of over 50,000 population.

Government. Government is the essential ingredient in helping solve each of the problems of urbanization. It needs to be geared to modern conditions and needs. Its officials should be competent and alive to what's going on, and it is part of the voters' job to see that they are. Urbanization brings with it problems in political science that range from developing a merit system for municipal employees to such matters as the proper role of the federal government toward municipalities, and likewise the role of the state. Should the federal government create a Department of Urbanism—just as there's a Department of Agriculture—or would that be the wrong move? Should more states set up bureaus to furnish municipalities with technical services and advice? How can a city get sufficient funds through taxes and other devices to perform what's called for by its residents? Should a share of the financial responsibility be borne by suburbanites who daily work in the city? Are "authorities"—commissions set up to handle specific services—the best device for managing water supply, transit, bridge and airport construction and maintenance, and similar functions which can be paid for out of fees and tolls?

Most overwhelming question of all is how to handle the huge urban complexes that pay no attention to municipal boundaries, straddle rivers, and spill over into several states. In such metropolitan areas, there may be all sorts and types of governmental jurisdiction, including federal and state as well as municipal, with some even counteracting the function of others. New York City's greater metropolitan area furnishes a striking example. It presents probably the most complicated governmental pattern in the world, involving three states, twenty-two counties, numerous boroughs, and various authorities. One reason why this conglomeration works pretty well is because it is developing a degree of voluntary cooperation among its parts. Each type of government or management involved sends members to regular meetings at which what's being done and what's going on are discussed. This body sets up working committees on specific problems. Thus, though there is no authority to enforce decisions or carry out plans, and less cooperative units can slow things up, the well-being of the whole metropolitan area is at least kept in view.

A further logical step might be federation, with a legislative body designed to bring together all major units concerned with the affairs of the metropolis. Each unit would still manage its own business, preserving the principles of democratic self-government. But legislative decisions having to do with the metropolis as a whole would be made by the federated legislature. At the head, as the responsible executive, we may some day see an elected official—a "metrogovernor"—who may take his place in importance alongside the present governors of the states.

Thus far, the metropolitan area of Toronto, Canada, is the only place where such a federation is now actually functioning —but we're likely to see others follow soon—with the Miami-Dade County area of Florida, and also the area of Greater Detroit, moving in that direction.

Taking the list of problems raised by this guide and considering them on the basis of our own neighborhood and also as representative of the national picture, how do we feel about each? What's being done? What do we believe is still needed? Is or isn't there an intelligent pattern of development?

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

As a progress report, it gives me great pleasure to send to you this just-released booklet on the Center, with your generous comment on VITAL ISSUES included in the section entitled "A Sampling of Opinion". Your encouragement has had a great deal to do with bringing the Center to the point where it promises to become an increasingly significant and important force for education and democracy.

With appreciative regards,

Sincerely yours,

THE CENTER FOR INFORMATION ON AMERICA

WASHINGTON, CONNECTICUT

The medallion on the cover was drawn for the Center by Clare Leighton of the National Institute of Arts and Letters.

WHAT IS THE CENTER?

The Center is an independent non-profit educational corporation established in 1951. It seeks to heed an admonition by President Washington in his Farewell Address that "in proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened."

The Center believes that the future of freedom in the United States — and ultimately throughout the world — will largely depend on an informed, and a thinking, citizenry.

WHY DOES IT EXIST?

In today's world-wide civil war, testing whether men shall govern themselves or submit to being governed, freedom itself is at stake. The more the American people can cultivate in themselves an intelligent understanding of public affairs, the more likely it is that freedom will survive.

Citizens of all ages — especially those who are themselves well-informed — must renew their faith in the idea of a responsible electorate and exert themselves on its behalf.

The Center is dedicated to this objective.

HOW DOES IT WORK?

In order to improve the climate for a responsible electorate, the Center encourages widespread discussion as a prerequisite to wise decisions in national and international affairs. Its activities and aspirations embrace several programs.

"Vital Issues"

VITAL ISSUES seeks to present impartially the background and facts that will enable readers to reach their own conclusions about what should be done. It discusses problems selected by the Center's Editorial Advisory Committee as matters of vital national interest. Editorial policy is based on the belief that one should usually underestimate a reader's knowledge but never his intelligence.

During 1958 VITAL ISSUES is focusing attention on such subjects as presidential disability, our foreign service, possible Statehood for Hawaii, and the non-military uses of nuclear energy. It is published 10 times a year, September through June.

VITAL ISSUES has proved a valuable service to citizens in every State of the Union who wish to keep well informed, to club, church, and other adult study groups, to the employees of business and industry through company reading racks, and to teachers and students in secondary school and college.

In publishing VITAL ISSUES the Center has no axe to grind — other than its basic objective of encouraging individual citizens to focus their attention on public affairs and to form their own opinions grounded in fact.

Institutes in American Studies

One of the Center's important objectives has always been a program of institutes in American studies. Within this field the need for summer sessions for pre-college students has demanded first attention.

Beginning with a three-week Pilot Institute for 40 students in the summer of 1958, the program is planned to take place over a five-year period with subsequent sessions for larger groups in various locations. Mobility will thus be an inherent feature helping the idea of pre-college institutes in American studies to spread and take root.

The Pilot Institute will be held in Washington, Connecticut, the Center's headquarters, using the facilities of The Gunnery, an independent preparatory school, which have generously been made available. In selecting faculty from the ranks of both school and college teachers, the Center is fortunate in having access to excellent sources of counsel, including the Society of American Historians and the American Studies Association, both of which — as well as other groups — are represented on the Center's advisory committees.

Tangible benefits may be expected to result as this program develops, both for education generally and for the individual teachers and students who participate. In ad-

dition to the summer deployment of both facilities and teachers, the Pilot Institute — and increasingly so in the case of subsequent Institutes — may be looked on as presenting promising educational opportunities. Outstanding among these are bridging the gap between school and college, and bringing back to local communities — through the students and teachers returning from the Institutes to their own schools and colleges — a further enrichment of educational purpose and processes.

The Institutes will be devoted to generating a deepened comprehension of the meaning of America, in keeping with the Center's fundamental purpose.

Television and Other Media

The people of the United States are rapidly acquiring new means of mass communications that can be used to enrich their education. How we exploit this opportunity will undoubtedly have a decisive effect on the future of human freedom and public knowledge.

The Center believes that the idea of VITAL ISSUES can be adapted for effective use in films, radio, and television. Although thus far only a start has been made toward developing the use of these avenues of communication, the Center is confident that the time has now come when this goal can, and should, be translated into reality.

HOW IS THE CENTER FINANCED?

The Center started with a gift of $30,000 from an individual who wishes to remain anonymous. Since then generous support has been provided by a number of interested persons and the following foundations:

THE DORIS DUKE FOUNDATION
THE FORD FOUNDATION
THE GRANT FOUNDATION
THE NEW HAVEN FOUNDATION
THE SCHIFF FOUNDATION
THE SPANEL FOUNDATION
THE ALBERT H. WIGGIN FOUNDATION

While the Center's income includes revenues from subscriptions and sales of VITAL ISSUES — which were more than 100 per cent higher in 1957 than in the previous fiscal year — it is unlikely that income from this source will ever be adequate to meet the Center's total operating costs.

Principal reliance must therefore be placed on the support that individuals, foundations, and other sources see fit to provide. During 1958 the Center's operating needs will require in the neighborhood of $78,500, of which approximately $37,500 will be met from VITAL ISSUES revenues and gifts in hand. The balance of $41,000 for all purposes must be raised before the end of 1958.

Contributions to the Center are deductible for federal income tax purposes in accordance with Section 170(c) of the Internal Revenue Code.

February 22, 1958

A SAMPLING OF OPINION

. . . about the Center

Detlev W. Bronk, President of The Rockefeller Institute for Medical Research and of the National Academy of Sciences: *"I have followed with great interest the vigor of the Center for Information on America as evidenced by its steadily expanding services. Perhaps never before has it been so important that Americans should know their country and its institutions, for with this knowledge they will better understand the significant role their country has in the larger community of the world. This you are advancing in a typically American way, mobilizing the resources of technology and mass-communication to bring to every citizen the means for reaching intelligent and fully informed personal and public decisions."*

Richard M. Nixon, Vice President of the United States: *"I have followed with interest the work of the Center for Information on America during the past few years . . . . It is vitally important to the welfare of the nation that we have an alert and well-informed citizenry. I wish you continued success in your efforts to bring knowledge and understanding of national and international affairs to the greatest possible number of people."*

Adlai E. Stevenson, former Governor of Illinois: *"The Center is doing an important job by broadening the public understanding of both our national and international affairs, and I wish it and VITAL ISSUES all possible success."*

. . . *about the Institute program*

William G. Saltonstall, Principal, The Phillips Exeter Academy, Exeter, New Hampshire: *"I strongly believe that these institutes will stimulate a further knowledge and understanding of America by Americans."*

Martin Essex, Superintendent of Schools, Akron, Ohio: *"The procedures and proposals for the Pre-College Summer Institutes in American Studies are very encouraging. In my opinion the proposal has unusual possibilities."*

George E. Shattuck, Principal, The Norwich Free Academy, Norwich, Connecticut: *"I consider the proposal a most challenging program and one in which there will be great interest on the part of the participants."*

Allan V. Heely, Headmaster, The Lawrenceville School, Lawrenceville, New Jersey: *"The Institute I think would be particularly timely in these days when the whole educational system of the country is under increasingly close scrutiny, for the project seems to create an awareness of, and to reaffirm the country's basic tenets of freedom of thought and action."*

. . . *about "Vital Issues"*

Edward R. Murrow, Columbia Broadcasting System, Inc.: *"I think this is an eminently useful, well-edited, and stimulating contribution to the current literature of our time."*

Brendan Sexton, Director of Education, United Auto Workers: *"They seem to me to be extraordinarily well-edited . . . . Yours looks like a very interesting and useful program."*

Sister M. Madeleva, President, Saint Mary's College, Notre Dame, Indiana: *"This publication from the Center for Information on America will be of great value because of its compactness, its timeliness, and the authoritative qualifications of its contributors."*

Robert L. Johnson, President, Temple University, Philadelphia, Pennsylvania: *"It seems to me that the work you are doing is very important and I want to compliment you and your staff on the highly palatable manner in which you are attaining your objectives."*

Francis Parkman, Executive Secretary, National Council of Independent Schools: *"This is the kind of venture which I like to bring to the attention of our schools."*

Ben M. Snyder, Assistant Headmaster, Cranbrook School, Bloomfield Hills, Michigan: *"This has become an important teaching device and we thank you for your unique contribution to the study of current problems."*

Louise E. Mills, Head of Business Department, Senior High School, Winthrop, Massachusetts: *"I don't know how much advertising you are able to do or how widely VITAL ISSUES is used but it should be in every school and in as many classes as time permits."*

James T. Patterson, U. S. House of Representatives: *"It is seldom that one is privileged to read material on pertinent national issues which is truly objective, well written, and extremely factual in content. This service is the rule rather than an exception when applied to the offerings of The Center for Information on America."*

Dear Mr. Murrow:

I note with interest that the question of statehood for Alaska and Hawaii is to be on "See It Now" on Sunday, March 2. This calls to mind several conversations we have had in the past on the idea that the printed word and television presentation might well complement each other, and my suggestion that perhaps the Center's VITAL ISSUES might serve in that respect. We have had guides on both topics--in fact that on Hawaii was our January issue. I enclose copies of both.

I am delighted you are taking up this question for it is most important, it seems to me, and for many reasons, that Americans become better informed on it.

With kind regards,

Sincerely yours,

Townsend Scudder

December 4, 1957

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

In a campaign to draw wider public attention to the services of the Center, we are presently issuing a descriptive brochure. We have asked a few distinguished citizens in various occupations and professions to permit the use of their estimates of the Center as part of this brochure. We already have brief statements, with permission to quote, from such persons as Dr. Detlev Bronk, President of the Rockefeller Institute, and Vice-President Richard Nixon. We should be deeply appreciative if you would care to furnish us with a statement for this purpose.

You are already familiar with VITAL ISSUES, in the Center's Discussions Program which, as you know, has Ford Foundation support. I enclose the two most recent issues for your further inspection. You are also aware, I believe, that the Center's plans and services are by no means confined to its Discussions Program. We are making real progress, for example, toward inaugurating Pre-College Summer Sessions in American Studies as part of our Conferences Program. Should you care to look more closely into our plans in this respect, I am sending you, under separate cover, a report on the proposed curriculum for a Pilot Session in the summer of 1958. The two-page preface presents current developments and a brief history of the idea. Further reading is entirely optional!

Your estimate of the value of what the Center is doing, for inclusion among those I have mentioned, would be of the greatest help in furthering the work of the Center.

With kind regards,

Sincerely yours,

Townsend Scudder

New York 22, New York

Dear Mr. Murrow:

It occurs to me you may care to see the two most recent numbers of VITAL ISSUES, so here they are.

By the way, you will be interested, I think, in a comment from a letter recently received from the Enoch Pratt Free Library of Baltimore, Maryland, concerning their activities for adult education. Referring to their use of VITAL ISSUES, they remarked: "We bought the Vice Presidency issue in quantity to have on hand at showings of the Murrow Vice Presidency film, which were held at the main library and several branches."

I still trust that a way may be found in which VITAL ISSUES might be made systematically useful as an adjunct to your work.

With regards,

Sincerely,

Townsend Scudder

THE UNITED NATIONS EMERGENCY FORCE--
Set It Up On a Permanent Basis?

The Senate's Foreign Relations Committee, by unanimously recommending Senate passage of the following Resolution, looks with favor on the idea.

IN THE SENATE OF THE UNITED STATES

JANUARY 7 (legislative day, JANUARY 3), 1957

Mr. SPARKMAN (for himself, Mr. HILL, Mr. HUMPHREY, Mr. KEFAUVER, Mr. MANSFIELD, Mr. SMITH of New Jersey, Mr. CASE of New Jersey, Mr. WILEY, Mr. KENNEDY, Mr. FLANDERS, and Mr. JAVITS) submitted the following resolution; which was referred to the Committee on Foreign Relations

JULY 16 (legislative day, JULY 8), 1957

Reported by Mr. SPARKMAN, with amendments

RESOLUTION

Whereas the United Nations emergency force, created pursuant to resolutions of the United Nations General Assembly of November 3 and 4, 1956 (A/RES/391 and A/RES/394), has made an important contribution to international peace and security in the Middle East; and

Whereas the need for such a force appears likely to continue; and

Whereas such a force could be an important instrument for the maintenance of international peace and security not only in the Middle East but also in other areas of the world:

Therefore be it

Resolved, That the Senate welcomes the establishment of the United Nations emergency force.

SEC. 2. It is the sense of the Senate that—

(a) ~~the force~~ *a force of a similar character* should be made a permanent arm of the United Nations;

(b) ~~the~~ *such a* force should be composed of units made available by members of the United Nations: *Provided*, That no such units should be accepted from permanent members of the Security Council;

(c) consideration should be given to arrangements whereby individuals would be allowed to volunteer for service with ~~the~~ *such a* force: *Provided*, That individuals who are nationals of permanent members of the Security Council should not be acceptable;

(d) equipment and expenses of ~~the~~ *such a* force should be provided by the United Nations out of its regular budget.

Do we say O. K., too?

Should the idea of establishing a permanent United Nations force receive official U. S. approval?

To help us decide, let's take a close look at what's been going on and on what seems to be developing.

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, Department of the Army, Washington, D. C.; Dr. Allan Nevins, Professor of American History, Columbia University, President of the Society of American Historians; Dr. Robert E. Spiller, Chairman of the Department of American Civilization, University of Pennsylvania, Council Member and former President of the American Studies Association, a national society for the study of American civilization.

WHY AND HOW THE U. N. E. F. WAS SET UP

It was set up at a moment of intense world crisis* that looked to plenty of observers like the beginning of World War III.

It was set up after the shooting had actually started.

In the Middle East, armed forces of France, England, and Israel were blazing away at separate Egyptian positions. The

English and French were attacking at Port Said, on the Mediterranean end of the Suez Canal. The Israeli army was sweeping across the Israeli-Egyptian boundary into the Gaza Strip and Sinai. In Sinai, Israeli forces speedily took over Egyptian fortifications at Sharm-al-Shaikh, which up to then had been barring Israel's shipping from use of the Gulf of Aqaba as her means of reaching the Red Sea — since Egypt would permit no Israeli vessels to pass through the Suez Canal.

And as almost always happens when the shooting begins, other nations, on either side, were showing signs of being drawn in. The most serious threat of an expanding war was coming from Russia, which had already been supplying Egypt with arms. Russians were reported to be volunteering for service with the Egyptians. There was also an official threat from Bulganin that "modern and terrible" weapons would be

used unless the Anglo-French forces, and the Israelis, pulled out.

And, as in almost every shooting crisis, there had been a complicated build-up over a considerable time before the guns went off.

In 1948, Israel had declared herself an independent state. A majority of U. N. members recognized the new Republic, the U. S. A. being among the first to do so. But U. N. member states who belonged also to the Arab League refused to acknowledge what had happened. They started marching in an army to put Israel down. Instead of a push-over, they met with such effective resistance from the Israelis that the new Republic was even able to add more territory to what was originally allotted by a U. N. committee. At this stage of the game, the United Nations persuaded Arabs and Israelis to agree to an armistice.

But this 1949 truce has been an uneasy affair, with Egypt, as leader of the Arab bloc, refusing to admit that her state of belligerency with Israel had ended. It is because of this claim that Egypt has all along denied Israel the use of the Suez Canal and has tried to hold up Israeli shipping that sought to reach the Red Sea through the Gulf of Aqaba past the forts of Sharm-al-Shaikh.

When Colonel Nasser, head of the Egyptian state, in 1956 nationalized the Suez Canal, his action came as a great shock to England and France. Both had been hoping for some form of international control to safeguard their use of it. Nasser, because the Canal goes through Egyptian territory, argued he had the right to run it.

So when Israel, on October 29, 1956, after enduring repeated raids year after year by Egyptian feedayan or commandos from across the Gaza Strip, at last struck at Egypt in offensive self-defense, England and France, regarding the right of passage through the Suez Canal as also essential to themselves, struck too.

The Israelis launched what became a hundred hour blitzkrieg which shattered the Egyptian Army. Israeli forces took over the Gaza Strip, moved swiftly across Sinai toward the Canal, and at the same time seized the fortifications at Sharm-al-Shaikh.

At the Mediterranean end of the Canal, the French and English landed troops at bombed-up Port Said. This action looked as though it would not stop till after taking over the whole waterway.

It was at this point that the United Nations, dedicated to the preservation of world peace, stepped in.

The General Assembly passed a resolution calling on Israel, France, and Britain to withdraw. Russia and the U. S. A. were included among the nations that voted "yes."

Though the General Assembly of the United Nations has no power to enforce its requests, this one had the power of world opinion behind it.

As to those volunteers from Russia, who looked as though they might swell the fighting into a big war, the U. S. A. warned the U. S. S. R. that there was to be nothing like that. A rapid concentration of U. S. naval forces in the Mediterranean caused the "volunteers" to lose interest, and the Soviet press let the subject drop.

England and France announced they would bow to the U. N.'s efforts to restore peace in the area. But — declared the British representative in the General Assembly — U. N. police action, to keep things quiet during the troop withdrawal, was a must.

Next day, over the protests of Britain and France, a "cease-fire" resolution, proposed by the U. S. A., was voted by the General Assembly. Then the Assembly adopted a Canadian proposal creating the U. N. E. F. "to secure and supervise the cessation of hostilities."

The General Assembly decided that the Great Powers should be specifically excluded from furnishing contingents. Moreover, no power directly connected with the dispute was to supply men for the Force, which was to be made up of

volunteer units drawn mostly from the smaller nations. To make sure that there would be no lopsidedness to the Force, national units were to be of battalion size or under. Major General E. L. M. Burns, of Canada, who was already in charge of the U. N. Truce Supervision Organization along the Arab-Israeli border, was named Commander. The direction and organization of the Force itself was to be the responsibility of the U. N. Secretary General and not of any designated member nation. The one restriction the U. N. felt impelled to place on itself in creating the U. N. E. F. was to the effect that the Force could not "be stationed or operate on the territory of a . . . country without the consent of the government of that country."

**For backgrounds to the crisis, see Vol. VI, No. 5 of VITAL ISSUES, "The Middle East — What Goes On?"*

The U. N. E. F., when in operation, would be something new in international practice: a body of men armed not to fight but to prevent fighting. When the shooting stopped, it was hoped that the questions under dispute could be settled by means other than force.

THE U. N. E. F. IN ACTION

Given the green light to organize the U. N. E. F. and put it to work, Dag Hammarskjold, Secretary General of the United Nations, got busy.

A staging area for the Force was offered by the Italian republic and set up at Capodechino Airport, near Naples. First unit to arrive was that volunteered by Denmark. The Danes were flown in by U. S. Skymasters and flying boxcars stationed at Wiesbaden, Germany. Almost at the same time

a contingent of Norwegian ski troopers arrived the same way, and Capodechino began taking on the look of a busy military base, with preparations in full swing to take care of new arrivals. These included tall, sinewy, brown-skinned paratroopers from the republic of India — members of one of her most famous regiments, striking to look at in their colorful red turbans. Their journey from India was as noteworthy as the men. Pacific-based American Super-Constellations had picked them up at Agra for the flight to Capodechino — negotiating successfully what was perhaps up to then the longest military air lift in history. The Colombian unit, from Latin America, also came in U. S. Super-Connies which picked them up at Bogota. Only the Canadians — units of the Queen's Own Rifles, a regiment dating back to the French and Indian Wars before the American Revolution — flew themselves in, arriving aboard Royal Canadian Air Force North Stars.

Dag Hammarskjold stopped off briefly at the staging area to inspect his forces, still only several hundred strong, but with more arriving almost every day. A force of 4,500 — he explained to newsmen — was being planned on, with an ultimate strength of perhaps 6,000. Then the Secretary General hurried on to Abu Soueir for talks with the French and English commanders, then to Cairo for negotiations with Nasser.

The British and French announced themselves "in full agreement" that company-sized units be assigned immediately to Port Said. As for the Egyptian Government, it was eager for this to be done as a starter toward the withdrawal of the French and English from Egyptian soil.

But just how this peace-keeping wedge of U. N. soldiers would make out as it took up positions between the fighting forces on either side was anybody's guess.

Flown in without charge by Swiss transport planes, an advance unit of 192 Norwegians, under their commander, Major Wiik, landed on November 15 at Abu Soueir airfield. Lightly armed with rifles and machine guns, they moved cautiously into the battered city of Port Said. They had no orders to shoot, explained Colonel C. F. Moe of Norway — U. N. E. F. Deputy Commander — though the time might come when they would have to use weapons. "When the local population sees the U. N. troops here with the approval of their government" — added the Deputy Commander — "tensions will probably be eased."

That's exactly what happened. As this and later units of the U. N. E. F. patrolled Port Said, then crossed the cease-fire line and took up positions further along the Canal between British and French forces and Egyptian positions, they transformed a narrow strip along the Canal into an international barrier against war. Under these conditions, the French and English withdrawal began to be carried out as agreed on and no major disturbances got a chance to take place.

After the English and French were out, but before the Canal itself was cleared of wreckage or any settlement of the dispute as to the Canal's use had been reached, Dag Hammarskjold withdrew the U. N. E. F. from the immediate Suez Canal area. As the Secretary General explained, the use of the U. N. E. F. "must be impartial, in the sense that it does not serve as a means to force settlement, in the interests of one party, of political conflicts or legal issues recognized as controversial."

An agreement for use of the Canal that will secure "freedom of navigation" for all — in the words of a U. N. resolution — has still to be reached.

In the Sinai desert-Gaza Strip-Gulf of Aqaba area, the U. N. E. F. still holds its positions.

The Israeli Army, in its withdrawal at the General Assembly's request, was in no haste to leave. Israel was determined to block Nasser from again attempting to set up an Arab offensive which, according to evidence they had collected, was designed to wipe out the Jewish state in Palestine and drive its inhabitants into the sea. It was this threat, with action reportedly planned for the early spring of 1957, Israel maintained, which had prompted their own offensive in self-defense. As they withdrew, they saw to it that no roads useful to an invading Egyptian army remained intact. No staging areas for an attack on Israel were left in usable condition.

While the Israelis methodically pulled back, the U. N. E. F. began taking up positions between them and the badly mauled Egyptian forces. The distinctive white jeeps of the U. N. observers became familiar sights as they directed U. N. E. F. units to strategic positions. The Yugoslav battalion, which had brought its men and materiel direct by ship to Port Said, was ready to move forward by means of its own mechanized equipment. Road barricades, flying blue United Nations

flags, and illuminated at night by floodlights, went up as the U. N. forces moved in. A United Nations resolution, passed February 2, 1957, declaring that the U. N. E. F. should station itself along the Egyptian-Israeli armistice line, served considerably to strengthen General Burns' hand.

The Israelis had clamped a tight curfew on the entire Gaza Strip. Would the thousands of Arabs under house arrest burst out violently as soon as the U. N. forces were sighted? U. N. loud speaker trucks blared out pleas for calmness and order.

It worked. No real trouble flared up as U. N. units, wearing the uniform of ten different nations† but marching under only

†List of nations contributing units to the force: Brazil, Canada, Colombia, Denmark, Finland, India, Indonesia, Norway, Sweden, Yugoslavia.

one flag, moved into the area.

It was nip and tuck as the Israelis completed their withdrawal back into Israel. Would Nasser order the tiny U. N. E. F. out of Gaza so that he could prepare for another build-up of Arab forces? If that were to happen — warned the Israeli Government — the army of Israel would strike again.

But though Nasser set up his own civil government in Gaza, he has not requested the U. N. E. F. to pull out. Probably he is glad to have it as a shield against the well-trained Israeli Army. So the U. N. E. F. remains in Gaza as a police force and border patrol. It has set up a series of observation posts several hundred yards apart along the two to three foot deep ditch that the Israelis dug to indicate the demarcation line. On the Gaza side, one can watch Palestinian Arabs, who left Israel mostly in 1948, tending their lands with camel-drawn plows and crude implements of a type used by their ancestors thousands of years ago. Within sight, across the line, Israeli farmers, whose ancestral stock dates back like that of the Arabs, work their fields with modern American tractors and equipment. And each spring, millions of red poppies rise from fields that have often been stained with human blood.

In the Gulf of Aqaba area, other U. N. E. F. units are stationed to keep the waterway to the Red Sea open for Israeli shipping.

With the U. N. E. F. serving as the buffer between, there's a lull along the Arab-Israeli contact points of the Middle East.

How long this may last, nobody knows. Perhaps Nasser, when he's had time again to build up his army, will release the whirlwind. Perhaps something else will. Yet perhaps — so long as the U. N. E. F. stays on the job — nothing explosive will happen.

WHAT FUTURE FOR THE INTERNATIONAL FORCE?

It's only natural, considering how things have worked out with the U. N. E. F., that suggestions keep coming up to make it permanent.

Early in the Middle East crisis, U. S. Secretary of State John Foster Dulles told the Senate Foreign Relations Committee, "I would be glad to see, myself, some more or less permanent character given this force." If made permanent, he felt, it could take on similar functions as other crises developed. "It raises quite complicated problems," he warned, "but in principle the idea of such a force is good."

Judging from bi-partisan resolutions before the Senate and House, many congressmen, too, are for the idea. Senator John J. Sparkman (D), who introduced the Resolution given on page one, predicts that the U. N. E. F. will become the nucleus of "a permanent, small, highly mobile U. N. force that could move quickly into any area."

The Twelfth General Assembly of the U. N., meeting in the fall of 1957, also has on its agenda the question of a permanent force.

All this gives us plenty of opportunity, based on plenty of public discussion, to form and express our own opinions as to what should be done.

Do we, or do we not, agree with Section 2 of the Resolution (see page 1) that "a force of a similar character (to the present U. N. E. F.) should be made a permanent arm of the United Nations"?

If we agree, how about Section 2b? What are our views on exclusion of units from permanent members of the Security Council? What arguments might be presented pro, what arguments con?

How about 2c? Are we for or against a force that would contain individual volunteers? What might be the advantages, what the disadvantages, of adopting this idea?

What about d? The probable 1957 deficit of six or eight million dollars will have to be made up by voluntary contributions from member nations. What to do about the costs for 1958, estimated at twenty-five million, is something the Twelfth General Assembly, including our own delegates, will have to decide.

There are many other problems likely to come up, among them the following:

1. Shall the strength of the force be only sufficient to serve to quell mobs, prevent looting, and keep raiders out during an international crisis until local authority can be restored?
2. Shall it be made powerful enough so that when a crisis comes, the force can serve within a state or states regardless of whether or not those states consent to its presence?
3. In working out plans for the new force, shall Article 43 of the U. N. Charter be considered, or be ignored and scrapped? Article 43, like the rest of the Charter, was written in 1945 when there was hope that the five Great Powers that made up the permanent members of the Security Council could keep on working together as they had during World War II. Article 43 calls on U. N. members to hold "armed forces" in readiness in case the Security Council decides to use force. Article 47 set up a military staff committee to work things out, with the U. S. A. and U. S. S. R. both represented. But the committee has never been able to see eye to eye and the cold war seems to have put an end to the whole notion.

What do we think should be done about problems like these?

Where we go from here is a very vital issue.

The editors wish to thank the Department of Public Information of the United Nations for helpfulness in preparation of this guide.

Education Beyond the High School-Crisis at the College Level?

"We must assess, with painful anxiety, the penalties we will suffer if we permit Soviet Russia to outstrip us in the education of her people."

That's what Senator Prescott Bush told the New England Conference of State Federations of Women's Clubs in a recent address.

For Russia's attitude on education, he cited a memorandum from a report being made by Dr. Finis E. Engleman, Executive Director of the American Association of School Administrators, and Chairman of the U. S. Delegation to the Twentieth International Conference on Education at Geneva: "The Soviets put schools ahead of almost everything else in their mad scramble for world domination."

America's belief in the value of education stands as one of our oldest and firmest traditions. It's a tradition which has played a potent part in bringing us the blessings we enjoy today. A well informed and educated people is a must for the continuing success of our democracy and the preservation of our way of living. That is why, as Senator Bush puts it, "We must give sober and careful consideration to whether we are doing enough for education at all levels of government."

And that, of course, applies to all levels of education as well.

Many indications, including crowded schools and a scarcity of teachers, emphasize the crisis over the past few years at the secondary education level.*

This crisis now is threatening the college level as well.

For 1957-58, the largest number of students ever is enrolled in our institutions of higher learning. According to the U. S. Commissioner of Education, the figure stands at around three and one-half million—some two hundred thousand more than last year's record crop. Or put it this way: one out of every three young persons between eighteen and twenty-one is now going to some university or college.

According to the people who deal in population statistics, this is only about half the story if we look ahead to 1970. By 1970, students in higher education will number at least six million—if not nine million as some estimators believe. If present trends persist, by 1970 one out of every two young persons will wish to go to college.

Proportionately, that's a far greater rise than the expected increase in population itself.

If the facilities for taking care of this flood of students threatening to overwhelm the colleges don't keep up with the demands and needs at the college level, we'll be faced with a truly critical and wasteful situation. As Senator Bush points out, it is a vital issue which calls for our "sober and prayerful consideration."

How Did This Crisis Sneak Up On Us? There are several reasons for this gathering rush to the colleges.

The most obvious is the greatly increased number of young

people ready and wanting to go.

Ever since the end of World War II we've had bumper baby crops. After flooding into our secondary schools, a large number of these young Americans now are pushing forward into college. They wish to go because they and their elders believe there are many advantages. For one thing, this jet-propelled age of atomic energy and automation puts a high premium on college education and specialized training. It calls also for the type of training for life and leadership which a liberal education is believed to give.

Overcrowding and lack of facilities haven't yet quite reached the point of acute crisis. Most young applicants, this year and next, will get into college—though not necessarily the college they'd prefer. Most still will find pretty fair facilities for education.

But can we afford to ignore ominous signs of trouble ahead? Can we neglect to give serious attention toward seeing what needs to be done?

It is for the purpose of stirring people into thoughtful planning and action (since education is everybody's business in a democracy) that the President's Committee on Education Beyond the High School has issued its most recent report.†

Drawings by C. P. Meier

The Committee has this to say about the U. S. A. and education: "America would be inexcusably blind if she failed to see that the challenge of the next twenty years will require leaders not only in science and engineering and in business and industry, but in government and politics, in foreign affairs and diplomacy, in education and civic affairs . . . World peace and the survival of mankind may well depend on the way we educate the citizens and leaders of tomorrow."

The Committee's assignment was to uncover the problems of education beyond high school and suggest how to meet them.

So while there's still time, let's get on with the business. Let's plan to read the report. And let's now consider at least the major recommendations of the Committee that concern themselves with education at the college level—the level that generally leads to the B.A. and B.S. degrees.‡

Top item on the Committee's list is the pay teachers get at the college and university level.

College Teachers — and Faculty Salaries. Without teachers to do the teaching, colleges couldn't educate. They're the indispensable factor, more vital to successful higher education than up-to-date buildings, laboratories, or anything else.

Have we enough teachers now, and if not, why not?

We now have about two hundred and thirty thousand college teachers. That's a ratio of around one to every thirteen students. If we want to keep this ratio where it is, we'll have to add at least 115,000 additional teachers to meet the needs of the additional students pouring in. By 1970, the number of teachers would have to be doubled.

Yet a survey of the present situation shows that fewer instead of more people are going into college teacher training or are taking graduate work with a view to entering college teaching. In fact many are leaving the profession because

elsewhere they have a better chance for advancement and more pay.

Money isn't everything—but teachers must live. Most are dedicated to their profession—but is it fair to take advantage of that? In these days of a higher and higher standard of living, and higher prices, too, inadequate pay really hurts. By professional standards—and a college teacher's preparation ranks with the toughest in difficulty and in length of time that it takes—college teachers are drastically underpaid. Only about thirteen percent of all college teachers can expect to earn as much as $7,500 or better per year. More earn considerably less.

College pay is out of whack with the current rise in the cost of living. In the past fifty years, the average instructor in a large university has increased his purchasing power by about forty percent. But people in manufacturing have found theirs increasing by as much as 130 percent.

So the President's Committee recommends that average faculty salaries be doubled within the next five or ten years, and that fringe benefits, such as retirement funds, parallel what's being done for employees in industry. Action like this, the Committee feels, will help place college teaching on a competitive footing equal to that of comparable professions. Better pay should help to keep able teachers in the teaching profession and attract high caliber young people into it.

Of course the need to recruit the most able prospects is regarded as imperative by the Committee, along with seeing to it that they get top-notch training.

What are our views on this problem of getting enough good college teachers, and how do we feel about the Committee's recommendations on pay? In our own locality, what's being done to recruit good people into college teaching? Do we, or do we not, agree with the Committee that faculty improvement, and increase of faculty salaries, should come ahead of development of the physical plant? What's the tendency

†*The Chairman of the President's Committee on Education Beyond the High School is Devereux C. Josephs, Chairman of the Board of the New York Life Insurance Company. The membership is comprised of other distinguished citizens from education, business, publishing, law, public life, and labor. The report referred to may be ordered from the President's Committee on Education Beyond the High School, Health, Education, and Welfare Building, South, Washington 25, D. C., at no cost.*

as to which comes first in institutions with which we are familiar? Do we or don't we approve?

The Students. Students are the obvious other and all important human side of the fundamental college equation.

The fact that some of our best potential college material never gets to college at all means that there's a waste of talent which America, right now, can ill afford.

Nearly half of the upper twenty-five percent of all high school graduates are not entering college. There are various reasons for this. Everyone knows that tuition is apt to come high, and that stops a good many. But a sizeable number of these brighter students don't go simply because they have not learned about and planned for the opportunity of getting a college education. Therefore the Committee recommends that guidance as to college possibilities be considerably stepped up in the schools. It suggests that more information as to colleges be made available by such government agencies as the U. S. Office of Education.

What are our views as to these recommendations? Locally, is or is not such counselling and information adequately available? What locally do we feel should be done?

As to tuition costs, it should be borne in mind that high as they may seem, the amount paid by a student is only part of what it actually costs the institution to put him through college. Even if he has a full tuition scholarship, the institution will still be out of pocket unless it receives gifts to supplement tuition—whether paid by the student or met by scholarship funds.

For the college, the Committee urges that sufficient funds be made available so that they can do a satisfactory job.

For parents faced with the expenses of putting young people through college, the Committee suggests revision of income tax laws to ease the burden.

For qualified but needy students, the Committee recommends that increasing help be given in the form of loans, jobs, and scholarships.

If long term loans are made available to able students unable to get enough scholarship funds, the young men and women receiving such loans can pay them back in installments as they earn money after college. As for programs of jobs

within colleges—a spot where the Committee feels the Federal Government could help—they not only give the student extra money to finance his education but also help the colleges themselves. Pay checks to regular hired hands can mount up to sizeable expense.

There's been considerable increase in the money available for scholarships. Foundation programs on a nation-wide basis are providing a great stimulus. Industry, by granting scholarships and setting up scholarship programs within individual companies for the company's personnel, are making a mounting contribution. On the ticklish question of federal scholarship aid, the Committee's advice is to go slow. Help for education from the Federal Government is regarded by many as dangerous lest it lead to Federal control. The Committee feels that federally granted scholarships, in most instances, should only be set up if private resources don't provide enough.

What are our views as to each of these points?

Expansion of Facilities. If more students are to be taken care of in the colleges, expansion of facilities becomes a must. This means dormitories, laboratories, classrooms, and the rest. It also, of course, applies to increased college teaching personnel.

The President's Committee believes that before new colleges are set up, those already in existence should be given the opportunity to expand their facilities.

What are our views on the subject of expansion?

Efficiency. Any operation can be improved through greater efficiency. The President's Committee urges that colleges and universities make every effort to get the most and best out of what they have.

The individual states, the Committee feels, could trade information as to the use of facilities in the state universities. Some excellent state universities, geared to take care of more students, could drain off some of the surplus from already overcrowded institutions.

Federal efficiency also gets a searching look. There are many government programs aiding education in one way or another—the report records—without much coordination among them. The Committee feels that the Office of the Secretary of Health, Education and Welfare could do something to improve this situation. It could also make available more information on college education than is now readily at hand.

Non-accredited Colleges. A considerable number of colleges, because of insufficient funds, can't hire enough teachers with graduate degrees, like the Ph.D., or maintain well enough equipped laboratories, to gain what is known as "accrediting" —official certification that they are able to provide for their students the grade of education required to earn the B.A. or B.S. degree. The Council for Financial Aid to Education suggests that, if worthy colleges in this category can be helped to raise a little more money, they could improve their facilities enough to win accreditation. This should enable them to take on 100,000 or so additional students.

How do we feel about that?

Junior Colleges. Another suggestion for relieving the strain is to up the number of two year colleges. At present there are relatively few and their total enrollment is small. But the President's Committee believes that they well may be "the next logical step in filling in and rounding out our educational system." They have the merit of providing at least a fair amount of training for students who wish to go on beyond high school, but perhaps not four years beyond.

From the local community's point of view, such colleges are not overly expensive, since costly laboratories and campuses are not necessary and students can live at home.

But the President's Committee warns that the junior college idea should not be overworked, lest it weaken itself and also cut into the financial support going to local elementary and secondary schools. Communities expecting a big student population growth are in the best position to set up successful junior colleges. Only a community that really wants one, and is ready to support it, should try to make a go of such a project.

What's the junior college situation in our neighborhood? If any exist, of what type are they and what do they teach? Do we or don't we feel there's a need for further development of the junior college idea in our community?

Television, and Education Beyond High School. Here's a gimmick which may well prove of great value. Television

is still in the experimental stage in providing education that

merits awarding the B.A. or B.S. degree. Yet already, here and there, about half a dozen experiments are going on to teach regular college courses by TV. There are twenty-two educational TV channels in operation.

Going to college by television is a development that justifies careful watching.

What's the situation with regard to educational TV in our vicinity? What's our opinion of what goes on?

Financing Education at the College and University Level. That's the rock-bottom problem—because college education comes high.

As William G. Carr, Head of the National Education Association, says, "The high quality of education that Americans need and will get in the next twenty years cannot be bought in the bargain basement."

In 1957-58, running the colleges and the universities of the U. S. A. will cost close to four billion dollars. If we build up the plant to take care of expected enrollments, and raise teachers' pay in the amount suggested by the President's Committee, the total sum should double by 1970. This represents a staggering amount of cash.

So staggering, perhaps, that recent sessions of Congress have seemed in no mood to vote substantial federal benefits to education.

As for the states, faced with the rising cost of running their affairs, they, too, seem slow to act. Higher education appears to have less voter appeal than some of the other services that draw on state revenue. But some well-off states, the President's Committee feels, could do more for higher education than they at present are doing—and that goes also for local governments, particularly metropolitan areas.

One source of support for higher education that has increased immensely is revenue contributed by industry and business. The hundred million dollars given this year is four times the amount of five years ago. Labor, too, the Committee feels, though making contributions, can and should make more. And then, of course, there are the alumni and the general public.

It's Up To Us. Whether it is through taxes, or direct or indirect contributions, it's the citizen who pays the costs. It is we, the people, who must decide what we're willing to pay for higher education.

To help us make up our minds, the President's Committee strongly recommends that each of the states (as some already have done) hold fact-finding and plan-making conferences on education beyond the high school. Local communities are likewise urged to do so. Such conferences, the Committee feels, offer the best chance to stir up public interest and help lead the way to sensible solutions.

Adequately meeting the crisis in education beyond the high school, the Committee believes, offers "an enormous and unprecedented opportunity to develop the human resources of this nation to a broader and fuller degree than even our most optimistic forebearers ever dreamed of."

What the Crisis at the College Level Means to Young People. In practical terms, what it means is that it's becoming harder and harder to get into college.

If it's a private institution, such as the Ivy League and other older colleges, chances of getting in aren't much better than one out of three. What's more, the odds will go up. These privately supported universities and colleges feel that they will best serve the purposes of education if they expand their programs of small classes, seminars, individual instruction, and research, rather than greatly increasing enrollment. Looking for quality, they feel they can afford to be picky and choosy on admissions. What we're trying to do, remarked one Ivy League Dean of Admissions, "is to find candidates of high academic and personal promise. In the vernacular, we want brains and character." While the tax-supported state universities have to be more responsive to admissions demands, and will probably expand enrollments from fifty to one hundred percent, they, too, are looking for best qualified students.

That being so, pointers listed below on how to gain admission may come in handy and helpful.

HELPFUL HINTS ON HOW TO GET INTO COLLEGE

1. In your high school sophomore year, see your guidance counselor about which courses to take in your last two years. Find out also course and other requirements to fulfill before graduation in order to get into the college of your choice. Learn to study hard. Plan your time. College isn't easy and people who don't know how to study don't stay.

2. In high school junior year, write the Director of Admissions of the college or colleges of your choice to ask for entrance and scholarship blanks (if you need the latter). Ask him which, if any, college entrance examination board tests you should take and when and where to take them.

3. Also in your last two years, take part in some outside activities such as sports, band, debating, student government, and so forth. Colleges are looking not only for good students but also for good citizens in the school community.

4. See as many colleges as you can. If you like what you see, attend classes, find out what the costs are, and so forth. Tuition will vary from about $600 for public to $2000 for private colleges, including room and board and general fees. About $400 extra will be needed to pay for books, laundry, entertainment, and so forth.

5. If you have an interview with a college Admissions Officer, dress properly. Be at ease, but polite. Do your best to give an idea of why you want to come and what you want to do.

6. Be businesslike. Write letters to Admissions Officers neatly, dating and signing them clearly, and include your address. If accepted by more than one college, tell the others you have decided to go elsewhere.

7. Make sure you want to go to college. Perhaps, if college doesn't appeal to you, college isn't your dish. Perhaps you should enter the Armed Services before going to college. Think it over, and get opinions from people you respect.

8. If you've decided to go, be grown up. Find out all you can about your college and its opportunities and plan to make the most of them.

CONFERENCES PROGRAM

PRE-COLLEGE INSTITUTES

PROPOSED CURRICULUM

FOR SUMMER SESSIONS IN AMERICAN STUDIES

AT THE SECONDARY SCHOOL LEVEL

October, 1957

A non-profit non-partisan educational corporation dedicated to furthering the knowledge and understanding of America by Americans through informational publications, radio, films, television, and conferences.

PREFACE

Since 1951, when the Center began developing its services dedicated to furthering the knowledge and understanding of America by Americans, a program of Institutes on American Civilization has been an important objective. Within this conference field, the need for summer sessions between high school and college demanded first attention.

In 1954, the Trustees of the Center authorized a preliminary survey at the pre-college level. This survey, released as a report in September, 1955, confirmed the need, found that "duplication hardly enters the picture," and recommended holding a three-week summer session in American Studies for selected high school students.

The preliminary report's suggestion that a syllabus for such a pilot session be prepared has now been carried out. Thanks to the generosity of the Grant Foundation, which also made possible the preliminary survey, the curriculum proposed in the present Report is herewith presented. It is the work of Mr. Van R. Halsey of the Department of American Studies, Amherst College, and of Mr. Thomas J. Johnston of the Lawrenceville School, chosen by the Center's Advisory Committee to serve as Curriculum Committee for the project.

A first draft of this syllabus was submitted to a reviewing group which met at Washington, Connecticut, during August 24 and 25, 1957. A list of those attending is included in the Appendix, together with certain earlier memoranda bearing on the project. Summaries of the discussion of the reviewing group are available on application.

This Report in its present form has had the benefit of the suggestions made at the reviewing session. It is not to be regarded as final, since it is being mailed in the present form to the reviewing group for possible further comments and suggestions. This procedure is likewise being followed with other interested persons.

One need hardly point out that curriculum planning never comes to an end. The most satisfactory teaching by competent teachers is achieved when a syllabus is regarded mainly as a useful guide, not as a rigid pattern for procedure.

The enthusiastic response to the idea of pre-college Institutes conducted by the Center which was manifested by those attending the reviewing session prompted the Center's Advisory Committee to recommend to the Trustees that ways and means be developed to hold a pilot session, and that the Center's program

of Pre-college Summer Institutes in American Civilization be planned to extend over a five year period.

The pilot session will use the excellent facilities available through the hospitality of The Gunnery, a preparatory school for boys at Washington, Connecticut. For subsequent sessions, facilities in other parts of the country have similarly been offered. Mobility of this sort seems desirable as a means of helping the idea of these pre-college summer sessions in American Studies to spread and take root.

As the Curriculum Committee points out in its introductory comment to the current Report, benefits from the project should accrue not merely to students attending but to education in general. Current plans for student recruitment call for at least one-third to be drawn from truly able young people between their junior and senior high school year. Returning to school after their summer's experience, such students should carry back stimulating ideas, useful to education at the secondary school level. The same thing goes for instructors drawn from secondary education, while those from the colleges should gain a better understanding of the problems of the teachers who prepare young people for education beyond the high school. For those students who have already graduated from high school, the pre-college Institute can well become an important experience in bridging the gap between high school and college.

Townsend Scudder,

Townsend Scudder
President

October 1, 1957

PROPOSED CURRICULUM

Introductory Comments

The Curriculum Committee, in the development of this syllabus, has operated on four general hypotheses:

1. That the summer session be more than a mere discussion group in current events.

2. That the first conference be three weeks long and be thought of as a pilot session; initially inviting forty students with the intention of increasing the numbers of students in multiples of ten or twenty over a five year period.

3. That at the start the session can assume, on the part of its students, very little acquaintance with "American Studies" beyond a reasonable knowledge of American history, and that it is unrealistic to hope that the students would have the time to complete any significant amount of background reading before coming to the conference.

4. That the initial session, and increasingly, that subsequent sessions be looked on:

   (a) As an opportunity for growth toward maturity on the part of the individual student through a confrontation with one or more areas of what we call American Civilization.

   (b) As a means, during the five year period, for bringing together able young people from various regions and backgrounds not only to study together but also, through association with one another, to add still further to their comprehension of the meaning of America. For the faculty, this same opportunity would exist, with emphasis on the chance to become better acquainted with other teachers and with teaching at the high school level and beyond, in both public and private institutions.

   (c) As an opportunity, through the experience of both students and faculty, to bring back to local communities - to schools and to colleges - a further enrichment of educational purpose and processes.

Recommendations

The utmost care and attention should be paid to the selection of the seminar and discussion leaders. We recommend that the primary qualification be that of experience and ability in face to face dealings with small groups of young people. We

do not recommend that these leaders be chosen specifically because of either their proficiency or eminence in a particular field of American Studies.

We further recommend that at least during the first week, the lectures proposed be given by one or another of the conference staff rather than inviting widely known scholars or writers to participate. These "experts" should be reserved for the second week where they would be invited to give lectures relating to the specific problems currently being discussed in the particular seminars.

Seminars should be limited to ten students. They should be offered on a series of announced subjects, each one an outgrowth of the session's topic or theme. Their choice should be voluntary, the student selecting the one which best suits his interest and needs, and the staff should be prepared to offer a seminar on any valid topic on student demand. Students will be required to write at least one paper in their seminars, and it is suggested that time be set aside near the end of the session for the presentation of some of the best student papers. It is also suggested that papers be fully commented on by the staff members concerned, for the student is entitled to know how his efforts have been received and the process of judgment furnishes a stimulus to good work.

Besides the obvious evening activities such as guest speakers and panel discussions on subjects related to the topic or theme, the Committee feels very strongly that a great deal can be accomplished by means of entertainment. Good motion pictures, such as Flaherty's Louisiana Story, are fine examples of American creative energy and imagination. The Grapes of Wrath, Dead End or On the Waterfront would be good too. A folk singer (Josh White, Pete Seeger, Tom Glazer, Richard Dyer-Bennett) would give a worthwhile and relevant evening.

Approach

At the outset of the reviewing session held on August 24-25, 1957, it was stated that the program offered should be immediately stimulating to the student as well as to the staff, whether the approach be thematic or topical. By way of suggestion, the Curriculum Committee had proposed "Education in a Democracy" as a topical device for entering into the study of American Civilization, and "Individualism and Conformity" as a possible thematic approach. The reviewing group favored the latter, and accordingly it becomes the basis for the following syllabus and plan for work.

Syllabus and Plan - First Week

The first week is one of exploration of his fellows by each student, of his discussion group by each teacher. In order that the Institute may succeed, it is of prime importance that a proper atmosphere be created. While "atmosphere" is intangible, it is nevertheless real and necessary. The discussion groups of the first five days are designed to help the students get to know one another, to enable the teachers to draw the students out on the subject of individualism and conformity, to break down the natural reluctance of students to discuss openly and subjectively their own problems and experience in the general area of the conference theme. The discussion groups will not have formal syllabi; rather they will be meetings in which the teacher will attempt to present the ways in which conformity plays a part in modern American life, but this is to be done not by lecturing, but by the skillful handling of discussion within the group. The teacher is attempting to create an atmosphere of free discussion and exchange of ideas which will lead naturally into the seminars course, but this direction will be subtle and flexible enough to enable the student to discuss his own views and feelings freely enough so that he will not feel that he is being subjected to any preconceived plan.

At the same time that these discussion groups are being held, there will be reports to the whole student body, by designated representatives of each discussion group, on the ideas and material which have arisen in each group. This step is planned so that all students may be aware of what is going on in other discussion groups and so that there is a feeling of uniformity of awareness and concern.

It is a necessary function of the discussion groups to cover, during the course of the first week, and in an introductory way, the problems posed by each of the seminars offered by the Institute. In this manner, the student becomes aware of the ways in which the various problems of individualism and conformity interrelate, and he also sees that his own experience with individualism and conformity is not unique, that it forms part of a pattern which concerns many people.

The schedule of the first week, then, would shape up as follows:

Sunday: Arrival, registration, room assignments. Students to be present by 6 p. m., when supper will be served.

7:30 General meeting followed by introductory lecture by member of the staff.
(This lecture, the most crucial one in the three

week session, will concern itself with a statement of the theme of the Institute, it will show students the ways in which this theme manifests itself daily in the lives of us all, and it will pose, but not attempt to answer, some of the problems which the whole matter of conformity presents. These problems will be selected to (1) provide material for the first week's discussion groups, and (2) lead logically into the seminars of the second and third weeks.)

9:00 Free time with activities designed to help students get acquainted.

10:45 Quiet.

11:15 Lights out.

Monday through Thursday:

7:30 Rising.

8:00 Breakfast.

9:00 - 9:45 Series of four talks by staff members, these to be merely expository stories of particular incidents in history illustrating aspects of main theme. (Suggestions: The story of Sacco and Vanzetti, Galileo's trial, what happened to the State Department's 1947 tour of an art show, F.D.R. and pre-World War II public opinion, one person's experience with the McCarthy investigating committee.) The speaker should be as objective as possible, leaving judgments to the students in their discussion groups.

10:00 - 11:30 Discussion groups. Perhaps using the preceding talk as a take-off point, but emphasizing the student's personal experiences until such time (time will vary with groups) as a link can be made between his own problems and the opening lecture. At this point the leader tries to bring students from the particular and personal problem to an awareness of its connection with the larger issues and to begin lining up student interest in a special area seminar (e.g. from a personal student problem of writing for school literary magazine to question of the writer's role in society).

12:15 Lunch.

The period after lunch provides the student with a time of day when he can relax, rest, write letters, etc. It also is designated as a period in which he can work on assigned reading, background reading for discussion groups and lectures, reading for seminars.

3:00 Free time for recreation (tennis, swimming, softball, and other, planned by the Director of Activities).

5:00 - 6:00 Informal meetings of discussion groups. Teachers will be available during this period in announced places so that students will be able to continue the day's discussion, seek advice on reading or papers, or merely talk.

6:15 Dinner.

7:30 Evening meeting. Reports to entire student body by representatives of each discussion group so that the whole student body may know what is going on in each group. These reports will be followed by a period of general discussion. On alternate evenings there will be student reports on outside reading (e.g. The Organization Man, The Caine Mutiny, Civil Disobedience).

9:00 Free time.

10:45 Quiet.

11:15 Lights out.

(NOTE: The evening meeting is devoted during the first week to the reports cited. In the ensuing weeks, it will be used for guest lecturers, panel discussion by visiting and student panelists, and for entertainment relevant to the theme of the Institute.)

Friday:

7:30 Rising.

8:00 Breakfast.

9:00 General meeting. The purpose of this meeting is to have the leader of each of the various seminars explain briefly what his seminar plans to cover, the problems it proposes to explore, the

questions it will expect students to answer for themselves. As with the entire conference, the emphasis is upon having the student make up his own mind after having been faced with a question or problem.

Faculty members will be available for the rest of the morning for consultation about seminar choices. Students will be expected to turn in a list of three choices of seminar topics by lunch time.

12:00 Lunch.

1:00 - 3:00 Assigned reading for individual seminars to be read before opening seminar on Saturday, or general reading of assigned titles in library.

3:00 - 5:00 Recreation.

6:00 Dinner.

7:30 Evening meeting. A faculty member can review the various student reports of the week and can point out, in a brief lecture, the community of interest and idea which exists within the student body. In this way, a kind of unity or homogeneity can be fostered, giving students the feeling that they are not alone in their ideas, that they have much in common with others.

8:30 Free time.

10:45 Quiet.

11:15 Lights out.

Saturday:

7:30 Rising.

8:00 Breakfast.

9:00 - 10:30 Seminars begin. They will meet at this hour through the second week and up to and including Thursday of the third week.

The topics of some of these seminars will have been announced in advance for publicity reasons, but the staff should be prepared to offer seminars in other fields if there is a demand expressed in the discussion groups. The seminars should

adopt a problem approach: that is, the topic will be in the form of a question which all the students in each seminar will have to come to a decision on in a paper due the middle of the third week. The papers will be based on outside reading, the lectures, and the seminar discussion.

Suggested topics:

1. What role should the arts play in modern society?

2. What is the responsibility of the writer to society?

3. Is social and intellectual conformity a necessity in secondary school?

4. Does business have a social responsibility or should it be concerned solely with profit maximization?

5. Should the President of the United States lead the public or should his actions be guided by public opinion?

6. Does mass communication mean conformity to standard ideas and behavior?

7. How can individuality be maintained in an age of large corporations and labor unions or sprawling suburbia?

8. What role should advertising play in modern American society?

11:00 Hike and picnic lunch.

7:30 Evening entertainment. Motion picture which is relevant to the conference in that it concerns itself with some facet of modern American life. Suggested titles: Louisiana Story, Grapes of Wrath, Dead End.

9:15 Free time.

10:45 Quiet.

11:15 Lights out.

Sunday: Sunday is a free day so far as formal meetings are concerned. However, reading assignments will

be posted by the various seminar leaders. It is expected that students will do some reading on this day in preparation for the seminars on Monday. Religious services are available in Washington and neighboring communities.

Second week:

Monday:

7:30 Rising.

8:00 Breakfast.

9:00 General meeting for announcements followed by seminars. Seminars are to run for roughly one and a half hours. The time immediately following the seminar, before lunch, may be used by the seminar if the group wishes to continue. It is also to be used as a period for reading, for library work, and for consultation with faculty.

(NOTE: Because, obviously, the time for the general meeting will vary somewhat, the times listed for the morning schedule are suggestive.)

9:15 - 10:45 Seminars.

10:30 - 12:00 Reading, library work, consultation, paper writing.

12:15 Lunch.

1:30 Lecture to all students.

A series of four pairs of lectures by guest speakers on alternate days are proposed; one at this hour and its successor at 7:30 the same day. Each pair would deal with opposite points of view regarding one of the four seminar topics. For example: The Monday lectures might deal with the problem of the writer's role in society, if that were one of the seminars currently in progress. The morning talk would be by a social critic such as John Marquand and the evening one by Faith Baldwin. If one of the seminars was considering advertising, the morning lecture would be by a Madison Avenue representative, while the evening talk would be by a critic.

Since the seminar topics will not be definitely

fixed until after the staff is selected, the choice of speakers must remain somewhat uncertain.

3:00 - 5:00	Recreation.
6:00	Supper.
7:30	Lecture and question period.
9:30	Study time.
10:45	Quiet.
11:15	Lights out.

Tuesday:

7:30	Rising.
8:00	Breakfast.
9:00 - 10:30	Assigned and supplementary reading.
10:45 - 12:00	Seminars.
12:00	Lunch.
1:00 - 3:00	Conferences with seminar leaders, and work on bibliography for papers.
3:00 - 5:00	Recreation.
6:00	Supper.
7:30	Evening meeting: Entertainment. A folk singer of essentially American music in a concert of American and English and Scottish ballads and folk songs. (Suggested artist: Richard Dyer-Bennett)

(NOTE: The conference staff would try to get an artist who would be willing to do some explaining of his material as he went along so that he would describe and demonstrate the American debt to English and Scotch balladry and the development of American folk song, the emergence of the work songs, the songs of the Revolution, of the Frontier, and, later, of labor.)

9:15	Rest of evening on usual schedule.

Wednesday: Daily schedule the same as Monday with two more invited speakers.

Thursday: Daily schedule the same as Tuesday with the exception of the evening meeting.

7:30 Evening meeting - student panel discussion: Conformity in Pre-college Society. A completely student run panel with the moderator and panelists chosen by the faculty. This panel is designed to give the students an opportunity to draw together some of the ideas which have found expression in the discussion groups of the first week and in the seminars, in the informal talks among students, and as a result of some of the lectures. It will help to preserve something of the sense of unity which the conference requires.

Rest of the evening on usual schedule.

Friday: Daily schedule the same as Wednesday.

Saturday: Daily schedule the same as Thursday except that the whole afternoon is free time.

8:00 Square dance.

Sunday: Free day. Although there are no regular appointments, it is expected that students will work on seminar papers, avail themselves of the library facilities, and continue with required reading.

Third week: This is the capstone week in which the papers prepared for each seminar will be completed, and painstakingly analyzed. The final two days are to be devoted to a presentation of the best student papers and a series of reports by representatives of each seminar. These reports will sketch, for the whole student body, the work done by each of the seminars so that each student may be aware of what has been going on in seminars other than his own, and so that he may at least be aware of the ramifications of the conference theme in terms of American Studies. The presentation of papers and the oral reports will once again bring the whole student body into contact with the conference theme and help to conclude the conference with everyone again considering common problems and ideas.

Monday: Daily schedule the same as Friday with the final pair of lectures presented.

Tuesday: Daily schedule the same as previous Thursday.

7:30 Evening meeting - concert of recent American music, "live" if possible, recorded if not. This concert is designed to acquaint students with what is being done in modern, serious music in this country. (Composers such as Piston, Hanson, Barber, Copland) with commentary by staff member.

Wednesday:

7:30 Rising.

8:00 Breakfast.

10:00 Papers due at seminars meeting.

10:30 All day outing (Mystic Marine Museum, or Sturbridge Village).

7:30 Movie.

Thursday:

7:30 Rising.

8:00 Breakfast.

9:15 Seminars. The papers will have been read and commented on and this final seminar will be a critique of the arguments presented in the papers and selection of those to be given by students to whole student body.

12:00 Lunch.

1:00 - 3:00 Two student papers taking opposing points of view will be presented by their authors from two of the seminars - four papers in all.

3:00 - 5:00 Recreation.

6:00 Supper.

7:30 Concert of American Jazz (live if possible) exploring the evolution from New Orleans Dixieland to Modern - with commentary.

Friday:

7:30 Rising.

8:00 Breakfast.

9:15 Four more papers delivered by students.

10:30 - 12:00 Free time.

12:00 Lunch.

Afternoon: Student-faculty baseball game.

6:00 Supper.

7:30 Dance and student entertainment.

11:15 Lights out.

Saturday:

8:00 Breakfast.

9:00 Final conference meeting: A review of the conference, its aims, an evaluation of the extent to which the aims have been met, its prospects for the future. To be delivered either by the Conference Director or an officer of the Center.

12:00 Conference ends after lunch.

Respectfully submitted,

Thomas J. Johnston (Lawrenceville School)
Van R. Halsey, Jr. (Amherst College)

CONFERENCES PROGRAM

Memorandum on Staffing

Nothing is more important to the entire program (Summer Sessions in American Studies at the Secondary School level, Sessions for Teachers, and Sessions for Non-Teacher Adults) than excellent staffing. Utilizing the services of the most qualified, inspiring, and capable teachers should be a primary aim. Because evidence of their ability is in many respects intangible, good teachers are harder to locate than good scholars (though a combination of these attributes makes for the ideal).

One source of supply open to the Center is suggested by the presence on its Advisory Committee of the President of the Society of American Historians and of a former President and present Council Member of the American Studies Association. Groups of this sort naturally contain individual teachers of the type which we seek. Already various professional organizations, in addition to the two mentioned above, have been informally sounded out, among them the American Historical Association, and the College English Association. Officers of each have expressed a friendly desire to be helpful in the matter of staffing. As soon as our Conferences program is ready for this step, more formal cooperative arrangements might well be entered into with such organizations, with a view to building up a pool of teachers available as the Center's conferences program develops and expands.

CONFERENCES PROGRAM

Summer Sessions in American Studies at the Secondary School Level

Memorandum on Student Recruitment

The Preliminary Report on these sessions, June, 1956, suggests that "as a working basis for a pilot conference, 100 students - 50 boys and 50 girls - might be assembled."

Subsequent thinking, based on further conversations with well-qualified advisers, suggests that this number be made up of a boy and girl from each state, with four foreign students in American schools to round out the total.

The objective would be to seek from every state truly outstanding representatives - young people of noteworthy intellectual endowment, fine character, and a marked potentiality for growth and leadership. Mens sana in corpore sano is a painfully trite phrase - but it still expresses an ideal very well worth aiming for. With young people of such qualifications at the pilot conference, selection for attendance at subsequent sessions should become an honor and opportunity much sought after, with the states themselves increasingly interested in the quality of the young people named to attend.

This brings up a second aspect of recruitment: How should the candidates be selected and designated? Dr. Abraham Flexner has strongly urged us that if this can be made the concern of the individual states, it would hold various advantages. From the point of view of interest on the part of state governors, the only state executive thus far consulted, Governor Abraham Ribicoff of Connecticut, has endorsed the conferences idea in a letter dated August 2, 1956, and in a later conversation has indicated his willingness to go along with a suitable plan for selection and designation when it is ready. Various official and unofficial organizations and groups have been suggested to do the screening and make the nominations: Each state's Board of Education, the State Association of Secondary School Principals, State Associations of School Administrators, State School Boards Associations, Parent-Teachers Associations, and so forth. Further investigation and consideration is needed to help evolve workable plans for choosing the right boy and girl from each state - young people serving, in a sense, as the states' representatives, and above all, qualified to gain the greatest benefit from attendance. Such selections would in turn contribute to the usefulness and success of the sessions through what they themselves would bring to them.

Comments on this memorandum, and suggestions, will be very welcome and are earnestly solicited.

Townsend Scudder, President

Vital Issues
"A DISCUSSION GUIDE FOR BETTER INFORMED AMERICANS"

Published by the
CENTER FOR INFORMATION ON AMERICA
WASHINGTON, CONNECTICUT
Volume VI, Number 4

Drawings by C. P. Meier

AUTOMATION: What's Ahead?

Our country owes its remarkable economic growth and its unsurpassed standard of living to the skill with which we've dreamed up and put to practical use technological advances on our farms and in our factories. Our ability to find faster and better ways of doing things has become a national trait. We pride ourselves on our "Yankee ingenuity."

Even so, plenty of people aren't so sure that further technological progress will prove an unmixed blessing. They particularly wonder about that feature of it which we call "automation." Yet automation is only a new word for something we've always believed in — inventing ways of making things quicker and cheaper so that there will be greater abundance for everyone.

Why then is there fear of automation along with approval? The answer is that we have learned how to make machines that are entirely automatic.

Doesn't this mean that machines will be taking over many people's jobs? Going a step further, a few imaginative persons have prophesied a streamlined world run by robots — a world in which the human spirit with its love of freedom and its belief in the worth and dignity of the individual will no longer count.

But experts on the subject, both from a practical and theoretical standpoint, insist that automation will mean more jobs, not fewer. They insist that it will enrich our lives, not degrade them. They point out that in the next ten years we will need 40% more productivity than we now have, while, in the face of this, our labor force will increase by only 13%. They maintain that unless this serious labor shortage is counteracted by an increase in automation, we will be confronted by a declining standard of living.

From this point of view, it looks as though automation is sure to come. Already many types of manufacture have introduced plenty of it. As the trend goes on, it's bound to bring its own particular benefits. And it's also bound to raise serious social and economic problems.

What about those factory and office workers whose present jobs will be taken over by machines? In new work, won't they have to acquire new skills in order to fit successfully into the new scheme of things?

Moreover, won't our present management, production, distributional, and marketing systems become increasingly obsolete? Doesn't this mean that businessmen will have to develop and master new techniques and concepts?

The truth is that the progress we make in receiving the benefits of automation will depend, not just on technological advances, but on what we can do to overcome social and economic stumbling blocks along the way.

This is the true vital issue we must solve.

To most of us automation still seems shrouded in mystery. How is it used? What are the facts we must face?

IS AUTOMATION SOMETHING NEW?

Automation is both new and old. It is a new tool in mankind's agelong search for better ways to produce the things he needs. Man invented the plow — and moved further ahead

from his primitive hunting stage. He devised the wheel —one of his greatest inventions—for moving carts, for making pottery, for milling and spinning. He invented the loom for weaving cloth. He learned the use of copper, bronze, and iron, and in some places there appeared handicraftsmen of superb artistry and skill. We still marvel at early Egyptian jewelry, Greek pottery, and Etruscan bronzes. Thus man helped himself to get civilized through making things he and other men could use.

But in ancient days goods were produced in a large degree by slave labor. And in early medieval times they were produced by serfs — men who were bound to their land and their jobs by feudal overlords. Neither situation was much fun for the average human being. He had little real incentive to produce. He did not fully enjoy the fruits of his labor.

As commerce picked up, towns began to grow, and the number of freemen increased. Goods were manufactured by independent craftsmen who sold them right at their shops. Each trade banded together into a guild and strictly controlled the number of members and the quality and price of the articles they made.

The guild system of production worked fine while towns were practically little governments unto themselves. But as great nations came into being and the modern world was born, the craftsman guilds couldn't provide enough goods for home consumption or international trade. Enterprising men began to farm out raw materials to groups of workmen in their homes. This method of production was known as the domestic system.

Around 1750, there came a quickening of men's ingenuity to build machines — run first by hand, then by waterpower — which increased the productivity of the individual worker. In 1764, Hargreaves, an Englishman, invented the spinning jenny which enabled a single operator to spin several threads at one time. In 1785, Cartwright invented the power loom.

By 1788 Watt had perfected his steam engine. An American, Eli Whitney, in 1790 invented the cotton gin. In doing so, he hit on the idea of interchangeable parts — the key to mass output. So the stage was set for a new type of production — workers under one roof operating power driven machinery. Thus the factory system was born.

The Industrial Revolution brought about by the factory system raised many problems, such as a shift of workers from the farm to the factory, child labor, city slums. These had to be faced — and not all have been satisfactorily met even yet.

With the tremendous economic expansion that followed the Civil War, the American Industrial Revolution moved into full swing.

By the end of World War One, we were the most heavily mechanized country in the world.

And with the growth of the automobile industry during the twenties, the assembly line came into its own. But at the same time, work became more and more routine. Lightening the repetitive drudgery of much of it became one of the problems calling for attention.

The enormous demand for military equipment during World War Two speeded the development of high-production machines. They became semi-automatic. The operator turned the machine on and off, fed in raw stock, took out finished parts, and watched for slip-ups.

Also during the war our scientists and engineers designed new electronic devices that would automatically guide guns and airplanes. After the war it was obvious that these electronic controls could be applied to semi-automatic production machines to make them fully automatic. Automation was

here. Some people have called it the Second Industrial Revolution.

HOW IS AUTOMATION USED?

Automation has two principal uses — shaping materials and processing information. The first applies to manufacturing, the second to management.

In Manufacturing

In manufacturing, automation means the use of machines which are self-correcting. Through the "feed-back" principle, the machine is designed to check itself, to compensate for its own errors, and to follow through a sequence of logical operations. Human "brain power" is not needed.

A further aspect of automation in manufacturing is the automatic transferring of materials (solids or liquids) from one machine to another. The raw material enters one end of the plant, goes through a continuous process untouched by human hands, and comes out as a finished product. This is the ideal of the automatic factory.

While the automatic factory is still largely theoretical, many successful automatic machines are already in use in manufacturing — lathes, screw machines, milling machines, drills, punch presses. In addition, there is automatic inspection, testing, sorting, weighing, and packaging. In some industries (notably refining, but also bottle making, tin cans, paper, light bulbs, radio tubes, cigarettes) the continuous process — or the automatic factory principle — has been developed to a high degree. And through the development of punched paper tapes, on which blueprint designs can be recorded and fed directly into the machine, the future of automation in manufacturing looks bright indeed.

In Management

In management, automation means the use of computing machines or "electronic brains" to process data. In a matter of minutes, these machines can make accurate tabulations and computations that would take skilled human beings hours of hard work to complete. Automation in management also means the instantaneous selection of this information and the delivery

of it to the appropriate places by electronic communications.

Although this aspect of automation has not been advanced to any great degree, electronic computing machines are being adopted widely for tabulating and processing information in all types of industrial corporations and in railroads, banks, and insurance companies, not to mention government offices and mercantile companies.

Automation is certainly here, and it is here to stay.

WHY AUTOMATION?

But why have people concerned with manufacturing and management problems adopted automation?

The answer is simple. It pays.

The main problems in manufacturing are volume and cost per unit volume. Automation helps solve both of these. As the number of articles a single machine can produce each day goes up, the cost of each article comes down. But cost also involves the wages of the operator, the number of parts that are spoiled, the time it takes to make adjustments. Automatic machines eliminate the operator, have little or no spoilage, and adjust themselves. Thus they produce more parts more accurately.

The same applies to computing machines. They turn out more information more accurately. Businesses today must handle a vast amount of figures just to carry out their routine work such as payroll, taxes, and billing. They also need all kinds of data to make decisions and plans — production and inventory figures, sales and market statistics. Automation speeds routine bookkeeping and enables management to give better service. In addition, the accurate and quick information it provides, some of which was never available before, enables management to make better decisions and sounder, more reliable plans.

Besides merely computing, automation can add to the efficiency of management by instantly transmitting processed data to those who need it. A good example is what one stock brokerage firm does. When a branch office customer buys or sells a stock, all the arithmetic involved is computed in a few seconds on a giant "electronic brain" located in New York.

This information is transferred to a punched paper tape, fed into a teletype machine, and flashed to the customer's office almost instantly, no matter how far away it might be.

HOW WILL AUTOMATION AFFECT WORKERS?

We have seen how and why automation is used. But what about the people it displaces? Will it create a serious unemployment problem?

In the long run, it shouldn't. Quite the reverse, automation should make for more and better jobs, rather than fewer. But till there's been time for adjustment, automation can bring hardship, especially to older people who have done routine factory or office work for years and find it hard or impossible to learn new ways.

But once automation becomes established, it should help to make factory and office life more pleasant, for it will eliminate tedious routine jobs and will increase the demand for highly skilled technicians. Although machines will be doing the work, more and more people will be needed to keep the machines working, to build them, and to set them up for the work they have to do.

Since there is already a scarcity of labor of this caliber, management will have no choice but to train the technicians needed. For the worker, greater skill means better pay. Thus automation should upgrade labor.

Also because with automation more goods can be made more cheaply, the market for many types of things should expand. As a consequence, corporations will grow. Hence

more jobs — not fewer — should be created.

Yet though automation promises labor a higher status, more opportunity for self-government, more pay, and more jobs, unions are inclined to fear that automation may reduce their bargaining power. But manufacturers who may introduce automation for this reason are fooling themselves. Automation costs money. It also tightens competition. These circumstances make it pretty expensive to allow a strike to close a plant down. For these reasons, labor's bargaining power is not likely to be impaired. The refining industry, for example, which is highly automatic, has a very stable labor record.

Finally, as far as labor is concerned, the greater productivity of automation will increase the possibility of getting a shorter work week and give the working man more leisure.

WHAT ABOUT AUTOMATION AND MANAGEMENT?

As we have seen, automation is helping management solve some of its problems by speeding bookkeeping and providing better analytical data. But it is also raising newer and, in some ways, tougher problems. Factory production systems are having to be changed to utilize automatic machinery. Products are having to be redesigned. Training programs for technicians and even for engineers and designers are becoming a necessary cost.

Besides these problems within the plant, management is having to revise its techniques of marketing and distribution, since automation will allow much less fluctuation in output. The market will have to be much more predictable and definite than it ever has been.

All of this indicates that automation will bring some radical changes to the economics of the average business firm. The managers of our free enterprise system are coming up against one of the biggest challenges they have ever faced.

HOW WILL THIS NEW WAY OF MAKING THINGS AFFECT US?

Because of the great expense of installing it and because of the nature of automatic production equipment, it seems likely that in the coming years we will have to accept even more standardization in what we use than we have now.

However, though this may be a drawback, automation will

benefit us with a more stable economy. Today, when a businessman finds goods piling up in his warehouse, he cuts production and lays off workers. But as automation advances, he is going to find that he can't save money by shutting down

part of his plant, and he will have to reduce his inventory by harder selling. Thus we will tend to move away from the "boom and bust" cycles that have always troubled us. We'll have more job security.

But the greatest boon of automation is that by its remarkable capacity to make more things available at a lower price it should bring us a better living standard. Moreover, with machines taking over much of our work load, mankind at last may be achieving what he has always yearned for — the leisure for living itself.

This however will bring us squarely up against still another problem. What shall we do with our leisure time?

We're a nation of workers. We look upon work as a virtue to be cultivated and idleness as a sin. Yet aren't many of our social ills aggravated by the fact that we have too little time left over from our work for other important things? Parents need more time to be with their children. We need more time to take part in worthwhile civic and cultural activities.

If we learn to use the coming increase in our leisure wisely, we can become a happier and better society.

If we don't, boredom may become a source of national frustration and instability.

HOW FAST WILL AUTOMATION BE APPLIED?

While the application of this new technique of producing the things we need should give us a sounder, more abundant economy, we certainly are not going to have it overnight. For one thing, industries which have invested millions of dollars in plant equipment and have spent years in developing their manufacturing methods are not going to scrap everything for something new. They will introduce automation gradually, wherever they think it will pay. Also some industries simply do not lend themselves to automation, particularly those which produce in small lots.

Another drag on automation is the lack of trained technicians and of instrument, design, and production engineers. Lack of knowledge and experience is still another barrier, for there are many technical problems involved in the advancement of automation, and they will take time to solve.

Finally, there is always the matter of money. The high cost of automatic machinery means that industry will have to raise large amounts of capital. And until the public becomes more interested in buying stocks and bonds, to finance such installations, this will not be easy to do.

No matter how perplexing the obstacles in the way of automation may seem to be — the inertia of management, the distrust of labor, the lack of personnel, of know-how, and of money — they are all things we'll be called on to help overcome. Our population is growing rapidly — more rapidly than our ability to produce what it needs. Unless we are willing to accept a lower living standard, automation looks like a must.

Here are some of the questions raised by automation which deserve being thought about and discussed:

1. What shall we do with regard to factory and office workers displaced by automation who may be too old to learn new skills or who do not have the aptitude to do so? Would some sort of pension plan be one solution? What are others?
2. What means can we suggest to train new technicians and engineers? Should we persuade more people to attend technical and engineering schools? What about government scholarships or scholarships from industry?
3. Can we think of more ways to increase the amount of money available to industry for investment in automatic equipment? If so, let's consider them. Should our tax laws be changed, or would this be favoring "big business"?
4. Do we, or do we not, believe that the shorter work week is a good thing? What do we suggest for the use of leisure time? Are there any important things we have neglected because work has used up most of our time and energy?
5. How do we feel about our present system of distributing and marketing our products? Is, or is not, the difference between the factory price and the store price too much? Why does automation lead us to think about these things?

THE PUZZLE OF PROSPERITY

What Can We Do To Safeguard Our Economic Well-Being?

Outside of our freedom, there is nothing we Americans are more proud of than our high standard of living. We like to think of ourselves as an industrious and inventive people who have transformed our vast natural resources into an abundance everyone can enjoy.

Today we are in the midst of the greatest industrial boom of all time. Never before has the world seen a society capable of producing so much for the benefit of so many. But even more amazing is the fact that in addition to all this, we are able to build a big national armament for our defense and to provide surplus food and equipment in order to support and strengthen the economy of other nations whose friendship we need.

But how long can such prosperity be continued? Will the expansion of our gigantic industrial machine get out of hand? In order to build it and in order to buy what it produces, are we running into too much debt? Already we have seen various cut-backs, such as in automobile production and in housing. Farm prices have sagged. By no means all of us feel as well off or secure as the rest of us. Could a recession be on the way?

The answers to these questions are complex — full of all kinds of *ifs* and *buts*. Yet that should not scare us away from the problem.

Because our country is now a world leader among free nations, safeguarding and continuing our economic prosperity is one of the most vital issues of our times.

We have already heard a lot about it during the presidential campaign. We need to keep right on thinking about it.

Let's study the facts.

Let's see how we gained our prosperity.

Let's examine the problems we face in maintaining it.

OUR ECONOMIC GROWTH UNTIL 1860

A glance at our economic past should shed some light on what to look for in the present. It should also help prepare us to take care of the future.

It's at once apparent that our economic development since the start of our nation has been characterized by amazing

growth. But it is also apparent that this growth has been attended by periodic disruptions and distortions that have brought suffering to many of our people and have at times checked our progress.

Outside of military matters, the most serious problems between 1774 and 1788 that faced the Continental Congress were economic ones — how to pay for winning the war and running the government. After the war, there was a sudden deflation (falling of prices), which ushered in a long depression.

The new Congress set up by our Constitution in 1789 benefited from good leadership and especially from the financial brilliance of Alexander Hamilton. It was on his recommendation that we established a mint and adopted a national coinage system. Slowly the new nation began to acquire some financial muscles and to get on its feet.

But for a long time we remained dependent on imports, and our economy was subject to sharp fluctuations due to European wars.

After 1812, the most upsetting factor in our economy was speculation in the new Western lands. Periodically, as in 1819 and 1837, rapid expansion would run up against the limits of our supply of cash and credit. The land bubble would burst, and there would be a depression.

Yet, in spite of such obstacles, the overall trend went vigorously upward. We were busy building turnpikes, canals, steamboats, and connecting markets and waterways with railroads. We were in the midst of developing an interdependent economy. It soon became possible for Western farmers and Southern planters to sell their crops in the East and to buy manufactured goods in return. Waterpowered and steam-

driven machinery made large factories possible. New England became the center of the textile industry. And through the ingenuity of such men as Eli Whitney (who also invented the cotton gin), we were learning the value of making things with interchangeable parts — the key to mass production.

By the 1850's we were a thriving nation and becoming an industrial power. But we tended to move too fast. Our optimism caused us to bite off more than we could chew. Every big step forward was apt to cause half a step backward, like the economic crisis of 1857.

CAPITALISM COMES OF AGE

Though the economy of the South was ruined by the Civil War, the country as a whole, when the war ended, entered on a phase of intense economic expansion, centered in railroad building. The public began to invest its savings in the stocks and bonds of large corporations. Everybody wanted to get rich quick, and there was a vast amount of speculation, especially on the New York Stock Exchange. Financial speculators and promoters such as Jay Cooke, Daniel Drew, Jim Fisk, Jay Gould, and Cornelius Vanderbilt engaged in ruthless wars for the control of the railroads. They had devious ways of manipulating the stock market, and again and again the gullible public found itself out in the cold.

The greed of this group was their own undoing. After 1873, when Jay Cooke's investment house collapsed, a more responsible type of financier appeared — the organizers of giant corporations. These men were sincerely interested in seeing the corporations they controlled prosper. But there was still severe competition among them, and sometimes it caused trouble. For the most part they concentrated on consolidating their railroads into large, area-wide systems and building their steel mills and oil companies into efficient organizations. In the process, the small, independent manufacturers were often forced out of business. The public began to fear the power that was accumulating in the hands of such men as John D. Rockefeller and J. Pierpont Morgan.

THE GOVERNMENT TAKES A HAND

In 1890 the Sherman Act was passed against monopolistic restraint of trade. But through the device of the holding company (a corporation formed to buy the stocks and bonds of other corporations), large combinations continued to grow. By 1904 there were over 300 big industrial combinations with an aggregate capitalization in excess of $7 billion and controlling over two-fifths of the manufacturing in the country.

From time to time, such as in Teddy Roosevelt's administration, there has been "trust busting" activity against big business. But whether we like it or not, we can hardly enjoy the benefits of mass production without the productive capacity of large industrial corporations. They are a characteristic of our economic life. The Department of Justice keeps a close watch on what they do. In addition to the Sherman Act, through the Clayton Anti-Trust Act and the Federal Trade Commission Act, the government tries to protect the public against the danger of monopolistic practices.

The stupendous development of our national wealth up to the outbreak of World War I was not achieved without plenty of headaches. One of our greatest weaknesses was a shaky and inflexible banking system. There was a depression in 1893 and another in 1907, both attended by the usual bankruptcies and bank failures.

In 1913 Congress passed the Federal Reserve Act, which tied the National Banks into a membership system of 12 regional banks. The Act has given our financial structure a measure of stability and unity. The Federal Reserve Board sets the percent of reserve funds that members must carry, and, by changing the amount of this reserve and setting interest rates, strives to keep credit within safe bounds and gives our money supply considerable elasticity.

Had the Federal government used the financial instruments of the Federal Reserve more wisely, it is possible that the stock market crash of 1929 would not have been as severe as it was. The primary cause of the crash was the hectic speculation in stocks and bonds rising out of the prosperous 1920's — a period which saw the growth of the auto industry and a boom in building. Our whole economy became fantastically over-inflated. The crash was the prelude to the darkest and longest depression in our economic history, the low point of which was the disintegration of our entire banking system in 1933.

Up until this time, the public felt pretty much that the government's attitude toward business should be *laissez faire* – a policy of non-interference which assumes that the "natural

laws" of economics will work best for the welfare of free enterprise. But in 1933 many people began to wonder if our free enterprise system alone would be able to get us out of the depression. The New Deal adopted a policy of deficit spending, the theory of which was that if people had money to buy things, business would get the lift it needed and soon be able to carry on alone. It was called "pump priming."

There is no doubt that many of the policies of the New Deal were wasteful and ill-advised. But the depression was a time of great suffering for millions of our people, and new ways had to be tried to set our stagnating economy once more in motion. Despite considerable floundering, many good things have come to us from that trial-and-error period. Among them are the Banking Act of 1933* and the Securities Exchange Act†, both of which have given us a sounder financial machinery.

While the New Deal approach to our economic problems has been modified with time, it is still fundamental to the viewpoint of the Democratic party. The Democrats hold that the welfare of our people depends on the broad distribution of our wealth. They believe that if the working man has good wages and the farmer has a good income, business conditions will remain favorable. They have been friendly to labor, have subsidized farm prices, and tended to keep high taxes on corporate earnings.

The Republicans, on the other hand, believe that the long-run well-being of all our people is best served by allowing industry a profit large enough to encourage further growth. Also they believe that the severely graduated income tax has prevented savings from being invested in productive enterprises and brought about a scarcity of "risk capital." They maintain that the stronger and more productive business becomes, the more things there are for everyone — more jobs, more pay, more things to buy. Free enterprise — they feel — is the best asset our nation has. The government should interfere as little as possible.

Whatever theory one agrees with, this much is clear: our swift and amazing economic growth has been subject to frequent and violent fluctuations. In its effort to correct the causes of these distortions, combined with the total mobilization of recent wars, the Federal government has acquired a permanent role in our handling of our economic life. Almost everyone agrees that for some time to come we will have a "mixed" economy, with both private business and the Federal government working side by side in the effort to sustain our growth and prosperity. The question is only a matter of degree: how much shall the government do? How much shall be left to private industry?

Let's open our national account books and see how we stand. Are there any dangerous soft spots? What problems will government and business leaders need to consider in the vital issue of avoiding a depression and maintaining our economic progress?

HOW IS BUSINESS?

1956 will probably be the most prosperous business year on record, with a gross national product of more than $400 billion.

But a good many business leaders are not comfortable about the way things are going. They are worried about the slump in the auto industry and in housing and the slow-up in textiles. Goods standing unsold on the shelf and in the factory have piled up to around $85 billion. Competition is getting much tougher, and at the same time it costs the manufacturer more to make things. This means his margin of profit is starting to be squeezed — a condition no businessman likes.

If industry finds that the market for what it produces is getting tight and that it has less money in the till at the end of the year for expansion and improvement, the rapid growth our country has enjoyed since 1940 will slow down. The boom could even come to a halt and turn into a recession.

What is happening is that at the present time we cannot

consume all the things industry produces. After World War II industry geared itself with remarkable speed to fulfill the demand for goods made scarce by the war and also to meet the needs of our growing population. But production increased so fast that supply tends to exceed demand. This is especially true in automobiles and appliances. If industry cuts production to reduce the supply, this will mean fewer jobs. And with less money going around, everybody will feel the pinch.

Yet, except for some auto makers and a few others, almost all businesses are spending more money than ever before for new factories and machines — over $44 billion this year. They are planning to produce *more* goods instead of less. This seems contradictory indeed. But the fact is that most businessmen are optimistic that America is in the midst of a long growth phase. It will not be as rapid as it has been, but it will be steady and continuous. Our population is expected to increase by 55 million in the next 20 years. And this in itself will create new demands for all kinds of goods — appliances, housing, clothing, automobiles. Businessmen who have an eye to the future want to make sure their particular companies will be ready to share in our growing national market.

Meanwhile, the money which industry is spending for new factories and machines is helping to buffer the effect of the slow-down in other fields. Other things which are giving our prosperity a sturdy basis are the billions the government expends for defense, the recent rise in farm income, and our vigorous foreign trade. For the forseeable future — barring a serious inflation — business looks good.

WHAT ABOUT INFLATION?

Our prosperity has been creeping toward a somewhat inflationary condition. Inflation means that the value of our

dollar in terms of what it will buy becomes less and less.

Inflation is possibly the biggest single threat to an expanding economy. If we are not extremely careful on this matter, business could take a bad tumble.

For a while at least, all of us would be in for hard times. We have seen how the land speculation in 1837, the boom

**This Act makes it illegal for commercial banks to deal in stocks and bonds like an investment bank. Also set up the Federal Deposit Insurance Corporation to insure bank deposits up to a fixed sum.*

†Requires registration of all new issues of stocks and bonds and full disclosure of all information. In 1934 the Securities and Exchange Commission was created to prevent manipulation and fraud on the securities exchanges.

in railroads after the Civil War, and the speculation in the stock market in 1929 all brought about sharp inflations that suddenly resulted in severe depressions.

We don't want it to happen again.

Our dollar will now buy only 51% of what it would in 1939, and it looks as if it may buy even less in the future. The cost of living hovers around an all-time high. In the past few months, due partly (but not entirely) to the steel strike, the price of almost everything has risen — clothing, food, housing, autos, appliances. Salaried workers (whose raises are generally slow in coming) and people living off the income from money they have salted away will have to cut corners. Factory workers are not so badly off. Many of them have "escalator" clauses written into their union contracts. When the cost of living goes up, their wages automatically rise. But even this contributes to inflation, for businessmen are prone to pass along higher wages in the form of higher prices.

The inflationary pressure we are now feeling is the result of too rapid an expansion. Industry has had to pay high costs for scarce labor and materials, but in doing so, it has not only had to pass the costs on to us, it has also been forced to incur a huge amount of debt. The supply of credit (lendable funds) is getting slim, and currently money is "tight." Though industry is now overproducing in some fields, it still needs money to get ready for the future markets. This has made interest rates higher than they have been for 25 years.

The Federal Reserve Board believes that "tight" money is a good check on inflation. In some districts it has raised the interest rate it charges for funds it lends to member banks (the "discount rate") to 3%. When banks have to pay more for their money, they naturally charge more for the money they lend. The "prime rate" (the interest banks charge their best customers) is now 4%. The Federal Reserve expects that this high cost of borrowing will act to put the brakes on inflation.

But meanwhile, because money lenders can now do better than the 4 ½% interest on Federal Housing Administration and Veterans Administration mortgages, people are having difficulty borrowing money to buy homes. This is one of the reasons why the housing industry is feeling pressed.

It is also an example of why the Federal Reserve will have to be careful not to squeeze the credit supply too tightly For if industries find it too expensive to borrow, they may cut back their expansion programs drastically and push the whole economy off balance. The fight against inflation is a tricky business.

Thus far we are still somewhat ahead of the game. The purchasing power of the average factory worker has advanced 35.2% since 1950, while the cost of living has risen only 14%. Though office workers and farmers are relatively not as well off, generally speaking, Americans have never had it so good.

But if we are not careful to control the push toward inflation, all our gains could be wiped out, and once more we would take half a step backward.

We are justly proud of our prosperity. Our free enterprise system has given us an abundance that has confounded the economic theories of the Communist world. However, our wealth also brings critical problems. The more money we earn, the more we have to pay for the things we buy. And the higher the cost of badly needed schools and roads, the more taxes we will have to pay.

Our economy proves to be a highly complex machine. The delicate relationship between all its parts has to be carefully balanced in order to keep it moving smoothly and steadily forward. The overly selfish actions of any one group could easily jam our economic gears and cause our prosperity to stall. The solution of the puzzle of our economic progress will require the cooperation of all parties and groups for the welfare of all of us. That, after all, is the meaning of good citizenship.

1. What do we think is the best way to control inflation? Could prices be kept down by fixing a ceiling on them? Would this be consistent with our ideals of freedom?
2. In our opinion, what things can businessmen do to keep prices down? How could they reduce the cost of the things they make? Could they take a smaller profit? How would this affect the stockholders?
3. If every time workers get a raise, the cost of the things they buy goes up, what is the good of the raise in the first place? Could this lead to a "spiral" of constant wage and price rises?
4. Do we or do we not agree with the "tight" money policy of the Federal Reserve Board as a way of maintaining our prosperity? What are the advantages? Are there any dangers?
5. In a country proud of its freedom, what role should the government take in regulating our economy? Should it keep "hands off" and let things work out by themselves? Or should there be more regulation than we now have? Where?

Map and drawings by C. P. Meier

THE MIDDLE EAST -- What Goes On?

The subject's so big and the problems so mixed up we'll skip the introduction and get down to cases.

Area. The Middle East spreads southward from the Black and Caspian Seas to the Arabian Sea that forms the upper part of the Indian Ocean. The simplified map at the left gives a rough idea of it — but there's nothing like looking at a globe to grasp its importance.

The places in the Middle East we've been hearing about — Port Said, Suez Canal, Sinai Peninsula, Gaza Strip, Israel, Syria — lie along the eastern edge of the Mediterranean.

The bulk of the Middle East includes Asia Minor, bordered at the north by the Soviet Union, and the Arabian peninsula, between the Red Sea and Persian Gulf. Within it lies a large section of the Mohammedan world.

Past and Present. The Middle East has known powerful ancient empires — Babylonian, Egyptian, Assyrian, Persian, and that of Alexander the Great. Today, though the armed might of the world has shifted elsewhere, the area contains a dozen or more kingdoms, principalities, and republics which tend to keep alive the hatreds and the clash of purposes which have made the story of this area violent for its own inhabitants and dangerous for the rest of the world. For various reasons it has great strategic importance. It's like a bomb with several sputtering fuses.

The Part Geography Plays. For centuries the Middle East has been a bridge between Europe, Asia, and Africa. Across it moved caravans carrying the goods of East and West. Northern and southern trade converged over the Isthmus of Suez. Armies fought one another for these trade ways and also to control the sea lanes on either side.

Presently modern man began improving nature's routes. In 1869 the Suez Canal made possible a water route direct from the Mediterranean to the Indian Ocean. More recently, airways to India, China, the Malay States, Australia and beyond required bases in the Middle East. This intensified its importance to outside nations.

Oil. Above all, the oil fields of the Persian Gulf and of the Tigris and Euphrates river valleys in Iraq have made it imperative to keep communications open. American companies have provided a considerable part of the investment that developed these oil resources — the largest present reserves in the world. Industries and transportation in Western Europe and in the British Isles are dependent on the oil of the Middle East.

But this strategic resource is not merely essential to people outside. The states of the Middle East in which it is produced or through which the pipe lines and Suez Canal pass are dependent on oil for revenue. It's the oil of Arabia, Iraq, Iran that will pay for roads and railroads, electrification, power.

Money from oil can dig artesian wells for agriculture in arid districts. It can build hospitals, schools, and public improvements which the Middle East needs and wants.

Which Are the Nations of the Middle East? What's known as the northern tier is made up of Afghanistan, Iran (Persia), Iraq, and Turkey. Then come Syria, Lebanon, Jordan, Saudi Arabia, Yemen, the British colony of Aden, and the sheikhdoms on the coasts of the Indian Ocean and Persian Gulf. Then Israel and Egypt.

Afghanistan and Iran. Afghanistan has close relations with the Soviet Union, along which its northern border lies.

To the west of Afghanistan, Iran also borders the Soviet Union. It is part of the Middle East by reason of its history, its Mohammedanism, and its oil fields. These oil fields have caused serious difficulties between the United States and Great Britain on the one side, and the Soviet Union. Iran is at present an adherent of the Baghdad Pact for defense against the Soviet. Other pact signers are Pakistan (more a part of the Far East than of the Middle East), Iraq, Turkey, and Britain. The United States encouraged this agreement and has given aid to these states.

Egypt. Egypt belongs among the predominant nations of the Middle East. It owes part of its importance to its strategic location on the Red Sea, the Isthmus of Suez, and the Mediterranean. The fertility of its Nile valley is a considerable asset. Cairo and Alexandria are world famous cities. And Egypt enjoys intermittent political and cultural leadership in the Mohammedan world.

The story of Egyptian nationalism needs to be studied for an understanding of the present crisis over Suez. When Britain in 1875 bought the Egyptian shares in the Suez Canal Company and then took control of the whole country to protect the "life-line" of the British empire to the Orient, Egyptian nationalists after World War Two turned increasingly against the British protectorate. Britain hung on. It would have liked to retain a Middle East Command at the Suez Canal, in which all nations interested in defending the canal against Soviet or other encroachment might participate. Egypt insisted that Britain's forces should be removed entirely. Mobs of nationalists, with Communists among them, played hob in Cairo. Guerrilla warfare required Britain to keep some 80,000 troops guarding the canal. This burden, along with changes in defensive warfare because of long-range aircraft and the atomic bomb, caused Britain, urged by the United States, to withdraw, setting up its main base on the island of Cyprus. Nationalism since then, in both Egypt and Cyprus, has continued to make headline news.

Nasser climbed to dictatorship in Egypt at the expense of shrinking British prestige, and with the threat of Soviet arms to aid him.

Turkey. The Sultan had fought on the losers' side in World War One, and thus lost much of the Middle East which the Turkish Empire had controlled for centuries. Out of the wreck came an assortment of states including the republic of Turkey. Although Mohammedan in religion, Turkey has taken to western ways. Political reform has moved in the direction of free elections and truly representative government. Because of its fear of Soviet Russia, Turkey's foreign policy is more Western than Middle Eastern. Turkey is a member of NATO and signed the Baghdad Pact. But the island of Cyprus needs to be borne in mind in understanding Turkey's possible future attitude. If Britain were to settle the troubles there more to the advantage of the Cypriote Greeks, the majority, rather than to the advantage of the Turkish minority, Turkey's foreign policy might swing away from the West.

Syria — Trouble Spot. Below Turkey on the eastern Mediterranean shore is the Arab republic of Syria. Wealthy feudal families dominate a country which has little industry but depends on agriculture, sheep, and goats. The mandate over Syria which France got after World War One was never pleasing to Syrians. Because of their experience with American educators and missionaries, the people would have preferred American trusteeship if they could not have immediate independence. French arms defeated the expectation of Emir Faisal that he was to be king of Syria, but could not break the Syrian spirit of nationalism.

During the Second World War, British troops overpowered those of Vichy France and the Syrian Republic emerged. Its many squabbling parties, including a Moscow-supported Communist faction, have fallen before successive military dictators. The power of the army is expressing itself again through Colonel Serraj, an ardent Arab nationalist who appears to be relying on Soviet arms from Czechoslovakia. But the decision in Syria is not yet clear. Will Syria turn instead toward alliance with Turkey, Iraq, Iran, and Pakistan against Soviet infiltration and for protection of pipe lines passing through its territory to the markets of Europe? Or will Syria move into closer relationship with Egypt and Saudi Arabia? That's what the Arab League would like. The Arab League, founded by the British and now turned against them, hovers on the verge of a holy war against the West, against Christians and Jews, against what it regards as imperialism and colonialism.

Lebanon — Conservative Arab State. Lebanon, fellow republic enveloped geographically by Syria, is another agricultural state but with a chance for power development in the Litani River, and with one of the world's cosmopolitan cities, Beirut, for its capital. Lebanon too shook free from the mandate of France. Because of its Christian population, and perhaps such influences as the American University in Beirut, Lebanon enjoyed unusual autonomy even during the Turkish empire. It is more stable and secure against pressures than Syria. Although there are more Christians than Mohammedans in Lebanon, the Arab minority of Mohammedan faith is always represented in the government. The President is usually Christian and the Prime Minister Moslem.

But Lebanon is, after all, an Arab state, a member of the Arab League, and therefore opposed to the Jewish state of Israel — though Lebanese opposition does seem milder than most. It's possible that Israel and Lebanon can come to some agreement for use of the Litani River. It runs entirely within Lebanon, but rainfall makes a surplus of much of its water, which Israel needs for irrigation.

Iraq and Jordan. The two inland Arab kingdoms of Iraq and Jordan owe their existence mostly to Britain. Both are under rulers chosen from the Hashimite dynasty, descendants of Mohammed. Iraq with its oil fields and Jordan lying between Saudi Arabia and Israel are in position to alter the course of events.

When negotiating with France and Czarist Russia during World War One to dismember the Turkish empire, Britain insisted on keeping the Mesopotamian area (now mostly present Iraq) apart and under arrangements of its own. The British placed the Arab warrior Faisal, who had done so much to help them defeat the Turks, on the throne of Iraq at Baghdad. Since then, despite some wavering expressing Arab nationalism, and a pro-Nazi government when it looked as though Hitler's forces would break through to the Persian Gulf, the kingdom of Iraq, with its oil resources, has remained on the side of Great Britain and modern Turkey.

As an Arab state, Iraq took a sharper attitude than Britain

against the rise of Israel to statehood, going so far as to send troops into the Palestinian War of 1948-49.

Though representatives of Iraq declaim officially against Israel and deplored the military action which Britain and France took in Egypt regarding the Suez Canal, Iraq still adheres to the Baghdad Pact. The ambassador of Iraq to the U. S. has openly joined with Turkey, Iran, and Pakistan in proposing to Secretary Dulles that the Baghdad Pact be linked with the North Atlantic Treaty and with the Southeast Asia Pact for defense against Communist encroachment. It seems pretty clear that the will to maintain the Baghdad Pact against Soviet power will persist in direct relation to the equipment to do so provided by the U. S. A.

Jordan, the other inland kingdom, is the most artificial of the Arab states built on the ruins of the Turkish empire. Britain created Transjordan in the area of its mandate from the League of Nations. The kingdom of Jordan had grave weaknesses which have become more apparent since the assassination of Abdullah, whom Britain helped place on the throne. It has neither agriculture nor industry nor mineral resource. It has been dependent on subsidy from Britain. It has as great need as Israel for irrigation and waterpower. Moreover, Jordan is altogether too vulnerable to invasion by the desert army of Saudi Arabia which under Ibn Saud drove into exile Abdullah's father Hussein, Sharif of Mecca.

Pressed by Saudi Arabia and Egypt, Abdullah's successor has dismissed the British commander of Jordan's Arab Legion, taken over the airfields, and denounced the treaty with Britain. He has gone completely, it would seem, to the side of Nasser against both Israel and Britain regarding Sinai and the Suez Canal.

Saudi Arabia — the Rise of Ibn Saud. As guardian of Mecca, sacred to Moslems everywhere, and possessor of great wealth in oil, the kingdom created by Ibn Saud in the Arabian peninsula stands in the strategic spot of being capable of becoming leader of the Arab League. The philosophy of the League opposes as infidels and unbelievers all Christians and Jews. Its ultimate weapon is the jihad or holy war, which could summon all Moslems against what it regards as Western imperialism. Its prime objective would be to eliminate the Jewish state of Israel from Palestine.

Ibn Saud, strongest chieftain in Central Arabia among the desert tribes, rose to power by conquering his neighbors one by one until he had extended his sway from the Red Sea to the Persian Gulf. His strongest following lies among the tribes of the Wahhabi sect, who interpret the Koran far more strictly than do the more urbane Mohammedans of India and Egypt. Ibn Saud cultivated the friendship of the British overlords along the Persian Gulf and in Mesopotamia, but he took advantage of their shaky situation in the First World War to turn a quarrel over a border oasis with their favorite Hashimite ruler, Hussein, into conquest of Hussein's realm.

Between the two World Wars, Ibn Saud skillfully strengthend his prestige in the Mohammedan world. Then, in el Hasa, on the Persian Gulf, Ibn Saud came on unexpected wealth. He struck oil — or rather, Americans in 1933 did it for him.

Absolute ruler of Arabia from Persian Gulf to Red Sea and exalted in the Mohammedan world, Ibn Saud declared his neutrality in the Second World War. But as a result, his revenues from pilgrimages to Mecca and from oil sharply declined. He needed cash. So he demanded thirty million dollars from his American friends on the threat of cancelling their lease. He got his money, but it arrived indirectly from funds which the U. S. had allocated to Britain for use in the war. Ibn Saud did not believe, as many other Arab leaders did, that Hitler and Mussolini would win. So he compromised his neutrality further by giving permission for the U. S. to build an airfield at Dhahran on the Persian Gulf, one of the largest and most strategically placed.

Saudi Arabia and the West. Ibn Saud protested in 1946 when President Truman urged Britain to admit 100,000 Jewish immigrants into Palestine. His son, who presently succeeded him, has taken a leading position in the Arab League against the State of Israel. He has supported Nasser in Egypt. He has encouraged Arab resistance to France in North Africa and has opposed the Baghdad Pact. Thus the present King Saud's influence is joined with Nasser's on the side of the nationalists in Syria against Iraq and Turkey.

It would appear that King Saud is conscious indeed of his place in the Mohammedan world and his power to affect the course of the Arab states.

The Holy Land. It is the vortex of all grudges and grievances in the Middle East. Palestine and Jerusalem are sacred to Mohammedan, Christian, and Jew. When the British and French made a secret agreement in 1916 to divide the Turkish empire among Czarist Russia, Italy, Greece, and themselves, they ignored the wishes of their Arab allies in Palestine. They made room for Arab states between the spheres reserved for France and Britain in Syria and Mesopotamia, but they also reserved the Holy Land for an international organization of some sort.

The Zionists had begun long before, with Turkish consent, to establish colonies in Palestine, immemorial land of their fathers. Zionists looked to the day when there would again be a Jewish state. But Arabs had lived in Palestine as long and were of no mind to be dispossessed. Jews could live there as they always had, in a fair amount of living and let live. But Mohammedans did not wish to have the Jewish colonies grow into an independent state.

Britain's Balfour Declaration of 1917 assured the Jews that they were to have a "national home" in Palestine. It also stated that nothing should be done which might interfere with the rights of existing non-Jewish communities. To Zionists, the Declaration meant that Jews were to take charge of the government. To Arabs, it meant that Jews were just to be allowed to live there. For more than a quarter of a century British statesmen tried to find between the conflicting ideas a course of action that somehow would reconcile the pledges given to Arabs and Jews during World War One. At the same time, Britain wished to keep British dominance in the Middle East and to protect the Suez Canal, "lifeline" of the British empire.

To this end, Transjordan was set up as a curb on Jewish expansion toward Saudi Arabia and the Zionists were notified in a memorandum of 1922 that the British Government did not mean to have their national home in Palestine become a Jewish state. Finally, as World War Two approached and Nazi propaganda penetrated the Middle East, Britain's white paper of 1939 proposed an end to the British mandate. Instead, there should be a Palestinian state bound by treaty to Britain. Jewish immigration into it would be limited to annual quotas of 75,000 for three years.

During the Second World War, Britain kept the lid on an upheaval in Palestine, but trouble was brewing, with Zionists and Arabs preparing to organize. The Arab Mufti of Jerusalem had fled to Germany and was looking for help from the Nazis.

The demands for Jewish immigration swelled as victims of Nazi brutality increased in Eastern Europe. President Roosevelt spoke in favor of the Zionist cause. Contributions poured in, supporting Palestine as a refuge for the Jews.

Two successive Anglo-American commissions studied the problem. The first proposed a trusteeship of the United Nations and admission of a hundred thousand victims of Nazi and Fascist persecution. The second returned to the original British idea of a federalized Jewish and Arab Palestine, with further Jewish immigration determined by Jewish and Arab consent. There was no agreement. Then, at Britain's request, the United Nations took charge. The majority of its special committee constructed a plan for dividing Palestine into an Arab state, a Jewish state, and Jerusalem under international authority.

Territorial separation, however, was as difficult as cooperation to accept. The Zionists wanted all of Palestine with such Arabs as remained a political minority. The Arabs favored the suggestion of the special committee's minority because it provided for a single Palestine state in which there would be an Arab preponderance and a limit to Jewish immigration. The U. N. General Assembly accepted the majority plan. The United States and Soviet Union voted for it. Great Britain abstained.

The State of Israel. The British withdrew their forces on May 14, 1948. The Zionists proclaimed the State of Israel within the area set by the special U. N. committee. The U. S. A. gave recognition to the new republic. The Mohammedan states of Turkey and Iran later also recognized it. But the Arab League gave notice that its forces would move into the "vacuum" created by British withdrawal.

The Arabs found no vacuum but a Jewish army that treated all their forces except the British-trained Arab Legion of Jordan to ignominy in defeat. There was little coordination and direction to the Arab attack. Saudi Arabia sent only a token force. Israel dispossessed nearly a million Arab inhabitants and seized more territory than allotted by the U. N. committee. But Egypt still held the Gaza Strip on the Mediterranean, and Abdullah's Arab Legion controlled East-Central Palestine including old Jerusalem.

Truce — and the Aftermath? The United Nations, if they could, had now to persuade the warring nations to make peace. The first U. N. Commissioner, Sweden's Count Folke Bernadotte, was assassinated. His successor, the American Dr. Ralph Bunche, managed to obtain separate truces between Israel and the members of the Arab League. But raids and reprisals continued. Living on the borders of Israel was a constant invitation to death.

In the struggle, Egypt turned to economic warfare, closing the Suez Canal to Israeli goods. On July 26, 1956, six weeks after the last British forces quit Egypt, Nasser nationalized the Suez Canal, taking over its management from the private international company under British-French control which had been running it. Nasser gave a boost to Egyptian military strength, when the West refused to sell him arms, by making a deal with Moscow for military equipment. Britain and France considered their chances for use of the Suez Canal growing dimmer and dimmer. Along the Israel frontier, volunteer commandos, known as Fedayeen, were stepping up raids into Israel, which led to further reprisals. Then, on October 29, units of Israel's army crossed the border into Egypt's Sinai desert and the Gaza Strip. Israel — said Prime Minister Ben-Gurion — had moved to protect the nation's security. Next day, Britain and France delivered an ultimatum to Egypt and Israel. They must stop fighting, or else. When Egypt rejected the ultimatum, British and French forces began trying to seize and hold Britain's old bases in Suez.

At this point, the United Nations managed to assert itself once more, reflecting majority world opinion and condemning independent action by individual nations. A tiny international police force, hastily formed, filled in as British and French and Israeli forces withdrew.

But the fundamental, long-range problems are still there, demanding solution lest they plunge us all into war.

Newspapers, magazines, TV, and radio have kept us posted through this latest crisis and what's coming out of it. What goes on, and what may be developing, we may perhaps be better able to understand against this vital issue's background of the clash of purposes which dominate the Middle East. As citizens, we have a responsibility for U. S. foreign policy. Here are just a few of the many questions we need to think about and discuss.

1. Under what control and arrangement might the Suez Canal best serve world commerce? Could or should this also apply to the Panama Canal?
2. With the people of the Middle East, for the most part, suffering from poverty and its attendant ills, what are our views as to technical assistance, U.S. and/or U.N., and economic aid and development for the nations that need it? Military aid?
3. How may the needs and aims of Arabs and Jews most fairly be served?
4. What should be done about Jerusalem and the Holy Land?
5. What methods might be used effectively to preserve the Israel-Arab truce?

Scudder, Townsend

September 14, 1956

Dear Mr. Scudder:

We have still not yet firmed up our plans for Latin America; I will let you know when we do.

I am afraid there is no possibility of our undertaking the Alaskan piece this year, much as I would like to do it. I shall be in New York fairly regularly after the 1st of October and hope to see you again.

Sincerely yours,

Mr. Townsend Scudder

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

I have a suggestion to make.

The Center is going to include a guide on Alaskan statehood in its VITAL ISSUES, Volume VI. We feel, in view of developments, that this will be a very lively topic indeed. Because the Territory is going right ahead with the election of a congressional delegation in November and its two senators and one representative without seats will be in Washington when Congress assembles, there will be a dramatic aspect to the whole question even over and above the interest previously shown. I recall your saying that Latin America would be in your schedule for the coming winter. How about adding Alaskan statehood? It seems to me that such events as Alaska's nominating conventions for these candidates, then their campaigns, and the Alaskan election itself would make very interesting on-the-spot material. From there on the activities of Alaska's "representatives" in Washington should certainly continue to furnish first class television material.

If you feel that the idea has merit, I should welcome an opportunity to discuss it with you and see if we could work out something jointly here also.

With regards,

Sincerely yours,

Townsend Scudder

July 27, 1956

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Thanks for your letter of July 27.

We shall keep several slots open in our schedule for a possible issue on automation, pending word from you in October as to your own plans on this subject.

You will be interested to hear, I think, that the guides, in their editorial policy, don't seem to be losing their balance on the tightrope they are walking. We have just received a substantial order from the Guaranty Trust Company of New York for their personnel rack program, and today this letter - of which I send a copy - came in from the Education Department of the UAW. If the Center can go on increasingly being of some use to good Americans of various points of view, it will be very gratifying indeed!

Sincerely,

Townsend Scudder

Center for Information on America
Washington, Connecticut

Dear Sir:

Thank you very much for your kind note and for sending me the copies of your little bulletin.

I would like to order sixty copies of each of these for circulation among members of the Education-PAC staff of our union. I think it may be that they will find these useful and may, in fact, be able to secure a wide circulation for them among members of the union. They seem to me to be extraordinarily well edited and I think that our staff people at the very least will find them very useful. Yours looks like a very interesting and useful program.

I cannot say in what way we could be concretely and specifically helpful to you but if you think that we might be of assistance in some way, I hope that you will not hesitate to call on us.

Thank you again for your interest and kind regards.

Yours truly,

Brendan Sexton

June 29, 1956

Dear Mr. Murrow:

Our conventions issue, as you will see, is meeting with sufficient demand to call for a second printing. This gave us an opportunity to make a slight change to cover President Eisenhower's second illness.

We are now making up our schedule of Vital Issues for Volume VI, and it seems to be filling up rapidly. Could we get together sometime at your convenience and talk about an issue on automation? I recall your saying we might be able to work out something which would be usefully supplimental to your program on that topic, and if so, I should much appreciate knowing approximately what month we should be scheduling it for.

With regards,

Sincerely yours,

per Townsend Scudder.

GUIDE TO THE PRESIDENTIAL NOMINATING CONVENTIONS:

HOW DO THEY WORK?

Chicago for the Democrats and San Francisco for the Republicans will be where the conventions take place. The starting dates, respectively, are August 13 and 20.

As the time draws near, thousands of delegates and party leaders will begin pouring into each city.

In addition, there'll be a swarm of newspaper men and women and of magazine and other writers to report what goes on. Press photographers and newsreel cameramen will be out in force. Hundreds of commentators from the various networks will be giving their analyses. And, exceeding even the coverage of four years ago, television and radio will make it possible for citizens everywhere to sit in.

Very literally, what takes place at Chicago and San Francisco will be monitored by the eyes and ears of America. We, the people, will be there. That's all the more reason to brush up a bit on what we'll be hearing and seeing.

At convention time, there'll be a good deal of a carnival look to both cities. Flags and welcoming banners will flutter. The "Cow Palace" at San Francisco and the International Amphitheatre at Chicago will be all dressed up. The delegates themselves, by their excitement and anticipation, will add to this holiday spirit. There'll be jovial greetings, laughter, and much slapping of backs. Even after the convention starts, there may be times when speakers on the rostrum high at one end of the hall will have trouble making themselves heard. Interruptions, demonstrations for this or that candidate, and parades—impromptu or staged—are sure to disrupt the proceedings.

But nothing of all this should obscure our realization that what's taking place is part of a very serious business. Out of all possible candidates, just two nominees, for the first and second spot on the national ticket, are being picked at each convention. During the campaign that follows, we'll be making up our minds as to which pair we prefer. And when, in November, we make our choice at the polls, the standard bearers of one or the other of our two major parties will become President and Vice President of the United States.

In view of the magnitude of the President's job and the importance of the part he must play in making ours an effective government of, by, and for the people, we owe it to ourselves and to democracy to improve our understanding of how the nominating conventions go about their business.

Let's turn the page. It's a vital issue worth looking into at once.

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, United States Army, Washington, D. C.; Dr. Allan Nevins, Professor of American History, Columbia University, President of the Society of American Historians; Dr. Robert E. Spiller, Chairman of Committee on American Civilization, University of Pennsylvania, Council Member and former President of the American Studies Association, a national society for the study of American civilization.

Editor: Townsend Scudder, Executive Director of the Center.

HOW NOMINATIONS WERE MADE IN THE PAST

Almost from the beginning of our federal government in 1789, there have been two major political parties seeking every four years to elect one of their members as President. Down to 1828, and the election of Andrew Jackson, party candidates were chosen by congressmen of each party. That method was known as the congressional caucus.

Jackson had difficulty getting nominated by his party's caucus, so he invented another method. He devised the national party convention—the system we still use today. "King Caucus," as the old method was called, had fallen into disfavor because it was considered undemocratic. Jackson had little trouble replacing it with his national convention idea. By 1840, both major parties were nominating by the new method.

HOW NOMINATIONS ARE MADE AT PRESENT—THE CONVENTION SYSTEM

Before we consider the nominating convention system itself, we might make sure that we understand how the political parties operate. Each of the two major parties has a national committee made up of a man and woman from every state and from Hawaii and Alaska, plus the District of Columbia, Puerto Rico and the Virgin Islands.* Though the method of picking members is complicated by various procedures in different states, it pretty much boils down to the practice of having each state delegation choose or name its two members at the close of the national convention. The new committee (many members of which, of course, will have served before) then takes over for the next four years to the end of the next nominating convention. The committee's chairman, whose first big job will be to run the coming campaign, is picked by the Presidential nominee himself, though the national committee goes through the motions of saying O. K.

The national committee that's been in office for the past four years sets the date for, issues the call for, and makes the preparations for the nominating convention.

Each party's convention will draw delegations from all the states and from the other areas represented on the national committee. There are two kinds of delegates. A district delegate represents a state congressional district. A delegate-at-large represents a whole state. There are alternate delegates who vote in case regular delegates are absent.

The number of votes and the size of each delegation are determined by rules adopted by the last convention—the one that met four years earlier. The general idea is for states and other areas to be given votes on the basis of their political importance from the point of view of the party, determined by the number of congressmen and the number of votes for party candidates cast in the most recent election for President, Governor, or Congressman.

The two parties differ as to their specific rules about the number of convention votes, delegates, and alternates. In 1956, the Republicans will have 1,323 delegates, each with one vote. They will have one alternate for each delegate, totalling 2,646 persons in all. The Democrats, with 1,372 votes to be cast, will have 2,744 delegates present, each with half a vote. Adding in the alternates, the Democrats will have 4,640 persons all told.†

Delegates and alternates for either party's convention are picked in different ways: by state primary election, by state party convention, or by the state party committee. Some states use a combination of these methods.

With regard to the delegates themselves, both parties have one rule in common. They must pay their own expenses. Not infrequently, they are also expected to contribute money to help take care of the costs of the convention. Perhaps this fact will lead us to view more tolerantly the antics which from time to time take place. These not only afford a little relaxation in the serious business that's being carried on but actually play a significant part in bringing about the result for which the delegates have assembled—the nomination of the two standard bearers on the national ticket.

If it is to get its business done, every gathering must have organization and leadership. Therefore each convention has its officers. The table at the bottom of the page lists the key officials and what they do.

As for organizing the convention so that it can get on with its work, that is the job of the so-called standing committees. Each convenion has four of them.

It's the temporary chairman's business, shortly after taking over, to see that these standing committees get set up. This he does by asking the chairman of each delegation for the names of the persons picked by that delegation to represent it on each of the committees. Thus every delegation is represented on all four. The way the chairman gets the word from each delegation is by a method which soon becomes monotonously familiar to TV viewers and radio listeners. He asks for a roll call of the delegations, in alphabetical order, beginning with Alabama and closing with Wyoming for the states, followed by the other areas represented. Each delegation chairman in turn speaks up for his group till every delegation has been heard from concerning the particular business on hand.

As soon as the four standing committees have been named, their members get to work—while the great mass of delegates and alternates (and the radio and TV audience) listens to the keynote address and otherwise passes the time till the standing committees are ready with the reports which, as soon as accepted by the delegates as a whole, make it possible for the convention to get down to its major purpose—the selection of the party's Presidential and Vice Presidential candidate.

The four standing committees, with their membership and functions, are as follows:

Committee on Credentials

(One member from each delegation)

1. Hears disputes on contested seats. Sometimes differences and splits in the party within a state result in rival individuals or groups going to the convention, each claiming to have been duly and properly chosen. It is up to the national committee to say which shall be seated, but in case of protest or appeal, the committee on credentials takes the question up from there.
2. Puts into its report to the convention its findings on such disputes and its recommendation as to who shall be seated. All this has to be done in order to draw up an official and permanent

CONVENTION OFFICERS

Office	*By Whom Chosen*	*Function*
Temporary Chairman	National Committee—though delegates go through the motions of formally electing him after the national chairman has called the convention to order	Presides until Permanent Chairman is chosen
Permanent Chairman	Nominated by convention's Committee on Permanent Organization, which presents his name for election by the delegates	Presides during rest of convention
Keynote Speaker (Always a person of national prominence—often the temporary chairman himself)	National Committee	Delivers the "Keynote" address which is supposed to arouse the fighting spirit of the party for the coming election campaign

**The Democrats also include the Canal Zone.*

†Like the Republicans the Democrats allow one alternate for every delegate-at-large. But they allow only one alternate for every two delegates from the districts. This tends to hold the grand total down so that it is not quite twice that of Republicans.

roll of delegates qualified to cast their votes during the rest of the convention. Till the report of the committee on credentials is heard by the convention and its recommendations acted on in one way or another, no further business can be carried on.

Committee on Permanent Organization

(One member from each delegation)

1. Nominates officers for the convention, including the permanent chairman.
2. Presents its nominations to the convention for action.

Committee on Rules

(One member from each delegation)

1. Draws up a set of rules for conducting the convention.
2. Presents them to the convention for action.

Committee on Resolutions—the "Platform" Committee

(One man and one woman from each delegation)

1. Draws up the platform—a statement of the principles and objectives of the national party for the next four years. Generally the separate planks are the work of subcommittees, and then there's a drafting subcommittee which fits them together. The whole committee passes on the result.
2. Presents the platform to the convention for action.

As soon as the reports of the four standing committees have been adopted, with or without changes, the delegates are ready to get down to the all-important business of nominations. This, like everything else, is handled by the roll call method. Each delegation is entitled to make a nomination and seconding speeches, and Alabama leads off. But if it wishes to, any state may yield its time to a delegation further down the list in case both have agreed they favor the same man.

When the end of the list of delegations has been reached, and all nominations made, balloting begins. The roll of the states again is called. The chairman of each delegation announces the vote of his group for one or another or several of the nominees. The tally clerks record the votes. Keeping score lets us know how close any nominee is to winning the required number to clinch the nomination—a simple majority according to the present rules of either party: 687 votes in the Democratic Convention; 662 votes in the Republican. Failing a majority, the balloting must be repeated until a majority is reached. The person receiving it triumphantly emerges as the party's candidate for President.

In the Republican Convention, if President Eisenhower runs again, renomination is likely to be almost automatic. If he doesn't, the four days originally scheduled may have to be stretched to give time enough for the Convention to choose the ticket.

In the Democratic Convention, because there are several leading contenders, making the final selection is almost sure to be a lengthy process.

In the first place, the convention may have a large number of nominees to vote for. Delegations like to honor some party member from the home state by nominating him. Such a person is called a "favorite son." His delegation may vote for him on several ballots, even though he has small chance of winning.

Delegates from at least 17 states will be told how to vote by "the folks back home." Preferential primaries, in which party members‡ show their preference for President, take place during quite a long period before the convention. In some states, because there is no requirement for the state's delegates to support the winner, the preferential primary is not much more than a popularity contest. But other states require their delegates during at least several ballots to vote for the winner of the primary, unless he "releases" the delegates pledged to him.

At the start of the voting, each of the stronger contenders will have a considerable number of pledged delegates. But seldom does one contender have a majority behind him to begin with. The effort to get a majority calls for trading votes and for similar "deals."

Not infrequently, the convention deadlocks. No contender is able to get that necessary majority, and none is willing to withdraw in favor of another. This is where the "dark horse" or "compromise candidate" enters the picture. Unable to agree on any of the leading nominees, the party leaders pick someone who has not been a strong contender but who seems acceptable to a considerable number of the delegates. The "dark horse" under such circumstances may run away with the race.

Repeated ballotings bring tense drama to a nominating convention. When no candidate is able to muster the winning number of votes after repeated roll calls, the next move is likely to be a recess, so that party leaders can confer and bargain. One such pause may not be enough, so the process goes on: roll call, tabulation of votes, recess—time after time. First one candidate gains a few votes, then another.

Suddenly there's a break in the deadlock. A large state delegation has switched its votes.

Delegation after delegation jumps on the bandwagon. Vote after vote is changed.

When the result is obvious to everyone, the Chairman will ask: "Shall the nomination be made unanimous?" A thundering chorus of "yeas" answers him.

WHAT TO LOOK FOR DURING A CONVENTION

Much of the excitement of a national convention is not open to the public eye. Most of the committees work in executive, or private, session. Bargaining for votes is often a personal affair between no more than a handful of people. And the business of selecting a compromise candidate, when necessary, is a matter for the "smoke-filled room."

Even so, we can work like Sherlock Holmes or Ellery Queen by searching for clues, and knowing what they mean when we find them. That adds to the interest and excitement of listening in on the conventions.

Here are some of the more important clues to be watching for:

Disputed Nomination for Chairman. This may begin before the convention opens. As with any presiding officer, both the temporary and the permanent chairmen have important powers of recognition when members ask to speak. The permanent chairman is so important that every strong contender for the nomination tries to get a friend elected to the position.

Look for pre-convention struggles over the chairmen, and especially over suggestions as to who's to be permanent chairman. What candidate, if any, has the chairman favored before convention time?

Contested Seats. The question of contested seats is raised when more than the authorized number of delegates from a state or other represented area is reported to the National Committee. That committee, as we have seen, decides the claims, subject to appeal to the Credentials Committee. In turn, the decision of the Credentials Committee can be appealed to the convention itself. Seats usually are contested by delegations supporting different contenders. A contender may win or lose the nomination depending on whether or not his delegation is seated.

Remember the struggle in 1952 between the pro-Eisenhower and the pro-Taft delegations from Louisiana and elsewhere?

Changes in Rules. As we have also seen, until it can adopt its own set of rules, which is after hearing the report of the Rules Committee, a convention must operate under the rules of the convention of four years earlier. Usually the old rules are adopted with little or no change.

Once in a while, however, there are suggestions for drastic changes. What's generally back of such efforts is an attempt to take power away from one group and give it to another. Naturally this can lead to a first-class political fight which may even force delegations to walk out of the convention.

Planks in the Platform. Delegations will fight tooth and nail to prevent the inclusion of planks which they feel are objectionable to the voters back home or to the candidate they favor.

‡*In certain states, however, like Minnesota, Republicans and Democrats if they wish can vote in the other party's primary. Variations like these in the primary laws of the states tend to make the pre-convention political scene very confusing.*

A contender for the nomination will oppose a plank which runs counter to what he stands for.

The outcome of a fight over platform planks may be important as to who gets the nomination. We should try to discover the real reason for any such struggle. Does it only involve contenders for the nomination, or does it go beyond that? Does it mean a struggle, perhaps, for control of the national party?

The Schedule of the Convention. If the Convention is not ready to begin nominations and balloting at the time set by its original schedule, the chances are that trouble is brewing. Probably a fight has broken out in one or more of the committees.

When the Convention falls behind schedule, look for a trouble spot. This may be the point where a battle for power has begun. The result may change the whole course of the Convention.

CHOOSING THE VICE PRESIDENTIAL NOMINEE

So much for the way conventions pick the party's candidate for President.

What about the Vice President?

The procedure for nominating the second man on each ticket is the same as for the Presidency, and is the next thing turned to by the Convention.

But in 1956, in both Conventions, much more attention seems likely to be paid to the Vice Presidency than in the past.§ That's a development we'll wish carefully to keep an eye on.

HOW ABOUT IT?

After we've had the chance, by watching them, to see how the conventions work, we may wish to ask ourselves this question: is the present system adequate, does it need improvement, or should it be scrapped for some other method▲ of picking the nominees for President and Vice President of our United States?

Mr. Edward R. Murrow

485 Madison Avenue
New York, 22, N. Y.

Dear Mr. Murrow:

Along the line of supplementary material about which we were speaking yesterday, here are the advance copies of the Center's June printing of VITAL ISSUES, which I said I would send, on the subject of the nominating conventions. I shall be interested to learn whether they fit in with your concept.

It was a great pleasure seeing you yesterday. Naturally I regret your not joining our advisory committee but I respect the reason for your present decision and very deeply appreciate your continuing kind interest in the Center and the services which it is seeking to perform.

Sincerely yours,

Townsend Scudder

This guy has got $105,000 from the Ford Foundation. He is a responsible individual, the material he publishes is, so far as I can tell, accurate and strictly non-partisan. He has an appetite to try to coordinate his publications with SEE IT NOW programming. I think it might be worthwhile to have someone on the shop keep him informed of what we decide to do when.

Mr. Edward R. Murrow
485 Madison Avenue
New York 22
New York

Dear Mr. Murrow:

Here is the January number of the Guides.

Would you by any chance have a few moments available on January 12, when I expect to be in New York, as I should ever so much appreciate the opportunity to see you. However, knowing how busy you are, may I add that it would be possible, I am sure, for me to come to New York any day in the latter half of January or early in February, if an appointment can be squeezed in. I shall call your office before the 12th, and if that date is not convenient, perhaps your secretary may be able to suggest another date.

With all good wishes for the new year,

Sincerely,

Townsend Scudder

THE GOVERNMENTS OF THE 48 STATES

Vital Issues
FOR BETTER INFORMED AMERICANS

Published by the
CENTER FOR INFORMATION ON AMERICA
WASHINGTON, CONNECTICUT
Volume V, Number 5

Drawings by Stuart Judd, Jr.

ARE THEY DOING THEIR JOB?

The forgotten area in government of, by, and for the people is that of the forty-eight states.

Especially in years of Presidential election, what goes on in the way our own state carries out its job gets very little notice.

All eyes are on the race to see who'll occupy the White House at Washington, and it's mostly national issues that catch our attention.

Yet what our own state, with our local community as a part of it, does for and to us is pretty apt to affect our daily lives more directly and frequently than does our national government.

Public school education, for instance, is a local and state concern. Our state system of highways is indispensable to our citizens. How the state police function has a great deal to do with our personal safety. Through its various services connected with public health—running its welfare institutions, inspecting local hospitals to see that standards are kept up, analyzing local water supplies to make sure they're not contaminated—our state very directly contributes to our personal well-being.

That's just part of the list. More and more, state services in great variety are expected by the people. In the last twenty-five years, state expenditures on highways alone have increased more than six thousand percent; expenditures for education by six hundred percent.

That's like space mathematics.

Not counting the nation's outlay for defense, the annual expenditure of the forty-eight states about equals that of the national government.

State government is too big and important to be foggy about —yet most of us are pretty ignorant of the subject.

Have we even glanced at our state's constitution—the rules and regulations covering how it's run? Can we give the name of one other state official beside the governor's? Do we know whether our legislature represents us fairly—the very heart of our self-government? The chances are, it doesn't. The various systems in the forty-eight states for apportioning seats in the legislature tend to over-represent some elements of the population and under-represent others.

Let's start with a look at our own state. But we've got to bear in mind that what's done and what goes on in the forty-seven others may be considerably different—just as are the states themselves. Each one is important to us who are its citizens. All are important to us as citizens of the Union. The success of our federal system depends to a great degree on the performance of the forty-eight states.

Are they doing their part of the job? Are they carrying on their appropriate functions democratically, responsibly, intelligently, and efficiently?

It's a vital issue, all right, which we better look into.

FAMILY HISTORY

Years before our Federal Union, the original states were functioning as governments. As former British colonies, they had united in a loose confederation to win the War of Independence. With the Revolution ending, they wrote constitutions, putting into them what they and mankind had learned about self-government, and setting up safeguards against tyranny from without and within.

After a stormy trial period as a league of independent states, a more perfect union seemed essential. The new Federal Constitution drew freely on useful provisions in the constitutions of the original states.

The earliest state constitutions—because their framers remembered the tyranny of governors sent over from England—had been inclined to cut down and hem in the chief executive's job, making the legislature the more powerful and important branch of state government.

From 1776 to 1912, when the forty-eighth state—Arizona—was admitted to the Union, state constitutions were being written, amended, and revised. The process continues. It makes comparisons difficult and generalizations as to what's best hard to agree on.

With regard to the Federal setup, states have one big ad-

vantage in running their affairs. They can do anything that's not forbidden by the U. S. Constitution. The national government, on the other hand, can only do what the Constitution permits.

Because there's no provision against it, states can:

(1) make and change their constitutions;
(2) raise and spend their own funds;
(3) enact and enforce their own laws;
(4) run their public education system;*
(5) license occupations, charter corporations, regulate utilities, insurance, and other business, and thus keep an eye in general on what's going on;
(6) set up and regulate all sub-divisions within them—counties, municipalities, townships, and what have we. All owe their creation to an official o.k. from the state.

What this amounts to for the states is pretty broad freedom to run their own affairs.

The things that the U. S. Constitution forbids the states to do form a rather short list. They can't:

(1) make treaties with foreign countries;
(2) coin money;
(3) do anything that would break up a contract;
(4) tax imports or exports;
(5) deny equal treatment to any individual;
(6) though not expressly stated, the National Constitution also frowns on any member of the Union putting up barriers in the way of commerce between the states.

As state after state entered the Union, and state constitutions continued being written, amended, revised, certain broad patterns developed which help explain what goes on.

By 1800, all but one state had adopted the two chamber ("bicameral") legislative system.

This was probably in imitation of the national government. But it also came about during a time when many persons believed that wealth and position were entitled to extra consideration. Special privilege could thus be given through setting higher eligibility requirements both for voting for and sitting in the senate of a state.

When Andrew Jackson, in 1828, became President, starting the era of the common man, this undemocratic notion petered out—but the bicameral system stuck.

Because people saw that the office of President was working well, they became readier to give their state governors more importance. It became the regular thing for him to be popularly elected.† Like the President, he had veto power.‡

As time went on, states began taking more and more social responsibility: toward education, toward public health and welfare, and so forth.

After the Civil War, the government of states, like that of the nation itself, fell into a downward spiral. Greed, graft and corruption had a heyday. Boss rule made abuses hard to combat. When reform at last began, it took various paths. Direct primaries spread from state to state to get rid of boss-ridden nominating conventions. A cleanup of corrupt practices in voting included adoption of a ballot giving the names of all candidates, to be marked in secret at regular polling places that could be watched for violations of the state's election laws.

The right to vote was spreading. By 1900, women were allowed to take part at least in school elections in fourteen states. By 1920, the nineteenth amendment to the Federal Constitution gave all women the vote.

In various states, particularly the newer ones in the West, plans to give the people an even more direct say in state government began to be put into effect. By 1921, initiative, referendum, and recall were adopted in nearly half of the states. "Initiative" meant that if the required number of voters petitioned for it, a legislative bill or constitutional amendment would come directly before the people for a vote—bypassing a balky legislature. "Referendum" meant that the people, also by following prescribed procedure, had the chance to veto an act passed by the legislature. "Recall" was a way, by direct vote, to toss out an undesirable elected state official.§

By the 1920's, an "executive budget" for the legislature to pass on—a budget which makes the governor responsible for figuring out what the entire business of state government will cost and where the money is to come from—became part of regular operations in over half of the states. Today, it's universal.

Recent plans to tidy up and improve the machinery of the Federal Government have led to the same idea in the states. In 1955, the U. S. Commission on Intergovernmental Relations, "the Kestnbaum Commission," in its report, o.k.'d the following suggestions made in 1949 by a committee of the Council of State Governments:•

(1) strengthen the office of governor.
(2) reduce the number of independent agencies and administrative boards and commissions used in the running of the state, and group them into major departments.
(3) Give the governor greater power to appoint or remove department heads.
(4) Strengthen control over budgeting, accounting, purchasing, managing state property, and so forth, for which the executive branch is held responsible.
(5) Revise legislative procedures to make for greater efficiency.

The reasons for these recommendations are pretty obvious, but we might consider each in turn, particularly with reference to our own state.

**In all the states, the actual management of public schools is in the hands of local boards of education. But though locally elected or appointed, and therefore locally responsible, these boards are agents of the state.*

†Election of the governor from and by the state's assembly was fairly common in earlier days.

‡The President's veto applies only to the whole of a bill. He can't veto certain parts which he doesn't like, and let the rest go through. Most governors, however, have the right to veto individual items they object to, if they're willing to have the rest of the bill become law.

§By and large, these three measures have been disappointing as reforms. What's the situation in our state?

•Established in the 1930's, the Council has been valuable in helping states to work together and in presenting points of view of the states at Washington, D. C. The annual governors' meeting is part of its activity.

OUR OWN STATE

Naturally what we expect from our state is good government.

(1) If our legislature represents us fairly, (2) if our governor is a leader in shaping needed policies and carrying them out, (3) if our officials recognize it is the citizenry's right to be kept fully and honestly informed about the public business —then we have reasonable cause for confidence.

Some states are doing a real job. Others are showing progress towards gearing themselves to handle their growing responsibilities. A large number are still poorly prepared to meet the many problems which they—and we as their citizens—face.

What's the situation in ours?

Perhaps the basic obstacle blocking progress for better government in our state is our own ignorance and indifference to what goes on and how the state operates. If we ourselves don't take interest in government by us, of us, and for us, what can we expect in our state?

There's one explanation of our neglect which should be looked at before we consider some of the actual problems. It's the fact that—most of the time—not much goes on in the affairs of our state that really captures our attention. What catches the eye and gets in the news is usually something at the national or at the strictly local level—what's going on in the country and world, or right in our own home community.

Much of the time, the functioning of our state government is pretty much out of the picture. Besides those we've already noted, there are obvious reasons for this, such as the fact that most state legislatures meet only once every two years and for short sessions at that.

Either now or later, we may wish to consider just what could be done to improve the low visibility which keeps us from paying much attention to what's taking place in the state.

State Constitution

Nearly all our state constitutions are ancient. Brand new ones, like New Jersey's streamlined replacement, are the exception.

But just because a constitution is old doesn't necessarily mean it's no good. Our U. S. Charter—though an 18th Century model—is the greatest document ever written for democratic government. It so happens, however, that the years between 1800 and 1900 showed a lack of knack for constitution writing. The constitutions of most of our states fall within that period.

Though most state constitutions haven't been recently revised, many have been amended so much that the tail wags the dog. Counting amendments, the average state constitution is four times as long as that of the Federal Government. This clutters them up to an extent fatal to efficiency. Instead of basic documents for the conduct of government, like the U. S. Constitution, many are loaded with complicating details. Many contain specific provisions and limitations which don't belong in codes for government. They should go, instead, among the laws of the state. The Kestnbaum Commission, June, 1955, reports that it " . . . finds a very real and pressing need for the States to improve their constitutions."

What's the situation with us? Some homework to find out about our state constitution and how it functions, along with a look at the document itself, is a must if we want our answer to be informed and constructive.

The Party System

It's our habit to think of the U. S. Government in terms of the two party system.

But as plenty of us know from the situation at home, this doesn't apply to the government of a considerable number of states. In about eighteen, just one party has power—thirteen Democratic, five Republican.

In the government of the nation, each party in the two party system, in an effort to persuade voters and win elections, brings up issues and offers plans for carrying them out. Thus the people get a chance to decide which party they think will best serve them. If a state has only one party, issues in state elections generally are nowhere near as clearly defined. Various factions within the party say they're for this or for that—but the situation is apt to shift and be confusing.

What's the situation with us? How about it?

The Executive Branch and Governor

Compared to the President and his chance to get things done, the executive branch of state government is pretty generally weaker. Many states elect a half-dozen or so state officials (instead of just President and Vice President as in national elections). This tends to split up authority. In many states, a number of semi-independent boards, along with the various departments and other agencies, have a hand in running affairs, thus splintering executive authority and responsibility even further.

To add to his difficulties, the governor is usually in for a short term—two years in nineteen of the states. In a short term a governor has little chance to build on experience.

On each of these points, what's the situation in our state? Any other problems? What do we feel should be done? Do we want our governor to furnish the principal leadership in deciding what's needed and in getting things done, or would we rather keep him in check, following the traditional attitude in many states of distrusting a strong executive?

The Legislature

With any state legislature the big question is: does it really represent us?

The fundamental idea back of democracy is that the people be fairly and equally represented. When groups of just a few people are represented by a considerable number of legislators at the state capital, while other much bigger groups have only two or three representatives, the very principle of democracy is violated. Yet that's how it is in most state assemblies. Estimates figure that urban centers, with almost 60% of the total population, elect only 25% of the lawmakers of the states. That means that three-quarters of the legislators come from rural areas, where only some 40% of the people live. What's back of this situation is the way the states are districted—a district being a subdivision entitled to elect a specific number of representatives. Such subdividing has always been a regular part of the democratic system. But even where a state may originally have been fairly divided in order to give equal representation to the citizenry, shifts in population, along with

growth of cities, have upset the pattern. In addition, such devices as gerrymandering foul up the balance. "Gerrymandering" means laying out a district in such a way as to give one party an advantage out of all proportion to its strength in the state.

State constitutions often provide that redistricting, to ensure continued equality of representation, shall take place after every census.

But since redistricting is the legislature's job—which got itself elected through the way things were—legislators much prefer to sit tight.

What's the situation as to representation in our state? How long ago was it redistricted or reapportioned?

As to how the legislature works, the pattern differs in each

state. The questions listed below may at least give us some guidance in looking into and checking on the job being done.

1. How many representatives in each houseΔ in our state? Is that about right, too large, or too small?
2. Do we, or do we not, favor changing to a unicameral system? What are our reasons?
3. What pay do our legislators get? Should it be lower or higher?
4. How often does our legislature meet? Do we, or do we not, favor more frequent sessions? Why? Does the constitution set the frequency and length of sessions? Do we favor such regulation, or not? For what reasons?
5. Are representatives from the rural areas more numerous than those from the cities? If so, what's the effect?
6. How many standing committees does our legislature have? Are there joint committees of both houses? Do we, or don't we, favor such an arrangement? Why? Do committees schedule public hearings on important bills before submitting them to our representatives for legislative action? How can we keep posted, in our state, on legislative action?

Pressure Groups

In considering legislation, there's one situation we should be very much aware of. We can get at it by asking ourselves this: do our wishes as individual constituents determine how our representatives vote, or are they influenced more by pressure groups?

Pressure groups are organizations of citizens banded together because they have common interests which they want to have looked after. In nearly every state, important groups include farm organizations like the Grange, the Farmers' Union, the Farm Bureau, the National Council of Farmer Co-operatives. Labor has its pressure groups, too, as does business and industry. So do the veterans.

Because such groups represent big blocks of votes and have staff members at the state house who know how to talk to legislators, they're in an advantageous position to get what they want. Many of the things they advocate may be greatly needed. But let's think about it this way, too. The organized bird lovers and organized cat lovers are apt to tangle in their views. What comes out in the way of legislation may be good for neither birds, cats, nor people. What if one group is organized, the other isn't?

There's nothing to prevent us joining such groups. Yet we might ask ourselves some questions about them. For instance, should provision be made to see to it that they operate more openly? Is there anything else about pressure groups we should look into and recommend?

People at Work

In trying to figure out how good a job our state is doing, we need to consider people: what kind of people are working for us, and how well do they work?

In our state's elective offices, that's up to us. We, the voters, put the candidates in.

For the other job holders—who are in the great majority—it's something else again.

In state government, the merit system, though growing, is still in its infancy. "To the victors belong the spoils" is still the way many state officials look at it. They go right on appointing their friends to government posts as rewards for political service rather than because they're qualified for the jobs.

What's the situation in our state?

We've nearly reached the end of the page, yet we've only just scratched the surface of the subject. There's lots we've had little chance to think or talk about—the judicial branch of state government, for example, the most effective organization of which, in most states, is a subject of continuing debate.

State government is a complex and complicated business. It concerns us closely. We should make a real effort to look into it further.

How can state government's capacity to do its job responsibly, democratically, intelligently, and efficiently be improved?

ΔOnly Nebraska has a unicameral system.

HELPFUL FOR LOOKING INTO THE QUESTION FURTHER

The Forty-eight States, research reports and background papers prepared for the use of participants in the Eighth American Assembly, October 13-16, 1955. (Chronological list of comments, continued)

Mr. Wallace Irwin, Jr., Director, Office of Public Affairs, United States Mission to the United Nations, in a letter dated September 12, 1955, with reference to the Guide on U.N. Charter revision: "... up to your usual high standards."

Miss Olga B. Gechas, Assistant to the Director, United States Committee for the United Nations, in a letter dated September 15, 1955, with reference to the same issue: "It is an excellent job of directing some very complex and comprehensive material."

Dr. Robert L. Johnson, President, Temple University, Philadelphia, Pa., October 17, 1955: "VITAL ISSUES is excellent, and I am wondering if it would not be a good idea to devote one of your new issues to the Hoover Commission recommendations."

Mr. J.L. Blair Buck, Coordinator of Teacher Education, State Board of Education, Commonwealth of Virginia, in a letter dated October 21, 1955: "I have just finished your excellent treatment of Disarmament in the October, 1955, issue of your very valuable publication. It is an excellent summary which should be very helpful in supplying perspective for considering next steps in the search for an acceptable disarmament plan.
The issue on schools was another exceedingly valuable contribution."

Miss Lillian Lehman, Editor, Kentucky School Journal, in a letter dated November 21, 1955: "I have just received Volume 4, Number 8, of Vital Issues, ... I am very much interested in ... 'Crisis in the Public Schools: What's Up? What's Needed?' I am considering publishing this article or excerpts some time in the Kentucky School Journal, if permission will be granted by your editorial board. This is an article which would be most timely for our readers during the approaching session of the General Assembly of the Kentucky Legislature."

Mrs. T.L. Johnson, 1 Breckenridge Road, Palmer, Mass., a supporting subscriber to VITAL ISSUES, in a letter dated December 6, 1955: "I am finding Vital Issues very informative, and pass each one along to sincerely interested persons."

Dr. Detlev W. Bronk, President, The Rockefeller Institute, New York City, in a letter dated December 12, 1955, with reference to a Report on the activities of the Center: "I was much impressed by what you have accomplished and I send you my warmest best wishes for the continued success and further development of your important and significant undertaking."

Chairman of Committee on American Civilization
University of Pennsylvania
President of the American Studies Association,
a national society for the study of
American civilization.

Mr. Edward R. Murrow
485 Madison Avenue
New York 22
New York

November 30, 1955

Dear Mr. Murrow:

Along with the current issue of the Center's Guides, I am enclosing a Memorandum which I feel will interest you.

A question of great importance to the future of the Center has come up on which I would greatly value your advice and counsel. I promise not to take more than ten minutes of your time, and, if possible, would ever so much appreciate the chance to see you before the middle of the month. I expect to be in New York on Wednesday the 7th, but could rearrange my schedule for almost any other day to suit your convenience.

Sincerely yours,

Townsend Scudder

Vital Issues

"A DISCUSSION GUIDE FOR BETTER INFORMED AMERICANS"

Published by the
CENTER FOR INFORMATION ON AMERICA
WASHINGTON, CONNECTICUT
Volume V, Number 4

AMERICA'S MANPOWER RESOURCES -

ARE WE MAKING THE MOST OF OURSELVES?

In democracy, nothing is more important than men, women, and children. That's our belief. That's what our Declaration of Independence, Constitution, and Bill of Rights stand for.

Nothing counts more than making the best of ourselves—for our own sakes as individuals, and for the benefit of all of us. Our happiness, our well-being, our liberty and security, depend on ourselves. The sum of the training, skills, and abilities of us all adds up to America's manpower total. That's what makes us what we are; that's our greatest resource.

So, the thing is to see that our human resources are given the best chance to develop. Thomas Jefferson thought that each citizen should have available the highest level of education for which he was qualified. Our belief in "educational opportunity for all" accounts for the American public school system to help prepare young people for life and for work.

Nevertheless, there is a good deal of evidence that, in the training and use of our human resources, there's room for improvement. In this technological age, we're still the furthest advanced nation. But our technological development—so directly responsible for our high standard of living and our security—depends on having enough skilled scientists and engineers, and enough trained technicians, to keep it progressing. We're waking up to the fact that here's one place where we're running very short. We're running short elsewhere, too—short on teachers, for example. The importance of having plenty of good teachers is clear. It's not just because they teach but because part of their job is to build character so that young Americans can make the best of life in general. They help prepare us in the fundamentals of good citizenship on which the quality of our government depends. Inspiring teachers stimulate able students to seek further training to increase their chances of making the most of themselves.

Are we shortchanging ourselves in the preparation and use of our human resources in general? What's the effect on our economy of the fact that it is tougher for certain citizens, because of color, to get training to develop their best abilities? What's the total result of the reluctance to hire older workers? How about drop-outs of young people in school? Because two-fifths yearly leave high school before graduation, isn't there a tremendous loss of potential manpower?

We should look into these things.

They're important for each of us.

We ourselves are the vital issue.

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, United States Army, Washington, D. C.; Dr. Allan Nevins, Professor of American History, Columbia University, President of the Society of American Historians; Dr. Robert E. Spiller, Chairman of Committee on American Civilization, University of Pennsylvania, President of the American Studies Association, a national society for the study of American civilization.

Editor: Townsend Scudder, Executive Director of the Center.

HOW GOOD IS THE SELF-STARTER?

Becoming a working part of the nation's manpower is a bit like getting a car going in cold weather. The engine needs to warm up.

For a great number of young people, choosing one's work is a haphazard performance. Many take the first job offered. Rather than as the result of painstaking search, very likely the opportunity is heard of casually through a relative or friend. Usually, because that's more convenient, it's something near home. The idea of looking farther afield, or hunting up better opportunities elsewhere, doesn't dawn very quickly. Instead, there's considerable floundering around—trying various things. Meanwhile a little valuable know-how is picked up, along with a better notion of the market for jobs and what's needed to get good ones.

If the young job hunter hasn't graduated from high school, he's almost sure to find himself under a handicap. Employers are coming to regard a high school diploma as standard equipment—proof that the applicant has acquired a certain amount of necessary knowledge and has successfully seen one task through. At a time when, as a nation, we're short on manpower, that may mean some good material is passed by—since many young people with intelligence and other desirable qualities never finish school.

WHAT DOES GETTING READY CONSIST OF AND WHAT ARE THE JOBS TO BE FILLED?

Our system of free education for all (education paid for by the citizenry through taxes) extends through high school. The program is in the hands of all of us. It is as good as we make it—no better, no worse. There's plenty of criticism of what goes on in school—not a bad thing if we know what we're talking about. These are among the comments heard. Several contradict one another or get in one another's way.

1. The typical high school gears its program to the average student. As a result, bright students are neglected.* This means they don't get a real chance to develop. Some of the best get bored and drop out—a serious loss of talent.
2. Not enough is done to work out ways of training for the below-average student, who simply endures school because the law won't let him leave till sixteen.
3. Gifted students often find the schools they are in do not offer the type of training they need for professional study at the university level.†
4. There's not enough vocational training. Since the majority of high school students doesn't go to college, every student should learn some skill so as to be ready to make a living.‡ There should be more business training, too.§
5. The three R's aren't thoroughly taught. Too many students don't learn to understand what they're reading. Too many can't explain what they mean—either through talking or writing. Too many can't spell. Too many haven't really learned even the fundamentals of math—can't add or subtract.
6. Not enough able high school students are encouraged to take science or higher mathematics.●
7. The program offered in high school should be broad and general—with history to acquaint young people with man's past and to furnish a yardstick for the present, with courses in music and art, with good reading to let young people know about man's aspirations.
8. Religion should be taught in public schools.
9. Religion shouldn't be taught in public schools.
10. There ought to be more citizenship training. A key purpose of secondary education in a democracy is to prepare each individual to be a good citizen.
11. There ought to be more emphasis on guidance, both for choice of work and for problems faced in life. There should be more courses acquainting young people with opportunities ahead.

What about each point? What, if anything, is needed? How achieve these needs?

What we want, and what an awakened public interest is striving to get at the free level, is the best possible education for all to help prepare for life and for work. It's traditional with American parents to hope that their children will do better than themselves—and it's good to see how often, in our U.S.A., this belief works out.

As for jobs waiting to be filled, they scale all the way from the unskilled laborer's to Albert Einstein's. If we consider the general job-holding situation during or at the end of high school, here is how it stacks up. A semi-skilled worker—and for our work force of over sixty-five million, it's less and less likely for any job to require no skill at all—picks up what he has to know from his foreman and by watching those around him.

Skilled Labor

There are roughly about eight to nine million in the skilled labor force. Included are electricians, tool and die makers, machinists, and a lot of others. Typically a good machinist can use various machines, and hand tools also, to turn metal into objects our industrial civilization needs—parts of a car, of a watch, a plane. He has to be able to follow written specifications and blue-prints. He needs to be able to work out problems for himself.

At least three out of every five skilled workers and technicians get that way through informal training. Starting as beginners, many grow more and more skilled as they move from one work assignment to another or shift from job to job. The climb up the ladder depends on such things as performance, the desire and ability to make the most of training opportunities, and seniority (how long you've worked with the same outfit).

Formal training comes in various ways. It may be offered you. You may make your own opportunity to get it. Recently there's been a noticeable increase of formal training programs for promising workers by big industrial concerns. These are sometimes of the night-school type, with classes designed to improve the general skills of the work force. You sign up if you're interested. Sometimes they're intensive courses to develop specialized, selected groups of workers.

Unions have traditionally taken great interest in the education and training of their memberships. In cooperation with employers, or on their own hook, they have set up trade schools and run training programs. The apprenticeship system is largely union-made. It operates mostly in the construction trades. Sometimes it just means that those who ask for it will be given a chance to learn a trade. More usually, these days, apprenticeship consists of a formal training program. Uncle Sam recognized that fact some twenty years ago by setting up the Bureau of Apprenticeship. Most apprentices are in programs registered with the Bureau. It encourages the formation of joint employer-employee committees to administer programs. The Bureau and the committees are interested in establishing standards: (1) what shall training requirements be? (2) at what age shall apprenticeship begin? (3) to become an apprentice, what aptitudes should be asked for; what educational backgrounds? [the three R's are pretty much of a must, and most formal programs include applied mathematics and some science training], (4) apprenticeship means learning on the job—so, what shall the hours of work be; what the pay? (5) who shall be selected for apprenticeship and how many? [It's an old complaint that first claim goes to sons and relations of union members]. Some or all of these matters customarily form part of the agreements concerning employment drawn up between unionized labor and management. Apprentices generally receive better than half the standard pay of skilled workmen. Depending on the industry, apprenticeships run from two to five or more years—

**Dr. Hilton C. Buley, Chairman of a Committee on the Gifted and Bright appointed by the Commissioners of Education of eight states, has said: "You just can't take it for granted that a gifted child will reach his full potential without special attention. We have to make better utilization of the brains of . . . gifted children."*

†53% of the nation's high schools do not offer courses in physics. Half do not offer courses in chemistry.

‡In high school, the tendency is to confine vocational programs to the last two years. Most such training is given in regular high schools. Vocational high schools make up only a small percent of our total public school system. Such courses are to teach skills in trades, industry, home economics, and agriculture. Nearly half our high schools offer "vo-ag" courses. They make a valuable contribution, but only a relatively small proportion of our graduates go into farming. For years, more children have been born on farms than could be absorbed into agriculture.

§Over half of all high school students take commercial courses: typing, shorthand, accounting, bookkeeping, office procedure, etc.

●Within the last 50 years the proportion of high school students studying algebra has dropped from fifty percent to twenty percent, physics from twenty percent to four percent. But a far larger proportion of students today attend high school.

two for construction iron workers; five for certain types of electricians.

Even though about half those entering registered apprenticeship programs get out before finishing, they've made a start at learning an occupation, rather than just catching the hang of a particular job. They're that much better off to meet the challenge of new problems. The traditions of apprenticeship tend to create in the trainee a sense of responsibility and pride in his work.

A chance to begin learning a trade is open to every qualified young man (qualifications include a good high school background) faced with the obligation and duty of military service. Many aren't aware of these opportunities for acquiring skills which, when young soldiers become civilians again, can give them a boost up the job and salary ladder. Around half of those entering the services get some type of technical training. Of these, around half are given the advantage of extended school and on-the-job instruction in such varied fields as aircraft maintenance engineering, foreign languages, photography, and jet mechanics. The difficulty is that, as a general thing, the services have only two years or less of a man's time to work with. And the main idea is to make good soldiers for the nation's defense.

Then there's the United States Armed Forces Institute—providing through classroom and correspondence courses the largest adult education program in the world. Through the Institute, men in uniform can work for high school and college credits—though again, because of limited time, far fewer complete courses than begin them.

The G.I. Bills of World War IIΔ and Korea gave many service men, who for financial reasons would otherwise have been left out, the chance to continue their education right through graduate school if they had the ability.

This brief survey shows there's not much rhyme or reason in the way we train for skills. Is that for the best and in closest accord with our belief in the individual's right to choose his occupation, or is there room for improvement?

The means we've looked at are for free. But education costs money, and beyond high school, unless training takes the forms we've considered, the chap who wants further education has to hunt up ways to pay.

Technicians

Along with an increased demand for skilled labor, there's been an enormous rise in the call for technicians. In our total manpower, there are about four hundred thousand of these. Technicians include engineering aides, draftsmen, laboratory assistants—besides many other sorts. Their jobs usually bring them into close contact with professional personnel—doctors, scientists, engineers, and others—who can be seriously hampered in their work if there aren't enough technicians to help. Though, like skilled labor, future technicians may develop their knacks through work experience and informal training, formal post-high school courses are more and more heavily relied on. Depending on the degree of expertness involved, such programs may be carried on in technical institutes during one, two, three, four or more years, or in two-year junior or regular four-year colleges. Correspondence schools also offer training. Technical schools are expensive to run, and tuition often comes high.

The Professions

For the professions themselves, the costs are highest of all, and the preparation longest. That's one reason why the shortage here is greatest and most acute. Our country's economic strength, its social, moral, and spiritual well-being, depend to a critical degree on the small group of highly trained men and women who work in scientific and professional fields. We look to them for solutions of the still unsolved riddles of how to master diseases which have not yet yielded to man's medical skill. To them we turn for the answers—ranging from how to conquer space to how to live in peace on earth. Among our needs, scientists and engineers are at present in dangerously short supply. Because of this lack, the armed forces have had to cut down on certain research and development work. In private enterprise, shortages are critical in the petroleum, metal, food, paper, aircraft and electrical industries. Three to four times as many specialists in peacetime development of the atom will probably be needed each year than are presently being trained.

It's also hard to get enough good executives—both in business and government—for all that needs to be done in managing our expanding economy.

The inadequate supply of highly educated people in various fields is hard to fill for a number of reasons. Top training takes time. Next, a lot of America's potentially best talent doesn't get the chance to get trained. We've looked at the drop-outs in school. In college there's a sizable drop-out rate too—around forty to forty-five percent—much for financial reasons. Particularly during freshman year and especially in science and engineering, drop-outs occur because of inadequate preparation. Better science programs in secondary school and better teaching would help. But good science teachers are hard to keep—they get paid more elsewhere.

This all adds up to serious waste.

How about the form and quality of college and graduate school training? Is an adequate job being done? One argument concerns itself mostly with the undergraduate level. Influenced by this technological age, specialization tends to begin early in college. The existing shortages put the pressure on. When undergraduates see senior engineering and science majors being offered jobs at high starting salaries, they naturally wonder whether it's wise to pay much attention to the liberal arts—history, literature, philosophy, and so forth.

If able students are channeled into scientific studies, the humanities and social sciences tend to lose out. Those who feel there's danger in this argue as follows. In the humanities may best be discovered the intellectual, moral and spiritual resources of the human race. For the most effective leadership, for the best success, knowledge of the humanities is a vital element. Courses which seem to have little to do with one's success in industry, business, or government, may, in the long run, prove very important.

What are our views on this problem of specialization vs. broad liberal training?

As for specific training, more and more large industrial concerns are running their own programs for the management and research personnel which they recruit from the colleges and universities.

Graduate professional schools, as their title shows, concern themselves directly with preparation for a profession—but the candidate has to be well qualified to get in.

At the top level, the lack seems likely to remain acute for considerable time. In order to relieve the scarcity and save waste, the National Manpower Council believes that "nothing short of a determined cooperative effort involving government, industry, the educational institutions and professional and other groups" will do. An informed public opinion is needed to understand the crucial role "brain power" plays in the nation's welfare. That includes awareness of the fact that pure science and learning (searching out knowledge for its own sake) lead often to the advances made in applied science (research for some definite purpose, like developing better aircraft engines).

To achieve more efficient manpower use—says the Council—we should:

1. Develop more reliable knowledge about our human resources.
2. Strengthen . . . institutions which educate and train our scientists and professionals.
3. Maintain . . . a continuous, large flow of students through our colleges and universities.
4. Expand . . . opportunities for capable young persons to secure a higher education.

That's a large order. Let's think about and discuss ways and means to fill it.

GUIDANCE

Even the ablest and best-adjusted young person when trying to decide what to do can make mistakes. Wrong choices waste potential abilities and weaken by that much the nation's manpower resources. Obviously anything which will be of help in

ΔThis bill provided education and training for more than 7,800,000 veterans.

picking a vocation should be all to the good. At the same time, the American tradition that the individual shall be free to make his own decisions as to the kind of education he wants, and the career he hopes to follow, needs to be carefully guarded.

By and large, not much *is* being done about guidance, and the average young person gets relatively little usable information. Good guidance programs require money, people, and time.

Various social agencies are doing what they can. Outstanding is the work of the Y.M.C.A.—because of its excellence and because it reaches so many. The Veterans Administration also concerns itself with guidance. So, among others, do different church groups.

Where programs are especially needed is in school—not just for the eleventh and twelfth grades, but when young people are getting ready to enter high school. That's when important choices must be faced. Shall it be the general college preparatory course, or something leading more directly toward a vocation? What *are* the job opportunities ahead? How do I find out what I'm qualified for? What should I do to get ready?

A special reason for guidance in school is because, once teenagers see how important education can be for a successful life, they will be more willing to study and more anxious to do well.

At present many high schools, if they have guidance programs at all, offer only makeshift counseling services. Often the teachers assigned are not prepared to give sound guidance advice. The mistakes they make bear directly on the lives of the students. There's always the risk that, in advising young people to fill serious shortages in a particular type of skill or profession, there'll presently be overproduction of manpower and not enough jobs to go around.

The National Manpower Council recommends that schools, professional societies, governmental agencies, and other interested groups get together to strengthen the information and counseling services in high school and college. The Council suggests that school guidance programs should help:

1. to clarify a student's understanding of his own interests, aptitudes, and vocational goals [Tests now given more and more generally in schools are proving a considerable help in solving these questions—but many educators warn that their findings should only be taken as an indication];
2. to let students know about the range of occupations, not only locally but in other communities. [A difficulty with what guidance data there is lies in the fact that the best deal with national rather than neighborhood situations];
3. to cause students to relate their present schooling to future work and careers;
4. to inform students about opportunities for further education and training.

What are our own views on vocational guidance? What should be done?

PAYING FOR FURTHER EDUCATION AND TRAINING

There's the rub.

Lack of cash or credit accounts in large measure for the following figures and facts:

Many who have the ability to go through college never consider doing so because they don't know about opportunities for financial help. Tuition costs are steadily rising.⊙ That forces plenty of good students to drop out. It has been estimated that these circumstances each year prevent from 100,000 to 150,000 superior high school graduates from going on. There's real danger that young people from the average income bracket will be priced out of college.▲ Let's consider what's involved in all this, and what needs to be done.

Are there other solutions than scholarships? If so, what?

The American Council on Education finds that scholarship aid has been concentrated on the top five percent. Should the base be extended to include the top quarter of students?

Should the level of free education be raised from the twelfth grade to include two years of junior college? College itself?

On education in general, we are spending about two percent of our national income for secondary schools. One percent goes to higher learning. By way of comparison, over four percent is spent for recreation and fun. In recent years, though, there has been a marked rise in the number and value of scholarships and fellowships. They come from the higher institutions themselves; from private sources such as foundations, industry, unions, fraternal and professional organizations, and individuals; from cities and states; from the federal government.

What should our national policy be concerning America's manpower resources?

⊙*Tuition fees cover only a minor part of what it costs most institutions of higher learning to give each student an education. The largest part of the expense must be raised elsewhere.*

▲*A survey by the American Council on Education shows that a substantially higher percentage of high school graduates attend college from the higher income levels than from the middle and lower levels. Here is another figure which the survey turned up: half of the top 25% of high school graduates don't continue to college.*

FOR FINANCIAL AID

At your local library, consult the most recent available issue of **Scholarships, Fellowships, and Loans,** by S. Norman Feingold, Bellman Publishing Company, Cambridge, Mass. There's a large and growing number of national scholarship programs. Ask local high school superintendent or principal for further information on how and where to apply. Individual colleges have their own programs, and will send literature on application. Such scholarships are customarily awarded on basis of ability and promise, with amount adjusted to financial need of students and their families.

FOR GUIDANCE

Occupational Outlook Handbook, U.S. Department of Labor, Government Printing Office, Washington 25, D. C. $3.25. Describes 433 occupations, giving summary of prospects for employment in each for next five or ten years, description of nature of work, earnings, training and other qualifications needed.
Education for the Professions, issued in 1955 by Office of Education of U.S. Department of Health, Education and Welfare. Government Printing Office. $1.75. Three hundred and seventeen pages of facts about preparing for and practicing each profession, alphabetically arranged.
Your Life Plans and the Armed Forces. Prepared by Defense Committee of North Central Association of Colleges and Secondary Schools. Designed to aid high school students to plan their further education and careers while fulfilling their military obligations. Available in school and college libraries.

COMING: ***Our Mental Health—are we doing enough to keep it good?***

If there is demand for a guide on womenpower resources, we'll prepare one. Please let us hear from you.

MEMORANDUM TO THE BOARD OF TRUSTEES AND ADVISORY COMMITTEE ON PROGRAM OF SERVICES READY FOR DEVELOPMENT AND EXPANSION.

Introductory Comment

As a non-profit educational corporation dedicated to furthering the knowledge and understanding of America by Americans through informational publications, radio, films, television, and conferences, the Center is attracting the interest and approval of an increasing number of persons in positions of responsibility, in universities, on state boards of education, in schools, in learned societies, in organizations like the National Education Association, in government and in industry. Below is given a brief resume of our present and projected activities.

Discussion Guides

Circulation and Distribution

Up to now, the guide program may be described as having been on a pilot basis. Without benefit of organized promotion and with limited manpower and facilities, the Center's Discussion Guides have made their mark, with distribution and circulation increasing. For the concluding issue of Volume IV (May, 1955), 3,317 copies were needed to take care of regular subscriptions. At present, over 4,000 copies are required. Judging from past experience and present indications, 5,000 or more of each issue will need to be kept in reserve to fill special orders. An increasing number of these come from libraries wishing current and back numbers as permanent reference material. Of regular subscriptions, 534 new ones have directly resulted thus far from the Book-of-the-Month Club's "Bookmark" calling attention to the work of the Center, with more coming in daily.

Particularly gratifying is the fact that, from the Bookmark group, supporting subscribers (those contributing $5.00 or more above regular subscription price) are running around eight to nine percent of the total. This degree of support of the Center and its purposes would seem to hold out promise that there is reason to look for a broad basis of support.

What has taken place without benefit of promotion raises interesting conjectures as to what could be accomplished with adequate promotion from here on out. The current response to VITAL ISSUES adds further evidence that the Guides are proving acceptable and useful at various age levels from the 'teens on up. The time seems ripe for launching a full scale promotional campaign for VITAL ISSUES and for further development of the Center's discussion guide service.

Development

The adjuncts to the discussion guide service suggested in the January, 1953 memorandum to the Trustees should be put in practice and tested. Such preparations as are possible are already under way. With the supply of certain issues nearly exhausted, and others coming into increasing demand, reprints become imperative. Here two courses are open - straight reprinting, or revision. The background material of all Guides (as repeated reorders indicate), remains up-to-date. But the device used in many to stimulate immediate attention by reference on the front page to pending questions of immediate national or international concern means that a certain portion of each Guide becomes "dated". Here revision in reprinting is called for. In November, 1953, the Center brought out an issue on the farm problem. It is still in demand. Work on a revised issue is now being carried on by Terrance Keenan, of Merrill Lynch, Pierce, Fenner & Beane, New York City. Keenan is one of the many able young men who on a part time basis have carried on research and done other work for the Center. The Guides on Atomic Energy, Natural Resources, Neighborhood Betterment, and several others are in need of present reprinting.

A special issue (not to be included as part of the regular monthly schedule) on how to conduct mock presidential nominating conventions, designed particularly for use in schools, is now being worked on by Richard Clopton, a former graduate student under Dr. Fesler at Yale and now a budget examiner with the state government, Hartford, Connecticut.

With regard to school use, it is time for another survey of the questionnaire type, to subscribers, like that made in 1952 at the conclusion of the first test run of the Guides. As on the first occasion, this should include a request for suggestions to make the service of the greatest possible value to teachers and students. A manual for most effective group use of the Guides, taking due account of present successful practices, should be developed. In making this survey, personal contact with as many subscribing schools as possible would be desirable.

Though the Center has never advised it, the Guides are employed in a number of schools at the eighth grade level. An investigation should be made as to whether a special edition for junior high school, based on the regular text, but in simplified language, would be desirable.

With regard to use by industry, for distribution to employees in reading rack programs, and to customers also, the same sort of investigation should be made, along with promotion.

Promotion

As is apparent, it is time for a well directed, long-term campaign for subscriptions. Equally important for the sake of wide distribution are special orders. Thus far the largest of these was for 50,000 copies from the National Citizens Commission for the Public Schools, for the issue, Crisis in the Public Schools. This order, like those for other issues which have met with continuing demand, came without benefit of any special promotional effort. The Center, at the time, lacked funds for that. It is only in the last few months that the Center has begun to avail itself of the very real opportunity for wide distribution of individual issues. The firm of Glick and Lorwin, 1790 Broadway, New York 19, New York, has been retained, at a modest figure, to engage in a limited campaign to gain special orders for the two most recent issues, Disarmament, and Neighborhood Betterment. Their expectation of selling over 100,000 copies of the last named issue awaits realization. Future candidates for this type of promotion would seem to be the forthcoming numbers on Manpower Resources and Mental Health. The brief, highly condensed, yet meaty and readable presentation of topics like these furnishes an inexpensive means for broad distribution of information and findings often difficult to lay hands on because available only in various and far longer reports.

Conferences

Since the Center's founding in 1951, conferences have been on the list of its projected services.

Summer Sessions for 'Teenagers.

Made possible through the generosity of the Grant Foundation, of New York City, a preliminary study of the idea of summer sessions in American Studies at the secondary school level was conducted this past summer, and the report completed late in September.

On the basis of the findings, and of responses to the report thus far received, the holding of a pilot session in 1956 seems a justifiable next step. This would call for careful planning and preparation which should begin at the earliest possible moment. If a pilot session is to be held this coming summer, it is imperative that a director be appointed at once, to work out details and assemble his staff. The Advisory Committee has already been asked to suggest candidates, and names are coming in.

Once established through practice, these summer sessions at the secondary school level could be held in various parts of the country. A pool of competent conference leaders, from all over, would be building up, along with practical experience in conducting the sessions. And, to quote from the Foreword of the Report, "In the field of curricular development alone, such sessions, unimpeded by the formal requirements of the regular school year, could have far reaching influence. They could make a contribution to education in general, to a better understanding of America, and to the cause of good citizenship."

Summer Sessions for Teachers

As the 1951 Brochure of the Center states, there should be secondary school teacher summer sessions " ... devoted to the study of America and to discussion of what America is." Already the Center has an accumulation of ideas and suggestions, taking into account needs in many respects not now being satisfied. But as with the 'teen age sessions, a preliminary study and report should be made, followed by a pilot session.

Summer Sessions for Non-Teacher Adults

Summer sessions for non-teacher adults, as "refresher" sessions on America, including what constitutes good citizenship, consideration of the form and function of government, foreign relations, trade, production, industry, and so forth, and also, and highly important, on the accomplishments of America in literature, art, and music (the humanities), are a further natural development of the Center's conference program. These sessions, like the types already mentioned, would utilize the Center's VITAL ISSUES for informal discussion, spreading the realization that interchange of ideas, and consideration of even very serious topics, can be fun (something many youngsters have already found out, but which grown-ups are apt to forget), besides being so necessary if democracy is to prosper.

These non-teacher sessions would meet the growing need and demand for interesting and worthwhile use of vacation and leisure time. They would help satisfy the urge felt by so many Americans "to be back at college again" - if only for two weeks. Utilizing the best teacher resources accessible through the presence on the Center's Advisory Committee of the Presidents of the Society of American Historians and of the American Studies Association, the Center is in a unique position to conduct and manage such sessions and recruit for their faculties the best teaching talent available.

Places for holding these conferences which obviously suggest themselves are Colonial Williamsburg, Old Sturbridge Village, and other places of historical interest. But the question of location has very wide possibilities, such as the campuses of colleges idle in the summer and the lodges in the National Parks system. Under the guidance and supervision of the Center, a nationwide program could be developed.

A study should be made and pilot conference held.

Booklet Program

This also has been a projected program from the start. The idea of it was first touched on in the 1951 Brochure. The potential significance of the Center's paperbacks project was commented on as follows in a letter from Professor William L. Langer, of Harvard University, in January, 1953. Commenting on the Guides, he adds, "I am even more impressed, however, with your pamphlet program which promises to strike at the main issue I had in mind in so far as it aims to review all the major aspects of modern American thought and activity and thus lay the foundation for a better understanding of what our culture involves."

Backed by the experience gained through the Discussion Guides, preliminary steps toward realizing this particular service are in order. There should be a study to determine need and demand, and the preparation of a sample paperback to begin establishing standards for the series. These standards are of the greatest importance today, when there is danger that, in the flood of material, objectivity and impartiality can all too readily be lost sight of. The Center, both in the material it can furnish through its Discussion Guides and the Booklet program and because of the editorial standards to which it is dedicated can - besides being useful to schools, colleges, and individuals - make a very telling contribution to industrial reading rack programs which, according to a survey made by Industrial Relations News, 230 West 41 Street, New York City, " ... are a worthwhile method of getting ideas to workers."

Television and Radio

The Guides have already been used for television and radio presentation by groups and organizations other than the Center. It is time the Center itself played a part. Development of a program good enough to merit sponsorship by advertisers should be the objective. Mr. Parker Wheatley, general manager of WGBH - FM, Cambridge, Massachusetts, has suggested that the material of each Guide, throughout the month of its issuance, could be divided up for presentation once a week. Mr. Edward Sherburne, program manager at the same station, suggested the lecturer type of presentation as inexpensive and effective. Dr. James Fesler, Professor of Government at Yale University, has said he felt panel discussion would be the best method.

The need now is for study to develop ways and means.

As a natural by-product, the development of tapes and filmstrips should be also undertaken.

# # # #

Agenda

Enlargement of Board of Trustees.

The stage the Center has reached in its development suggests the time for enlarging the Board, and getting wide national representation, has come. Accordingly, the President of the Board has appointed a nominating committee consisting of Judge Carroll C. Hincks, Helen Kenyon, and Ogden Miller. Already a number of candidates have been suggested, by the Trustees themselves, and by the Advisory Committee at its meeting in July, 1955. An early session of the nominating committee is planned to place names before the Trustees at the next meeting.

Staffing.

For the Center to develop its wide potentialities, adequate staffing is a must.

Thus far, part time help has been the chief reliance.

During the summer of 1955, hoping that funds might very presently be available, promising candidates were lined up for the positions of business and promotion manager, and of editorial assistant. Though these persons presently had to be notified that appointments could not at once be made, and they are in other positions, their interest continues. The fact that candidates also continue to apply for jobs with the Center strengthens the belief that with the aid of the Center's Advisory Committee, the right persons for these and other positions as they develop can be found. Getting the right people is of greatest importance, and the Center's Trustees are well aware of that fact.

Conclusion

With its broad program of present and projected activities, the Center is prepared to fill a vital American need and to perform an important national service.

October 28, 1955

Dear Mr. Murrow:

On the back page of the current guide which I enclose, you will notice that a forthcoming issue is announced on the subject of "Seeking a Vice President (Is the Way We've Been Doing It Adequate?)." This is a topic we have long had in mind, and with your own fine contribution to a deeper understanding of the Vice Presidency, the time seems opportune for bringing out this issue, though we are still somewhat undecided as to just when this should be and also have not yet formulated our general outline and plan of emphasis. Your advice would be ever so much appreciated. I shall call your office early next week in the hope that I may see you some day early in the month to get your advice.

Sincerely yours,

Townsend Scudder

NEIGHBORHOOD BETTERMENT-

Vital Issues

"A DISCUSSION GUIDE FOR BETTER INFORMED AMERICANS"

Published by the
CENTER FOR INFORMATION ON AMERICA
WASHINGTON, CONNECTICUT
Volume V, Number 3

OR BLIGHT?

What **is** blight?

When the neighborhood in which we have our homes, or the places where we work—schools, offices, shops, farm buildings, factories, and what surrounds them—begin running down at the heels, **that's** blight.

It's a disease which can happen anywhere—country, suburb, or city. Because it's apt to sneak up on us, we may be threatened by blight right in our own back yards without knowing it. Then something drastic happens like a fall through a cellar stair that's been quietly rotting away.

Blight's later symptoms, when it's too late for anything but costly cures, are familiar enough—dilapidated buildings, yards and alleys littered with rubbish, streets bumpy, full of holes, and crumbling away. In the country, signs are broken-down homesteads and abandoned farms. In the suburbs, there's a hodgepodge of dwellings, shops, factories, junk yards, filling stations, used car lots, and so forth. In urban regions, the city itself is sick, with crowded, congested downtown areas and slums.

Blight gives a black eye to our American efficiency. It's a roadblock to progress. At its worst, it is a breeder of delinquency, crime, misery, and disease. It becomes an enemy of life, liberty, and the pursuit of happiness.

Fortunately our wealth of natural resources, the bountifulness and beauty of our land, the industrial know-how which has brought to our nation the highest standard of living in the world, all help to keep blight from taking over.

Rapid, haphazard growth, as well as neglect, can cause trouble. Even the neatest, trimmest neighborhoods—whether long established villages and towns or brand new suburbs—may suffer from growing pains. How about traffic from everywhere else tearing through what used to be quiet, safe streets? That's just one of many problems which a little forethought and planning could take care of. Left alone, sooner or later such conditions cause blight.

An increased awareness of the need to fight blight has launched the nation on its biggest campaign for neighborhood betterment.

In metropolitan areas ambitious programs are under way, including slum clearance and well designed housing projects for people who can't afford much rent. All over the country, communities of every size are working on plans for improvement. Such programs can be for the long haul or to meet an emergency. Flood rehabilitation in New England and elsewhere is part of the picture. When disaster causes sudden blight, there's an unusual opportunity to plan and build better than before.

How about our own community—large or small? How about where we live? What are the needs? Have we taken a careful look lately?

What should **we** do about neighborhood betterment?

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, United States Army, Washington, D. C.; Dr. Allan Nevins, Professor of American History, Columbia University, President of the Society of American Historians; Dr. Robert E. Spiller, Chairman of Committee on American Civilization, University of Pennsylvania, President of the American Studies Association, a national society for the study of American civilization.

A STITCH IN TIME . . .

saves nine!

A mighty good place to heed this old saying is right at home. It is better and usually costs far less to head off blight than to check it once it gets started. Forethought and planning are habits worth cultivating. That goes for home owner, tenant, or landlord. Take a look around. Paint job needed? Roof leak? Any other repairs?

But how about blight in the neighborhood, where we don't have direct control?

That's where community spirit and community action come in. A successful fight against blight is essentially a community problem.

THE LOCAL COMMUNITY

It is at the local level—whether in a big metropolitan city, medium sized town, or little village—that the job itself must be done.

Circumstances will differ in different places. But the most satisfactory ways to get started remain pretty much the same. When there are problems connected with the manner in which a community occupies the land on which it stands, including the condition and use of buildings, a sensible approach is to size things up.

Let's bear our own neighborhood in mind as we consider how a community might go about looking itself over. If we're part of a group, let's discuss each point that applies.

First, Self-Analysis

What does a community wish for itself?

Ideally, it wants residential neighborhoods that are good for family life: well kept dwellings (whether for single families or for multiple family use); safe streets with no through traffic or heavy trucks.* It wants schools and playgrounds easy for children to reach. It wants nearby churches. There should be convenient places for shopping and diversion—downtown areas free from congestion. Handy shopping centers are a help, with plenty of off-street parking. A civic center, perhaps, to include the town offices, recreation facilities, and a hall for meetings. If there are factories, they should be up-to-date in construction. They should occupy land apart from residential areas and best suited to industrial needs, with plenty of room in which to grow.

There's apt to be quite a gap between what we'd like and what we've got.

To know what's what, one of the first things to do is to count noses. What is the exact population in terms of men, women, and children? Where, precisely, do they live? Are any dwellings overcrowded, rickety, and unsafe? Do they lack toilets, baths, kitchens, or heating? For the children—present and expected—what kind of school buildings? Is there space enough in all classes? For how long?

How and where do the people of the community earn their living? Is the present setup able to take care of the movement to and from work? How hard is it for people to get around? What about parking?

If there are factories, what are they like? Which ones require room for expansion? Are any showing tendencies to fold up and wither away, creating areas of blight?

And how about the topography of the town? Are there hills and valleys to cause present and future problems? What about streams which may flood?

To get such statistics into usable shape, a big help is maps—a separate map for each purpose and use. One would show the exact location and extent of land being occupied by the entire community for residential, commercial, industrial, civic, and other purposes. Another would chart the existing system of major thoroughfares, along with all other streets and roads. A third would indicate the location of schools, parks, playgrounds, and so forth.

When the analysis is complete, it may reveal various surprises, good and bad, in addition to what we'd expected to find. But whatever turns up, it will all help show what's needed if we're to get a better community. For instance, over here, in this area—once a "good" neighborhood—we find that families which used to occupy single dwellings have been moving out and other families moving in on every floor. Overcrowding results, with wear and tear on buildings never intended to shelter so many. That means wear and tear on people as well. Over there, business has been infiltrating into converted houses, causing a mixture that's a danger sign for blight. Heavy trucks passing, as stores and factories crowd into what before was mostly a residential area, add up to further trouble.

Next, A Plan, and Action

No matter what its problems, any community, after making a thorough analysis, is in a good position to identify the extent and damage of blight—if blight there is, and few communities are without it—and is better prepared to map out the future.

Planning means drawing up a guide for community growth. The plan's purpose is to promote with the greatest efficiency and economy the coordinated development of a municipality and the general welfare and prosperity of its people. Experience has pretty well shown that planless development—just leaving a community alone—simply doesn't work for the best. Misuse of the land we build on and work on—mostly unintentional misuse and often not realized as bad at the time—can raise hob with economic development and blight our hopes for decent living conditions.

HOW TO GET NEIGHBORHOOD BETTERMENT

Plans are no good unless acted on. For successful action, popular interest and support are a must.

Popular Support

It may start in a very small way with a few neighbors gathering to talk things over at somebody's house. The idea grows and spreads, enlisting the interest and cooperation of more of the community. Arranged for by neighborhood leaders and local officials, there may be meetings and discussions open to all. An informed public is the best basis for going ahead. Questions can be asked, views expressed, doubts and misgivings gone into, misapprehensions cleared up. The chances of getting something done are sure to increase if the idea gains the support of representative citizens' organizations—the local Chamber of Commerce, service associations like the Rotarians, Kiwanians, or Lions, Veterans' groups, the PTA and various educational bodies and church societies. Schools too—civic classes and such—can play a part. Perhaps a citizens' advisory committee will be formed to help the officials whose job it is to carry out the actual work.

Is there anything we could or should do to gain popular support for neighborhood betterment?

Laws and Ordinances

Rules and regulations, passed by the people through their representatives, are the tools by which democracy gets things done. These range from Federal Housing Acts, through state legislation, to the building and housing codes, zoning regulations, and health ordinances of our own local community.† As

See the Center's Guide—Our Highways, Streets, and Roads** (Vol. IV, No. 5).*

†Zoning is the division of land into districts and regulating the use of each for agriculture, residence, business, and industry. Its rules include such things as location, height, and land coverage of buildings permitted in each area. Generally, zoning, as set up, is a compromise between existing community conditions, as revealed by analysis, and the way the citizens would like to have the whole locality develop.

Codes and ordinances serve to set up safe, adequate standards and to combat the spread of blight. They cover such things as construction, fire prevention, plumbing, and electrical installation. If a structure doesn't come up to standards, it can be declared illegal for occupancy.

Local officials and elected or appointed planning and zoning commissions have direct responsibility for attending to these matters.

informed citizens, we need to study the laws we've got to see what tools are available for handling neighborhood development and improvement. On the local level, the community may find additions or changes will need to be made. Enforcement also requires looking into. If it's slack, the best plan becomes useless.

Help and Advice

In this technical, complicated age, professional help from trained experts‡ is really necessary if a community is to make good plans for its neighborhood and successfully carry them

out. Big cities hire full time staffs for the job. Smaller communities may be able to get along all right by seeking help on a part time basis. An able traffic consultant can suggest plans which may save a community plenty of trouble and money. An expert planner can prevent all sorts of costly mistakes. Local expert volunteer talent can also be a big help. It's wasteful to neglect it.

Financing

Neighborhood rehabilitation and betterment often cost plenty. Though much of the expense must be borne directly by the citizens themselves, city, state, and national government,

and various lending institutions, help in a number of ways.

Private capital is used for new construction, mortgage loans, and the purchase of bonds (guaranteed by the federal government) to build public housing and other improvements.

Financial help from government all comes originally, of course, from taxes we pay and similar revenues. It takes various forms, sometimes several being used at the same time. A typical example of public low-rent housing would be where local government buys up slum land, then, with the federal government's help, builds new housing and pays the difference between the tenants' modest rent and the monthly cost of operations. Or government—local, federal, or both—helps assemble the land, then sells it to private builders or cooperatives at a reduced level.

Of great importance is the indirect assistance offered by government insurance of mortgage loans. Such insurance makes it possible for lenders (banks and insurance companies, for instance) to advance up to 95 percent, in some cases, of the private builder's costs. Government insurance also guarantees repayment of home improvement loans made to private citizens.

What do we think of these types of government help? Should they be extended or cut back?

If a local community looks either to its state government or to Uncle Sam for help, there are definite requirements it must meet and live up to, including the making of careful plans for what it intends to do. Details as to what's needed before an application can go through are available for the asking.§

Even though it must spend its share of money, many a local community has discovered neighborhood betterment is not all a matter of shelling out. By clearing slums and checking blight, metropolitan areas have found that they have increased their municipal revenues. Business becomes better, industry thrives, more tax money comes in. In residential areas, property values go up. In fewer years than anticipated, bond issues and other obligations that helped pay for the job can be cleared off.

HEADACHES

Of course problems, too, may develop during rehabilitation. Progress is seldom completely painless. In rehabilitation and slum clearance, what's to be done about people dispossessed of their homes? There are solutions—but they've got to be looked into.

New developments, too, can raise all sorts of headaches. Almost at once they can become a breeding ground for blight.

Suppose, in a mostly rural community near some big town, there's suddenly a great deal of fresh building. Let's take a look at what may happen if things are allowed to get out of hand.

Probably it begins when real estate prices rise because of increased demand, and owners begin selling off parcels of land. These in turn are further subdivided. Many homes spring up. Local schools cannot accommodate the surplus of children. Classroom shortages are only one of the many problems. What about water supply? How about sewage disposal?

Here is what's apt to happen in haphazard development. First, the lots are cut small, so that there will be more of them to sell. Because it's cheaper and easier, streets may be laid out in gridiron fashion, with little regard to the lay of the land. Since the community water system hasn't yet reached that far, each house must have its own well. If these dwellings are built close together down a slope, the septic tank or cess pool of each is likely to contaminate the well of the next house below. The new owner or tenant—who is apt to be a former city dweller used to the municipality's handling such things—finds himself stuck with a whole lot of problems including a garbage pail with no one and no place to dump it.

For new developments, this is where foresight and planning come in, under the supervision of publicly elected or appointed commissions. By proper regulation, difficulties can be headed off before they start.

Without planning, there is a good chance that what's being

developed is a future blighted area. With proper planning, such developments will have safe and usable street layouts and grades, reasonable lot sizes, and provisions for utility improvements. If the new neighborhood is big, the need for schools, for playgrounds and parks and perhaps a community recreation center, will be taken into account.

‡*Because the demand is great and the supply of experts small, planning is a good profession to go in to. To date only twenty-seven North American colleges and universities offer advanced degrees in planning, but the number is growing.*

§*See Box on back page.*

SIGNS OF THE TIMES

Good use of the land we live on is a sign of the pioneering enterprise of the human spirit. Look around. There are encouraging examples.

There's Morningside Heights in New York City. Less than six years ago, much of this northwest portion of Manhattan Island, dominated by the buildings of Columbia University and the gothic towers of Riverside Church and the Cathedral of St. John the Divine, was a mess. Having taken over in various portions, blight—unnoticed or ignored at first—was spreading fast. Its ugly flood was rolling right up to the doors of the educational, scientific, and religious institutions, which, along with Columbia, had been living almost a separate life on the Heights, not paying much attention to what was going on in the vicinity. Once started, blight on so large a scale is hard to stop. But a combination of neighborhood private initiative and public financing has begun turning the tide. Sponsored by the educational, religious, and medical institutions of the neighborhood, Morningside Heights, Inc., was formed to carry on a program for community regeneration. Study and analysis form the background to plans now well under way. Residents of the spoiling areas, suspicious at first and indignant because they feared they would lose even the poor homes they had, have been won over. Through meetings and other means, full explanations were given of the beneficial, humanitarian nature of the work going on. Assurances were also made that, one way or another, dispossessed residents would be taken care of till they could move into the low-rent public housing or cooperative middle-income developments now building or about to be built in the place of former slums. Plans include much more than honest-to-goodness nonsegregated inter-racial housing. Greater public safety, better recreational facilities, all-around development of the means for decent existence, are resulting from this enterprise which has enlisted the cooperation of people from all walks of life and various creeds and colors who live on the Heights—Negroes, Puerto-Ricans, and Whites. Intellectuals, white-collar workers, and labor. Morningside Heights has become an inspiring example of human beings working together for the improvement of their neighborhood.

Though big slum areas still exist in New York City, huge projects to get rid of them are shaping up.

In other cities, too, there's the same story. Chicago, for instance, has a long history of fighting against blight. Efforts there, as elsewhere, have grown into a comprehensive, coordinated, city-wide program of urban development. A noteworthy example is the Hyde Park—Kenwood area, north of the University of Chicago, where over 72,000 people widely different as to race, training, and income have learned to live satisfactorily as a community largely through neighborhood spirit and action. By means of a well-organized association of block groups—spreading block by block—the people have improved the whole area—setting up playgrounds in vacant blocks, improving property, campaigning for sidewalk repairs, better street lighting, zoning and building enforcement, good schools. So successful has this experiment been that it has become a guide followed by many other communities.

A unique feature of rehabilitation in Philadelphia is the "do-it-yourself" program being carried on by the Quakers. The American Friends Service Committee convinced Philadelphia's Redevelopment Authority that a "do-it-yourself" plan should be tried. The city helped make a slum block available. As part of the down payment, owner occupants contribute a share of their labor. Skills needed in carrying on the work are taught by the Friends Service Committee. Through community effort, buildings not too far gone are being reclaimed. Interiors are getting spruced up. Outdoors, worn old fences have been torn down and rubbish cleared away. There will be room for a large court in the center of the block for a children's and adults' recreation ground and open air social center.

In a democracy, when we come right down to it, everything begins with cooperation and self-help. Country, small town, suburb, or city—it's up to us.

What are **we** doing or going to do about making our neighborhood better? If we decide on further action, what plans shall we make for carrying it out?

WHERE TO GET FURTHER INFORMATION AND HELP

READING MATTER

100 Selected References, a bibliography, published by ACTION. Single copies 25 cents; no orders for less than one dollar. Write to 2 West 46th Street, New York City, N. Y., for list of ACTION'S other reports.

PUBLIC AGENCIES

Housing and Home Finance Agency, Washington, D. C. Responsible for housing functions of the Federal Government. Write directly or get in touch with the nearest branch office to learn what's required of a community in order to get financial aid. Also provides technical and professional assistance. Its publications may be purchased through the U. S. Govt. Printing Office, Washington 25, D. C.

State and Other Agencies. Most states have housing and development commissions that fill the same general functions. Along with financial and other aid, many states furnish staff members for speaking engagements. They also supply visual aids such as color slides, sound-on-film motion pictures, "before and after" scale models useful to organizations and for study in schools. Many sponsor clinics and workshops for municipal officials or anyone interested. Write to your state's capital to find out what it's got.

Local. Larger cities generally have housing commissions or authorities in charge which can also supply services similar to those rendered by the state. In smaller communities, municipal officials, planning and building commissions, citizens advisory committees are sources for information.

PRIVATE ORGANIZATIONS

American Council to Improve our Neighborhoods, Inc. "ACTION." 2 West 46th Street, New York City. Non-profit, non-partisan. It gathers and makes available facts useful for home and neighborhood improvement. Provides expert technical assistance to individuals and communities to help plan and carry through an effective local program.

National Association of Home Builders, 1625 L Street, N.W., Washington 6, D. C. This association of around thirty-five thousand members, in cooperation with others, intends to set up housing service centers in every major American community. Each will have a full-time staff, advised by an operating committee of builders, realtors, bankers, and others.

U. S. Chamber of Commerce, 1615 H Street, N.W., Washington 6, D. C.

National Association of Real Estate Boards, 1737 K Street, N.W., Washington 6, D. C.

American Society of Planning Officials, 1313 E. 60th Street, Chicago 37, Illinois.

National Association of Housing and Redevelopment Officials, 1313 E. 60th Street, Chicago 37, Illinois.

These national organizations, along with many others, are interested, and will help. Get in touch with national headquarters, or, if there is one, the local branch.

Our own neighborhood **Bank** and local **Savings and Loan Institution.** Good sources for advice. For instance, consult them as to what's required to get a federally guaranteed Home Improvement loan.

Help in preparing this issue has been received from many sources. The editors wish especially to thank Dr. Christopher Tunnard, Graduate Program in City Planning, Yale University, and the staff of ACTION, New York City.

COMING: ***Our Civilian Manpower Resources (Have we enough and of high enough quality to meet America's needs?); Picking a Vice-President (Is the way we've been doing it adequate?).***

Mr. Edward R. Murrow
485 Madison Avenue
New York 22
New York

Dear Mr. Murrow:

I take pleasure in sending you these copies of the first issue of Volume V of the Center's Discussion Guide, sent out to subscribers on August 31. In view of what the flood did to Waterbury, where VITAL ISSUES is printed, this maintenance of schedule was something of a triumph.

On July 14 the Editorial Advisory Committee gathered for what will probably be the only session this year. We all expressed the hope that when next we meet, you will be with us.

Sincerely yours,

Townsend Scudder

THE UN CHARTER:

Vital Issues
"A DISCUSSION GUIDE FOR BETTER INFORMED AMERICANS"

Published by the
CENTER FOR INFORMATION ON AMERICA
WASHINGTON, CONNECTICUT
September, 1955 Vol. V, No. 1

Cover by Stuart Judd, Jr.

CHANGE IT, OR LEAVE AS IS?

"If . . . a General Conference of the United Nations for reviewing the present Charter . . . has not been held before the tenth annual session of the General Assembly . . . , the proposal to call such a conference shall be placed on the agenda of that session of the General Assembly."

Boiled down from Article 109 of the UN Charter.

This suggestion to take a second look at the Charter, written into the Charter itself back in 1945, becomes a vital issue which concerns us all. On September 20, 1955, the tenth General Assembly begins.

According to Senator John L. Sparkman, the problem actually has two parts. Senator Sparkman is a member of a subcommittee of the Senate Committee on Foreign Relations holding grassroots hearings to find out what Americans everywhere are thinking about the UN.

Senator Sparkman, presiding at one of the Hearings, puts the two parts of the UN problem this way:

"We are out . . . to ask the people this question:

(1) Do you believe that there ought to be such a conference for the review of the Charter?

(2) If you do, or if there is such a conference, then what ideas, what suggestions, do you have as to how the Charter ought to be revised?"

The first is largely the concern of the delegates from the sixty member nations gathering for the tenth annual General Assembly at UN headquarters in New York.

For the second part, it is up to us to decide what proposals, if any, we as a member nation should come up with or support.

The Senate Hearings showed how intense our interest has become. As Senator Alexander Wiley, former chairman of the Committee, remarked, the UN is " . . . a subject which arouses strong and sometimes conflicting passions in the communities of the U.S."

Testimony ran all the way from plans to enlarge the authority of the UN so it could function along the lines of a federal world government to proposals that we scrap the organization entirely. The range of suggestions stretched from those which would require a virtual rewriting of the Charter to those which could be carried out with little or no change in the Charter itself.

Most of the witnesses seemed to bear pretty closely in mind the constructive hope of increasing the effectiveness of the UN in preserving the peace and improving the lot of mankind.

"Regardless of their viewpoints," said the Senate subcommittee chairman, complimenting our fellow citizens for speaking up, "they are performing a valuable and useful public service."

If we're to do the best possible job in helping form U. S. policy in this matter, we must know what we're talking about. To aid us, many sources of information are at hand.

Let's start with the San Francisco Conference of 1945 as a background to the foreground of the question: shall the Charter be left as is or revised?

EDITORIAL ADVISORY COMMITTEE: Dr. James W. Fesler, Professor of Government, Yale University; Dr. Kent Roberts Greenfield, Chief Historian, United States Army, Washington, D. C.; Dr. Allan Nevins, Professor of American History, Columbia University, President of the Society of American Historians; Dr. Robert E. Spiller, Chairman of Committee on American Civilization, University of Pennsylvania, President of the American Studies Association, a national society for the study of American civilization.

Editor: Townsend Scudder, Executive Director of the Center.

merica.

UP TO NOW

On April 25, 1945, when delegates from fifty nations began the Conference at San Francisco which they hoped would head off future fighting among nations and make a better world for all of us, World War II still was raging in the Pacific. Fighting in Europe was only just dying down, with the United Nations triumphant over Nazi Germany and Fascist Italy, ending Hitler's and Mussolini's ambitions to dominate mankind. In Germany, American, British, and Russian troops were occupying bombed-out Berlin.

These three allied nations, together with Chiang Kai-shek's China—still battling to throw out the invaders from Japan—were the sponsors of the San Francisco Conference.

The invited delegates came with an acute awareness that their peoples, exhausted from years of bloodshed and suffering, yearned for an enduring peace. They gathered in the hope that a rational pattern of living could be worked out among the nations that would replace the barbaric spectacle of war which had so often muscled in on a world where force counted heavily and aggression was hard to stop. They were prepared to make those compromises necessary before any plan which all are prepared to back can be put in practice.

The Conference's sponsors, and the invited nations, had stood side by side, as the united nations, in this latest struggle against dominance. Though little can be certain in this changing world, the delegates hoped that the general unity which had held their countries together to win the war would keep right on to help assure peace. They assumed that peace treaties with the enemy nations—Germany, Italy, and Japan—could be readily drawn up through cooperation of the victors.

History has proved both these expectations wrong.

The 1945 way of looking at things naturally influenced the delegates as they drew up a Charter for an organization aiming at these four objectives:

(1) To save succeeding generations from the scourge of war;
(2) To reaffirm faith in fundamental human rights;
(3) To establish justice and respect for international obligations;
(4) To promote social progress and better standards of life.

President Harry S. Truman, addressing the Conference's closing session, declared:

"This Charter, like our own Constitution, will be expanded and improved as time goes on. No one claims that it is now a final or a perfect instrument. It has not been poured into any fixed mold. Changing world conditions will require readjustments . . . "

What emerged was an association of sovereign states pledged to help the United Nations achieve their objectives. And the Charter specifically states that the UN is not authorized to deal with matters which are within the domestic jurisdiction of a sovereign state—*i.e.*: hands off when it comes to private household affairs.

In the Security Council, a sort of executive group of eleven member nations primarily charged with the job of maintaining world peace, any action, including that of calling on the armed forces of member nations to help stop aggression, can be blocked by the veto—a safeguard of the right to control their own actions on which both Russia and the United States* insisted—though many smaller nations felt this provision might stand in the way of the Council's carrying out its assignment.

The General Assembly, made up of delegates from every member, can recommend action—but has no veto provision to block an affirmative vote. If a proposal rallies enough votes, it will pass. Whether or not to act on the proposal, and to what degree, remains the decision of each individual member.

Disputes, says the Charter, should be settled "in conformity with the principles of justice and international law."

Some of the delegates at San Francisco wished the UN's International Court of Justice to have compulsory jurisdiction over members in legal disagreements. But this suggestion was turned down and didn't get into the Charter, which, like all such documents, including our Constitution, is the result of compromise. It was because of these concessions made by various nations in order to get the UN set up at all that Article 109, calling for a review conference as one of the ways to consider amending the Charter, was put in.

Had the Charter not been a living instrument, capable of adapting itself to changing conditions, it and the UN would by now most likely have suffered the fate of the Dodo bird and become extinct. Under few national constitutions could such dramatic and rapid developments in handling problems have taken place without formal amendment of the rules. And the Charter as originally written has served during a period which has seen such colossal and unexpected happenings as the explosive birth of the atomic age, and, in international politics, the breaking out of the cold war. Another major development has been the upsurge of nationalism and a demand for a better life on the part of the peoples of Asia and Africa.

Our own Constitution, though also born into a changing world, had it no tougher. As Chief Justice Marshall, one hundred and fifty years ago, said of the Constitution: "It was intended to endure for ages to come, and, consequently, to be adapted to the various crises in human affairs." Already, in the brief span of ten years, the Charter permitted UN action in ways not foreseen at San Francisco. While there are defects disappointing to the hopes of many, unsuspected virtues and resources have also turned up.

A striking circumstance about the U. S. Constitution, over the past hundred and fifty years, is that it has served for the most part without drastic changes in text. By and large the rather difficult amending process has been called on only now and then.

Like the Constitution, the Charter has proved flexible enough to adapt itself to new situations without formal amendment—a process even more difficult than under the Constitution. Just how such evolution has taken place comes out as we take a look at history since the hour when A bombs ended the war in the Pacific forty days after the conclusion of the San Francisco Conference.

Several years were to pass before the overwhelming seriousness of the atomic age as regards the survival of the human race was fully to register.

Meanwhile the machinery of the UN, guided by the Charter, set the organization in motion. The Economic and Social Council set to work carrying out the fourth purpose of the UN: the promotion of social progress and the betterment of standards of living for the peoples of the world. During this same period the Security Council was having difficulty cutting its teeth. These teeth were to be a police force for preserving the peace, to be made up somehow among member nations. To this day, the members of the Security Council have been unable to agree on how to go about raising this force—so that Article 43, under which it would be set up, hasn't come to life in any practical form.

A big reason for the stalemate in the Security Council lies in the fact that, instead of the expected one world, with cooperation among the great powers, we were waking up to the

**Without the inclusion of the veto power, the U. S. Senate—many qualified observers felt—would never have approved American participation in the UN. With the veto provision, the Charter was approved in the Senate by an almost unanimous vote: 89 to 2.*

realization that we were living in two—our own, and Communist Russia's.

The resulting disagreement showed up sharply in futile efforts to control atomic energy as a threat to world peace. No plan offered in the UN by either side could get past the objections of the other. As the cold war worsened, Russia went on a veto spree to make up for her lack of votes. Resulting stalemates in the Security Council threatened to bring to a halt much of the work of the UN. If the organization was to go on performing its basic function of preserving the peace and insuring the security of its members, other ways of doing so, outside the veto-clogged Security Council, would have to start developing—and that's just what happened.

The way was shown when the U. S. Senate, on June 11, 1948, passed the Vandenburg Resolution. While this act resolved to " . . . reaffirm the policy of the United States to achieve international peace and security through the United Nations," it also had an eye on insuring for us a more trustworthy bulwark against aggression—particularly Communist aggression—than the stalemated Security Council seemed likely to furnish. It advocated the "progressive development of regional and other collective arrangements for individual collective self-defense in accordance with the purposes, principles, and provisions of the Charter."† Such arrangements are the Rio Pact linking the Americas, NATO for the North Atlantic, and the recently concluded Southeast Asia Treaty Organization. These operate free of the Security Council veto, giving us a greater sense of safety. They're one example of what can be done because of the flexibility of the Charter.

By 1949, a very special serious crisis was coming to a head—a situation which few of the delegates could have foreseen at San Francisco. China was undergoing a political upheaval. Chiang Kai-shek's Nationalist government, signer of the UN Charter in 1945 and one of the four permanent members of the Security Council, was caving in under the onslaught of Mao Tse-tung's communists.§ The U. S. and its western allies in the cold war found themselves faced with the hard fact that China, whose friendship had been heavily counted on, was going over to the communist side. With Chiang and his government pushed off the mainland and in control only of Formosa, Mao's Reds claimed China's place in the UN, including her seat in the Security Council. Russia and her satellites backed Red China's claim.

But the Communist block in the UN could not come anywhere near to mustering enough votes to unseat Chiang's representatives and get Red China in. So Andrei Gromyko, head of Russia's delegation, staged a "walk-out." Starting January, 1950, the U.S.S.R. began a boycott of the UN. This gesture had one result not expected by Russia. When at one o'clock in the morning of June 24, 1950, the army of Communist North Korea launched a surprise attack across the 38th parallel on the South Korean Republic, set up under the auspices of the United Nations, and the Security Council called for " . . . urgent military measures . . . to restore international peace and security," no representative of Russia was on hand to kill the resolution by a veto.

To head off future stalemates in the Security Council—for Russia quickly ordered her delegates back into action in the UN—the vetoless General Assembly, on November 3, 1950, passed the "Uniting for Peace" Resolution. This enables the General Assembly to meet and act promptly in any crisis which threatens the peace, if action by the Security Council is tied up by the veto.

What was happening, and without any formal amendment to the Charter, was a shifting of the all-important job of "keeping the peace" from the Security Council to the vetoless General Assembly. As one result, during the past five years, the once very important Security Council, meeting less and less often, has, at least for the time being, faded into the background.

In other ways, too, the UN has been adapting itself to meet changing times. These include the creation of further special organs and agencies, such as UNICEF, heavily backed by the U. S., which looks out for the needs of children all over the world. They include a gathering list of interpretations of how the UN and its agencies shall work, and a slowly growing set of decisions‡ by the International Court of Justice helpful in focusing attention on the question of international law.

CHANGE IT, OR LEAVE IT AS IS?

That brings us pretty much up to now.

With few exceptions, our responsible leaders, irrespective of party, have supported the UN and backed up the idea of its importance in conducting our foreign policy. But in practice, while we've regarded the UN as an organization to be supported, we've relied little on it for help in settling major international problems.•

How do we stand on a possible Charter review conference?

The official State Department attitude, as expressed by Secretary Dulles, is to favor holding it.

Such a conference doesn't necessarily imply formal changes, since amendments to the Charter involve the veto, which could be used by either Russia or us or any other Security Council member, and also ratification by two-thirds of the member states. Whether formally changed or not, the Charter is likely, as in the past, to keep right on growing. But such a conference would give us a chance for getting better acquainted with everything about the UN.

Anticipating a possible review conference, studies are being made, and have been for quite some time: officially by the Senate Foreign Relations Committee and by our State Department, by the UN itself, and by many member nations; unofficially by foundations, colleges and similar organizations, by various groups of citizens, and by us in general. Back of the entire question, among those in favor of the UN, stands this purpose: what will best help the UN carry on its job?

As to possible changes, there is at least one which seems likely to gain official U. S. support.

It's a **proposal to drop the veto power as regards admission to UN membership.**

As the Charter now stands, admitting new members is something in which the General Assembly and Security Council must concur. But quite a few applicants, though able to muster the required two-thirds vote in the General Assembly, have been blackballed by a Soviet veto in the Security Council. Because of the cold war, admission has turned into a political football, with each side anxious to keep out candidates which might add to the voting strength of the other. As a result, less than half of those applying have been let in. The UN, as originally thought of, was to be open to all peace-loving nations willing to accept the obligations in the Charter. In the

†*These individual and collective arrangements, or "pacts"—most UN members agree—come within the scope of Articles 51 - 54 of the Charter. But there are those who disagree and attack these "pacts" as not in harmony with the purposes of the Charter. It is a problem worth looking into.*

§*See the Center's Guide: "Our Asian Policy: What Should It Be?" (Vol. IV, No. 9).*

‡*While not binding, the Court's decisions, like the recommendations of the General Assembly, bear considerable moral weight. Heads of governments think twice before going against them.*

•*The "summit" conference at Geneva, for example, took place on its own. An instance where we used the UN is Korea. As Henry Cabot Lodge, Jr., our Ambassador to the UN, testified before the Senate Hearings: we couldn't permit having " . . . this finger of Korea pointed right into the middle of Japan in Communist hands." The statement — continued Ambassador Lodge — "that the UN . . . sucked the U. S. into Korea is not true. If anybody sucked anybody in, it was the U. S. that sucked the UN in, and quite rightly." Study of the time table of U. S. and UN moves bears out this comment.*

last ten years, former enemy states have returned to the family of nations and are asking to come in. Particularly in Asia, many Eastern peoples have gained their freedom, and, as new states, are also knocking for admission. Yet many, though they meet the requirements, are being kept out by the veto. Our Ambassador to the UN, Henry Cabot Lodge, Jr., favors dropping the veto in the Security Council in this special matter of membership.

How do we feel about the question, and what are our reasons?

Mixed up with the idea of **universal membership** is the question of **Red China's claim to a seat.**

What are our views as to that?

Then there's the question of **voting in the General Assembly.**

At present each member, big or small, has a single vote. Is this the fairest arrangement? The General Assembly, as the UN develops, is assuming greater responsibilities. Therefore should there not be some form of weighted voting, so that nations which, because of weakness or smallness, can't assume military or financial responsibilities, won't have an equal say in wishing such responsibilities on other nations?

What are our views as to that? How will the problem look to other countries? (With regard to every suggested change, that's a consideration we'll need to bear in mind!)

Then there's the matter of **international law,** which, at the Charter Conference, quite a few delegates from other countries felt had not been given attention enough. Quite a few Americans, too, have been wondering. Back in 1951, Robert Taft wrote that a fundamental defect in the UN Charter " . . . is that it is not based primarily upon an underlying law and an administration of justice under that law." And Chairman Walter George of the Senate Foreign Relations Committee warns that "the development of rules of law to regulate the conduct of nations in their relations with one another . . . is perhaps the most important single task man can perform in his eternal quest for peace." As compared with the growth of national bodies of law, international law is still in its babyhood. Article 13 of the Charter calls on the General Assembly to start studies and make recommendations to encourage the development of such law—but so far, little's been accomplished.

Should or should not more be done to build up and strengthen international law? If we feel such legal aspects have been neglected, what do we recommend?

As for other views already expressed by our fellow citizens, they also are to be found in the published Hearings of the Senate's subcommittee on the UN Charter. Let's think about and discuss some more of them, adding any of our own that may occur:

Curbing UN Authority

1. The police force powers assigned to the Security Council should be eliminated.
2. The veto power should be kept intact.
3. The right of the General Assembly to make recommendations should be further checked.
4. Regional security pacts should be further expanded and encouraged, deemphasizing the collective security role of the UN.
5. The right of member nations to handle their own internal affairs should be further safeguarded.
6. More care should be taken to keep down UN costs.
7. We should get out of the UN.

Enlarging Authority

1. The veto power should be curbed to permit wider and more frequent positive action.
2. Membership should be made universal and compulsory.
3. An international police force should be set up and the collective security powers of the UN strengthened.
4. Armaments and atomic energy should be under the control of the UN.
5. To carry out its functions, the UN should be given the right to levy taxes.
6. The International Court of Justice should be given authority in all international disputes, and, like our Supreme Court, should serve as interpreter and guardian of the Charter.
7. The UN should be given control over the development of dependent territories toward independence.
8. The UN should have the power to see to it that human rights in all countries are established and preserved.

Further Suggestions

1. The great powers should agree among themselves not to use the veto in such matters as admission to membership, or the consideration of plans for the peaceful settlement of international disputes.
2. The recommendatory powers of the General Assembly should be further strengthened.
3. Closer coordination and supervision should be developed between the UN and the specialized agencies.
4. Voluntary programs for cultural and humanitarian purposes, and for technical assistance, should be further encouraged.

In conclusion, let's see if we can draw up a statement or list of recommendations covering what we feel our national position should be, and what changes in the UN, if any, we most favor.

WHERE TO GET FURTHER INFORMATION

The United Nations Charter, ten cents.

Guide to the United Nations Charter, latest revised edition, 25 cents. (Both are UN publications—write to Department of Public Information, United Nations Headquarters, New York City, N. Y.).

WASHINGTON, CONNECTICUT

June 28, 1955

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Here are the two additional guides that you mentioned you would care to see. We were still using the title "Future Voters" in 1953, but are shifting to "Vital Issues," which better takes care of both school and adult readership.

It was a great pleasure meeting you, and I shall look forward to hearing from you on your return from Geneva. I earnestly hope that your answer will be "yes."

Sincerely yours,

Townsend Scudder

IMMIGRATION
"WHOM SHALL WE WELCOME?"

Immigration means coming to a country to settle—coming to make it one's home.

Ever since the first little groups of colonists set foot on these shores, immigration has had a great deal to do with building America.

There are always two points of view on immigration—that of those who wish to come in; that of those already in who are considering whether or not to receive the newcomers. Furthermore, those already in are apt to have various answers to the question, 'Whom shall we welcome?'

There's the traditional American answer based on the declaration that "all men are created equal" and have the right to "life, liberty and the pursuit of happiness." Mindful of the new world as a refuge from the tyrannies of the old, George Washington summed it up thus: "The bosom of America is open to receive not only the opulent and respected stranger but the oppressed and persecuted of all nations and religions, whom we shall welcome to a participation of all our rights and privileges if by decency and propriety of conduct they appear to merit the enjoyment."

Washington was spokesman for a sparsely populated seacoast nation with a vast empty continent to spread out in. Since then our physical situation has changed. Have our attitudes toward immigration changed also?

That immigration remains a hot issue is clear from the nationwide controversy that goes on over the McCarran-Walter Immigration Act.

In his State of the Union message, President Eisenhower said:

> It is a manifest right of our Government to limit the number of immigrants our nation can absorb. It is also a manifest right of our Government to set reasonable requirements on the character and the numbers of people who come to share our land and our freedom.
>
> It is well for us, however, to remind ourselves occasionally of an equally manifest fact: we are—one and all—immigrants or the sons and daughters of immigrants.
>
> Existing legislation contains injustices. It does, in fact, discriminate. . . .
>
> I am therefore requesting the Congress to review the legislation and to enact a statute which will at one and the same time guard our legitimate national interest and be faithful to our basic ideas of freedom and fairness to all.

We the people are vitally concerned with what's to be done. To help us decide whom we shall welcome, let's start with the history of immigration in America.

Illustrations by Stuart Judd, Jr., Yale '56.

IMMIGRATION IN AMERICA

Taking into account the need for strengthening and settling the nation, the Declaration of Independence, in its list of grievances, charges that King George the Third " . . . has endeavored to prevent the population of these states, for that purpose obstructing the Laws of Naturalization of Foreigners (and) refusing to pass others to encourage their immigration hither . . . ".

George Washington, looking for men to work on his plantation, thus described the kind he was seeking: "If they are good workmen"—he wrote—"They may be of Asia, Africa, or Europe. They may be Mohametans, Jews, or Christians of any sect."

But other Americans had their doubts and reservations. Already they were a bit disturbed by the arrival of newcomers of Scottish stock who, because of oppression abroad, began seeking America in large numbers. What troubled them even more was a growing tide of strangers from Germany. Most of these immigrants couldn't even speak English. Wouldn't they fail to mix in? With their foreign habits, wouldn't they upset the way things were? Wasn't it time to draw the line?

If barriers had been placed in the way of these German speaking peoples, what well-known Americans might not be here because they or their ancestors might have been prevented from coming? What contributions to American life can we ascribe to this particular tide of immigration?

By the authority of the Constitution, Congress has the right to control immigration. But for over a hundred years Congress took no action. During this period, the idea of America as the welcoming land of refuge, freedom, and opportunity became traditional at home and abroad.

On top of the continuing German tide, a wave of Irish began to arrive.

From 1820 to 1850 or so, Ireland was suffering from crop failures and very hard times. In America, there were canals and then railroads to build. Irish brawn played a very important part in laying the steel network which speeded the development of the continent.

Like the Germans, the Irish were at first regarded with suspicion and distrust. But like the Germans they won their way into the American pattern, gaining success in America's many and varied activities.

Let's name some well-known Americans of Irish origin or descent and discuss the Irish contribution.

Overlapping and following the German and Irish immigration came a tide from the Scandinavian countries. Swedes, Danes, and Norwegians found the pine forests and lakes of Wisconsin and Minnesota much like those they had left. So they settled and helped build the Northwest.

Let's name some well-known Americans of Scandinavian origin or descent and discuss what's been contributed to American life.

By 1900, because times were better, making a living was no longer so hard at home. So the tides from Germany and Scandinavia fell off.

Emigration (leaving the homeland) seems to go by waves, with bad conditions (hard times, over-population, or military and political crisis) launching the wave, and the tide subsiding when conditions improve. Of course conditions and opportunities over here also have a good deal to do with it.

The earlier tides had flowed and ebbed mostly from the northwest part of Europe. From around 1880 on, circumstances shifted the source to the south and east parts of Europe. The next great flood came from Italy.

Let's name some well-known Americans of Italian origin or descent and discuss what's been contributed to American life.

The size of this tide from Italy, before it was stopped, was pretty close to the five million from Ireland—though it could not match the seven million of Germanic origin.

These were the bigger waves, though the Statue of Liberty in New York Bay and the Golden Gate in California have welcomed to our shores immigrants from practically every nation on earth, including Switzerland, Holland, France, Poland, Portugal and Spain, Russia, Czechoslovakia, China, Greece, Japan, Lithuania, Finland, and the lands to the north and south of us in our own western hemisphere.

Before we go on, let's name well-known Americans from some of these lands, or discuss what's been contributed to America by these stocks.

As is bound to happen where people are concerned, there were some misfits and undesirables among the thirty-five million or so immigrants who have sought our shores. But our nation today is proof that immigration in general has worked all right. To describe America as the land of opportunity and as the melting pot remains one of our proudest boasts.

The chief credit for turning the newcomers into Americans must go to the public schools. In our schools, the children of those who have sought our shores adapt themselves—as children readily do—to American ways.

Not till 1882 did Congress use its constitutional power to regulate immigration. An influx of Chinese on the West Coast led to the first Federal immigration act.

The earliest Chinese to arrive were a few merchants. Then, with laborers needed to work on western railroads, thousands of coolies were brought in to supply the demand. Without them, declared Leland Stanford and other railroad builders, the transcontinental lines could never have been built. But other Americans saw the situation differently. They were alarmed by this oriental tide. These Chinese working at low wages and able to live on a cheap diet of rice—they insisted—were being used to bring down pay and were threatening the American standard of living. Opposition led to riots and bloodshed. So Congress passed the Chinese Exclusion Act barring Chinese labor.*

Once Federal regulation began, the problem was—what form shall it take?

The general law of 1882 provided that no convicts, no idiots, and no persons who might not be able to support themselves should come in. This started a national policy

**When Japanese exclusion was also about to be enacted, the Japanese Ambassador pointed out it would be a serious blow to his people's self esteem. Secretary of State Charles Evans Hughes urged Congress not to "affront a friendly nation."*

of selection.

But one test for choosing acceptable immigrants had to wait quite a while before becoming law. This was the literacy test, requiring all adults to prove they could read. President Cleveland, vetoing the idea in 1897, called it too drastic a departure from our national policy of letting all decent people come in. At last, in 1917, though President Wilson declared such a provision would not be a true test of character, since many immigrants who might become good citizens had thus far had no chance to learn, the literacy test passed over the President's veto.

In 1921 we turned another corner. The end of World War I found the American people wishing to have as little as possible to do with Europe and its troubles. Wouldn't a new flood of immigrants pour in? Wasn't the country full?

As a way to check the tide, Congress passed the immigration laws of 1921 and 1924. The Act of 1921 provided that the number of aliens admitted from each country be limited to 3% of the number of persons of that nationality already in the United States according to the 1910 census. The Act of 1924 continued this national origins quota provision, but cut the percentage figure to 2% and based each nation's quota on the census of 1890.

The general effect was to restrict total immigration to 350,000 a year for 1921; 165,00 a year from 1924 on.

What effect would the national origins quota system as based on these years of census have on immigration from various countries?

What might be the benefits, what the disadvantages, in thus greatly curtailing immigration?

Between 1924 and the passage in 1952 of the McCarran-Walter Act, this has been done:

The basis for determining national origins quotas has been shifted to the census of 1920.

In 1943, when China was our ally, the Chinese Exclusion Act was repealed, with a Chinese national quota of about 100 a year.†

In 1946, the same thing happened with regard to India.

In 1948 and 1950, emergency legislation was passed to help solve the problem of the "D.P.'s." (We'll go into that on page 4).

Emergency legislation has also taken care of the entry of war fiancees and war brides, including Korean girls.

The McCarran-Walter Act, passed June 27, 1952, over President Truman's veto,‡ in general continues present U. S. policies, with eighty-five national quotas based on the census of 1920 and with a top annual total of 154,-657. It greatly tightens security measures against subversives.

The highly detailed, complex act covering one hundred and nineteen pages may be characterized as liberalizing the immigration laws in some respects, and in other respects increasing existing discriminations and adding new ones. New features which have been singled out for public comment include the following:

1. A provision making naturalized citizens liable to revocation of citizenship for certain actions which native-born citizens are free to perform without punishment.

2. A provision setting up a special racial quota for what is defined as the "Asia-Pacific Triangle," instead of separate quotas for Japan, China, and other Asiatic nations, arrived at on the same basis as are the quotas for European nations. By the new provision, those with oriental blood are counted as coming from the Asia-Pacific triangle, regardless of where they were born.

3. A provision whereby Jamaicans no longer come within the British quota but are processed under a quota of their own. The general result is to cut the number of Jamaican immigrants (mostly colored) from 1,000 to 100 a year.

What do we think about each of these provisions?

Now—how about the whole question: 'whom shall we welcome?'

To touch off our general discussion, we might consider the following two statements—one in support of present policies and the McCarran-Walter Act, the other opposed:

1. The national origins quota system is " . . . not based on the premise of the superiority of the Anglo-Saxon races but . . . on the sound proposition that a preponderance of the population of the United States, its cultures and institutions . . . stem from Northern and Western Europe and therefore . . . should be from Northern and Western Europe."§

2. "We have today an American policy on immigration which is completely outmoded, out of harmony with our ideals and actions, and completely at variance with the foreign policy which we are pursuing in accordance with such ideals."•

To be specific, here are two suggestions that have been made for changes in the 1952 Act. What do we think, pro and con, of each?

1. Raise the present number for yearly admission from 154,657 to 250,000. How do we feel about this figure? Could, or could not, the nation absorb that number? Could it absorb more?

2. Abolish the national origins quota system and put in its place an overall quota without regard to national origin, race, color, or creed. How do we feel about this suggestion? If this should be done, on what considerations should the admission of immigrants be based?

†*The McCarran-Walter Act itself repeals Japanese exclusion, for much the same reasons and with much the same results.*

‡*The vote to override the veto, in the House, was 278 to 133; in the Senate, 57 to 27, just one more than the necessary two-thirds majority.*

§*Statement by Senator Pat McCarran of Nevada.*

•*Statement by Monsignor Edward E. Swanstrom, Executive Director of War Relief Services, National Catholic Welfare Conference.*

THE D. P. PROBLEM

"We say—and we sincerely believe—that we are on the side of freedom; that we are on the side of humanity. We say—and we know—that the Communists are on the side of slavery, the side of inhumanity.

Yet to the Czech, the Pole, the Hungarian who takes his life in his hands and crosses the frontier tonight— . . . this ideal that beckoned him can be a mirage because of the McCarran Act."

General Eisenhower, during the Presidential Campaign, in a speech on Oct. 17, 1952.

War can sear the land like a flood of lava from an erupting volcano. Some people in its path seek refuge in flight, only to find themselves homeless in already crowded neighboring countries. Others are forcibly transplanted, or "displaced," by the conquering armies. Still others, after the conquest of their homelands, escape to what they trust will be a friendly welcome beyond the frontier.

These are the displaced persons and escapees—homeless through no fault of their own—who look especially to America as the traditional refuge for the oppressed and the land of opportunity. Many possess skills and knowledge which, before they became war's victims, brought them success—good farmers, machinists, carpenters, engineers, doctors, scientists. The vast majority hate the Communist tyranny that drove them from their homes.

Probably never since our nation was founded have old political or religious tyrannies victimized more people than have the new tyrannies of Nazi brutality and Communist cruelty. Never before has there been a greater need for giving the victims of tyranny a chance for a new start.

Yet on account of our national origins quota system, most of these people cannot come to the United States as settlers and prospective citizens. They are debarred because before the war not many persons from their lands —Poland or Czechoslovakia, for example—had yet come here to settle. As a result, their national quota is much smaller than that of other countries where the tides of immigration, for one reason or another, began at an earlier date.

To help take care of the plight of the D.P.'s—who are the responsibility of the entire free world—the United States Congress, in 1948 and 1950, sidestepped the national origins quota system by passing special legislation to admit a maximum of 400,000 D.P.'s. Stiff provisions were set up for careful screening to guard against possible subversives. Only the best prospects for citizenship were let in.

In 1952, with the arrival of the last of the 400,000, this special legislation stopped.

But the need and problem go on.

Daily we hear of daring escapes from behind the iron curtain. Some, like the account of the Polish pilot who flew a Mig to freedom, or of the train from Czechoslovakia which continued right past the guns of the guards at the border, sound like television thrillers. Often we learn these escapees risked their lives as the result of listening secretly to our radio broadcasts. And they keep coming in. Western Germany, for instance, has many more such refugees than she can possibly take care of.

On April 22, 1953, President Eisenhower, commenting on the steady flow of escapees from behind the Iron Curtain and on European concern over population pressures, asked Congress as soon as possible to enact emergency legislation admitting 240,000 refugee immigrants to the United States during the next two years.

Should, or should not, such emergency legislation be passed? (In discussing the D.P. question, we might consider, among other things, how D.P.'s we actually know of in our neighborhood have made out.)

If we pass such legislation, how about the President's figure of 240,000 D.P.'s? Is it too many, or too few?

What other remedies for the whole problem might we suggest?

WHAT SHALL WE READ?

Our discussion makes it clear there's a great deal to learn about the entire topic. As a starter we might turn to:

WE WHO BUILT AMERICA, by Carl Wittke, 1939. Professor Wittke is Dean of the Graduate School at Western Reserve University and an authority on Immigration.

WHOM WE SHALL WELCOME, Washington, D. C., January 1, 1953. This is the report of a commission appointed in 1952 by President Truman "to study and evaluate Immigration and Naturalization Policies of the U. S."

Its membership consisted of seven distinguished citizens familiar with the subject as churchmen, laymen or public officials. The Report may be obtained from the U. S. Government Printing Office, Washington, D. C. for 75 cents.

ALL ACCOUNTS of present and contemplated action in Congress. All other comments in the papers.

DISCUSSION GUIDE

A Service of the Center for Information on America, Washington, Connecticut.

April, 1953 Vol. 2, No. 8

WHOSE OIL?

"The biggest untapped bonanza we possess."

That's what the oil deposits have been called which lie in the submerged lands beneath the seas that surround our country.

These untold millions of gallons, geologists believe, may prove our richest future source for all the petroleum products so necessary to keep us in high gear or jet propelled: gasoline for our cars and planes, fuel for our battleships. We all know how vital oil is for our progress and comfort, and how imperative it is for our national defense.

With the oil under our dry land running short of our needs, here's this great reservoir of it under the sea.

But a hot dispute has been raging as to who has the primary right to the submerged oil fields.

The seaboard states of California, Texas, Louisiana, and Florida claim the oil off their shores is theirs.

Should it belong alone to the people of these coastal states?

Or should it belong to the people of the entire nation?

Whether we are citizens of the four states most concerned or are citizens of inland states which could benefit from nationwide ownership, the decision is important.

If the oil rightfully belongs to the seaboard states, it would be an injustice to take it away.

Texas, for example, has been financing its public school system from revenues received through leasing to various producers the submerged oil fields off its coast.

If the oil belongs to the U. S. citizenry at large, then all the people should have the use of the revenues for worthwhile purposes.

That's in brief what is known as the Tidelands Oil question which for fifteen years and more has been calling for a showdown.

But the problem is complex. Tidelands oil, for instance, isn't even the correct name for the subsea oil deposits involved.

The nation, including its future voters, will have to do some careful investigating and thinking to solve wisely and fairly this question: "whose oil?"

Illustrations by Stuart Judd, Jr., Yale '56.

WHAT'S BACK OF THE PROBLEM

A blackish fluid called petroleum has long been around. Found here and there in smelly, greasy pools, it was regarded by early American settlers as worthless. Then they noticed that the Indians daubed it over cuts and bruises so they tried it too. This was its only usefulness.

Not till about a hundred years ago did men find out that petroleum could be distilled into kerosene, a clear inflammable oil excellent for lamps.

Before this discovery, people mostly went to bed with the birds—for candle-light was dim, and whale oil, which gave a somewhat better glimmer, was expensive. Abundant and cheap, kerosene banished darkness from people's homes and changed the whole pattern of living.

Fifty years later came a second revolution in how we live. American productive genius began making combustion engines. The further refining of petroleum was supplying the fuel necessary to usher in the new age of power and speed. To meet its demands, more and more oil was drawn from the earth.

Presently cars began swarming like ants on the roads. The need for petroleum products multiplied fantastically. In 1909, for instance, the United States Navy, to propel its ships, converted from coal to oil. So important to the safety of the nation had this driving force become that in 1912 President Taft set aside the first naval oil reserve. By the peak of World War II our armed forces were using one million five hundred thousand barrels a **day**—nearly a third of the total **daily** use by the whole nation.

Now we no longer have quite enough to go round. To meet total demands, we bring in oil from such nations as Mexico, Colombia, and Saudi Arabia.

No wonder the oil in the ground under the waters bordering our shores—this "biggest untapped bonanza"—is important.

Undersea oil deposits first were found off California. Next the Gulf of Mexico, bordering on Texas, Louisiana, and Florida, promised rich supplies. Assuming it controlled this oil and had the right to such revenues, each state leased to various drilling companies these underwater fields off its coast.

Soon American engineering and business enterprise began producing results. Putting millions of dollars into exploration and development, oil companies started building special barges to search out the oil. They bought old LST's, many of them veterans of Pacific invasions from Guadalcanal to Okinawa, and turned them into dormitories for the drilling crews. In the Gulf of Mexico, operations began as far out as one hundred miles from the shore. One oil company has put up a man-made island over the greenish blue Gulf. In fifty feet of water eight miles off Grand Isle, Louisiana, where Jean Lafitte the pirate used to terrorize crews of wooden sailing ships a century ago, this island stands on one hundred steel pilings. Hurricane proof and completely equipped for the comfort and safety of its inhabitants, it is big enough for the drilling of seven wells.

Up to the discovery of the underwater oil, the land beneath the sea around our coasts was of little interest to anyone. After the discovery, things became different.

Whose oil? Does this "untapped bonanza" belong to the seaboard states lucky enough to have it off their shores? Does it belong to the entire nation?

In 1946, Congress passed a bill "to confirm and establish the titles of the states" to the submerged lands off their shores. The President, insisting these lands with their immensely valuable resources belonged to all the people, vetoed the bill. The House failed to muster the necessary two-thirds vote to override the veto.

Seeking to establish its own claims by charging that the State of California, in making leases and collecting the rent, was poaching on Federal land, the Government took the case to the Supreme Court.* California's defense rested on the contention that the boundaries of the colonies which became the thirteen original states included the land off their shores. When they won their independence from England, they naturally won the right to their land, including the underwater area which presently was defined as running out to a three mile limit. California, admitted to the Union on an equal basis with the original states, contended such land also was hers.

On June 23, 1947, by a vote of 6 to 2, the Court decided for the Federal Government and against California.

But points were raised in the verdict which left the general question of undersea oil still open.

In the first place, only the three mile belt of water (and the land beneath it) that parallels the country's coastline — the Court declared — was involved in the case. The actual tidelands (the land exposed twice a day when the tide goes out) were not under dispute—these had always been regarded by state and federal government alike as belonging to the state. The rights to the rich lands of the continental shelf† running out beyond the three mile limit had also not entered the

**The Constitution (Article III, Section 2) provides that in all cases where there's a dispute between a state and the federal government, the U. S. Supreme Court has jurisdiction to settle it.*

†The under water plateau, rimmed by deep ocean, on which our continent rests. Along much of the Atlantic seaboard it runs from twenty to fifty miles out from shore. On the Pacific coast, where deep water lies close, the shelf stretches to about five miles. In the Gulf of Mexico, the shelf runs way out: from ninety to over one hundred and twenty-five miles.

case. What to do about that still remained to be settled.

In the second place, according to the Constitution‡—said the Court—the United States Congress has the power to dispose of public lands. The Court's decision did not affect that right. Congress merely had not passed the necessary legislation in this matter of the three mile belt. It had not mustered the necessary two-thirds vote to pass such a bill over the President's veto.

In the third place—as Justice Hugo L. Black, delivering the majority opinion, indicated—though California's claim to ownership of the three mile belt off its shores on the basis of historic precedent was not allowed by the Court, neither had the Court declared that the Federal government owned this land. It just had "paramount rights and powers"§ over it. When the Nation first won its independence—Justice Black pointed out—such statesmen as Thomas Jefferson were anxious to establish a definite zone off our coasts to help guard our neutrality. Before that, though at various times Spain, Portugal, and England made sweeping claims to dominion over wide expanses of ocean, the notion of a fixed three mile zone around each country had not been thought of. Thomas Jefferson set up such a three mile protective zone around the shores of our country, and notified England he had done so. The idea soon gained general acceptance. It was reaffirmed as international law for each country at the Hague Conference of Nations in 1930. It has been maintained against such claims as Russia's for an extension of sovereignty twelve miles off its shores. It is especially important today. As Justice Black pointed out, "the very oil about which the state and nation here contend might well become the subject of international dispute." It's not the job of the individual states of the Union, but of the armed forces of the whole United States to keep enemy ships, planes, and rockets from coming in over the ocean to attack us. Since the United States thus has this "paramount responsibility" over the three mile zone—Justice Black's opinion concludes—it also has a paramount right to the oil or other resources in the soil beneath.

One result of this Supreme Court decision was greatly to slow up the production of the oil. If companies applied to the Government for leases, suppose Congress, as it has the right to do, were to pass and uphold a law giving title to the seaside states? And what about the oil in the rich coastal shelf beyond the three mile limit? This land is of interest especially to Texas, Louisiana and Florida. Both Texas and Florida held that according to Spanish law, which had applied to them long before they came into the Union, they owned the continental shelf to ten and a half miles out.

The next case to come up involved the title of the Gulfside states. But though the Texas decision was closer (six to three)—since Texas maintained that having applied as an independent nation for admission to the Union she should have the right to hang onto what she owned before—the decisions of the Supreme Court, handed down on June 5, 1950, followed the line taken in the California decision.Δ

Thus production lags and the tug of war goes on.

It raged all through the Presidential campaign last year, with General Eisenhower supporting the claim of the individual seaboard states, and Governor Stevenson supporting the opposite position.

Just before he left office, President Truman issued an executive order setting aside all the offshore oil lands as a naval oil reserve.•

Bills have been introduced into the present Congress (1) favoring the claims of the individual seaboard states, (2) favoring the Federal Government. There is also an amendment providing that the revenue from leases be used to pay the costs of schooling and education throughout the United States. It would give to the Federal government 62½% of the revenue from oil leases within the three mile limit, with the other 37½% going to the respective coastal states. It would allot to the Federal government all of the revenue from such leases beyond the three mile limit. The plan would provide that this revenue should go to the support of schools, colleges, and other educational purposes in all the states. During the present emergency, the plan would provide that these funds be used to help pay the bills for national defense.

Hearings on these measures began this February.

Testifying on the "oil-for-education" amendment, Dr. John K. Norton, Head of the Department of Educational Administration at Columbia University, has declared: "The fact is that we do not have good education for everybody in this country today. If I were to make the best estimate I could—and this on the basis of over

thirty years of very careful study and intimate association with public education in this country—I think I would say that we have about a 50% educational system in the product it's turning out and in the support which it receives today."

Testifying on the main issue—whose oil?—Secretary of the Interior Douglas McKay has urged that Congress give title to the coastal states "out to their historic boundaries," with the Federal government to keep control from there to the far edge of the continental shelf. Attorney General Herbert Brownell has urged that Congress should grant the states "developmental" rights to the undersea lands which they claim but should not cede actual title. He foresees major complications, he said, involving further Supreme Court cases and also international law if title is ceded formally to the states. This would seem to suggest that all issues involving offshore oil will not be settled, no matter what immediate legislation is passed.

Proponents of the idea that the oil within the three mile limit and beyond belongs to all of the people also presented their views.

‡*In which Article is this Congressional power set forth?*

§*But "paramount rights and powers," said Justice Frankfurter, in a dissenting opinion, really amount to proprietary interest or ownership. "Proprietary interest (by the Federal Government) has not been remotely established," he contended, "except by sliding from absence of ownership by California to ownership by the United States."*

Δ*In dissent, Justice Frankfurter wrote: "The Court now decides that when Texas entered the Union she lost what she had and the United States acquired it . . . How that shift came to pass remains for me a puzzle." Are any of us puzzled, too? On what grounds?*

•*If he chooses to, President Eisenhower can countermand this executive order by issuing one of his own.*

WHOSE OIL?

Definitely, here's a very complicated problem solvable by no easy decision between obvious right and obvious wrong. All sorts of considerations, ethical as well as geographical and political, are involved. Before we try to make up our minds as to what should be done, we might weigh these words of a recent editorial‡ on the subject: "To reconcile the course of prudent statesmanship with the strong desires of the states whose interests are at stake is a task requiring wisdom on the part of both the legislative and executive branches. . . . A strong disposition to favor local rule, local responsibilities and local rights characterizes the Eisenhower administration; this represents, we believe, a healthy reaction to the overcentralization of the last twenty years. But it is a President's task to see the interest of the nation as well as the interest of the states. . . . When all sides in this case have been brought out by the studies of his advisers and by debates in Congress, it will be time enough for . . . President Eisenhower . . . to take a final stand."

Of course the big question is: "Whose oil?"

But it has so many sides to it that, for our discussion, we may wish to break it up into parts such as these suggested below:

Which arguments on historical grounds do we feel are stronger—Those favoring the seaboard states? Those favoring the entire nation? On what basis?

In considering this and other parts of the entire question, we should not lose sight of the fact that two geographic regions are involved: The lands beneath the waters within the three mile limit (Senate Joint Resolution 13, giving title to the states, would allow Texas, Louisiana, and Florida their claim to boundaries extending ten and a half miles out); the lands of the continental shelf.

How about the international problem?

How about the "oil-for-education" idea?

Would the production and conservation of offshore oil be more effectively carried out by private interests under federal control or by private interests under state control?

From the point of view of the good of the country, what do we favor? Why?

From the point of view of fairness, which position do we favor? Why?

If the seaboard states are given title, should inland states having public lands within them (such as national parks) be given rights to the mineral resources within those public lands, on the basis that "all states should be treated alike"? **Such an amendment is being proposed.**

Can, or can't, a bill giving seaboard states title to the oil beneath the three mile belt (ten and a half mile belt for Florida, Louisiana, and Texas) be reconciled with the Supreme Court decisions?

Do we find our arguments, on the basis of these various approaches, tend to make us inconsistent as to what we believe should be done? If so, what stand might we take about consistency?

Are we ready for the question? "Whose oil?"

Dear Ed:

Clinton was entirely admirable and the judges could do no other. All my associatipns with you are pleasurable.

About the editorial : I didn't write it. I wrote one of my regular department pieces emphasizing the point Meany brought out--that TV is felt to be so infinitly more persuasive than radio.

My copy got to the editors just as I got to Mass Gen'l Hosp to have a diverticulum removed from my esophagus! (Mighty interesting, too, and I'm all the better for it.)

Pete Ritner of SR phoned me, said they wanted to run it as an editorial, with some changes--and as I couldnt hope to discuss the changes with them from under a blanket of anaesthesia, I gave them carte blanche. Actually Ritner wrote most of the piece and I've sent on to him your letter to me.

NOW, dear colleague, I have a request to make. Would you, some day when near a tape recorder, read into it certain passages of your Brandeis address and give me the tape?

I have prepared a manual for discussion of the Mass Media for The Fund for Adult Education. I am trying to get a few people to record interesting ideas or basic principles. Frank Stanton has agreed to let me interview him so as to present to the discutants a straight broadcasting point of view. Arthur Schelsinger, jr., is going to record a couple of paragraphs similar in nature to your talk. (He said we're coming to such a point ofconformity even among excepional people that soon we'll have the bland leading the bland.)

I have the text of your speech and if you'll undertake to do this, any timewithin the next four months or so, I'll mark the passages I want.

Benedictions (whchh obviously means blessed speech) to you.

Gilbert

Gilbert Seldes

Seldes, Gilbert

June 28, 1957

Dear Gilbert:

I say you my thanks for your very gracious letter.

I must tell you that you wrote the most sensible words I have seen on the subject of the Khrushchev interview and to quote Carl Sandburg, "What's wrong with the country ain't you."

As ever yours,

Mr. Gilbert Seldes

Dear Ed:

For the record:

When I wrote you yesterday, I did not have the text of the paragraph which offended you in front of me and based my answer on the quote from it contained in the letter written to me by your colleagues.

I have looked at the text. The theme is stated in the first line, the operative word is "formula." That is what I am writing about. I did not think it necessary to repeat the word later.

I suggest to you that if I criticized the isolation booth on a quiz show I would not be implying motives to the producer.

Also I remind you that my request for a recording was made in connection with an enterprise of the Fund for Adult Education. It would have been possible for you to send the tape directly to the Fund and thereby prevent me from making any use of it whatever.

Because I had criticized the formula of your program, you said in a semi-public place, in front of a group of people including men with whom I work and with whom I couldn't work if my integrity was in doubt, that you couldn't be sure what use I would make of your recording. My own feeling--that this was said in jest--was not shared by them. Your implication was that I was dishonorable.

It seems to me that, between us, I have the better right to be aggrieved.

Everything essential I said about your program repeated what I had said in The Public Arts. After that book, dedicated in part to yourself, was published, you said to me that it made you re-examine your own work. Your words were, in effect, "I have to get up from behind my desk and go round and look at the person who's been sitting there." It was the most flattering thing ever said to me about my work --but more than that, it seemed to me to indicate something rather great about you. Something I persist in thinking you possess.

Faithfully yours,

Gilbert

Edward R. Murrow, Esq.

Gilbert Seldes

feb 26

Dear Mr Zousmer
Dear Mr Aaron

It's nice of you to attribute my remarks about Person to Person to a temporary state of being out of sorts. But the brief note you read in The Saturday Review only repeated what I had written in The Public Arts--a book dedicated in part to Edward R. Murrow.

I'm sorry that your letter didn't reach me a little earlier, but there are people on your side and one of the most effective of them has written a letter of reproof to SR which is being printed with my reply in the issue out next Tuesday.

It would be useless for me to recapitulate here the argument I make there. One point, scantily made in print, I can make to you : of course I didn't mean that you tried--or could--reduce the whole of your roster to nonentities. But I have to stick by my own experience : I've never seen one person on the program (except Krishna Menon) who came off as an impressive or interesting human being and (this is in the reply) every guest I've myself known has been from 25 to 50% less of a human being, a total person, than I've known him or her to be.

I think the drive and emphasis of your program tends to make people trivial. I do not think that you two and Ed have a low concept of humanity, but that you've let your program get out of hand--or possibly that the formula and the mechanics are wrong.

And you will not, never, nohow, shame me out of saying so. Morris Ernst, the defender whose letter is being printed, implies that I'm not a good critic. I am a good critic.

Faithfully yours,

Gilbert Seldes

Re-reading your letter I am troubled by your reference to "a speaking acquaintance with only one member" of your staff. The only man I know on P-tp-P is Ed and if you like I'll show signed letters from him indicating something more than a speaking acquaintance.

gs

Seldes.

125e57
nyc 22
feb 27

Dear Ed:

I was of course aware of an undertone of displeasure in our brief conversation at the Century Club yesterday but the one thing I felt sure was not seriously meant was the imputation that I would make any use, beyond the one I described to you, of the recording I had asked you to make. I still can't believe it although you have put it in writing.

And I have to take this in a context you do not yet know--the attack I've been forced to make on Person to Person in reply to Morris Ernst's letter--which will appear in the next issue of The Saturday Review.

It is not agreeable to me to dislike anything you do because, as you know, I have a superlative opinion of the best things you do. As I note in the new SR piece I've called you the conscience of the industry. But I have my own professional conscience and must say what I believe. I believe P-to-P is not only a bad program, but one which lowers the standards for others--precisely because <u>you</u> are doing it.

I do not find any attribution of motives in the brief paragraph I wrote. I find a judgment on the effect of the program and a judgment on the concepts behind it. The only motives I can think of in connection with any TV program which some people might consider unworthy are the desire to be popular and the desire to make money. I approve of both of these. I do not approve of all the methods by which these ends are achieved. It is the degree of intelligence behind the program I challenge and, as I wrote to your colleagues, I think you have been betrayed by your mechanisms.

You have yourself, in conversation with me, contrasted the seriousness of See it Now with the lightness of P-to-P. In your interview with Pete Martin you indicated that other people--you mentioned your wife--once had a low opinion of the program. They have changed their minds, I have not. I do not think this goes beyond the bounds of legitimate criticism.

I am profoundly disturbed by your imputation that I would act dishonorably in regard to you. Even assuming that I have been intemperate, I have given you no cause to think so. And nothing you do or don't do will alter my judgment that you are one of a tiny handful of people who can, and do, bring honor to your profession.

Faithfully yours,

Gilbert

Gilbert Seldes

Edward R. Murrow, Esq.

February 25, 1958

Personal

Dear Gilbert:

I would prefer not to do the recording you request.

Never have I raised my voice in public about any criticism of programs with which I am connected. I am not now about to do so. However, I am obliged to tell you privately that in your piece on PERSON TO PERSON you attributed motives to my colleagues and myself that went far beyond the bounds of legitimate criticism.

Your language was so intemperate that I cannot be sure what use you would make of any recording I might produce.

Sincerely,

Mr. Gilbert Seldes

New York City

Dear Ed:

I am taking out after you again and before my totally ill-informed and uncalled for attack on you appears in print I think I better remind you that you promised to record for me some excerpts from your talk at Brandeis. I am enclosing the text with those pages marked which I would most like to have in your own voice.

This would be preceded by one of two statements, the choice being yours. One, I would say that the following is a recording made by the most thoughtful of all broadcasters expressing his misgivings about some of the present trends in the business--with a few additional * uncomplimentary remarks about yourself and identification of the occasion when the remarks were originally made, and, two, you could do this yourself saying what is perfectly true "This is Edward R. Murrow" and proceding to say that I had asked you to record a portion of your remarks, etc.

I figure that somewhere around C.B.S. the facilities for recording could be made available to you. You will be in good company because Frank Stanton has also agreed to put something on tape for me. In case you have forgotten, the recording will be used at sessions of discussion groups under the auspices of the Fund for Adult Education.

I was glad to see that your Marian Anderson program was so well received because I thought it was as absorbing as it was important.

Faithfully yours,

Gilbert Seldes

* a secretarial error

heard the remark: "He's the one who really started me reading", or, "He taught me to doubt", or "That's the one who really stretched my horizon". I can only add that my own small part in this operation has given me more satisfaction than anything I have ever done.

As I understand it, this Award that I am to receive is in the general area of the Humanities. In radio and television circles that's a pretty high-brow term. And yet the mass media must be concerned with it. It was Joseph Wood Krutch who said: "The humanities as opposed to the sciences are concerned with whatever is important to man but cannot be measured and is not susceptible to valid experiment." So radio and television must concern themselves with the Humanities, unless they chose to limit themselves to the function of entertainment. Television is growing so fast that those in charge of it have hardly time to administer it well, let alone to think of its place in civilization. If these instruments are to survive, they must strengthen and affirm the values that are the essence of our civilization. This being true, it is not enough to entertain the greatest numbers; there also must be full appreciation of our historic heritage, wise understanding of our institutions and traditions, familiarity with our classics in literature and the arts, and persistent attention to our ethical principles. I am well aware that the bulk of the money that pays for television and radio comes from a relatively small number of corporations. Hence the thinking of the executives in these corporations will have a profound influence on what happens in television and radio. And that is saying that they will greatly influence and could possibly decide the course of our civilization. And it is insisting that they cannot abdicate this responsibility by assigning it to an advertising agency.

We now know that our civilization can be snuffed out overnight. We know that while we ourselves did not create it, we ourselves can lose it. It is committed to us. We also know that we can save ourselves from nuclear destruction by "buying" a different civilization, one that does not include our

values of freedom, or cherish like ours the dignity of the individual. We know we are not making this bargain. We value our civilization. So we begin to know that we must value it if we are not to lose it. But if we are going to survive as a nation and a civilization we must do so consciously. This means that the mass media must pay more attention to the humanities. The Humanist is one who cares, and is preoccupied with what is worth caring about. Another characteristic of the humanist is that he is preoccupied with the mystery of personality. People for him are always persons, and in these days that often makes him lonely. Preoccupation with science turns persons into people - a statistic on a chart - tendencies and "characteristics symbolized by curves neatly drawn on graphs." The Humanist is concerned not with manipulation but with understanding. He is interested not only in events but in character.

All too often in radio and television audiences are conceived and treated as people, not as persons. Quantitative response is consequently made the measure of quality. There is a willingness, and indeed eagerness to answer the questions, What? and How? But not enough attention is paid to the Why?

T.S. Eliot said: "Teach us to care and not to care. Teach us to sit still." It might be helpful if those who control television and radio would sit still for a bit and attempt to discover what it is they care about. They have great belief in the power and future of their instruments. But all true belief is rooted in doubt, and there is not enough doubt in high places in the field of mass communications. There is a disposition to take us for <u>what</u> we are, and that in turn is likely to keep us <u>where</u> we are. If these devices are to be used in an effort to entertain all of the people all of the time, then we have come perilously close to discovering the real opiate of the people. If in dealing with events we concentrate on what and how, and ignore the why, then we are not really searching for anything.

Our commercial television and radio systems appear to be the alternative to state-operated and financed communications. By and large we have freer

speech, more information than any state-operated system. We have vastly more money to spend. The system is practically universal. It is, for the individual, both a privilege and a peril. And it is, for those who finance the system, and those who select the programs, a responsibility in the field of communications never before borne by such a small group of men and corporations. I think it was Bernard Shaw who said: "You must get what you want, or you will come to want what you get."

Albert Einstein Award
May 5, 1957

You have done me great honor, and as Shakespeare said: "Beggar that I am, I am even poor in thanks."

To have his name linked, however remotely, with that of Professor Einstein is honor enough for any reporter. "A hundred times every day I remind myself that my inner and outer life are based on the labors of other men, living and dead. And that I must exert myself in order to give in the same measure as I have received and am still receiving." Those words were Albert Einstein's, but he spoke, I think, for every worthy man and woman who deals with information in the mass media. To him a disinterested love for facts was not enough. He had to care about the bearing of those facts on hopes, fears and destiny. He realized that fear, bigotry and intolerance will not command the land unless most of us are silent accomplices.

By freedom he understood, "Social conditions of such a kind that the expression of opinions and assertions about general and particular matters of knowledge, will not involve dangers or serious disadvantages for him who expresses them. He believed in what might be called "a reign of reason" which most of us have carelessly enjoyed without buttressing its foundations.

Professor Einstein would, I think, have agree with Milton who said: "If the waters of truth flow not in a perpetual progression they sicken into a muddy pool of conformity and tradition." He was conscious of the truth of what Lord Acton wrote in 1877: "There are in our day many educated men who think it right to persecute." There are indeed many men in our day who so believe.

Perhaps you will permit me a personal digression in order to apologize for my lack of formal attire. It is not due to persecution or lack of a dinner jacket, but rather to the fact that I have but just come from a television program where such clothing would have been inappropriate. I am without embarrassment and seek refuge in another quotation from Professor Einstein:

Seldes, Gilbert

equally as large. He should fly across northwest Nebraska over the Sand Hills region to see herds of beef on the hoof.

"Time permitting, he should stay long enough in Yellowstone Park to see its more spectacular offerings. He should stand among the Redwoods in California. He must go to the Top of the Mark in San Francisco; see both Bay bridges; and visit Golden Gate Park.

"If it could be arranged, he should eat a meal with the lumbermen in a lumber camp in the Pacific Northwest and fish for salmon at the mouth of Juan de Fuca Strait. He might land a king salmon.

"For pure scenic splendor, he might take the Coastal Drive down to Los Angeles, but the road is narrow and the way is long. He must see Los Angeles from the air, however, both at night and in the light of a clear day. He must be escorted through Paramount Studios or one as extensive; be present to watch Jack Benny's Sunday night show when Jack is broadcasting; meet a couple of the older M.C.'s such as Groucho Marx or Walter O'Keefe. Visit the Farmers' Market. Disneyland? No! He would be addle-headed.

"His return swing across the nation should include a breather at Hoover Dam; a look into Grand Canyon to reckon his own stature in the world. He could visit the Great Salt Lake and the endless salt flats surrounding it. He should have a couple of whiffs of the air in Arizona and New Mexico, if only briefly when the plane stops.

"He must see a ranch in Texas; a field of oil-wells; eat in New Orleans; note the moss-hung trees of the old Southland; and go on to Florida for deep-sea fishing and a gander at their hotels. For sheer novelty, he might sail back to New York on a banana boat, touching at ports along the way thus viewing the docks and the dockworkers.

"This is a quick trip. If he had more time, he could go through the Big Smokies, see the Ozarks in summer and the Minnesota woods in the autumn; and our Niagara Falls. He might visit Boston, Richmond, and Philadelphia, where our history began. He might have one look at Detroit and an automobile assembly line; one ride in an Edsel.

"His head would probably be swimming without having attended a football game or a race-track; but he would have a picture of a way of life and a few natural and man-made wonders to fill his soul for the rest of its natural time.

"This is sort of long. I am sorry."

I'm not. —F SUTTON.

TV AND RADIO

Notes from a Wheel-Chair

IT IS an established fact that people like me who fracture their ankles (on New Year's Eve it happened) see more television than anyone else. Some of the things they see are untrue.

• • A few weeks ago the formula of Edward R. Murrow's "Person to Person" was, as always, pulverizing some people into nonentities when the incredible happened. Urged—more exactly chuckled—into activity by Mr. Murrow, a man helped his wife into a fur coat and she went out to the terrace of their penthouse and began pointing out the sights. A droning noise was heard—I thought, at first, I was snoring. Then the woman said, "That's a plane up there" and Mr. Murrow replied, "I can hear it."

Now, it isn't sensible to suppose that the program arranged for the plane to be overhead at that moment, so we arrive at these conclusions:

1. That people on "Person to Person" are capable of independent observation and unplanned remarks.

2. That Mr. Murrow knows this.

Adding 1 and 2 together we come to

3. The reduction of individuals to nobodies on "Person to Person" is not inevitable. It is intentional, calculated, and indicates a low and contemptuous estimate of human values.

The Edward R. Murrow mentioned above is not to be confused with the man of the same name who is co-producer and star of "See It Now." One of them is an impostor.

• • Year after year "Omnibus" gets an award for being the best educational program on the air, and once at least Alistair Cooke expressed as much surprise as gratitude in his acceptance. I would say that it is an entertainment program using cultural materials and would say that, as it gives information and plays with ideas, it does educate. I would say this with greater assurance and happiness if "Omnibus" hadn't produced a whatnot publicized as a lighthearted report on suburbia which was wrong-headed in conception and disastrous in execution. Except for some archly presented introductions, nothing in the program was germane to the announced subject; and except for Bert Lahr's familiar, but immortal, answer to "What Do We Chop, When We Chop a Tree?" nothing was first class.

Like Mr. Murrow, the producers of "Omnibus" stand for intelligence and responsibility—responsibility toward the medium in which they work. Others have the God-given right to be second-rate. Not they.

• • A third responsible producing group is The Theatre Guild, which creates the U.S. Steel Program. I know nothing of the arrangements between the Guild and the actual sponsor of the show, but external evidence indicates that the kind of independence Murrow had when Alcoa sponsored "See It Now" is not given to the Guild. The programs have varied from good to indifferent. It is a pleasure to report on one that was excellent: "The Bromley Touch." It takes courage to tackle any *New Yorker* story by Edward Newhouse, and this one was peculiarly prickly. It was concerned with the cult of success and the milieu chosen was the dead center of the cult: the publicity racket.

• • In the same week "Playhouse 90" used another *New Yorker* story, Irwin Shaw's "The Eighty-Yard Run," which in a way reversed the theme. Here we had the adolescent hero who lived on his fame and then on his wife and was finally driven to live off himself, to do what he really wanted to do: be a football coach at his college. The whole thing was astonishingly consistent: nothing in it seemed true. I would say that for the wife of the perpetual boy-hero a love affair was a psychological necessity, but it was turned into nothing more than a dramatic device. I didn't believe a word of it, or in the reconciliation either. (I understand that the play did not faithfully follow the original story. I assume, then, that Mr. Shaw surrendered all his rights to the producers. He is in good company: Somerset Maugham and Ernest Hemingway do it, too.)

• • Some time ago I predicted that Hans Christian Andersen or the Brothers Grimm would win the Peabody Award for the best original stories of the year. If there was anything snooty in that idea, the utterly ravishing appearance of Claire Bloom in "Beauty and the Beast" makes me apologize for it and to put in nomination for special distinction the name of Joseph Schrank, who made the loving adaptation of the story.

Griffin index)

March 28, 1952

Dear Gil:

My belated thanks for your note on the Christmas show. If these pieces have merit I am sure it's because I have succeeded in picking up some knowledge of the medium from kind friends, particularly you.

As ever yours,

Mr. Gilbert Seldes
125 East ~~57th Street~~

Sunday

Dear Ed:

It gave me a sudden additiannal quantum of pleasure to remember that you had once lived in the room in which I have just seen your Christmas program.

And as you ended with the school to which my children went, some twenty years ago, with the pageant in which they took part, it was altogether a satisfactory day.

And apart from my personal feelings, what a beautiful and wise and generous and intelligent program it was! We're all grateful to you for it.

Always yours,

Gilbert

Thanks, Ed, for trying to get the Omar Bradley...

Next time I quote you it will be inrregard to "the inch"--I enjoyed that broadcast very much...

Also for lack of time I haven't run part of your album on my show...may get it in next week...

Most of all I'd like your comment on the Atlantic piece and to talk to you as always...

GS

Practitioner as well as critic of popular entertainments, GILBERT SELDES *proclaimed himself their champion with the publication in 1924 of his trenchant book,* The Seven Lively Arts. *In the 1930's he wrote for the* Atlantic *a pair of prophetic articles on the errors of television, which led to his being appointed Director of Television Programs for the Columbia Broadcasting System. After considerable work in radio, and a brief spell in Hollywood, he is now working on a book dealing with those popular entertainments known as "mass media."*

HOW DENSE IS THE MASS?

by GILBERT SELDES

BOTH the movies and radio are losing their audiences. The process has been going on for a long time in the movies; it has just begun in radio. The immediate causes are different, but the fundamental reason is the same; and the same simple, drastic step will save both these useful servants of the public. I am not predicting immediate bankruptcy for either, but if it comes, I would trace it to a kind of intellectual bankruptcy in the past.

For ten years, at least, nearly everyone in the field of popular entertainment has been hypnotized by two words: "mass media." The producers have said in effect, "We are mass media, we must produce for the mass"; and the critics, conceding the point, have complained, "What you produce isn't much good, and haven't minorities some rights, too?" The sponsor cynically giving the people what they like and the intellectual, unable to break the sponsor's argument, have both been under the spell of an abstraction: for the mass doesn't exist. And now, when the entertainments concocted for the mass have demonstrated their weaknesses, we can examine the concept of the mass medium and provide, I think, a new approach, with a sounder commercial basis, to the problem of the audience.

"Mass medium" is, of course, used as a shorthand symbol for "any form of communication and entertainment intended for a very large number of people." It parallels mass production and consumption and has some of the same characteristics: repetitive gestures on the producing end and passive enjoyment for the consumer. A network executive once described the mass, negatively but graphically, when he said, "There's a lunatic fringe that doesn't listen to radio." We see the great central mass, a sort of heartland of solid citizens bounded by a glacial fringe, a polar icecap, of non-listening highbrows.

In the mind of the sponsor, the audience is a large pie and all the programs on the air at a given moment are trying to get bigger and bigger slices — because there is only one pie, and success depends on "the share of the total audience." If the slice is too small, the sponsor has to drop out of the contest; consequently, the only kind of program worth putting on is the kind that gets the big slice. On this commercial basis an entire philosophy has been erected, of which the first principle is: Radio ought *never* to serve any interest except that of the mass; every hour taken from this purpose deprives the majority of something to which they are entitled, in favor of an intellectual minority.

When women's clubs, educators, or New Deal bureaucrats criticize radio programs, the answer of the industry is usually a table of the many kinds of entertainment provided, the many hours of cultural broadcasts, the varied and different interests served: quizzes and grand operas, news and drama; hot music and classics — sometimes they omit daytime

Copyright 1948, by The Atlantic Monthly Company, Boston 16, Mass. All rights reserved.

serials and horror stories for children. Radio's sweep of interest is, in fact, impressive when compared with the short tether of Hollywood, but the plea of "variety of interests" is unacceptable because, with a few exceptions, all these varied programs and interests are substantially of the same kind, appealing to the same people. Intellectually and emotionally, they lie within the same parallels of latitude, and the wide world of human interests outside this narrow zone is left untended. The major sponsored programs, the ones that give radio its essential character, all flourish in one climate.

The exceptions are illuminating. Under a variety of pressures, the broadcasters have been compelled to create and "sustain" programs they believed to be lacking in popular appeal. The wide open spaces between sponsored hours dismayed them; and since "no one was listening anyhow," this was a golden opportunity to show enthusiasm for "the public interest." All sorts of worthy cultural programs came to the air and many of them became good commercial properties, permanent elements in radio programing: extensive news coverage, such forums as "America's Town Meeting of the Air," and symphony orchestras.

In all of these, radio departed from the lump-mass concept of the audience. The somber analytical commentaries of Raymond Swing required attention differing in kind from passive listening to familiar songs; hearing the Jupiter Symphony produced an effect unlike that of a melodrama. The listeners to Swing and Mozart probably followed other programs, too, perhaps comedy or sport; they brought different responses to different programs and got different satisfactions from them. They proved, in fact, that our society is not a monolithic mass; it is, and has been from the start, pluralistic.

And just when the true concept of the pluralistic audience began to pay off in sponsorship, the networks abandoned it. They have themselves gone into the business of putting programs on the air for the declared purpose of sale to a sponsor. CBS, for instance, which gained prestige by sustaining the Philharmonic for ten years, now prides itself on the number of programs it creates and sells each year for commercial sponsorship. There is, of course, nothing reprehensible in this; the programs range from harmless to excellent; but they lie within the established zone of interest, as do the programs prepared by other networks for the same purpose.

The broadcasters' present nod toward the public interest is usually in the form of sporadic documentaries on thorny subjects like venereal disease and Communism. Produced in an awe-struck and portentous style, they make no bid for popularity, as if to say, "This is too good for the average man." Partly this defeatism goes back to the days when Norman Corwin led radio up a rhapsodic byway which did honor to both, but left the documentary so romantic that no sponsor wants to make an honest woman of her. Until the documentary is produced at regular hours it will not gather many listeners; the other non-sponsored programs, except for educational and religious periods, are specifically intended for the mass audience.

At this moment "the mass" is beginning to drift away. Surveys made for the radio industry show that the top-ranking programs drop half of their pulling power if there is a television set in the home; a reasonably good dramatic transmission can take away the greater part of a top comedian's audience; and nine out of ten set owners habitually choose whatever television brings them even if it is in conflict with their favorite radio program.

This is not radio losing its audience to itself; many television stations are not radio-owned and those run by newspapers will probably develop a kind of television which will have little to do with radio except for taking away sponsors. The television programs that attract audiences are hardly entertainment in radio's sense; if the present ratio of listening is kept up, television may take up the major part of the radio audience without developing any first-class entertainment of its own. It is hard to think of radio withering on the vine — but that is precisely what broadcasters, especially those without television stations, must think about. For the television programs that today take listeners away from the most expensive radio entertainment are third-rate local wrestling matches, variety shows of small charm and less talent, old Western movies, news events, a play, and then sports and more sports far into the night.

This is happening while television has little money to spend for talent and radio has much. When sponsors have to divide their appropriations between television and radio, when the quality of radio goes down and that of television goes up, the flight from sound-without-sight will be headlong. Then radio may ruefully remember that it might have created audiences which wouldn't have deserted so promptly to such an ignoble rival.

2

Before we consider what radio can do, let us see what has happened to the movies. In Hollywood the mass concept is enshrined in the words "Everybody goes to the movies" and on this premise Hollywood continued to build long after its own researchers had fished up the contrary truth: "Nearly everybody stops going to the movies." Even the great bankers who finance the movies were apparently as bemused by the concept of the mass audience as the producers were.

Every year more people went to the movies — or at least more money was taken in at the box office. No one bothered to ask whether the increased receipts represented higher prices or more tickets sold or in what proportion; no one asked whether any

increase in attendance corresponded to the over-all increase in population or had any relation to the fatter take-home pay of the American worker. The age-level was rising: were the movies holding their share of the mature or were they living on the increment of about a million boys and girls of movie age per year? Eventually some of these questions were asked — and the answers were ignored because the answers totally annihilated the fixed illusion of the mass audience. The inescapable fact about the motion picture audience is that 65 per cent of it is under the age of 30. The merciless tale of the statistics continues: beginning at the age of 19, people begin to fall out of the habit of going to the movies; they still go, but less often; they pick and choose more carefully, acting in fact as adults, and this process of going less and less to the movies is never reversed. Audience Research, Inc., has estimated that if all the people between the ages of 31 and 60 should go to the movies only once a week, the box office receipts after taxes would rise by 800 million dollars a year, and this does not count those between 19 and 30 who might be persuaded to go as frequently as they used to when they were younger. It has cost Hollywood a lot of money to kill off its own audience.

For when all allowances are made for new interests and altered economic status, the fact still remains that the movies have not provided the kind of entertainment that the average adult feels he must have. The people who stay away from the movies are not a lunatic fringe of intellectuals; they are the people who used to go regularly, they are average grownups no longer satisfied by the infantile myths of the movies. In their astounding miscalculation of the audience, studio executives not only recognized no difference between children and adults: they thought of maturity as a purely intellectual quality. Neither the movie-makers nor their bankers are peculiarly sensitive to the varieties of human experience; they keep thinking of the mass man and seem not to know that regardless of intellectual level the texture of a man's life is more intricately woven in the years when he is finding his place in the world, starting a family, going to war, buying a house. The same is true of a woman's life in that period.

Someone, an intellectual perhaps, accused the movies of being an escape mechanism. The movies were enchanted, they had a mission in life. It was decided that there is only one universal desire, to escape, and that escape is always in one direction. Like radio, but with far less justification, the movies spoke glowingly of their "variety": the Westerns, the comedies, the musicals, the mysteries; but the moment they touched new material they turned it into old, keeping it always in the mass zone of interest. So their dabblings in psychology came out as mystery-melodrama, all the biographical films were the story of Jack the Giant Killer, and their historical films could only be distinguished from the Westerns by the fact that "the hero signs his name with a feather."

The movie equivalent of radio's sustaining time is the B picture, but movie practice was different. No new ground was broken in the B's — no experiments to engage the interests of groups outside the regular movie audience or to give that audience greater variety. Variation came when a studio rewarded a big money-maker by letting him make a picture without too much interference from the front office. Pictures like *The Informer*, *The Lost Weekend*, *Treasure of Sierra Madre*, and in recent years half a dozen exceptional British films proved that pictures satisfying to the adult mind are not necessarily the highroad to bankruptcy.

But audiences are not created by exceptions; they are created by people getting, with some regularity, what they want. The studio managers, aware that something was going wrong, took a characteristic step: they pre-tested their pictures, asking sample audiences to decide, in advance of production, between a happy and a tragic ending. The vote was in favor of the happy ending and the producers sat back and said, "See!" because high-brow critics had always implied that the tragic ending, as a sign of maturity, would not be offensive to a large section of the audience. The happy endings were continued and the audiences continued to dwindle, steadily, by age brackets. When the 75-million-dollar income from Britain was suddenly cut off, the industry went into an unmanly fit of protestation and scolding and threats. No one mentioned the fact that by concentrating on their imaginary mass audience, the movies had lost a net income four times as great in the United States alone.

3

WHAT we imagine, we create. Our great entertainment industries are creating before our eyes a cultural *proletariat:* the intellectually disinherited, the emotionally homeless, whose function is only to answer the telephone and say what program they are listening to. Mass media are not the only forces working toward that end, but they are the most powerful. Every imitative sterile picture or program, however "harmless," enlarges the passive audience, brushes more and more stragglers into the central robot mass, and so "justifies" the next series. Movies and radio entrench themselves by creating the kind of audience they want, the audience which does not grow, makes no demands, is dumbly grateful — the ideal audience in a totalitarian nightmare.

If this process is to be stopped in time, our entertainments will have to accept the natural alternative to their concept of the mass audience. I have already suggested what this alternative is: we are a pluralistic society. Our entire history has made us

so. We are not only a nation of many nations: we have as many climates as all of continental Europe, we are an economic and intellectual composite; our laws refuse the minority no right except the right to rule the majority; our minorities are many and so vigorous that it takes a world war to give us even the appearance of unity; we pioneer and go off center as often as we dig in; we are unruly and act badly when we are regimented.

Opposed to the mass picture of an enormous central group with minority fringes of people who are totally unlike the mass, the pluralistic picture is this: many large groups, many small ones, and individuals belonging to several major and several minor groups at the same time, so that the people in any minority group are in many vital ways the same as the people in the majority groups. We all live simultaneously in a dozen worlds and the happy ones are those whose worlds are integrated and harmonious. The economist, the psychologist, the vocational guide, the intelligence-tester, and a dozen other people can find categories into which we fit, but we move in and out of large and small groups freely so long as we do not become part of a mass, so long as we live in a free society which recognizes our attributes as human beings.

The mass-and-minority concept whittles the individual down to size, so that he can be fitted into one of half a dozen compartments. In practice this leads to the principle of "the ruling passion" and ends, in radio, with the abstraction of the Laughing Man. Networks cancel news broadcasts and juggle their programs around to get "three solid hours of laughs," convinced that the Laughing Man will instantly turn to another station if you try to touch any other of his interests or concerns. It is known that he will laugh at the same thing at the same hour every week, that he will laugh at anything if he is told to laugh, and there is some proof, not yet conclusive, that he will laugh just as loudly at nothing at all. Corresponding to him is the Weeping Woman of the daytime serials. In between the day and night hours, a little time is found for the Shrieking Child. Television is developing its own abstraction ("Hiya, Sportlover!") and in the movies, of course, everything is lumped into the one universal abstraction of People Escaping.

A special appreciative word should be said for the program type which in 1948 demonstrated the workings of the mass concept so perfectly that even the National Association of Broadcasters, usually so indulgent to success on the air, got frightened — the big "giveaway," the program that asks nothing of you except that you answer the phone for a chance at a fortune. For the long pull it didn't seem good to the NAB that Fred Allen should lose his audience to *Stop the Music!* As entertainment this program was a void; its music was mangled, there was no comedy, the handling of the contestants was awkward. People listened for a chance at the money and to enjoy the pains and pleasures of other people's chances. The audience was not only paid for listening, it was paid to surrender all its individual qualities, all its interests, even its radio-induced habit of laughter; it was paid to stop asking for entertainment on the air. The giveaway has shown us how far in the creation of mass man radio can go.

The purpose of entertainment is to make people listen to the commercial; when entertainment has reduced the listener to a passive, noncritical state, the announcer moves in with his clubs or machine guns or soothing syrup and finishes the job. No matter what is said about program content, the commercial is sacred — it's the sponsor's private property. (I recall a network executive on the verge of hysterics because there was no way to stop the maddening reiteration of "Lucky Strike Green has gone to war.")

So it is peculiarly appropriate that a commercial announcement should demonstrate, beyond all question, the fallacy of the mass concept. Man-in-the-mass must be hammered and howled at; the name of the product must be repeated ten times, and spelled out, and surrounded by adjectives in triplicate; there is no room for candor or simple communication when you come to sell the product to mass man.

For the past two years a program has been on the air which carries the following identification: "The Goodyear Tire and Rubber Company presents . . ." The people who hear this program remember it, they connect the program with the product, they say they are influenced *by the program* to buy the product, not by the commercial, because there is none; and the audience response is from 20 to 50 per cent better than it is for programs using the technique of repetition. The program is *The Greatest Story Ever Told*, a scrupulous presentation of Christ's teachings; it impresses people by its content and method and its difference from other programs. It sells tires without ever praising a tire or asking the listener to buy one.

Reason totters at the suspicion that the sponsor may be wrong about the audience. That is sheer heresy.

4

WITHIN the range of their dominant ideas, both the movies and radio have made money and produced admirable entertainments. Obviously I am not preparing a balance sheet of the good and the bad and I am omitting the profoundly important question of the communications function of these media. I am concerned here only with one major explanation of the weakness and inadequacy which critical people too hastily ascribe to "commercialism." To make my own position perfectly clear, I would add that I think the standard product of radio and the movies is generally underrated by intellectual critics; and, on the other hand, no roster

of exceptions can excuse what is socially deplorable in the average product. I believe that the error of thinking which produces an enormous quantity of insipid works can be corrected within the framework of ordinary profit-making, and that when this correction has been made, audiences can be created to take the place of those that are deserting; I believe that with a proper concept of the audience new areas will be open to inventiveness and enterprise; and finally that we dare not wait too long for the machinery which is creating mass men to reverse itself.

The hope of profit is most important because the sponsors can take prompt and effective steps to vary the program structure of radio and no one but the managers can do anything about the movies. There isn't actually time for experiments from the outside; and outsiders might try to turn radio and the movies into high-brow art which they should never be. What needs to be done in the movies is relatively simple: make pictures for grownups. This does not mean, as Hollywood pretends, grim, slow-paced European films. The mature mind takes satisfaction in comedy, too, and in farce. The one thing adults require is as easy to recognize and as hard to define as the smile of a friend. It is the sense that something real is happening — as real as *Alice in Wonderland* or *Show Boat* or *Hamlet;* it is also the sense that something real is being said about human beings — as the Marx brothers say it in *A Night at the Opera* or Robinson Jeffers in *Medea.*

In radio, the brief experience with television while alarming is not decisive; its lesson is, however, reinforced by radio's earlier figures: there has always been a large non-listening group. About half of the women who listen to radio do not care for daytime serials; there are vast numbers of both men and women who listen for brief periods, selectively, without the radio habit; there are even off nights, when the total listening audience is known to be small. Everything indicates the existence of potential audiences, not yet touched; and the early experience of radio, with its sustaining programs, suggests that these non-listeners are waiting only to be interested. They are, moreover, not the people who will be seduced away from radio by the meager fare television is now providing.

For nearly a generation sponsors have been in competition for the mass audience, badgering the same people with the same kind of commercials, selling the same goods. Now they see that audience drifting away and can stop to think that 20 per cent of an audience that doesn't listen habitually might be far more profitable than a dwindling 10 per cent of the audience that does.

As for material, every program director in the business has a dozen projects he cannot get on the air so long as he has to aim for a section of the mass audience. Many of these are variations in the documentary style and some are imitations of the Third Program of the BBC, which is intentionally high-brow. There is little place in American commercial radio for programs which deliberately invite the audience not to listen, nor would they be particularly useful in solving the present problem, which is to create multiple, overlapping audiences of considerable dimensions. For this sponsors and broadcasters must coöperate.

We can ask the sponsors to end the constant iteration of one joke per comedian per year; to vary the range and improve the technique of dramatic programs; to restore the candor and simplicity of audience participation; to revamp the entire racket of guest appearance; to begin the slow process of salvaging what's good in the daytime serial; and, most important, to bring the accent of truth into the speech of radio. The networks which have recently threatened to throw out certain sponsored programs if their ratings failed to improve should surely demand a little improvement in quality also. There is no proof that this would reduce the appeal of a program.

For the networks, the problem is complex. If they want to improve the structure of the audience, they can do it by creating programs for sponsors which will attract new audiences, and programs for new audiences which, after a longer interval, will attract sponsors. There is little point in the networks looking for new ways to attract the audience the sponsor already has. That audience should have a chance to hear programs intellectually and emotionally more varied than those now offered; and such programs cannot be tried out if the objective is immediate sale to a sponsor. Nor can they make their way if they are presented only on special occasions, for prestige; they have to be offered regularly, at attractive hours, over a fairly long period of time, to find their audience.

It is inevitable that the documentary will be incorporated into the commercial program structure, and here the duty of the network is plain: to develop and set standards for this form, broadening the audience that cares for it, so that it will not be debauched when a sponsor takes it over. Another job for pioneers is to develop new ways of handling fiction, since radio drama has sunk into formulas and sound-effects. Still another is to bring confidently to the listener the materials now hidden in educational programs.

In these and dozens of other ways portions of the mass will be attracted to new things; the mass will break up and reassemble into many shifting groups; it will no longer be a mass. And this is of course the most important result of all. The fragmentation of the mass can only be accomplished by radio and the movies; if they do it, they will not only save themselves but all of us as well. For where there is no mass, there is no danger of a master.

Photographs of the U.S.S. Pennsylvania *in a recent issue of the* Naval Institute Proceedings *carried the caption that this grand old veteran of the seas "survived both atom bomb tests at Bikini and finally went down off Kwajalein more from the after effects of war damage at Okinawa than from atom bomb damage."* DAVID BRADLEY, M.D., *one of the team of medicos who were sent to Bikini "to see that no one got hurt," wrote down in his Log testimony of a very different sort, for he and his fellow scientists detected with their Geiger counters that not only the warships at Bikini but the fish in the atoll, the oil flecks washed ashore, even the water itself, were contaminated with radioactivity as a direct result of the underwater bomb. How deadly was this contamination will be seen in the pages that follow. This is the second of three articles drawn from Dr. Bradley's forthcoming book.*

NO PLACE TO HIDE

Did Any Ships "Survive" Bikini's Underwater Bomb?

by DAVID BRADLEY, M.D.

1

TUESDAY, *July* 2. — Rumors from the big fleet indicate a general disappointment over the bomb. The lagoon is still full of ships, and most of them have been safely boarded. Few have been sunk and not many are seriously damaged. Doubtless many people who have been fed on the current fantasies regarding the bomb will find Test Able something akin to K rations. Anything short of a second Krakatao would have been a letdown.

Actually, of course, what has happened is about what one would expect from an air-burst of the 1946 Model atomic bomb. The damage done to the ships should be largely to the superstructure, not to the vital parts. The radioactivity now present on board is probably mainly that induced in the metal by the burst of neutrons at the moment of explosion. Neutrons, like any other projectiles, have a limited range — about 2000 yards in air, which is considerably less than the area covered by the target fleet.

It would appear that at least for the time being we have escaped from the real threat of atomic weapons: the lingering poison of radioactivity. The great bulk of highly dangerous fission products was carried aloft into the stratosphere, where it can be diluted to the point of insignificance in its slow fall-out. In this sense, therefore, Test Able is very similar to the Hiroshima-Nagasaki shots. The bulk of the damage will be from the blast wave, and probably only those experimental animals exposed directly to the neutrons and gamma rays at the moment of explosion will show the effects of "Atom Bomb Disease."

WEDNESDAY, *July* 3. — Back to Bikini and the *Haven*. Able plus Two — already the lagoon is packed with shipping, as though where the bomb had struck down one ship two had risen in its place. The shore, the water, and most of the ships are now considered to be radiologically safe. Having got off so lightly on Test Able, everyone seems to be in a festive mood. The beaches and bars were packed all afternoon; the poker games, enshrouded in a penumbra of smoke and profanity, have settled down for the night, and even the worst of pictures in Hollywood's dismal repertoire is acclaimed.

THURSDAY, *July* 4. — I had a lucky assignment today, that of accompanying a group of Navy photographers while they took pictures of the entire target fleet. We went aboard no ships but had a chance to examine at close hand the superficial damage obvious on deck.

One sees plenty of evidence of the fury of that blast wave. The light carrier *Independence* is an impressive edifice of junk: its flight deck exploded, its hangar deck caved in, and all the complicated gadgetry of gun mounts, gangways, and electronic gear blown away or left dangling overside in fantastic disarray. The ancient battleship *Arkansas*, lacking most of its superstructure aft of the bridge, looks well on the way to being modernized. It wouldn't take more than an ordinary bomb to turn her into a carrier. Similarly, the cruisers *Pensacola* and *Salt Lake City* have their superstructures torn loose and wrenched half overside. The decks of these ships are a shambles. Overturned airplanes, wrecked lifeboats, and all sorts of debris are strewn

AA

I feel that I am up against the deep insoluble mysteries of life--like why does a studio audience laugh. The other day I heard the following--

"and in came Patrick Mulvaney--the Hungarian fella--"

and there followed a roar of Gragntuan laughter. It mademe feel sad, somehow until I remembered a story about a comedian, I think it was Bob Hope, who was talking to a man in the studio audience and remarked that this man looked like someone named George Barber--at which the entire audience shrieked with laughter--although no one except a pal of Hope's had any idea who George Barber was. Obviously studio audiences will laugh at anything. But its still news that they'll laugh at nothing.

Another mystery is why radio interviews all sound so phony. You all know the type where the MC does all the talking. He says, "You're Mr. Whooziz and you live in Burlington isn't that right and you are the man whose four children all want to grow up to be delinquents and you're seventy-six years old, is that true?" And Mr.Whoosiz says, after a pause for self-identification, "Er-uh- I guess so."

At least that way you get the facts.

The other type is the "gotta-keep-em-talking" type. From my notes I find that a few weeks ago a pioneer American aviator--was it Glenn Martin?--was being interviewed and the MC asked him,"The plane you're flying now is a lot different from the one you flew thirty years ago, isn't it?"

He said "Yes."

It gets them all. Edward R. Murrow --a supremely fine craftsman at his job, in addition to being a man able to walk with kings and statesmen, had one of the Boswell sisters on his show the other day, to talk about raising turkeys. It was the most reluctant, fumbling talk between two people that you can imagine--it positivly had Ed Murrow doing that little embarrassed giggle that is the fatal mark of insincerity.

(BB)

I used tothink that radio interviews were bad bec ause they were rehearsedin advance and then the people tried to pretend they were spontaneous. Now I'm not so sure. I've heard ad lib interviews that sounded just as spurious as the rehearsed ones.

And the final mystery is why a song called 160 Acres in the Valley is going to be popular--which I am sure it will be. It's one of those yearning and foolish sentimentalities about the simple life that are guaranteed to make you sick if youthink about them. But you won't.

I first heard this song, bythe way, on Bob Crosby's program- not Bing's--and the Andrews sister who had to ~~xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx~~ introduce it was apparently so nauseated by what she was given to read that she suddenly said, "Honestly I didn't write this." She has my symapthy.

Corrected Copy

The Lively Arts Gilbert Seldes WNEW Feb 13 10 PM

For Ed Murrow

Pages 1-3

ANNCR:

In the next fifteen minutes Gilbert Seldes will make his weekly tour of The Lively Arts... correcting the great American handshake with some peculiarities in the newsreels...looking into minor matters as well... but chiefly reporting on the planting of a delayed action bombshell under the American movie industry. What is that bombshell, Gilbert?

CLOSING

ANNCR:

The tour of The Lively Arts will continue a week from now and, as usual, Gilbert Seldes will observe and report to you whatever is fresh and important or amusing and exciting in the field of entertainment... in the theatre or the movies, in radio or comic strips... in night clubs or popular song... sooner or later you will get to all of them in The Lively Arts...with Gilbert Seldes...at ten o'clock on Sundays... This is station WNEW...

The Lively Arts Gilbert Seldes WNEW 10 PM Feb 13

I'll tell you about that in a moment, Dick. First I have to correct a mistake I made last Sunday.

Maybe you remember I was talking about the new rules announced by the Committee on un-American Activities. Under these rules, the only reporters admitted to hearings would be newspaper men, armed with pencil and paper. No microphones, no newsreel cameras, no television... not even flashlight bulbs. No new inventions - only pencil and paper.

And I said that this new ruling, this limitation on the American press in the widest sense of the word, was not popular with radio and television and newspapermen.

My friend Edward R. Murrow, who has been leading a brilliant attack on the rule, has pointed out to me the slip of the tongue I made. I meant to say that newsreel men objected - I didn't know how newspapers felt about it.

The reason Ed Murrow took the trouble to correct me is interesting. He went into the matter last Tuesday when he pointed out that this infringement on a basic American liberty was either passed by as unimportant or was actually praised by newspapers. In other words, which he didn't use, newspapers seem to be willing to sacrifice a lot of the freedom of the press in order to get rid of their more rapid and effective rivals. Several papers were gratified and the Christian Science Monitor looked ahead, warning its readers that "Americans are likely to hear that the barring of any media of public information violates freedom of speech and of the press." As if the idea is too silly for words.

And Mr Murrow went on sarcastically to note that :

"Here in New York...the Times and the Herald Tribune made no editorial comment, although their editorials did deal with such subjects

1-45

as movie stars' earrings, winter driving, a wise woodchuck...fragrance in February...and other matters that are presumably engaging the attention of metropolitan newspaper readers."

Those are Mr Murrow's words. They indicate that the press in general is not exactly watchful of its own liberties.

~~Actually,~~ Mr Murrow also reported that the head of the committee has now grave doubts about the ruling and that ~~the new media of communication~~ radio and the others may ~~come~~ be back ~~to~~ at the hearings. ~~While corrective measures will be taken in the proceedings of the committee itself~~ Presumably the committee will take other steps to see that publicity is not abused.

~~And it~~ This might be a good opportunity for newsreels and radio and television to look into their own methods and see whether they, too, need to exercise new restraints, not applied ~~fmr~~ from outside, but from within. ~~To~~ They, too, can make sure that nothing they do will prejudice the case against any man. The right of the press is sacred and the right of the ~~ind~~ individual so less. As I said last week, these two rights seem to conflict, and no slogan, no appeal to abstractions is going to solve the difficulty.

Since I have mentioned newsreels, maybe I can share with you some doubts I have had about the way they dress up the news. When a newsreel camera is placed in a committee room and takes whatever happens there, you get the actuality--some fragment of the truth is left with you after the cutting and editing is done. ~~The only xxxxxxxxxxxxxxxx opportunity for~~ Of course it is possible to falsifying the record comes when one side of a story is given full treatment and the other is either omitted or scantily delivered. And, of course, the spoken commentary writer-in can slant the picture in any direction.

On the whole newsreels seem to me to reflect the prejudices of the average man--but the prejudices of the average man are often created by

3-05

what he reads and what he sees and hears.

There is another kind of faking which is less important, because it does not deal with politics--only with human beings. It comes when the newsreel man get people to repeat something they missed--and this can be the way a woman fainted when she draw a ticket sweepstakes, or it may be--it actually has been--the signing of an important document by the President of the United States. Everyone is happy to do it over again for the cameras--and it's always a little phoney.

You can tell a phoney by two things. When the people in the picture keep looking a little sideways--they're wondering about the camera--that's one.

The other is the handshake.

Someone ought to make a study of the great American handshake. It's really an American institution; Englishmen are always surprised by the way we constantly shake hands--as if we had to reassure one another all the time that we're not carrying concealed weapons.

At least in the old days one man would face another, look into his eyes, and shake his hand. It may have been unnecessary, but it was honest.

Nowadays people shake hands sideways. Look at news photographs in the papers, look at the newsreels, and recently at television and you'll see that people shake hands on the bias; you'll see two people sitting side by side, their right hands crossing over for a handshake, not looking at each other because their eyes are fixed resolutely on the camera.

Sometimes a clever guy can jockey his opponent out of position so that he gets the full face and the other only a miserable profile. That counts ten for him. But in general the cameramen see to it that when people shake hands it looks as human as dummies in a department store window. And as intelligent.

In itself this is an irritating trifle, but it's part of an irritating big thing--

5-45

and that is the constant flow of faking in a hundred different places, high and low, the regular exploitation of little frauds and falsehoods conditioning us not to expect the truth, not to look for it, not to know it when we see it.

There was an advertiser out on the West Coast who had a lot of fun with that sort of faking. His radio commercials were the most honest in the world. He said : We sell more ~~furlined bontops~~ fur in California than anywhere else in the world.

He didn't feel called on to add that ~~the commodity in question~~ this fur was for sale only in California.

Of course television is young yet and its additions to the flow of phoney are still a mere trickle. I have reported one or two in this place. I think it would be a good thing to watch the development of the gentle fraud in this new medium. It will tell us a lot about where television is going.

Having used delayed action myself I am now coming to the planting of a delayed action bomb under the American movie industry.

I refer to the arrival in this country last week of a man named Filippo del Giudice, known simply as Del. As his name suggests he is of Italian birth, he comes here from London, and he is, to put it mildly, interested in the movies.

He talks--he talks a lot and with a kind of internal violence--and he says vehemently that a lot of people are no longer going to the movies because the right kind of movies aren't being made to attract them.

He says also that when the head of a studio has okayed a story and handed it over to the writer and director and the actors, he should leave these people alone to do their job. His pet phrase is "divorce production from sales."

7-25

In short, Del talks like an American critic, like lots of writers and directors in Hollywood--and he talks like no responsible head of an American producing studio with the occasional exception of Sam Goldwyn.

The only difference between Del and an American intellectual critic who has never met a studio payroll is this : Del is the producer of some thirty pictures including--it is hard to believe it but he is responsible for all of these : Hamlet, Henry the Fifth, Odd Man Out, In Which we Serve, Blithe Spirit and several new pictures which haven't reached America yet but are already sensatio nally successful in England.

In short, he has piled up one of the few distinguished records of production in the whole industry and his greatest pictures have all made great sums of money.

For a long time, the finest pictures sent to this country by the J. Arthur Rank organization were made by the Two Cities company--and Del was Two Cities. He is now an independent producer again, and I think his first picture coming here will be The Guinea Pig.

He is not here to revolutionize the American film industry. He thinks Hollywood's product is the kind of super-fiction that the British cannot make.

But he knows by his experience that you can make movies to draw in millions of people who hardly ever go to the pictures and that this can go on side by side with the other kind of production. He is a specialist in the problems of exhibiting--and he is in America to find perhaps a dozen theatres where his superior films can run for months at a time--as his Hamlet has been running at the Park avenue--perhaps for a year.

Whenever an outsider--a term of honor now--makes a suggestion about

9-05

Hollywood he is told that the men out there know their business and that they're making millions anyhow, so shut up.

Well, they're not making as many millions as they want to--and the basic reason is not television --it isn't even bad pictures. It's because the movie audience dies away... People go several times a week -- boys and girls--up to the age of twenty or so--and then they taper off--and presently when they are grownup they go only once in a great while. And the reason is that all the regular run of pictures are aimed at the same audience.

Hollywood has always said that this is the only big chunk of the total audience that it can get.

If Del's system works out here, as it has in the past in a smaller way, we will have the proof that you can make money out of pictures which will keep the mature audience coming also. And gradually the lesson will sink in -- no pictures have to be as bad as the worst, most pictures can be a little better than they are.

That is - the majority of the people, instead of the minority.

Nothing will happen fast. The other day in Hollywood Jack L. Warner went over the old ground--artistic pictures don't make money. "The arty stuff," he said, "is great for the critics, but My Wild Irish Rose did three and a half million and Sierra Madre, with all its raves grossed only one and a half."

Worse pictures than My Wild Irish Rose have grossed five million--to tell the truth. But a picture like The Treasure of the Sierra Madre, voted the best of the year by the New York Critics, brought people back to see movies--it enlarged the audience. And the people who paid to see My Wild Irish Rose are precisely the ones who will stop going to the movies within the next five years.

The command at Warner Brothers is to cut out the art stuff. In other

words, keep playing for the same audience that is deserting the movies, keep on doing everything you have done to bring the movies to the edge of disaster.

I wish all the luck in the world to Filippo del Giudici--not only for himself. I happen to like American movies, too; and I think when his bombshell explodes--when it is proved that good pictures can make a lot of money--the American industry will have a last chance to save itself.

There are many other things in the lively arts this week on which I'd like to report. For instance, Superman has found a way to appear both as Clark and as Superman, simultaneously--but we'll have to wait developments in that field. In the moment that's left, I'd like to make a semi-personal comment.

You have certainly heard a program called The Spoken Word on this station. The man who thought up the simple idea of letting radio do what it does best--I mean transmit the spoken word--has now gathered about a hundred items, all of them except the Gettysburg Address and a few others are poems, into a book : A Treasury of the Spoken Word, and to each of the poems he has appended a note on how it can be read, sometimes telling how the poem was read for a successful recording.

He is not dogmatic. He doesn't say that there is only one way to read, that the emphasis must be on this word and not on that. He has only indicated how much more there is in these poems than you might suspect--how much you can get out of them. And the selections range from The Kids Last Fight to Shakespeare.

I am myself a silent reader of poetry, which means that I am a little frightened of recitations. But recently I have been listening to recordings and have found an unusual pleasure in them. They may be

12-J-J

a little fancied up for every day use--but they put ideas into your head. And that is what this book does.

I said this was a semi-pesonal word. The editor of the book is Ted Cott--he also works at this station. He is in charge of programs and therefore of me.

But--making an atrocious pun which I will not repeat--he indicated that I could say anything I wanted about his book--as I am permitted to say anything I feel to be true on any other subject. For that I am grateful. The spoken word--even as I speak it--has to be a true word or it had better not be spoken at all.

Good night.

13-40

Louis Seltzer

August 12, 1959

Dear Louis:

I remember some months ago promising you that I should come to Cleveland in September and now I write regretfully to tell you that I must renege. We are sailing for Sweden on August 25 and hope to be away on our travels for the rest of this year and until July 1960. I shall hope to see you some time after my return.

As ever yours,

ERM:skh

Mr. Louis B. Seltzer

February 20, 1959

Dear Mr. Editor:

I have decided not to take legal action but to appear in person in Cleveland sometime during September and denounce you for irresponsible writing and wastage of newsprint.

Seriously, you have laid a great responsibility upon me, not the least of which is that Casey has decided to keep your editorial. This means that, in due course, he will decide one, whether you are anything of a prophet and, two, how much of a bum his old man turns out to be.

As ever yours,

ERM:skh

nevertheless by a conscientious effort to do a good job.

Ward 18: JOHN W. KELLOGG, an especially energetic and intelligent incumbent.

Ward 33: JACK CLEARY, in the insurance and real estate business, would give fresh and energetic representation to this huge ward on Cleveland's southwest side.

Three teen-age girls stepped up and, as resentatives of the most recent class of

Unrest in Faculty Row

An underlying yearning for greater recognition, respect and community esteem could be detected in the Western Reserve University professors' report, detailed by Press Reporter Bud Weidenthal.

Why not? Why shouldn't these men on whom the community has suddenly thrust great, new "crash" demands ask something in the way of appreciation in return?

The report, published by the Reserve chapter of the American Association of University Professors, specifically called for reduced teaching loads, more time for research and higher professorial pay.

But this would not seem to be the significant part of the report, in view of the fact that in recent years great sums have been poured into research at Reserve. And faculty salaries have been raised appreciably (15%) although there is still room for improvement.

The report raised the question—are professors really regarded by the university (which includes the community) as scholars or simply as hired hands, robots that spiel instructions in front of faceless rows of students, hour after hour, semester after semester?

Limited housing and parking facilities, too, have irritated the professors enough that they were included in the report. Here again are items that stem from a desire for greater recognition as individuals, as leaders of learning and culture instead of being relegated to routine employee status.

DAVID DIETZ—

Sun Has Worst Rash

Old Sol appears to be in a worse dither than at any time in the past 200 years during which astronomers have kept tab on its behavior.

The Mt. Wilson Observatory reports that there have been more spots on the sun in recent months than have ever been recorded before.

Sunspots have been recorded for the 200 years and on a daily basis for the past

The significance of the sudden increas the rash of spots on Old Sol has not yet determined, Dr. Thomas Cragg of the Mt.

What Would Lincoln Think of His America Today?

During the past few weeks, Editor Louis B. Seltzer has traveled widely throughout the country—south to Texas and Florida, to gatherings of editors in New York, Washington and historic old Williamsburg in Virginia. Everywhere, he found an intense kind of self-examination going on among people, a nagging concern that the moral underpinnings of our society are eroding away. In this article written for all the Scripps-Howard Newspapers, he describes this mood as he has sensed it throughout the country.

Abraham Lincoln is America's foremost name. His stature grows with time. His words take on greater meaning.

In Springfield, Ill., when this nation was young, dynamic, laboring to strengthen itself, Abraham Lincoln spoke these prophetic words:

"—at what point then is the approach of danger to be expected?

"I answer, if it ever reaches us, it must spring up amongst us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher.

"As a nation of free men, we must live through all time, or die by suicide."

What would Abraham Lincoln say of the United States of America today?

Would he say that the point at which "danger" is to be expected has been reached in America?

Would Abraham Lincoln say that our political morals have fallen to an all-time low?

Would he observe that in a land of free citizens that abstinence from voting in such great numbers as has characterized our elections, local, state and national, for the last half century forebodes the inner danger against which he was solemnly warning?

Would Abraham Lincoln conclude that our singular preoccupation with the physical comforts of our fabulously prosperous industrial society betoken a complacency and indolence that suggests internal deterioration?

Would the immortal president interpret the spectacular increase in the nation's divorce rate as symptomatic of an easy and disquieting subversion of the sanctity of marriage and an erosion of the family, around which he believed the country needed to be built enduringly?

Would he view with apprehension the scrambling of values among the youth of America by making available to such large numbers of them high-priced automobiles they had no part whatever in earning, and which literally by the thousands they park around schoolyards and campuses only blocks from their homes rather than exercising their limbs by walking?

Would he express concern over the interlocked and reciprocal relationship of our American society which inhibits its citizens from freely expressing their opinions about whatever they honestly believe for fear the backlash might adversely affect their economic or social positions?

Would he wonder about the conspicuous absence of America's old-fashioned capacity for indignation in the presence of corrupt or wrongful behavior, and construe it as an indication of an underlying willingness of the American people to compromise with what formerly were considered the elementary principles of right and wrong?

Would he look over our American political landscape and upon seeing the least capable among our citizens occupying the most formidably important positions of political influence while the ablest and most capable are in private endeavor—and, looking, be oppressed with his prophetic sense of danger?

Would Abraham Lincoln examine the best sellers on the bookstands, the plethora of sex-filled magazines, the obscenity-riddled scripts of the most successful plays, the curious music of our times, and furrow his brow in perplexity as to its meaning for the mood of the American people in the middle of this unpredictable 20th Century.

Abraham Lincoln would find much in modern America about which to be proud. The high percentage of home ownership and the tendency of a very high number of families to do things together. The social and welfare concerns of the American people, their insistence upon treating all of its citizens as even-handedly as possible and assuring opportunity for everyone without regard to status or geography.

The ingenuity and extraordinary resourcefulness of its industrial machine, the improvement in the lot of the workingman, the controls of excesses of many kinds which formerly beset the nation in its more formative periods. Its ability in time of national emergency to rise above and beyond its normal interests and give the country its utmost of blood and substance and patriotism.

The ledger has two columns. It is on debit side that many are being alarmed these days.

And one cannot help but wonder what Abraham Lincoln would think of his beloved America today—and how he would relate the America of today to his prophetic utterance in Springfield, Ill., on Jan. 27, 1838.

son Observatory says.

Sunspot groups in recent months have ranged in size from small clusters up to groups 100,000 miles in length.

It has long been known that sunspots go through a cycle, reaching a maximum approximately every 11½ years. The International Geophysical Year was timed to coincide with a sunspot maximum and it was believed that this was passed about the middle of 1958.

It is believed that sunspots are whirlpools in the gaseous surface of the sun. They are frequently associated with the appearance of great eruptions of gaseous material known as prominences.

These prominences are great tongues of hydrogen gas. Astronomers in recent years have made motion pictures of them with the aid of special types of telescopes.

Two types of prominences are known. One variety is associated with sunspots and forms a great loop in the solar atmosphere.

The other type appears like a huge flame that arches its back sometimes as high as 100,000 miles above the solar surface. This type does not always occur near a sunspot.

Both types of prominences, however, eventually collapse and fall back into the sun. They may live, however, for days or even months.

Another solar activity that seems to be associated with sunspots is the sudden outbreak of a burst of ultraviolet light. This is known as a solar flare.

The International Geophysical Year established that solar figures are connected with the ejection of great masses of hydrogen gas from the sun. As a result of this, the earth is sprayed with electrified or ionized hydrogen atoms.

Flares on the sun are followed by magnetic storms on earth that upset the compass, interfere with radio and long-distance telephony, and create spectacular displays of the Aurora Borealis.

An unusually large flare appeared on the sun just a few days before the start of the IGY on July 1, 1957.

Dads Are Best Audience

Fathers are needed in attendance at all baseball games involving their sons.

All juveniles will try their darndest in all games when the head of the family is cheering

on their efforts.

To a boy his father is his idol, especially if the father has taught him how to throw a fast ball, how to hit, what kind of glove to wear and the hundreds of tricks that only a loving dad can impart to his son.

Little Leaguers are the future major leaguers —while they are minors, the dads ought to be glad to see them circle the bases, always emulating the family breadwinner.

Encouraging boys to play baseball will make the United States of America the greatest of all diamonds in the world!

PAUL BROCK, 12127 Erwin Ave.

Good Editorial, No Results

Your editorial captioned "Why Should Public Pay for Lawyers' Problems?" was well taken.

As to your advice to legal brethren that the expense of investigation should be carried by the merchants in law themselves, in all probability will not be followed, since no profit will ensue to the lawyers doing the legal work. Hence the taxpayers should naturally become the benevolent grandparents to latest exercise in civic virtue by the two legal brotherhoods.

I further respectfully submit for your further consideration that in any event, the entire investigation will be much ado about nothing at all, since any legal advice gratuitously bestowed is not a subject for punitive action.

RALPH P. MONROE, 5239 W. 50th St., Parma.

April 10, 1958

Dear Louis:

Your agents serve you well and this miserable reporter almost failed to recognize you at LaGuardia on account of your wearing a hat, and hereby bows low in apology.

Should you be sufficiently reckless to pursue your project for 1959 I will produce the best speech of which I am capable which will probably be good enough to qualify me for the semi-finals in the sophmore class of a remote high school.

Incidentally, have you seen the current issue of Foreign Affairs? It is the best they have produced in many a year.

As ever yours,

Mr. Louis B. Seltzer
THE CLEVELAND PRESS

OFFICE OF
LOUIS B. SELTZER
EDITOR

March 24, 1958

Dear Mister Murrow:

All right, on the subject of public speeches, and coming to Cleveland for that purpose. The book is closed on it forever so far as I am concerned -- or, at least until reopened by you. I understand the reason for it, and, in fact, completely sympatico therewith.

However, and here I pick a very large bone with you. My espionage agents, of whom I have a surprising number scattered around the American landscape, advise me that you scotched an idea proposed by the obtuse writer hereof for a well deserved and long overdue orchid for your work in practical brotherhood.

That one, if I am privileged to express a stout demurrer, was in order, and should have gone forward, the Murrow modesty to the contrary notwithstanding. Granted that you may be surfeited with awards, recognitions, etc., etc., nevertheless it would have been good not only for yourself, but for the cause itself, and in this jumbled up country of ours it jolly well needs a hell of a lot more help than a good many allegedly knowing associates of ours in communications realize.

Therefore, while quietly acquiescing to any further invitations to speak, either in Cleveland or elsewhere (and I was almost tempted to invite you as the Friday, April 18 speaker for the ASNE, following by a day President Eisenhower), I will with perhaps unadmirable persistence pursue the Waldorf-Astoria topflight Murrow Award dinner for 1959. It could easily be one of the country's No. 1 events and furnish you with an opportunity to do a truly wonderful job that would push inter-racial and inter-religious understanding forward a considerable distance -- an objective highly desired by the Murrow I know and admire.

For the time being, and perhaps the many months ahead, you will not find your mail complicated by yeasty communicative ferment at this end.

Affectionately,

Louie

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

March 19, 1958

Dear Louis:

I must, in the vernacular, "level with you."

I can't come to Cleveland and the reason is this: a year ago, I made a flat rule that there would be no speeches of any kind. Since then I have been beaten over the head by Ford, the Hamm's Brewing Company, and American Oil Company to go to various meetings of their's and open my mouth in public. I have refused them all. If I were to come to Cleveland the pressure would become irresistible.

This sounds pompous but that's the way it is. I can only hope that you will understand and believe that I am deeply appreciative of the invitation.

As ever yours,

Mr. Louis B. Seltzer
THE CLEVELAND PRESS

The Cleveland Press

OFFICE OF
LOUIS B. SELTZER
EDITOR

February 6, 1958

Dear Ed:

In a very real sense you bring this upon yourself. If this editor did not so profoundly respect you both professionally and personally -- and believe you to be the standout of our times -- he wouldn't risk being such a persistent cuss.

How you manage to do only a small percentage of all the things you are called upon to do is a mystery to everyone who knows you -- including myself. But the fact is that you do and additionally appear, by some curious physiological alchemy, to thrive on it.

For me to add any extra burden induces an acute twinge of self-consciousness, and I apologise therefore. But --

Would it be possible for you, not being able, for good reason, to make the March 20 engagement, to do it for April 17 or May 15?

Even though I am this year program chairman for the American Society of Editors meeting in Washington, on April 17, 18 and 19, I would step aside from that important responsibility on April 17 to be here to present you with great pride to this tremendous audience on that day.

By the way, speaking of the ASNE meeting, we already have lined up Bernard Baruch, have a tentative commitment from General Gavin, and Beaverbrook is persuading Churchill to come over for this meeting -- and, of course, Saturday evening, April 19, Ike will conclude the 1958 session for us.

It might interest you, also, to know that Senator Jack Kennedy of Massachusetts will open our Book and Author project on February 20, and that Dick Nixon is coming here on February 27 at a big brotherhood banquet honoring George Humphrey for which the inept de-hirsuted writer hereof is toastmaster.

Have you ever attended any of the ASNE sessions? -- and, would you be interested in being my guest at the Ike banquet Saturday evening, April 19th?

I do really feel a sense of guilt coming back at you again in this matter, Ed, but it is a great hope I sincerely treasure that, under auspices of our paper, and its awkward editor, to present you in the living and vital personality you are to my fellow-townsmen and women from this special rostrum and for this special purpose.

Marion sends along her warmest regards and is unceasingly impressed by the fact that no letter which passes between us fails to mention her. She is a really "set up" girl for that thoughtful characteristic of the fellow we both admire so much.

Affectionately,

Louis

January 13, 1958

Dear Ed:

You will recall, distinguished sir, that I made a very earnest attempt to get you out to Cleveland about a year ago. Because of the continuous pressures under which understandably you are laboring it was impossible for you to do it at that time. You did, graciously, leave the door slightly ajar for the future.

Without engaging in any long-winded obliquities I am again approaching you.

The Cleveland Press three years ago inaugurated a BOOK AND AUTHOR project.

From the very moment it was launched its success was astounding.

We have been having audiences approximating 1100 and 1200 at each of our noon-hour meetings. It is the most successful of all of these projects around the country.

This community knows my virtual adulation of Ed Murrow.

I take special pains to make sure they know how I do feel.

Since this is a project created and sponsored by the newspaper of which for now going into the thirtieth year I have been its editor, nothing — literally nothing — could be more blessed than the presence of Ed Murrow on this year's BOOK AND AUTHOR program, even if, as you might quickly assert, this year is not an Ed Murrow book year — or so, at least, I am advised.

Is it at all possible, Ed, if I send a plane, pick you up, return you to New York, or whatever other destination you wish, all within a matter of hours on March 20 you could come out here for the purpose I am outlining?

I intend to cross my fingers, kneel in prayer, and express a devout hope that this time it will be possible for you to say yes.

Affectionately

Louis

December 12, 1957

Dear Ed:

Not in many years have I experienced so bouncing a belly-laugh as from the first sentence of December 9 letter.

If providence had endowed me with only a microscopic fragment of Ed Murrow's ability to write my joy would be unbounded.

By this time it must be evident to you that the hard-crusted fellow at this end has formed a thoroughly grounded admiration for you --- which he is at some pains, in and out of our mutual field of communications, and on numerous public occasions, to express as articulately and emphatically as he can.

So, now, may I, on Marion's and my own behalf, wish for you, and yours, both a Merry Christmas, a Happy New Year, and wider, higher and more rewarding accomplishments in '58, and the years ahead.

Cordially,

Louis

Seltzer

December 9, 1957

Dear Louis:

I wish like hell that I could write as well as you do.

Sometime, somehow, we are going to try our hand at the program you suggest, provided, of course, that one Seltzer will lend his talents to the discourse.

I don't think it will be very effective, but I don't suppose we are entitled to condition our actions to a prior belief of effectiveness.

In speaking of that, let me share with you a not too ancient quote by one Richard Nixon (attached) which is, I think, the complete definition of political opportunism.

As ever yours,

Mr. Louis B. Seltzer

THE NEW YORK TIMES - September 6, 1955 - By Russell Baker (9/5/55)

Denver: Then, the Vice President gave this interpretation of what he suggested had been Senator Joseph R. McCarthy's fatal error.

There was, he said, a political adage to the effect that "you must not strike a king unless you kill him."

"Politically," he said, "you could say you must not strike a leader unless you destroy him. I think that our political history shows that when you have a great issue and an individual decides to take on the top man, if he wins out on the issue he gains in popularity, but when you make a frontal assault on somebody bigger, you'd better be sure you win. If you lose, you're through."

November 25, 1957

Dear Ed:

Your note the other day intrigued me. I have been thinking a great deal about it.

Nothing concerns me more than the blight on our thought and speech in this country during the past forty years.

So long as America could keep her communications wide open nothing could happen to her. She was then alert, flexible, vital.

This is not so today. We have done a great deal of bartering away in return for economic, academic, and social securities. We have become fat in the head as well as the behind.

The erosion is serious.

Always we have argued that democracy could out-think and out-last autocracy. In the long stretch freedom out-lasts, we argue, the dictator, because one holds up the people, the dictator holds down the people.

A paradox is present nowadays. The dictatorship is loosening up, i.e., turning its scientists, technologists, students free to think and act for themselves in the ultimate interest of their country. In our democracy a sequence of circumstances has shriveled and thwarted us in these areas.

There is a kind of twilight of freedom in our country to which not too many - excepting a guy like Murrow - are alert. The bright sun of American freedom has been setting.

The process by which it has been happening is a long, tedious one -- a complex of industrial reciprocities, of government concealing itself behind "national security", of the phenomenal growth of the middle-man between the American public and the free press, of campus fears and mediocrities, of the immature attitudes between the press and electronic communications, of many other elements.

Lately I have been spending even more of my time than usual among all kinds of people. They sense these things. They are concerned. They are far ahead of those of us in communications. They wonder why we don't do something about them. They believe we are all afraid. They think we are inhibited because of our unwillingness to disturb either the national economic pattern or for fear it might swing around and injure us specifically.

The tragedy is that they - the people - are righter than they know. They think a lot of people are letting them down, government, business, communications.

Which gets me around, Ed, to saying that you in particular could do no greater service for communications or the country than some day set up a well-advertised-in-advance program centered around the theme of "The Right Of The People To Know."

As you alone would do it there is no question but what it would be the most significant and widely discussed program of our time.

That's all the fellow can say to you for the time being.

Affectionately,

Louis

Mr. Edward R. Murrow

Seltzer, Louis

November 12, 1957

Dear Louis:

Thanks for yours of October 31.

I wish that we might sit and talk through a long night. I am becoming less sure and more concerned everyday - not concerned about Sputnik or ICBM's, but about the climate of opinion in this country.

There is, I think, a real chance that the NATO meeting may demonstrate to the moderately perceptive that our foreign policy is bankrupt and the alliance coming unstuck. I plan to go over for the meeting, but don't expect it to be a very joyous occasion.

Thanks for being your usual thoughtful self and suggesting Lawrence and Lee for PERSON TO PERSON. I will discuss the technical problems with my colleagues and let you know what we are able to do.

My respects to Marion please, and my continued admiration and affection for you.

Sincerely,

Mr. Louis B. Seltzer
THE CLEVELAND PRESS

fc

The Cleveland Press

OFFICE OF
LOUIS B. SELTZER
EDITOR

October 31, 1957

Dear Ed:

Knowing how deeply devoted you are to "Person to Person" and how tenaciously you adhere to the high standard you have fixed, I have been very sparing of any gratuitous suggestions for it -- preferring to make an occasional one only when thoroughly convinced it is good enough.

Before, however, offering this one, I want to extend to you both Marion's and my own warm and affectionate regards and, at the same time, urge upon you once again to safeguard yourself in the multiciplicity of demands upon your reserve strength.

How in God's world you manage to do all of the things you do and do them so well, I am at a complete loss to understand. It can be no secret, young man, by this time, that this journeyman editor holds you in higher personal and professional esteem than any other in the field of communications. And that, I might add, is not restricted to electronic communications.

Now, about this suggestion.

Jerome Lawrence and Robert E. Lee, as you know, put "Inherit The Wind" on a four-year successful stretch on Broadway. It is really a great play.

Last night Marion and I attended the Cleveland opening of "Auntie Mame" with both Jerry and Bob -- the company in which Connie Bennett stars. It, too, is a great job.

Now these extraordinary young fellows are in the midst of producing a play centered around the life of a U. S. president which, when finished and put on Broadway, will exceed anything they've done, I am sure.

They are able, personable, articulate, and fascinating young men. They are both Greater Clevelanders. They lived on opposite sides of the town and, without knowing it, went to the same places, partook of the same literary and cultural stimuli, and it was not until they left Cleveland

that their paths crossed. Now they are an inseparable team. It is a great human interest story as well as a team accomplishment of substantial and growing proportions.

Both are so lively, so excited about life, its problems, the world, that a "Person to Person" with your skilled techniques would, I thought, make one of your best evenings. Thus I write. Thus I offer the suggestion. Thus I end this note -- once more urging strongly, in the interest of all of us who treasure you and your works so highly, that you take good care of yourself.

Affectionately, as always,

Louis

Mr. Ed Murrow

Seltzer, Louis

January 25, 1957

Dear Louis:

I am truly flattered by your invitation, and believe me this is not a "form letter"; but the fact is that I have television film commitments which preclude entirely the possibility of my accepting.

I have some hope that next year the schedule will ease a little, and maybe you will give me another chance. I harbor an appetite to say a few things about you to your fellow citizens.

As ever yours,

Mr. Louis B. Seltzer, Editor
The Cleveland Press
Cleveland, Ohio

rh

The Cleveland Press

OFFICE OF
LOUIS B. SELTZER
EDITOR

January 21, 1957

Dear Ed:

On knee bent in earnest supplication I come to you with hope in my heart and a prayer on my lips.

I know you are overwhelmed with infinite obligations.

Richly and extraordinarily endowed as you are, the physiological formula of dividing yourself into several parts in order to be that many places simultaneously is one even you have yet to accomplish -- although from mutual friends I am persuaded to believe you are imminently close to doing so.

In what I am writing herewith Ohio's new governor, Bill O'Neil, its new Senator, Frank Lausche, and Cleveland's mayor -- among many others - join me.

It is, as you by this time suspect, an invitation to come to our home town of Cleveland.

I hasten to say that if it is humanly possible for you to do this, and of course I profoundly hope it is, we will send a plane to New York for you, bring you out, and return you to New York. The plane will be equipped with all of the conveniences -- writing room, etc., and accommodations both for yourself and for anyone you might wish to have accompany you.

With this as a preface, the specific purpose is this --

Last year The Cleveland Press inaugurated a Book and Authors Luncheon program. The first year it exceeded in attendance and popularity any similar venture anywhere in the country, New York, Philadelphia and Chicago included. It was amazingly successful.

While I am mindful that you are literally swamped with such invitations it is nevertheless my hope that you might do us the great honor of being here as the Number One personality of our 1957 program.

Nothing would give me more personal or professional pleasure than to be able to present you to the great crowd of fellow-townsmen on that occasion. (The date is at noon on Thursday, Feb. 21 -- and the place the Rainbow Room of Hotel Carter, largest in Cleveland, and attendance 1200.)

Both Senator Lausche and Governor O'neil have advised me they will be present should you find it possible to be here.

That's my story, Ed. I don't want to labor it too much because the Mt. Everest of correspondence confronting you at all times calls for being brief, but the brevity of this note cannot possibly convey the earnest hope you will find it possible to accept.

Affectionately,

Louis

October 10, 1956

Dear Frank Stanton:

Enclosed is a letter which is self-explanatory.

It is a thought which has many times crossed my mind.

Other people have likewise shared it.

Ed Murrow, in my opinion, is the Number One TV personality in this country.

I say that without any personal qualification whatever.

He has done more to put dignity, courage, and impact into this electronic phenomenon than anybody else.

I sincerely hope that CBS one day works out the suggestion Mrs. Hodges makes.

With best personal wishes,

Louis

Dr. Frank Stanton,
Columbia Broadcasting System

Thanks

Mr. Edward R. Murrow
Columbia Broadcasting System, Inc.
485 Madison Avenue
New York, New York

Dear Ed:

May I add my voice to others in telling you that your "See It Now" program of Tuesday, November 16th, in which you dealt with the relationships between the Madison, Wisconsin, community and the Truax Air Base was exceptionally good. I am convinced that one of the things which we in this country are going to have to get used to is living with the military and, for that matter, the military living with the civilian community. Programs such as yours are a real contribution to this nation-wide adjustment.

In this connection I think you will be interested in the enclosed report on "People and National Defense", a report which is just being issued by an organization - the United Community Defense Services - of which I am Chairman of the Board. The report is an analysis of the social aspects of defense with particular regard to the responsibility of the federal government. I think it is an excellent job and I know Arthur Flemming and several other people in Washington would like to see it get top level consideration.

As you will note from the copy of my letter contained in the report, I have transmitted the report to the President and suggested that he call a conference of representative private citizens and government officials to develop a comprehensive federal policy and program covering the government's responsibility in this field.

We would not feel hurt if a review of the report suggested a basic idea for one or two "See It Now" shows in the future.

Keep up the good work!

Sincerely yours,

Louis

URGE PRESIDENT EISENHOWER TO CALL MEETING OF SOCIAL WELFARE LEADERS ON DEFENSE PROBLEMS

NEW YORK, Nov. 29 -- President Eisenhower has been urged to "call together a group of leading citizens and government officials -- federal, state, and local" -- to assist the federal government in the development of a comprehensive federal policy and program with respect to "human problems created by the national national defense effort".

The proposal was made in a letter to the President from Louis B. Seltzer, editor of the Cleveland Press and Chairman of the Board of United Community Defense Services, a federation of national non-profit health and welfare organizations. The letter accompanied a 36-page report, "People and National Defense", which analyzes the federal government's responsibilities for the problems of social adjustment intensified by the national defense effort.

"Time after time," Mr. Seltzer's letter asserted, "United Community Defense Services has observed that defense communities, faced with serious problems resulting from the nation's defense program, are severely handicapped by the lack of a comprehensive federal policy with respect to human problems created by the national defense effort.

"We believe that this lack of a positive federal policy is hampering the national defense program by preventing the full mobilization of those human resources which are the heart and soul of national security.

(MORE)

ADD 1 PEOPLE AND NATIONAL DEFENSE

"The experience of UCDS in several hundred defense communities led us to conclude that the preparation of the attached analysis of the social factors in the national defense effort might prove of value to those responsible for the nation's security.

"We urge the early development by the federal government of a comprehensive policy and program with regard to these matters. As one step in this direction, we respectfully suggest that you call together a group of leading citizens and government officials -- federal, state, and local -- to consider this important aspect of the defense program."

The full report, the first comprehensive analysis of the social impact of the defense effort, ended with three major conclusions:

1. "There is urgent need for clarification of federal policy with respect to the social aspects of defense and for the establishment of coordinating machinery for this purpose both in Washington and throughout the country."
2. "There is need for a clear affirmation of long-time federal-state-local cooperative relationships in the social field. It would seem incredibly foolhardy to scuttle or weaken with uncertainty the existing structure of federal-state relationships at the very time when national interests and federal defense responsibilities make the federal government must peculiarly dependent on existing state and local governmental machinery in these fields."

(MORE)

3. "It is apparent that the full contribution to the defense program by states, voluntary organizations and individual citizens cannot be mobilized until federal goals and policies are clarified."

The UCDS Board of Directors, at its November 10 meeting, adopted the report as an official statement of its position. Consultant to UCDS for the year-long study was Elizabeth Wickenden, former Washington representative of the American Public Welfare Association. Miss Wickenden has also held a number of executive positions in the federal government.

Among the specific recommendations in the report:

-- "The Office of Defense Mobilization appears the logical staff arm to asst the President in... reconciling immediate and potential defense requirements with continuing civilian programs."

--"The Department of Defense and all other agencies with major defense responsibilities should have a high level office, staffed with persons qualified by experience and professional competence, to handle the social aspects" of the defense effort.

--"The federal government must assume a direct responsibility toward those it employs... Responsibility toward members of the military forces and toward veterans is a primary federal obligation... Toward its civilian employees... in its own interest, as well as in fairness to its employees, it must assume the same measure of responsibility... as any other employer."

"There appears to be a serious need for clarification of federal policy in this regard: first, as to the degree to which it is considered desirable that federal employees be treated as a part of the surrounding civilian community, and second, as to the extent to which the federal government should assist such communities in

(MORE)

meeting the costs involved."

--"Payments in lieu of taxes... would appear a logical obligation in view of the extra services required of such communities as a result of federal activities and the influx of new employees."

--"The definition of allowable costs for purposes of reimbursement under cost-plus contracts should be sufficiently broad as to allow such contracting agencies to fulfill the normal welfare obligations of employers toward their employees and the communities in which they function."

--"Use of the states and their political subdivisions as the instrumentality of federal defense policy in the social field offers the widest range of possibilities for the discharge of federal defense responsibilities with the least disruption of normal political relationships and safeguards."

The philosophy underlying the UCDS study is explicitly stated in these words "People are both the end and the means of national defense. It is their freedom, national independence, culture, and physical survival which are at stake; at the same time they are themselves the means through which these ends must be achieved. No form of push-button warfare will ever be devised which can change this basic truth, for the machines of war must be made by people, paid for by people, operated by people, and their destructive power -- if they are used -- borne by people."

PEOPLE
AND NATIONAL DEFENSE

An Analysis of Federal Responsibility

UNITED COMMUNITY DEFENSE SERVICES

Copyright 1954 by United Community Defense Services

This is the report of an analysis prepared by United Community Defense Services. Elizabeth Wickenden was consultant to the project. After committee consideration, the Board of Directors of UCDS, at its meeting of November 10, 1954, adopted this report as an official statement of the UCDS position regarding federal responsibilities toward social welfare needs related to the national defense program.

UNITED COMMUNITY DEFENSE SERVICES
345 East 46th Street, New York 17, N. Y.
OXford 7-3270

To the President of the United States

NEW YORK, N. Y.
November 19, 1954

THE PRESIDENT
The White House
Washington, D. C.

DEAR MR. PRESIDENT:

Time after time United Community Defense Services has observed that defense communities, faced with serious problems resulting from the nation's defense program, are severely handicapped by the lack of a comprehensive federal policy with respect to human problems created by the national defense effort.

We believe that this lack of a positive federal policy is hampering the national defense program by preventing the full mobilization of those human resources which are the heart and soul of national security.

The experience of United Community Defense Services in several hundred defense communities led us to conclude that the preparation of the attached analysis of the social factors in the national defense effort might prove of value to those responsible for the nation's security.

We urge the early development by the federal government of a comprehensive policy and program with regard to these matters. As one step in this direction, we respectfully suggest that you call together a group of leading citizens and government officials – federal, state, and local – to consider this important aspect of the defense program.

United Community Defense Services will be happy to assist you in any way that we can.

Respectfully submitted,

Louis B. Seltzer

Chairman of the Board
United Community Defense Services

Highlights of This Report:

The Social Factors

NATIONAL DEFENSE IN THE MODERN WORLD IS A CONTINUING EFFORT, INVOLVing all aspects of the national life. It imposes inevitable sacrifice and heavy burdens of adjustment on all.

In a democracy social measures are as essential to the success of national defense as individual patriotism. These social measures serve the national defense program by helping to:

- spread the burden of its sacrifices more fairly;
- facilitate and speed the adjustments if necessitates;
- prepare for the implicit possibilities of war.

Social services, by helping individuals and families adjust to the requirements of national defense, substitute for the force and terror with which totalitarian governments implement their national policy.

In the United States defense responsibilities basically rest with the federal government, both constitutionally and in the nature of modern warfare. However, insofar as these responsibilities involve aspects of human welfare, many of them can be most effectively carried out through the established channels of state and local government.

For these reasons, the report concludes:

➧ *There is urgent need for clarification of federal policy with respect to the social aspects of defense and for the establishment of coordi-*

# of National Defense

nating machinery for this purpose both in Washington and throughout the country. The absence of such policy and such machinery at the present time is the source of confusion, inefficiency, and grave potential danger.

There is need for a clear affirmation of long-time federal-state-local cooperative relationships in the social field. It would seem incredibly foolhardy to scuttle or weaken with uncertainty the existing structure of federal-state relationships at the very time when national interests and federal defense responsibilities make the federal government most peculiarly dependent on existing state and local governmental machinery in these fields.

It is apparent that the full contribution to the defense program of states, voluntary organizations and individual citizens cannot be mobilized until federal goals and policies are clarified. Our experience convinces us that there is a vast reservoir of eagerness to participate in and contribute to this heroic effort of our own generation to safeguard for those of the future the values, institutions, and aspirations that form our heritage from the past. The federal government, charged by the Constitution with responsibility for the national defense, can by clarifying its own role liberate this powerful force that resides in a free people and their institutions.

1 The Nature of Today's Defense Challenge

NATIONAL DEFENSE HAS BECOME FOR THIS GENERATION A CONTINUING CONDITION OF LIFE. So long as the present world situation continues to be one of trigger-balanced tension between democratic concepts and aggressive communism, so long will the defense program continue to dominate the political, economic, and social policies of the United States. It is a reality of our time and one that imposes a heavy burden of adjustment on all our institutions. Some of these have already been made, but many lie ahead of us.

The Continuing Effort

For there is no reason to believe that the adjustments of the future will be achieved with less effort, difficulty or sacrifice than those of the past. It is, in fact, the very essence of national defense to be *prepared* – in terms of arms, men trained in their use, social institutions, and national psychology – for whatever future adjustments may be imposed, including the ultimate possibility of actual warfare. Those preparations that are directed toward facilitating the adjustment of people, communities, and social institutions to the anticipated or potential necessities of a defense situation are as basic to modern defense as arms and armies. The devotion of people to the defense of democracy, powerful asset that it is, cannot do the job unless the nation gives it the support of both military strength and social adaptability.

Dimensions of the Problem

The current federal budget shows 68 cents of every dollar spent by the federal government going into our national security programs. The Congress has made available approximately seventy-five billion dollars which may be expended for national defense in the next fiscal year, of which thirty-five billion is available for the procurement of military necessities. Over three million Americans are currently serving in the armed forces. For the first time in the history of the country peacetime military service is imposed by law on our young men and on the doctors needed to serve them.

Even more significant than these outward evidences of defense-mindedness is our unprecedented awareness of danger. This arises from three new developments in our national life: the accessibility of our country to attack as a result of modern air-transport, the existence of new weapons whose destructive power exceeds the capacity of the human imagination, and the emergence of a politically-motivated en-

emy with agents in all countries of the world, including our own.

It is no longer safe to assume that the decision between peace and war lies exclusively within our power. We can only prepare ourselves against such a threat, and in so doing, seek to minimize it. The totality of this danger requires an equal totality of defense preparation.

In these realities of the modern world the problem of assuring the national defense cannot be segregated from any aspect of the national life. It involves as immediate inter-related objectives the following:

Components of a Defense Program

1. An over-all strategic plan.
2. The production of an adequate supply of weapons.
3. The training of men in their use.
4. Preparation for the potentialities of actual warfare, including an enemy attack.
5. Protection against subversion, including the maintenance of a high morale.
6. The strengthening of resistance to aggression throughout the world.

Basic to all of these defense objectives is the ability of people to change their way of living, their ideas, and their social arrangements to meet the challenge of the danger confronting them.

2 The Welfare Role in National Defense

PEOPLE ARE BOTH THE END AND THE MEANS OF NATIONAL DEFENSE. IT IS THEIR FREEDOM, national independence, culture, and physical survival which are at stake; at the same time they are themselves the means through which these ends must be achieved. No form of push-button warfare will ever be devised which can change this basic truth, for the machines of war must be made by people, paid for by people, operated by people, and their destructive power – if they are used – borne by people.

Immediate vs. Long-Time Goals

Moreover, it would be delusive not to recognize that national defense means that immediate benefits must be sacrificed to long-time objectives. The slogan "guns and butter too" is a good spur to increased effort but the same amount of effort would produce much more civilian goods if it were not diverted in part to the production of guns.

Two basic questions are involved here in determining the relative share of national effort (or productivity) to be devoted to the ultimate objectives implicit in guns and to the immediate benefits implicit in butter:

1. What is the relative urgency of these two goals?

2. How much sacrifice can be imposed in the interest of these ultimate objectives without endangering the immediate effort on which their successful realization depends?

The first question clearly involves the total national policy, including such strategic questions as the relative strength of the potential enemy. But the second question has inherent welfare aspects and is, therefore, a proper subject for this particular inquiry. For the welfare function in society is essentially a means of sharing burdens, equalizing sacrifice, and facilitating those adjustments imposed on individuals in the common interest.

In a democracy people willingly accept and courageously adapt their lives to the sacrifices, adjustments, and burdens of national defense when its objectives are understood and these hardships are shared by all. It is, therefore, a part of governmental defense responsibility to adopt those policies and programs that will bring about this common base of shared burdens and shared measures to ease them.

Three different but related objectives are involved in this welfare concept and are discussed individually:

Aspects of the Welfare Function

1. *There must be a maximum equalization of sacrifice in the interest of national morale.*

2. *There must be facilitating measures to speed individual and community adjustments to the practical requirements of defense.*

3. *There must be plans and machinery to provide for the staggering welfare needs which would result from possible enemy attack.*

Before turning, however, to the specific nature of these social factors in effective national defense it is necessary to consider the political and institutional framework within which they must operate. For democracy is both the value we seek to preserve and the means of its own preservation.

3 The Organizational Basis of Defense

HUMAN BEINGS, LIKE ALL LIVING CREATURES, POSSESS HEROIC CAPABILITIES FOR QUICK adjustment and unusual effort under the pressure of immediate danger. When the house is actually ablaze, all hands pitch in to rescue the baby and subdue the fire. Today's challenge, however, requires a different kind of heroism. The effort and adjustments it imposes are of prolonged duration; the danger against which they are directed is diffused and difficult, if not impossible, to visualize. Yet should a hydrogen bomb destroy New York or Washington it would already be too late for purely spontaneous heroism.

The only useful heroism in the face of a danger of this dimension is one which seeks by advance action to prevent its occurrence; the only means of assuring national survival in the actual event of such an attack is the advance preparation of the total population for the adjustments and losses involved. Thus people are called on for heroic effort and adjustment in a time when they lack the spur of instinctive reaction to actual overt danger.

The Social Institution As an Instrument of National Defense

Man, from his earliest history, has turned to his own peculiarly human invention, the social institution, whenever his biologic heritage has failed to meet his practical needs. Thus he has developed forms of social organization, laws, plans, programs, division of function, and customs to supplement his basic instinct for survival. So in the present situation men are obliged to rely on social institutions to assist them in the undramatic but nonetheless heroic adjustments of a peacetime defense program. They rely, for example, on a selective service law to impose the obligation of military service with equity and fairness on all. They support continuance of burdensome tax laws in order to finance the defense program at home and abroad. They develop a civil defense organization to prepare themselves for an eventuality which they hope will never materialize.

Through these and many other measures people seek to use the common instrumentality of government to see that the sacrifices of the defense program are fairly distributed, its heaviest burdens eased wherever possible, and its functioning facilitated.

In this country the development of an adequate supporting system of social institutions for the defense program must take

Constitutional Limitations

into account the limitations placed on governmental power by our political concepts in general and our Constitution in particular. Some governmental powers are delegated to the federal government; others are reserved to the states; some functions are considered appropriate only to voluntary enterprise; certain rights are guaranteed to individuals. In time of actual war people are willing to make some temporary adjustments in this delicate balance of power but the long-time nature of the current defense program makes such emergency arrangements unacceptable. Ways must be found to meet defense needs within our long-time governmental structure.

Under the Constitution of the United States responsibility for the national defense is one of the powers placed squarely upon the federal government. This is spelled out in the following powers assigned to the federal Congress: appropriating funds for defense purposes, raising and supporting an army, providing and maintaining a navy, utilizing in the national defense the militias of the several states, declaring war. Over the years, through legislative enactment and judicial interpretation, many related powers have been derived from these basic powers. For example, in the actual presence of war the right of the federal military authorities to establish martial law as a matter of military necessity has been legally recognized. The Constitution specifically denies to the states the right to wage war and subordinates their militias to federal control insofar as national defense is concerned.

By contrast, governmental responsibility in the field of individual and social welfare was originally left largely to the jurisdiction of the states. In recent years, however, as the Constitution has been interpreted, the federal government has come to share in this responsibility under its powers "to lay and collect taxes . . . to provide for the . . . general welfare of the United States" and, to a somewhat lesser extent, under its power to "regulate commerce . . . among the several states".

The Federal-State Relationship

Many of the programs developed under the general welfare clause of the Constitution have operated through the grant-in-aid device; that is, federal funds have been made available to the states, under certain stipulated conditions and standards to stimulate and support their own programs in such fields as health, welfare, education, and services to farmers and workers. This arrangement has the advantage of reconciling the values of decentralization made possible by state and local administration in these sensitive areas of human need with the nationwide coverage and broader taxing power of the federal government. It has, however, come under some criticism in recent years as centering too much authority in Washington and is, therefore, a major point of study by the Commission on Inter-Governmental Relations and related state groups. Other long-time welfare programs are federally operated (as in Old Age and Survivors Insurance) or function through aids to private enterprise (as, for example, in some aspects of the housing program).

A Question of Policy

Thus the Constitution as presently interpreted gives the federal government broad legal authority under which it may, if such policies seem desirable, help to meet the human needs related to its program of national defense. Some programs for this purpose may be based directly on the defense authorities of the Constitution. In other cases it may appear better national policy to meet these needs through the long-time programs and devices established under the general welfare or interstate commerce provisions of the Constitution.

The problem is not at present so much a question of constitutional authority as of national policy. The question here is essentially this: How can social needs related to the national defense program, which is essentially federal in character, best be met without endangering the long-time values that lie in the decentralization made possible by state administration, the high productivity of non-governmental enterprise — whether for profit or community service — and the protection to individual liberty implicit in the constitutional separation of powers?

In the three sections that follow the welfare aspects of national defense are analyzed in terms of their basic purpose. Where programs exist to meet the needs discussed, these are mentioned; where no such program is now in operation past or possible methods of meeting these needs are cited. The very spelling out of these objectives, needs and programs makes clearer than any affirmation the complex challenge that confronts our democracy.

4 The Sharing of Sacrifice

COLLECTIVE SACRIFICE IS IMPLICIT IN NATIONAL DEFENSE BUT IT FALLS UNEQUALLY ON individuals. Citizens in a democracy will freely and courageously make such sacrifices when there exists (1) belief in their necessity, which in turn depends on the imminence or recognition of danger, (2) conviction that such sacrifices are imposed as fairly as circumstances permit, and (3) the fullest possible use of common resources to distribute the burdens and compensate for disproportionate losses.

In a democracy these three factors must be treated not as a desirable accompaniment of the defense program but as an organic part of defense policy, since absence of popular support for the necessary legislation would automatically doom the entire program to failure. This is especially true with respect to our present type of peacetime, long-range, defensive program of preparedness when the primary purpose of the defense program is to avert rather than meet actual attack.

Welfare measures undertaken for these purposes cannot be viewed as competitive with the defense program, either in terms of cost or policy. If there is a competitive claim against the national economy, it is not between the defense program and social measures undertaken to ease its sacrifices but rather between those making major and those making minor sacrifices. Thus, for example, it might conceivably be said that those seeking relief from high taxes were in competition with those requiring servicemen's dependency allowances or benefits, but not that the welfare concept, as represented by the dependency allowances, was in competition with the defense program.

Much of the discussion of what we can "afford" in a defense economy reflects this basic conflict between the obligation placed on some to make major sacrifices in the interests of national defense and the natural desire of all groups to keep their own sacrifices at a minimum level. As in all such conflicts of interest in a democracy, it is important that they be resolved in terms of the highest denominator of common interest. In national defense the common interest lies clearly on the side of equalization of sacrifice. This is especially true in the face of a danger which is political and psychological as well as military.

We have seen in many parts of the world the tragic results — in terms of susceptibility to subversion and unwillingness to make sacrifices — of policies which do not recognize as basic to a defense program the element of fairly-shared responsibility and burdens.

Some of the sacrifices imposed by the defense program and actual or possible measures to ease them are discussed in the following paragraphs.

PEACETIME MILITARY SERVICE

a. *Peacetime military service* imposes the heaviest sacrifice on young men, who are asked to give up, for two years at a crucial period of their lives, freedom to choose their occupation, place of residence, and way of life in order to serve in the armed forces. In a measure this sacrifice falls also on their young women contemporaries, who are thereby deprived of a normal and important factor in their lives. Many of these young people marry, have children, and struggle to establish some semblance of family life even against these heavy odds. Often young wives with their children follow their servicemen husbands about the country in an understandable if socially disruptive effort to keep the family together. Others who would normally have depended on these young men — widowed mothers, for example — are likewise deprived of their support.

Our peacetime defense program also imposes disproportionate sacrifices on those members of the medical profession subject to compulsory military service. For many this service means a very real sacrifice in loss of income, impairment of practice, and family disruption.

It is impossible to compensate in any real measure for the sacrifices involved in compulsory peacetime military service. The loss of this time, which would normally be devoted to the continuing processes of social and economic adjustment, is widely accepted — so long as it falls fairly on young men of draft age — as a part of the price of national security. However, certain provisions are made directly by the federal government, either through the armed services or the Veterans Administration, to compensate for specific losses or handicaps. The individual serving in the armed forces is maintained, equipped, furnished with medical care, and paid a small sum in cash. His dependents receive a dependency allowance and, in some instances, medical care. Families of officers and non-commissioned officers may be furnished housing. It is now proposed* that medical care be extended on a more adequate basis to all dependents of servicemen wherever they may live. It has also been proposed that peacetime military service be covered on a permanent basis for social security purposes.

Provisions are also made for the religious and many of the recreational needs of men in the services. An apparent weakness in the present provisions in the armed services, however, is the absence of well-organized social services to assist servicemen and their families with personal problems growing out of or aggravated by their military service. Such social services exist at present only within the medical services of the Army and, to a lesser degree, the Air Force. During the war years welfare officers were generally available to assist servicemen with personal problems growing out of or aggravated by their military service. The availability of such welfare personnel can be a major factor in locating and easing situations of unusual personal hardship.

Of equal importance is the availability

* S 3363, introduced in the 83rd Congress, was not acted upon, but a smiliar bill will undoubtedly be introduced in the 84th Congress.

of a network of social services to those left behind by the serviceman's departure from home. Even though such a helping hand may never be required the very fact that aged parents, dependent wives and young children have a place to turn in case of crisis can be a major factor of reassurance. While the Red Cross Home Service and other voluntary agencies provide this type of aid to the limit of their facilities, the local public welfare office must also be relied on as the only governmental social service agency of universal coverage.

On leaving military service many problems of readjustment to civilian life may again constitute a special hardship. Provisions are, therefore, made to assist the young veteran complete his education, locate a job, establish himself in business, or secure housing. If he has suffered injury or impairment of his earning power, medical treatment and financial compensation are made available to him. A program of veterans' benefits and services to compensate for specific handicaps caused by military service is a major aspect of any defense program.

ECONOMIC DISLOCATION

b. *Economic dislocation* resulting from national defense imposes peculiar sacrifices on certain individuals, business enterprises, and communities. People may lose their jobs, their homes, and their whole way of life as a result of changes brought about by the defense program. They may be obliged to move to new locations, learn new skills, and accept a reduction in the general level or certain aspects of their standard of living. Businesses may lose their market or the raw materials needed for existing products, be obliged to convert to wholly new types of production, or incur heavy costs for a defense market of uncertain duration.

Communities with a concentration of defense activity may find their facilities overwhelmed by an influx of population at the very time when their tax base is reduced by their inability to tax property acquired by the federal government. Should compulsory dispersal of strategic industries become an aspect of defense policy, other communities might find themselves deprived of their major economic base.

Many of the actual or potential measures for easing the disproportionate burdens resulting from economic dislocation are discussed in the next section on the facilitation of adjustments necessary to the defense program. It is, however, important to give recognition to the factor of equalizing sacrifice as well as to facilitating government objectives. For example, the farm tenants who were dislodged from their homes and their source of livelihood in the development of the atomic energy facility at Savannah River suffered heavy losses but received no compensation from the federal government beyond their actual moving expenses. Some of the charges involved in economic dislocation must be regarded as a simple question of fairness and equity. Not only would this involve reasonable compensation for the economic losses involved but also positive help in becoming constructively re-established. Unemployment as a result of defense dislocations would fall into the same general category.

COMMUNITY LOSSES

c. *Some community losses* can likewise be directly attributed to the defense program and impose a disproportionate collective sacrifice on those who make up the community. While defense activity may bring economic benefits to the communities in which it is centered, it may also impose handicaps. These need to be weighed in the balance in the interest of equity. The withdrawal of large property holdings from the tax base by reason of federal ownership involves such a sacrifice

and warrants compensation in the form of payments in lieu of taxes.

At the present time virtually the only compensatory aid given such communities relates solely to the education of children whose presence in the community results from federal defense activity. Since the families of these children would doubtless not remain were schooling not available to them, this aid is more in the nature of "facilitation" than compensation. Communities also deserve full protection against any special hazards involved in the location of a defense activity in their midst.

THE COST OF NATIONAL DEFENSE

d. *The cost of national defense* is inevitably heavy and its burdens must be fairly distributed. This is partly a question of general economic policy, partly a question of taxes, and partly a question of social services. Since inflation constitutes by all odds the least equitable way to finance a defense program, economic policies must be such as to maintain a reasonable balance between current income, savings, and prices. Wartime economic controls in the form of rationing, price and rent control, wage stabilization, foreign exchange and raw materials control belonged in this category. In peacetime governmental fiscal policies that maintain economic stability are basic to a successful defense program.

The principle of graduated taxation is generally accepted in this country today, and most Americans recognize that in time of general sacrifice the range of disposable income left to all individuals inevitably will narrow. But the more people are asked to share their personal income — through taxes — for the common good, the more they must likewise depend on each other for insurance against personal disasters and emergencies. This same principle may also be stated in this way: people will more willingly pay taxes which reduce the surplus in their current income, if they know that they have at least minimal assurance through governmental measures against the needs of their own old age and other hazards. In this sense social security, public assistance, health, and other social measures are basic to the defense program.

5 Facilitation of Necessary Adjustments

WHILE SOME SOCIAL MEASURES CONTRIBUTE TO THE GENERAL MORALE ON WHICH DEMOcratic support of the defense program depends, others contribute to its purposes in a more immediate and direct way. As we have repeatedly seen, the essence of national defense is the achievement of a variety of rapid adjustments at a time when people lack the goad of immediately felt danger. This can be facilitated in a democracy through organized measures that offer inducements to change and minimize its difficulties. Especially is this true in a long-range, peacetime defense program when people are properly reluctant to disturb the balance of political power discussed in Section III by imposing change through compulsion. Thus in a democracy social measures take the place of that imposition of change through force and terror which characterizes a police state.

Some of the changes and adjustments essential to the success of the defense program are described herewith.

MILITARY MORALE

a. *Building an adequate peacetime military establishment* involves more than the equitable application of the Selective Service Act. Equally essential is a permanent career service, composed of officers, noncommissioned officers, and enlisted men to serve as a nucleus and source of leadership and training for our shifting citizen military force. Moreover, the extent to which the efficacy of both the career and citizen components of the military establishment depends on morale factors has recently been recognized by a number of studies* made for those concerned with national defense policy.

If men and women are to be attracted to military service as a career, it must offer them inducements comparable to those available to them in civilian life. These include: respect and standing as an occupational group; suitable compensation, including provision for such related benefits as medical care, retirement income, and protection against disability; satisfactory

* e.g. *Medical Care for Dependents of Military Personnel,* Report of the Citizens Advisory Commission on Medical Care for Dependents of Military Personnel appointed by the Secretary of Defense, Washington, Department of Defense, June, 1953. Also the "Womble Report," a memorandum for the Assistant Secretary of Defense (Manpower and Personnel), constituting the *Final Report – Ad Hoc Committee on the Future of Military Service as a Career That Will Attract and Retain Capable Career Personnel,* J. P. Womble, Jr., Rear Admiral, U.S.N., Chairman, 30 October 1953.

living arrangements including housing, education for their children, recreational opportunities, social services and a good community environment; and reasonable opportunities for civic participation.

The present situation in the armed forces appears far from satisfactory in some of these respects and extremely spotty in others. For example, the availability of medical care for dependents of those in service depends at the present time on their proximity to a military installation providing such care. This would be remedied by the enactment of the type of legislation proposed by the Department of Defense which would permit the purchase of medical and hospital care for such dependents from civilian sources if military facilities were not available. Housing for the dependents of career military personnel is extremely uneven, especially in those installations undergoing rapid expansion. Private housing for such personnel, constructed under the government mortgage insurance provisions of the Wherry Act, is often located on federal property and seems to fall into a No Man's Land insofar as responsibility for related community services is concerned.

Community Relations

The relationship between career military personnel and the civilian communities on which they depend for many aspects of their lives is one which could benefit by clarification generally. In a large peacetime military establishment it is important that there be a minimum of isolation between the military and civilian communities; military personnel should be encouraged to participate fully in community life and communities should assume responsibility for the needs of military families on the same basis as any others. Such a close reciprocal relationship has the double advantage of minimizing the handicaps of military service and contributing to civilian knowledge of, identification with, and support for the defense program. Government policies to promote such a relationship and the assignment to this task of specific qualified personnel within the military establishment, as has been done in the case of the Air Force, would seem a good investment. Such policies should recognize and encourage the unique role of voluntary agencies in bridging the gap between civilian and military life.

The Morale of the Draftee

The situation with respect to those serving under the Selective Service Act is somewhat different in that their service is assumed to be temporary in duration and is not subject to the veto of their own free choice. Nevertheless, morale is an important factor in the degree to which they are able to concentrate their full energy on their training and assigned tasks, as well as in its effect on the civilians to whom their state of mind is important. Components of morale in their case would appear to include the following: full acceptance by the civilian population, including the community in which they are living; opportunities for recreation outside the military environment; freedom from worry about the welfare of dependents and others at home, including a channel of communication and help through social service in case of need; knowledge that jobs and other opportunities will be available to them when their service is completed.

Some of these factors of morale are dependent on governmental policies: adequate financial, medical and other provisions for dependents of men in service depend primarily on governmental programs, as do measures for their readjustment after their service is completed. Others are recognized to depend primarily on voluntary measures and community attitudes: here again, however, the designation of morale and community relations

officers can do much to facilitate closer ties to the civilian community and civilian programs. Re-establishment of a civilian advisory and liaison committee at the top level in the Department of Defense on these morale factors in the armed services might likewise be desirable.

DEFENSE PRODUCTION

b. *Expanding or converting to defense production.* While people remain as always the indispensable instrument of national defense, modern technology has placed at their disposal a complex array of weapons and other equipment, ranging from the simplest necessities of life to the hydrogen bomb itself. The production of these elements of modern defense involves major changes and expansions in the industrial structure. In some cases existing plants must be converted from the production of civilian consumption items to defense necessities. In other cases new plants must be constructed and new equipment purchased to make products the future market for which may be extremely uncertain. In some cases production may be undertaken directly by the federal government. In all cases careful planning is necessary to assure the most efficient possible use of productive resources, including manpower, and a minimum of social and economic dislocation. At all times the problem of future flexibility, security, and adaptability to developing technology and changing conditions must be considered. The resources of government must be used as required to facilitate both the economic and social adjustments involved.

The Defense Contract

The principal method of securing defense production is through the defense contract, either awarded on a low bid basis, or negotiated by a governmental agency such as the component units of the Department of Defense or the Atomic Energy Commission with a private individual or enterprise. Such contracts may involve the purchase of a product on either a fixed or actual cost basis, or they may involve the performance of a particular job or service (as in the construction of a federal plant, power dam, or military installation), or they may involve an arrangement with a particular private contractor to operate a plant for the federal government as in many atomic energy installations.

Location

Several social factors enter into the letting of defense contracts. Location is often a major consideration. When a particular job involves a large expansion of the labor force, on either a permanent or temporary basis, it is important that labor either be available locally or that the community be capable of absorbing additional population. Efforts have been made to place defense contracts, other factors being equal, in communities having a labor surplus as a result of economic dislocation. Efforts have also been made to avoid too tight a concentration of defense production, both for social and strategic reasons.

Labor Policy

Defense contracts also involve questions of labor policy: under the Walsh-Healey Act minimum wage stipulations are made a part of federal contracts and under existing executive orders race discrimination in employment policy under defense contract production is precluded. In both these cases the federal government uses its enormous economic power as a consumer to influence the policies under which defense production is carried forward.

Social Services

During World War II the federal contracting agencies permitted the inclusion under defense contracts of many social services as a part of the cost of production. Health programs, extensive recrea-

tional activities, day nurseries, and a variety of social services were often developed in this way under company auspices. Present policies do not appear to encourage such practices, partly as a matter of economy and partly on the assumption that tax-supported social services should operate under governmental auspices. However, the growth of fringe benefits, especially with respect to medical care, as a common industrial arrangement and the broadened concepts of personnel management have undoubtedly been reflected in production operating under defense contract.

Tax Concessions

Plant expansion for defense production has been encouraged by tax concessions permitting a more rapid amortization of capital investment for this purpose. This policy is an example of the use of governmental authority to facilitate adjustments to defense requirements on the part of one factor in the economy and, therefore, corresponds roughly to the provision of social services to facilitate personal adjustments.

Government-Owned Defense Plants

Some defense production has been undertaken directly by the federal government, as for example in military ordnance plants. In this situation the federal agency assumes the role of employer and carries the same obligations to its employees and the communities in which its operations are located as any other large-scale employer.

The discharge of this responsibility to its employees is somewhat complicated by the relative inflexibility of governmental procedures and policies, as well as by the difficulties of applying to industrial production personnel policies designed for the regular civil service. The discharge of a normal employer's responsibility to the community is virtually impossible until some method of financial contribution is devised, either through property taxes or some form of payment in lieu of taxes. While some defense communities formerly received aid for such basic facilities as water and sewage systems, at the present time such contributions are limited to the single purpose of education. It is likewise essential that representatives of the employing federal agency participate fully in community planning and social projects, both governmental and voluntary, affecting the efficiency and welfare of their employees.

Transitional Unemployment

Large scale conversion to defense production can often produce temporary unemployment during the transition period or the displacement of workers whose particular skill is no longer required. Adequate unemployment compensation to carry workers through the transitional period and help in getting relocated for those displaced should, therefore, properly be considered an intrinsic element in the conversion process. Similar provisions to cover ultimate reconversion to civilian production are likewise an inherent aspect of national defense. Such assurance would go far to overcome any reluctance to shift into and remain with defense production in a mixed economy situation.

Control Measures

In a tight economy where civilian and defense production are in competition for a limited supply of strategic raw materials, capital equipment, foreign exchange, or manpower, governmental allocations and controls might become necessary. Measures to ease the hardships and adjustments imposed on individuals by such controls would contribute directly to their acceptance in the common interest by those affected.

MANPOWER ADJUSTMENTS

c. *Manpower adjustments* are a major factor in defense mobilization. With de-

fense production superimposed on civilian requirements and several million potential workers diverted into the armed services efficient use of the country's full labor potential becomes a primary defense necessity as well as a matter of desirable social policy. In order to achieve this objective many people must be encouraged to move to new locations, often changing not only their jobs but also their way of living; others must acquire new skills and still others must be drawn back into a labor market from which they had—whether through choice or necessity—retired. In addition the efficiency and productivity of each individual worker must be enhanced by all possible means; unnecessary labor turnover must be discouraged and each worker used at his highest skill.

The very fact that the countries of the world at present aligned against the democratic concept of life have at their command greater *numbers* of people than we makes it imperative that each individual American be encouraged and enabled to function at his highest level.

Migration

Migration, with all its attendant problems of individual and community adjustments, presents the most conspicuous social problem of the defense program. Large new installations like the atomic energy plants at Savannah River in South Carolina and Georgia, and at Pike County, Ohio, require large crews of temporary workers for their construction. Over twenty thousand are currently employed in the Ohio development and Pike County alone has increased in population from 14,576 to nearly 30,000 within two years. School enrollment has jumped from 3,900 to 7,525. Other cities, as a result of a concentration of defense activity, have experienced a very great acceleration in their normal rate of growth. For example, Augusta, Georgia, doubled its population in one year; Moses Lake, Washington, doubled in two years; Richmond, California, is five times bigger than in 1940.

Fortunately, migration is a traditional and continuing aspect of American life so that individual and community adjustments are more easily achieved than in more settled cultures. Nevertheless it is important that available labor be quickly directed to the places where it is needed and that conditions in defense employment and defense communities be such that needed workers and their families will remain to complete the job that needs to be done. Many instances can be cited of delays and increased costs in defense activity owing to difficulties in securing or retaining workers with the needed skills either locally or through in-migration. Other cases have been reported of difficulties created for defense communities by the voluntary in-migration, again often with their families, of workers not qualified for available defense jobs.

Directing the Labor Force

An effective policy in directing labor on a voluntary basis to needed defense employment would appear to involve three elements: (1) full utilization of the available local labor supply, (2) directed placement of workers from outside the labor market area (including the converse discouragement of unqualified workers through public information measures), and (3) assurance of suitable living arrangements and related community services to absorb the additional workers needed in the defense communities and thus create an effectively stable labor supply.

The direction of labor to needed defense employment is essentially a job for public employment offices and requires a nationally coordinated system. In some

instances social services of various kinds can also do much to facilitate constructive migration and to minimize the disruptions in family life it entails. Such social services are often provided by voluntary agencies like the Travelers Aid, by the public welfare departments, and — in at least one notable instance* — by the public employment office. The provision of loans and other financial aids to facilitate migration might prove a worthwhile investment in certain cases of defense dislocation.

In time of war or extreme emergency it might well become necessary to direct the labor supply to essential employment by a system of compulsory labor service as was done in England during World War II. In such a situation the same obligation to equalize burdens and compensate for unusual hardship would apply as in the case of compulsory military service. In a peacetime effort to direct labor by voluntary methods, social services and aids can often serve as a facilitating factor and thus achieve defense objectives without resort to compulsion.

Expanding the Labor Force

Another method of meeting manpower needs is through policies to encourage the expansion of the local labor force. Full utilization of all available workers without arbitrary restrictions based on age, sex, race, national background, or creed is essential to a succesful defense program. Use of handicapped workers at jobs within their capabilities is also important and can be widely facilitated through rehabilitation programs. Many workers retired because of age can be effectively drawn back into employment, especially on a part-time basis. This is likewise true of those married women whose household duties do not require their full time and energies. Generally speaking, however, the mothers of young children cannot be effectively used as a means of expanding the total labor force, since experience has shown that virtually an equivalent amount of substitute labor must be found to care for their children. This might, however, be worthwhile in a few cases where the mother possessed a badly needed skill — as, for example, in the continuing acute shortage of trained nurses. Moreover, in those situations and localities where a substantial number of mothers have voluntarily gone to work outside their homes there is still need for day care and other measures for the protection of children as a matter of public social policy.

Training

Training in the skills needed for local defense production is also an important means to assure effective use of the nearby labor supply, minimize defense dislocation, and reduce migration. Training allowances or on-the-job training arrangements might in some situations be necessary to facilitate such retraining by individuals.

AID TO COMMUNITIES

d. *Aid to communities.* Manpower requirements related to defense require individual adjustments if they are to be met, but many of these individual adjustments are in turn dependent on community adjustments. Thus a community or cluster of neighboring communities cannot absorb large additional numbers of people in their capacity as workers without also preparing to absorb them as residents. People will not come to man defense jobs unless housing, schools, a healthful environment and reasonable opportunity for recreation are available to them.

Recent experience has demonstrated

* The Employment Service of the Commonwealth of Puerto Rico provides a variety of social services to facilitate the migration of Puerto Ricans to the mainland.

that even temporary jobs cannot be filled without provision of the basic elements of family living. The days when construction work could be carried on by single men or workers willing to leave their families behind seem to be relegated to a less domesticated era. Such family solidarity connotes a healthy national life but it does impose a special burden of adaptation on communities requiring a temporary or permanent expansion of their working force for defense purposes.

This problem of community adjustment is complicated by many factors, some economic, some political, some social. Most communities, given sufficient time, would ultimately make all necessary adjustments through the operation of normal political and economic evolutionary pressures. In a defense situation, however, the national interest requires that those adjustments be accelerated and that they take place without excessive profits on the one hand or exploitation of individuals on the other. Moreover, the federal government itself is inevitably an interested party in this process since the success of the defense program, for which it is responsible, depends on community adjustments involving political responsibilities reserved under the American Constitution to the states and — by delegation — to their political subdivisions. Except in such rare cases as federal towns like Los Alamos and Oak Ridge (themselves unpopular because of their departure from the traditional American pattern of community responsibility) the federal government can only assist in this process; it has not the direct means of bringing it about.

Facilities

People working in defense communities need such direct facilities, benefits, and services as: a place to live, schools for their children, a place to worship, preventive and therapeutic health services, places for their children to play, police and fire protection, and ready access to their place of work. Often, however, communities are not equipped to assure these basic amenities of modern urban life without a complete overhauling of their own structure and authority. This is especially true when a community hitherto rural in character is suddenly expected to take on urban functions or where old political subdivisions are rendered functionally obsolescent by a new pattern of defense-related growth.

Here the first need is often for planning commissions, new patterns of taxation, revised zoning provisions, redistricting for school or other public administration, and frequently reorganization of the basic structure of local government as through incorporation. These fundamental political prerequisites to change are frequently (and understandably) resisted by the old-timers, who feel their own control to lie within the old political mechanisms, thus complicating and delaying adjustments which are ultimately inevitable and in the interest of all.

Facilitating Social Change

Frequently it requires an outside catalytic agent to break through the impasse created by these conflicts between new pressures and old adjustments, and thus speed the normal evolutionary process. Similarly this process often requires a specialization of knowledge and a degree of technical competence not normally available in such a community undergoing an explosive transformation from rural to urban condition. It is primarily in terms of this latter need that the national voluntary organizations affiliated with the United Community Defense Services have been able to facilitate social change in the areas of their specialization. State agencies, like the public welfare and health departments, normally perform this type of service for

their local counterparts. In at least one state (Pennsylvania) special state funds are available through the state planning commission to assist communities undergoing rapid expansion and adjustment. Such services can be extended on a broader scale with the special planning funds for small communities provided by recent federal housing legislation.

The Federal Government and Defense Communities

The relationship of the federal government to these communities takes several forms. In some communities it must assume the usual community responsibilities of any large property owner or employer, if not legally at least morally. Even though the federal government is exempt from state and local taxation under the Constitution, as an employer and property owner it is dependent to a considerable degree on local services and benefits. Rarely, even in strictly military installations, is it able to provide housing for all its employees. As a matter of policy their children are expected to attend local schools. Their shopping is done and spare time spent in these nearby communities. Thus the existence of a safe, healthful, and functioning neighboring community is essential to a federal installation. At the present time federal aid is available to such communities only in the form of special funds for school construction and school maintenance and in the form of special insurance to private builders constructing housing for military and other defense personnel.

In other defense communities the role of the federal government is less direct. When a defense contract is placed with a private concern, the federal government assumes the role of customer or client rather than employer. However, since its work or order cannot be promptly and efficiently executed if community conditions are unfavorable, it is necessarily concerned with these conditions. In some cases such community conditions might in themselves be a determining factor in deciding where a defense contract is to be placed. In any case the contracting federal agency is directly concerned with the speed and success of necessary community adjustments.

Federal Measures

Several methods have been used in the past to further this federal interest. Special measures have been instituted to stimulate the provision of housing and related community services for defense workers, either through direct grants to governments or through federal mortgage insurance for private construction. During World War II under the Lanham Act federal funds were extensively used for the construction of needed local facilities, including schools, hospitals, recreational facilities, day care centers, sewer and water systems, and other public works. Federal agency field staff, both those assigned to regular federal programs and those especially employed for the purpose, extended technical help to defense communities in order to facilitate these adjustments. The field offices of the former Federal Security Agency were particularly active in this respect, but this function has not been assumed by its successor Department of Health, Education, and Welfare. In fact there appears to be no federal agency extending this type of field service at the present time even though the problems of defense communities, as observed by UCDS field workers, continue to be acute.

6 Preparations Relating to the Possibility of War

THE NATIONAL DEFENSE POLICY OF THE UNITED STATES IS DIRECTED TO THE OBJECTIVE of preventing war by a mobilization of such defensive power as to make war unattractive to any potential aggressor. On the other hand the very existence of a national defense program presupposes the possibility of actual hostilities. Preparations directed toward minimizing the dangers implicit in such hostilities and meeting the actual needs that could be expected to result from such hostilities must, therefore, be regarded as an essential aspect of national defense.

Moreover, it has been repeatedly demonstrated in recent years in other parts of the world that people will neither make the effort and sacrifices required by national defense nor take the risks involved in firm resistance to aggression and Communist conspiracy unless they are convinced that their government is taking all possible measures to protect them in the event of actual warfare. This presents a complex problem in this age when atomic and thermo-nuclear weapons subject the civilian population to unprecedented danger. Effective civilian defense must be highly organized and built around a continuing institutional framework; neighborly mutual aid can only be effective when related to such a solid core of governmental responsibility.

People need the knowledge that provisions and plans have been made; they need sufficient knowledge of those plans and policies to resist panic, protect themselves, and participate in the total mobilization of national recuperative effort an enemy attack would demand. They need to feel that a responsible government has taken all possible measures for their protection. This protection involves two types of action: those steps which can be taken in advance to minimize danger and those which are planned, on a stand-by basis, to be put into effect should an enemy attack occur. Each of these involves social factors.

MINIMIZING DANGER

a. *Measures to minimize danger* in the event of attack are an essential part of national defense. In view of the known accessibility of our cities to possible enemy attack one such measure might involve the dispersal of potential defense targets. Undoubtedly holders of strategic defense contracts have been encouraged to disperse such operations but there is little indication that such action has been compulsory with respect to already estab-

Dispersion

lished plants or that cities have been required to disperse their essential facilities or the residences of their population. Should such action be instituted on a widespread and compulsory basis, it would undoubtedly have to be accompanied by measures to facilitate the adjustments involved, compensate for individual losses, and equalize the sacrifices imposed on individuals in the total public interest.

Training

A second type of activity directed toward minimizing the dangers of possible enemy attack involves the immediate training of the civilian population in terms of the necessary knowledge, skills, and plans to meet such attacks. Under present arrangements the basic structure of such civilian defense rests within the regular units of government, aided by established community agencies. Citizen participation is related to this nuclear structure on a voluntary basis. The government, as the agent of shared responsibility, must or should, however, meet two costs involved in this training of the civilian population. To the extent that such training involves risks to the individual, there should be a sharing of that risk through governmental insurance protection. Moreover, for those who supervise such training as a part of their professional assignment financial compensation is essential and it seems reasonable that the federal government should share this cost.

Stockpiling

A third area of preparation involving the minimizing of potential danger covers the general category of stockpiling. Stockpiles are generally thought of as referring to the advance accumulation of strategic raw materials but some conditions might require also the stockpiling of such consumer items as clothing, food, medical supplies, bedding, and emergency shelter. The accumulation of adequate stores of such items is essentially a part of the emergency health and welfare programs covered in the following section. Any concerted effort at stockpiling may, however, result in social problems, either through the concentration of workers in the production of such materials or through the concentration of consumer shortages. An example of the former has been seen in certain communities affected by a concentration of uranium prospecting or the large scale exploitation of uranium deposits.

STANDBY PROGRAMS

b. *Standby programs for actual war conditions* are fundamental to national security in the modern world. Not only is our own country now accessible to enemy attack but available weapons make possible a measure of destruction that defies the imagination. Preparations against such attack cannot be left to individual initiative and voluntary enthusiasm but must be centered in governmental agencies, both those established for that purpose and the regular functioning departments of the federal, state, and local governments.

Moreover, it is important to recognize the extent to which problems created by enemy atomic attack on centers of civilian population would be essentially welfare problems. People who survived such an attack would be largely deprived of their normal ways of meeting their own needs. Such welfare problems as homelessness, joblessness, family separation, and lack of money, food, clothing, and medical care might well overwhelm all of the surviving population of a metropolitan area.

Obviously planning directed to meeting welfare needs on such a scale must embrace a wider area than the normal jurisdiction of local or even state government.

Plans and relationships must be established and maintained which combine the broader base of the federal and state agencies with the operational machinery and experience of local departments. To the extent that federal and state direction in this planning process can be supported by facilitating financial aid, it will be that much more effective.

A complete analysis of the problems of civil defense is clearly beyond the scope of this document which can only outline in broad terms the range of social factors involved in modern defense. Plans for civil defense must, however, be broad enough to cover the following possibilities, all of which involve a complex array of social problems:

1. Maintenance of law, order, and governmental processes.
2. Movements of people, either before or following enemy attack.
3. Loss of life, injury, and property destruction.
4. Maintenance of essential production, military operations, and services.

Each of these is briefly discussed from a welfare point of view in the following sections.

Maintenance of Law and Order

Present civil defense organization and policy place upon the regular governmental instrumentalities the responsibility for coping with emergency conditions following an enemy attack. However, it is conceivable that should an atomic attack or series of attacks be successfully carried out on centers of civilian population the disruption of normal governmental processes might be so complete as to require the imposition of martial law.

In this situation a serious welfare responsibility might devolve upon military government authorities in order (1) to bring to bear on the immediate needs of the devastated area or areas the complete welfare resources of the country, including those of nearby states, national welfare organizations, and any other possible sources of aid and (2) to re-establish the normal welfare responsibilities of state and local government. While operating within the framework of military authority and the military organization, such a function would require the highest possible measure of professional competence.

Evacuation

Movements of people on a large scale would be an inevitable accompaniment of enemy attack. To the extent that such attack could be anticipated the movement of people out of the target area would be a defense measure to reduce the extent of casualties. Such advance evacuation might take place in several stages: early evacuation of those in a peculiarly vulnerable condition, such as children, the elderly, and the handicapped; possible evacuation on a wider scale of all those not engaged in essential work; and conceivably the ultimate total abandonment of a doomed city.

Welfare problems involved in any program of large-scale evacuation are staggering in scope and complexity. In the first place any evacuation or movement of population assumes a destination. People must be *received* as well as removed. Those who are removed because of their particular vulnerability would by that very reason present peculiarly acute welfare responsibilities. Children must be assured adult care, preferably that of a member of their own families; persons institutionalized because of physical or mental disability would require similar institutionalization at their point of destination. Persons deprived of their normal

source of support by reason of their removal from target areas must have some substitute means of subsistence. Family separation and separation of individuals from their normal supportive social institutions are themselves welfare problems of the first magnitude. Carefully organized plans to anticipate these needs would be essential to prevent or minimize the danger of panicky, disorganized movements of people, a situation which would produce the most devastating welfare needs of all.

Enemy Attack

While the welfare problems of advance migration are complex and acute, those which would follow should an actual enemy attack occur in a heavily concentrated center of population are almost impossible to imagine. The extent of injury, loss of life, and destruction of property is limited only by the enemy's choice of weapon, the extent to which people had been successfully removed from the target area, and our hope for defensive weapons which either have not yet been invented or revealed to us.

Present planning must assume a potential devastation in which the extent of death, injury, and destruction would be incalculable. In such a situation health and welfare measures would become the predominant factor in efforts to save survivors, restore social organization, and share the weight of the disaster on the broadest social base. The provision of medical care for the injured, the identification and disposition of the dead, the housing and feeding of the homeless and destitute, protective care for children and helpless adults are all emergency health and welfare services of the most compelling nature. On a longer time basis the reuniting of separated families, relocation of the displaced, making provision for orphaned children, rehabilitation of the injured, and provision of a compensatory source of income for those deprived of their breadwinner or their own earning power are all examples of the contingencies for which plans must be made.

Economic Losses

The purely economic losses of such an enemy attack might be shared to a limited extent through a standby program of government-underwritten insurance against loss of property, life, or injury as was done during World War II. Economic assistance to meet immediate needs on a completely flexible basis would also be essential and its financing, in an emergency of such dimensions, would have to come from the federal government.

Restoration of Production

Among the many problems requiring personal service that would stem from such a catastrophe the probable loss of all types of personal – and in many cases official and business – records would loom large. Insofar as these records involved problems of personal identification and relationships this too would constitute a welfare problem.

The maintenance and restoration of essential production and services following an enemy attack would also involve social factors. Meeting the welfare needs of people in such a devastated area is obviously a pre-requisite to the re-establishment of any semblance of social organization or production. The injured, the dazed, the homeless, the hungry, and – above all – those obsessed with anxiety about lost children or missing members of their families cannot be expected to pick up the threads of their own social and economic responsibilities. Their own needs and anxieties must be dealt with – at least to some extent – before their social usefulness can begin to be restored.

The restoration of economic production would also involve the problem of coordinating available labor supply with surviving productive facilities. In some cases this also might involve the removal of people to undamaged centers of production; in other cases it might be necessary to make emergency arrangements to house workers needed for a defense plant that survived enemy attack. Restoration of essential facilities damaged by enemy attack would likewise involve provision for the temporary housing of the workers involved as well as many related services.

Basic to the successful restoration of a functioning community would be the restoration of normal governmental services and agencies, including those performing social functions. Careful advance planning could help to facilitate the transition from emergency to continuing programs, especially if federal planning and responsibilities were built upon the foundation of a long-time working relationship with established state and local agencies.

7 The Nature of Federal Responsibility

IN THE PRECEDING SECTIONS THE WAYS IN WHICH SOCIAL MEASURES AND WELFARE PLANNING are essential to a successful defense program have been briefly analyzed. In this section we examine specifically the role of the federal government with respect to these needs and the various methods available to it in meeting them.

RESPONSIBILITY FOR OVER-ALL DIRECTION

a. *Responsibility for over-all direction.* The Constitution places the basic responsibility for national defense clearly upon the federal government. Thus, whatever specific methods or instrumentalities are used in carrying out particular components of this responsibility, the responsibility itself cannot be delegated. This is as true with respect to the social factors of national defense as it is of the economic and military. For example, in the economic field the federal government may place with a private company a contract for some particular defense necessity, but it is the federal government itself that must write the specifications, pay the bill, and relate this particular item to an over-all national defense plan. So also with respect to the social factors of defense the federal government must draw up the plans and provide the measures necessary to putting them into effect as they are needed. Some of these measures may involve direct federal operation, some may be carried out through private enterprise, including the voluntary social agencies, and many in this field may involve the cooperation of state and local governments. But the responsibility for over-all planning, coordination, and direction is clearly federal.

The centering of such responsibility for the social aspects of defense is complicated by the fact that the basic welfare responsibility of the federal government lies outside the normal focus of defense responsibility. Moreover, these social responsibilities, while now concentrated primarily in the Department of Health, Education, and Welfare, are also diffused through other federal agencies such as the Department of Labor and the Housing and Home Finance Agency. Scattered and extensive as the social programs of the federal government are, they involve a concept of responsibility limited by specific legal provisions: the more general responsibility is assumed to lie with the states and many of the federal social programs are in fact carried out by state and local operating agencies. Thus federal defense policies, involving basic social poli-

cies and operations, must be superimposed on a highly decentralized administrative structure in which the factor of federal responsibility is normally minimized or at least regarded as contributory rather than primary. Clearly this requires a high measure of coordination and a sharply defined system of relationships.

An Effective Plan of Coordination

An effective plan of coordination and direction of the social aspects of defense policy would seem to involve the following elements:

1. The necessity of reconciling immediate or potential defense requirements with continuing civilian programs places the central coordinating responsibility upon the President and his immediate staff. The Office of Defense Mobilization appears the logical staff arm to assist the President in the discharge of this responsibility.

2. The Department of Defense and all other agencies with major defense responsibilities should have a high level office, staffed with persons qualified by experience and professional competence, to handle the social aspects of these responsibilities.

3. A continuing plan for coordination of policy and working relationships among the federal agencies concerned with the social aspects of defense is a practical necessity. Responsibility for liaison with other operating agencies on defense-related matters should be centered at a single point in each agency. The individuals charged with this responsibility, or their superiors, would logically constitute a coordinating and planning committee on the social aspects of defense policy, functioning under ODM sponsoriship. These agencies would include the Departments of Defense; Health, Education, and Welfare; Labor; the Federal Civil Defense Administration; Atomic Energy Commission; Housing and Home Finance Agency, and others on specific matters.

4. Major responsibility for the coordination of most of the social aspects of defense policy in relation to state and community programs and needs would appear to lie logically with the Department of Health, Education, and Welfare. This responsibility should include not only the interpretation of federal policy to the states and to local agencies but also the reporting back to the federal government of unfavorable local situations and developing welfare problems that might impede the defense program.

5. Through these operating and coordinating mechanisms a total program should be worked out comprising the following elements: (a) immediate measures needed to meet immediate situations, (b) measures enacted on a stand-by basis to be put into operation should the need arise, and (c) an emergency plan, which could be activated in case of full mobilization, immediate danger, or surprise attack.

RESPONSIBILITY AS AN EMPLOYER

b. *Responsibility as an employer.* The federal government must assume a direct responsibility toward those it employs. In a defense situation many of these persons have been obliged to become federal employees – as members of the armed forces – involuntarily and are subjected to unusual hazards in the national interest. Toward these persons the federal government must assume full responsibility not only during their military career but also – to the extent they have suffered a permanent or temporary physical impairment and social dislocation as a result of military service – after it is finished. Responsibility toward members of the military forces and toward veterans is a primary federal obligation. That of the states, local

governments, and voluntary organizations is supplementary to this primary federal responsibility.

The federal government's responsibility toward its civilian employees, whether in regular civil service or in defense production, is also a direct responsibility even though less extensive than that toward its military personnel. In its own interest, as well as in fairness to its employees, it must assume the same measure of responsibility toward its workers as any other employer.

RESPONSIBILITY TOWARD COMMUNITIES

c. *Responsibility toward communities.* The federal government also has a direct responsibility toward the communities in which it functions as a large-scale employer or property owner. The discharge of this responsibility is, however, complicated by the fact that the federal government is not subject to local jurisdiction with respect to tax and other laws. Three types of situations appear to exist here:

1. In a very few cases, notably Oak Ridge, Tenn., Los Alamos, N. M., and Richland, Wash., communities have been developed wholly on federal land and within federal jurisdiction. In such an arrangement, not generally regarded as a very satisfactory one in terms of American concepts of social organization, the federal government itself assumes all normal community responsibilities.

2. In a typical military reservation and other types of federal installations the federal government assumes many normal community responsibilities toward those of its employees residing on federal property.

3. In the majority of cases nearby communities are expected to furnish normal community services to federal employees. In the case of an unusual burden in the field of education special federal grants are made to such communities. Payments in lieu of taxes are authorized (though not actually made) in the case of the Atomic Energy Commission and would appear a logical obligation in view of the extra services required of such communities as a result of federal activities and the influx of new employees.

There appears to be a serious need for clarification of federal policy in this regard: first, as to the degree to which it is considered desirable that federal employees be treated as a part of the surrounding civilian community, and second, as to the extent to which the federal government should assist such communities in meeting the costs involved.

RESPONSIBILITY AS A CONTRACTOR

d. *Responsibility as a contractor.* The negotiation and execution of large contracts by the federal government also involves certain responsibilities with respect to the social aspects of defense. The location in which such contracts are to be carried out is a major factor in minimizing many of the social problems discussed in the report. The labor and hiring policies of such contractors are of proper concern to the contracting federal agency. The definition of allowable costs for purposes of reimbursement under cost-plus contracts should be sufficiently broad as to allow such contracting agencies to fulfill the normal welfare obligations of employers toward their employees and the communities in which they function. In a few cases of excessive isolation from normal community services (as, for example, in the construction of off-shore bases or the assignment of American labor to contracts on foreign soil) it might be necessary for the contracting agency itself to provide services usually available in the typical American community and this too should be considered in the process of contract negotiation.

USE OF PRIVATE ENTERPRISE

e. *Use of private enterprise as the agent of federal policy.* Private enterprise can also serve in other ways as the medium for the discharge of federal defense responsibilities of a social character. In some cases a federal defense agency might well contract with a private enterprise, agency, or individual to carry out functions which it might otherwise be obliged to perform itself. Should the proposal to utilize private physicians and hospitals in furnishing medical care to dependents of servicemen — in situations where federal care was not directly available — be adopted, this would be an excellent case in point. Another situation in which private enterprise has been encouraged to meet a recognized federal social responsibility involves defense and military housing, where a substantial part of the cost of such housing is underwritten through federal mortgage insurance.

CONTROL MEASURES

f. *Control measures.* Private enterprise might also be subjected in some instances to federal control in the interest of defense requirements involving social factors. Federal rent control in defense-crowded communities was an example of the use of this method.

REGULAR FEDERAL PROGRAMS

g. *Use of the regular federal programs.* Defense functions of a social character carried out through the regular programs of the federal government is also a method used in some instances in the past. For instance the Old Age and Survivors System was used during World War II as a means of administering special insurance against losses incurred as a result of civilian defense activity.

FEDERAL-STATE COOPERATION

h. *Use of the states and their political subdivisions* as the instrumentality of federal defense policy in the social field offers the widest range of possibilities for the discharge of federal defense responsibilities with the least disruption of normal political relationships and safeguards. State and local agencies in the fields of health, welfare, education, and related social services are uniquely equipped with the structure, coverage, personnel, and authority to perform governmental functions of a social character. In the defense field this can be done in a number of ways:

1. Special federal assistance can be offered to states or local communities in meeting defense-related problems, such assistance to be made available under specified conditions at the request of the recipient. Present grant-in-aid programs for school construction and operation in defense-impacted areas belong in this category.

2. Regular grant-in-aid programs can be adapted to meet defense-related needs. Thus the public employment offices are used for defense placement, the public health program assists communities adapt to rapid urbanization, grants by the Children's Bureau to state welfare departments assist in extending child welfare services to areas affected by defense-related social problems, etc.

3. The appropriate state department — with its local affiliates — can be designated as the *agent* of the federal government in carrying out certain defense responsibilities. This method was used during World War II in the Civilian War Assistance program. Under this program a contract was drawn between the administering federal agency (then the Federal Security Agency) and the state public welfare departments whereby the latter agreed to fulfill specified functions and expend federal funds in meeting certain needs directly attributable to war or defense conditions. This method, however, presupposes the prior existence of a continuing working relationship between these federal and state agencies in terms of a related grant-in-aid program.

8 *The Summing Up*

Free people will resist with all the means at their command the threat of forceful aggression or conspiratorial subversion on the part of nations motivated by totalitarian political concepts even though their resistance imposes heavy burdens. These burdens will be willingly accepted and courageously borne when they are fairly shared by the whole people and their hardships eased by the supportive and facilitating strength of a common democratic government. Thus facilitating social services substitute in a democracy for the terror and compulsion used by totalitarian nations as an instrument of government policy in achieving defense objectives.

This analysis of the social factors involved in the defense program and the possible methods available to the federal government in dealing with them is necessarily an oversimplification of a complex process involving every facet of our national life and social organization. From this total picture, however, three broad observations clearly emerge:

➡ *There is urgent need for clarification of federal policy with respect to the social aspects of defense and for the establishment of coordinating machinery for this purpose both in Washington and throughout the country.* The absence of such policy and such machinery at the present time is the source of confusion, inefficiency, and grave potential danger.

➡ *There is need for a clear affirmation of long-time federal-state-local cooperative relationships in the social field.* It would seem incredibly foolhardy to scuttle or weaken with uncertainty the existing structure of federal-state relationships at a very time when national interests and federal defense responsibilities make the federal government most peculiarly dependent on existing state and local governmental machinery in these fields.

➡ ***It is apparent that the full contribution to the defense program of states, voluntary organizations and individual citizens cannot be mobilized until federal goals and policies are clarified.*** Our experience convinces us that there is a vast reservoir of eagerness to participate in and contribute to this heroic effort of our own generation to safeguard for those of the future the values, institutions, and aspirations that form our heritage from the past. The federal government, charged by the Constitution with responsibility for the national defense, can by clarifying its own role liberate this powerful force that resides in a free people and their institutions.

AN EXPLANATORY NOTE

About UCDS and This Report

United Community Defense Services (UCDS), since it began work in 1950, has assisted the people of hundreds of communities to meet health, welfare, recreation, and planning needs intensified by the national defense effort.

Some of these communities felt the impact of defense industries. Others found their community facilities overburdened by nearby military posts. More than a fourth of the communities helped by UCDS felt the effect of both types of pressure.

All of these communities had one thing in common: *they were vitally affected by the defense goals and policies of the federal government.*

A year ago the UCDS Board of Directors decided that this organization's first-hand observations and experience in working with people in defense communities cast a new light on many facets of the national defense program, and that this material should be made available to the appropriate government officials in the form of an analysis of federal responsibilities toward social welfare needs related to the national defense effort.

Elizabeth Wickenden was engaged as the consultant to prepare the analysis. She brought to her task the experience of many years in dealing with governmental activities in the social welfare field. After occupying a number of executive positions in the federal government (including the Office of Community War Services during World War II), Miss Wickenden was, for ten years, Washington representative of the American Public Welfare Association. She is currently serving as a consultant to several national organizations.

UCDS is a federation of national non-profit organizations (*see list on back cover*), established when our country embarked on its present defense program. The purpose of UCDS is to provide a means whereby national agencies can work together in a unified approach to help defense communities set up their own health, welfare, recreation, and planning services.

Shaw, Charles

March 17, 1959

Dear Charlie:

I say you my thanks for your kind and generous letter.

It was a difficult decision to take mainly because it inconveniences a considerable number of cherished colleagues, but I felt I had no alternative.

I have been feeling for a number of years exactly what you express in your letter, namely, that most of us in broadcast journalism are merely middlemen handling some pretty shoddy goods without the opportunity even to examine their quality.

I haven't a clue as to what the year off will bring, but I'm sure it will not diminish my affection for you and your family.

As ever yours,

Mr. Charles Shaw

Dear Ed:

I have no reason for writing other than to congratulate you on your decision to take time for reflection and to express my envy of you. I have been terribly upset since my return from Cuba. I keep wondering if the reporting we get from all over the world is as bad as we got from such eminent reporters as Larry Allen and Bill Ryan. If it is, how can I remain in my job and maintain responsibility for passing on such information to a few million who listen to and watch our stations? Worse yet, how can I possibly do news analysis if I cannot trust the "news" I am supposed to analyze?

I am hoping I can get out. I am very interested in the possibility of trying to help the Cubans consolidate their revolution. I have had considerable correspondence and conversation with Cuban leaders about such an undertaking. After Cuba, there's Paraguay, Santo Domingo and Nicaragua. All of Latin American beckons with stories of great pith and moment.

Maybe I shall have to remain on after you have started on your sabbatical. Maybe I shall be at the same old stand when you return. But what will you return to? Do you see any hope that our business - print as well as broadcast journalism - will be any better in mid-1960 than it is now? Is there not the possibility that it will get worse?

Will you reflect on what can be done and how it may be done? I see no hope, and I am sick. I thought something could be done from within; but one is really trapped when he's inside. My fellow News Directors either smile at me or ask my aid in fighting for the repeal of Canon 35. Get the Bell & Howells into the courtrooms and all will be well!

As I said, I had no reason for writing you except that I wanted you to know how I feel. But my cowardice probably will keep me in this rather financially comfortable spot far too long.

Sincerely,

Charlie Shaw

Dear Ed:

My colleague Barry Nemcoff, who is television news editor, has applied for one of the CBS Foundation fellowships. This note is to let you know that his application has my full backing and that I think the broadcast industry, as well as Barry, would benefit from the additional education he would receive through this fellowship. His application will tell you that, having been born in China of Russian parents and having lived there until he was thirteen, he is fluent in Russian and Chinese as well as English. He got his bachelor's degree at Temple after a hitch in the Navy and now is an Army reserve officer in a branch that required top secret clearance.

I would very much regret losing his services for any length of time, but I would not want to stand in his way.

Thanks again for letting me do the bit for you last Friday night. There's a lot more I could say, but I might get maudlin.

Sincerely,

Charlie

New York 22, New York

Dear Ed:

My colleague, Ed Randall, tells me that he has learned secondhand that Eleanor Roosevelt has invited you and Dr. Hutchens, or plans to invite you, to join her next Friday afternoon while Randall plays a tape he recorded with prominent white leaders in Norfolk, Virginia, for distribution by Friendly World Broadcasting, which Randall heads.

If you have received the invitation, I can tell you as the result of my long and most impressionable friendship with Randall that you will find this a valuable experience. I'm not going to run at length about Randall's background and what he's trying to do because I know you would want to find that out for yourself in conversation with him. The only reason for this note is to recommend that you try to accept Mrs. Roosevelt's invitation simply because I know this would be the kind of occasion which you relish.

If you're tied up at that time, I know that Randall would go far out of his way to let you hear the tape on another occasion, and explain not only what he is attempting to do but what he already has done - in my opinion an awful lot of good.

I have a lot of personal things to tell you but I'll write about that later on.

Sincerely,

Charles Shaw

New York 22, New York

Dear Ed:

I haven't felt like writing you my thanks for your hospitality until Nancy had written the three of you, and she couldn't write until she had obtained the thing that she wanted to send along to you. Now that that has been safely dispatched, I join her in thanking you and Janet and Casey for the highlight of our year.

The changeover here at WCAU has been accomplished with very little commotion and I remain - although no formal announcement has yet been made to that effect - as head of an integrated News Department. The new television manager, Jack Schneider, seems like a very capable young (32) man, and he seems to have much more respect for news than did Vanda, who had very little. I remain on television at 1:00 p.m., Schneider having rejected network suggestions that we go back to Cronkite at that time, and I shall move from 9:55 a.m. to 8:55 a.m. with a five-minute roundup of regional news following a ten-minute network show. Starting October 11, I shall do a half-hour weekly show called The Face of Philadelphia, which will be a grab bag of problem-type Philadelphia stories "in depth!" We have already started producing a half hour of news at 7:00 a.m. daily and, while I am not involved on the air, I am kept hopping by supervision. There is talk also of my doing a Sunday show; so I won't have much time to spend in poolrooms. Of course, my nightly radio commentary continues.

You asked me to remind you by letter of my suggestion of Mayor Dilworth as a possible Person to Person guest. I was reminded of that yesterday when, in seeking film to back up a telephone report which Marion Anderson gave us on her United Nations job, I used the film of you and Miss Anderson together with Dilworth which we shot last year. My thought was, as I told you, that Dilworth would be a likely prospect because (1) He is perhaps the nation's outstanding "apostle of the big

city," about which he has tangled with such anti-city people as Frank Lloyd Wright; (2) he has a very interesting new house on Philadelphia's "society hill," facing Washington Square hard by Independence Hall, and he hopes to persuade other prominenters to return from suburbia or exurbia to city homes, and (3) he is one of the most progressive, controversial, gutty and telegenic men on the American political scene. You may recall that he was a bit of a hero in the Andrea Doria-Stockholm collision. I haven't approached him on this, but would be glad to do so if you desire.

I haven't had a moment to re-examine my book manuscript, but I certainly want to avail myself of your offer to show it to Mrs. Knopf. I want to make sure that it is good enough to show you before I send it along.

We move into our new house next Tuesday, and that will ease our burden somewhat. I suppose I will use any extra time to work with my Cuban friends, who seem to be progressing very well and who may be making some important news before next spring turns into summer.

All the best.

Sincerely,

Charlie

August 8, 1958

Mr. Edward R. Murrow
Pawling
New York

Dear Ed:

I remember a conversation you and I had at 49 Hallam Street between my return from France and my jaunt to Sweden, in which I said, "Wonder what we'll all be doing after the war," and you said, "Well, there'll be lots of revolutions, and they're always fun to cover."

The closest revolution I could find as my feet became itchy a few weeks ago was the one in Cuba; so I went there. This is what The Bulletin did with my report, which I also did in televised version - a half hour last Sunday with film I shot myself, the first I ever shot. Additionally, I milked seven radio shows and a small magazine piece out of the junket.

I also had much fun earlier this summer doing a half-hour television conversation with Professor Toynbee, whom I regard as one of the two or three greatest men alive. We arranged the conversation by correspondence; then we did the half-hour film show, using one camera with a 1200-foot magazine running all the time in one position and a second 400-footer taking closeup and reaction shots, in a total of 45 minutes from his arrival until his departure. And I've never been more satisfied with that sort of show; and, until I did the Cuban thing, I considered it my best ever.

I asked Toynbee if he and you knew each other, and he replied, "No, we have never met, but I would very much like to meet Mr. Murrow. I have the highest regard for him, especially for the work he did before the United States got into the war, and my regard has been increased by what he has done since."

Nancy, Kip and I continue to look forward to seeing you later this month. Kip does well at camp - he's on the tennis and other athletic teams and he's in the girls' chorus for a Gilbert and Sullivan show, which should have some psychological meaning of which I am unaware. We here at WCAU are awaiting our absorption into the CBS family, I with great eagerness and some others with apprehension. I may be wrong, but I feel that those who deserve to stay will stay.

Sincerely,

Charles

A Visit to Raul Castro's Rebel Hideout in Cuba

CHARLES SHAW

Charles Shaw, news director of Station WCAU, here reports on a recent trip to the rebel-held territory in Cuba.

Censorship has blacked out much of the news of the rebel movement, but Shaw's report shows that the rebel forces are still strong.

Shaw will also discuss his trip this afternoon at 3.30 P. M. over Channel 10.

By CHARLES SHAW

One of the most fateful revolutions in all the world today is being fought in the island Republic of Cuba, 90 miles from Key West, Florida; a little more than a thousand miles from Philadelphia.

A revolution against the government of President Fulgencio Batista was launched by a young lawyer named Fidel Castro and a handful of followers on July 26, 1953, and it seemed to die a-borning.

Ill-Starred Attack

Most of the rebels were wiped out in their ill-starred attack on the army barracks in Santiago de Cuba that July day. Castro was

year. Late in March, he proclaimed an April offensive to topple Batista.

On April 9, the rebels struck in Havana, Santiago and other cities; orders went out from the Sierra Maestra for Cuban workers to stage a general strike. The offensive failed; the strike call met with little response, and it looked like July 26, 1953, all over again.

Told of Kidnapings

I listened respectfully but doubtingly to Philadelphia members of the movement as they told me story after story of Fidelista activities, and they finally suggested that I go to New York to talk with Dr. Mario Llerena, Castro's personal representative outside of Cuba.

Dr. Llerena, a graduate of Princeton Theological Seminary and an ordained Presbyterian minister, spoke convincingly about the growing strength of the 26th of July movement in Cuba. And in the midst of my conversations with Dr. Llerena came news that rebels under Fidel's brother, Raul, had kidnaped 47 Americans and two Canadians.

Still in Business

That news, deplorable as it was, provided proof that the Cuban rebels were very much in business, so much so that they could kidnap not only American and Canadian businessmen at their isolated establishments, but American sailors and marines within sight of the U. S. Naval Base at Guantanamo Bay.

On the morning of July 14, armed with a short note from Dr. Llerena to a member of the 26th of July underground in Havana, I flew out of Philadelphia for the Land of the Secret Revolution.

Cuba welcomes tourists, but not reporters; so I went to Havana as a tourist. For the first few hours in Havana, I pretended to be interested in the usual tourist attrac-

Senora Gomez was expecting me; and with her was a man—let's call him Jose—who also was a Protestant churchman but of a different denomination from that of Senora Gomez.

They questioned me and I questioned them at great length. They wanted to know what I wanted to do, and I wanted to know how they proposed helping me do what I wanted to do.

And as I sat in that church, even realizing that Fidel Castro was reputed to be a dedicated Catholic, I began to wonder, especially as I recalled Dr. Llerena's Presbyterianism, if perhaps the 26th of July movement might not be essentially a Protestant effort to seize power in a predominantly Catholic country.

Outline Plans

But I said nothing about any such thoughts as Senora Gomez and Jose outlined their plans for me to travel the underground railroad to the Sierras and meet with either Fidel or Raul Castro and their fighting men. Jose excused himself, and Senora Gomez explained: "He go to bring the next man—how you say?—'up the ladder,' the man who next take charge of you."

As we waited, we talked about the religious life of Cuba, and Senora Gomez explained that Cuba is, of course, a Catholic country but its six-million population includes about 250,000 Protestants divided among Episcopalian, Methodist, Presbyterian, Baptist, Seventh Day Adventist, Pentecostal and other denominations. There are several synagogues in Havana, and many of the city's 50,000 Chinese attend Buddhist services.

"And," said Senora Gomez, "we have the very best relations . . . as you will see very shortly."

Priest Enters

I didn't have time to ask her to

CHARLES SHAW BOARDED a bus in Havana for the 600-mile journey to Santiago, capital of Oriente province, in eastern Cuba. He traveled all night. In Santiago, he made contact with the rebels, who took him by jeep to Raul Castro in his mountain hideout.

RAUL CASTRO

Castro, 27, younger brother of Fidel Castro, leader of Cuban rebel forces, was interviewed in his Cuban stronghold.

DEBORAH

Member of the top-level rebel Council of Twelve, Deborah is 28 and serves as interpreter for Raul Castro.

honest labor leaders, intellectuals, students, clerical workers . . . what

bet you he'd be insisting that I go to Santiago."

read one story about fighting in Cuba—a short item reporting that

Cuba on July 26. Castro was arrested and sentenced to 15 years in prison. Released 19 months later under a government amnesty decree, Castro went to Mexico and tried to reorganize his revolution.

With 82 followers, Castro returned to Cuba in December, 1956, to be met by government troops who killed all but 12 of the Fidelistas. Those 12, led by Castro, limped to safety in the towering, jungly Sierra Maestra, a mountain range which forms an almost impenetrable wall along the southeastern coast of Cuba.

There and then they began the revolution in earnest, a revolution conducted under the name of the "26th of July Movement." They named their movement for a failure which they hope will turn out to have been the beginning of success.

Off to Revolution

Three weeks ago tomorrow, after four months of secret negotiations with 26th of July representatives here in Philadelphia and in New York, I went off to see this revolution for myself.

Philadelphia members of the 26th of July Movement had argued with me that the Fidelistas were growing in numbers and enlarging the territory they controlled week by week but that the Batista government's censorship was so effective that hardly a word about the revolution was now reaching the outside world.

There had been quite a bit of news about Castro earlier this year, when he had been interviewed by Herbert Matthews of the New York Times. Castro was arrested in the usual tourist attractions. I hired a driver suggested by the hotel, one Armand, who showed me the sights, and I finally maneuvered him to a spot about a quarter mile from where I was to meet my first contact.

Out for a Walk

At that point, I told him I'd like to walk around awhile, and told him to return to the hotel. He grinned knowingly and let me out of the cab.

I walked away toward what Armand most certainly thought was a romantic rendezvous arranged beforehand but which actually was one of the dozen or so Protestant churches in Havana and its suburbs.

It was in that church that I began ten days of association with the Freedom Fighters of Cuba — fighters in uniform in the rugged mountains of Oriente province and fighters in mufti in cities like Havana and Santiago de Cuba.

Nameless Heroes

I had expected to find a lot of heroes in Cuba, but I expected to find them only in the mountains. Find them there I did; but I found even greater heroes—and heroines —outside the Sierras, nameless men and women, who daily risk their lives as members of the civilian underground.

At the church, I met a woman whom I shall call Senora Gomez, whose husband is one of the leading Protestant laymen in Cuba.

A TYPICAL SCENE in rebel-held Oriente province. Followers of Castro brothers keep on lookout for government troops amid thick foliage of their hideout.

I didn't have time to ask her to explain that remark; because there was a knock at the door, and Senora Gomez opened it to reveal Jose and the "next man up the ladder."

He was a cassocked priest of the Roman Catholic Church, who had come eagerly to a Protestant church to take charge of the *reportero* who had been sent to Cuba to "learn the truth."

Under a Sallman painting of the head of Jesus they sat: Senora Gomez, a member of one Protestant church; Jose, member of another Protestant church; and the priest of the Roman Catholic Church, whom I shall call Padre Gonzales.

All Are United

I remarked, perhaps ineptly, on Padre Gonzales' presence in that building, and he replied, without offense:

"In Cuba today, we are Catholics and non-Catholics only in matters of dogma, and there we differ as much as Catholics and non-Catholics in any country. But where liberty and decency and human dignity are concerned, we are merely Cubans. We are obeying the great commandments of Our Lord, and there is no place I will not go to do Our Lord's work."

I asked Padre Gonzales about charges that the Communists dominated the 26th of July Movement. With Senora Gomez and Jose nodding vigorous assent, the priest denounced the charges as ridiculous, but then he said:

"The next person you meet will be able to convince you of how false those charges are even better than I. Tomorrow morning, you will go to the Cathedral and ask for . . ." and he gave me the name of a church official whose identity I dare not even try to approximate.

Denies Red Charge

He was not the Cardinal; he was not a Bishop; but he was a churchman of considerable position. As for the charge of Communism, which has been made by the Batista forces, the churchman at the Cathedral said this:

"Do you think that we of the Catholic Church would support a movement about which there was the slightest suspicion of Communism? You know what a Communist government in Cuba would do to the Church. Don't you think we have investigated Fidel Castro and his brother, Raul, to our satisfaction?

"As you meet more of our people, you will see that they are people to whom Communism would be anathema. They include Catholic priests, leaders of your Protestant groups, men and women of property, honest business leaders, students, clerical workers . . . what I like to think is a cross-section of Cuban decency."

The churchman then gave me instructions for my next step. I was to go to a Catholic church and meet a man who would arrange for my trip to Oriente province.

Contact in Church

That meeting took place in the sacristy of the church. The layman who was waiting for me with the pastor of the church was a handsome young man, garbed in a long white linen shirt called a *guayavera* which hung outside his sharply creased tan trousers.

This lean and vital young man, whose cover name was something like Captain Bradley, had one of the most dangerous of all jobs in the 26th of July Movement. He traveled regularly between the Sierras and Havana as the adjutant to the Movement's national delegate for Havana, and he acted as if he felt he would be captured by Batista men long before the revolution had triumphed.

Receives Letter

Captain Bradley gave me a letter, which he suggested I secrete between the bottom of my right foot and the sock; but I suggested another hiding place which he immediately approved. Then he showed me a name and an address in Santiago, which he had me repeat until my pronunciation of the street and section names was satisfactory.

"Can you remember this?" he asked. Assured that I could, he tore the strip of paper into tiny pieces and distributed them among three wastebaskets in the sacristy.

Then, as I expected him to tell me how I should proceed to Santiago, he asked me how I proposed to get there. Unexpected as the question was, I replied immediately, as if something unseen was dictating my words:

"I think it would be most effective if I went to the Cuban government's Tourist Department and got them to suggest a trip to Santiago. I could tell them I had seen enough of Havana and wanted to see some of the countryside.

Uncle at San Juan

"I could act most interested in Pinar del Rio (in the exact opposite direction from Santiago) or Cienfuegis (to the south and west of Havana) and then (ad libbing as I went along) I could mention something about my uncle's having been with Teddy Roosevelt at San Juan Hill and ask how far that was and where it was.

"And when he mentioned Santiago, I'd say something about Hobson and the Spanish fleet, and I to Santiago.

Captain Bradley's eyes danced, and the priest grinned, and the courier in the *guayavera* said simply, "I'm not worried about you. I hope I'm still around when you get back."

I didn't quite have the nerve to go to the Tourist Department in person, lest my facial expressions or other mannerisms betray me.

I joined an American couple at lunch in my hotel so that I might complain about the so - called attractions of Havana within earshot of waiters, any one of whom might well be one of the hated *chivatos* (the word literally means "goat," but it is the equivalent of our "stool pigeon"); then I took my problem to the room clerk and had him put me in touch by telephone with somebody who spoke English at the Tourist Department.

Tourist in Havana

The man at the other end of the line soon was aghast that I, the nephew of a man who had fought at San Juan Hill, hadn't thought of Santiago right off. I worried lest he might have a list of the Rough Riders and would ask me for the name of my uncle.

But I never had to supply the name of my imaginary relative.

As I walked and rode around Havana to while away the time before my bus left, I reflected on what I had seen and heard.

On buildings fronting the Prado, on walls along the Malecon drive and elsewhere were dozens of posters soliciting votes for candidates in a presidential and congressional election scheduled for November 3. I had asked members of the 26th of July underground, bellboys, taxi drivers, waiters and others about the elections. They all scoffed, some more than others.

Hand-Picked Man

The consensus of the Fidelistas was that the elections probably would be postponed; but if Batista did decide to go ahead with them, the election of his hand - picked presidential candidate, Dr. Andres Rivero Aguero, was assured.

The feeling was that Batista then would reassume his old status of "strong man," the power behind the President, or become head of the armed forces, which wield the power in Cuba today.

Rivero, at the moment, has opponents, among them former President Ramon Grau San Martin, but the guessing is that they'll withdraw at the last minute if they're convinced the government is going ahead with the elections, their withdrawal to be a dramatic protest against the rigged elections.

The newspapers were filled with stories from and about the Middle East. But in ten days, I Cuba—a short item reporting that eight rebels had been killed in a skirmish—and one story reporting the arrest of several so-called "saboteurs."

Censorship is complete. The regulations require that Cuban newspapers report government activities only by publishing government handouts. The handouts must be used textually; they are to be played up or down as the government indicates.

Cables Censored

All outgoing cables are censored, and the correspondents are never told what happened to their cables — whether they were killed altogether or what parts may have been deleted.

Most Cuban newspapers are government-subsidized, and they can be killed simply by withdrawal of the subsidy. But, if necessary, they can be killed by being suppressed by the army and the national police.

Everywhere in Cuba — not just in Havana — boys and men hawk tickets for the National Lottery, drawings for which are held every Saturday. Customers are assured that the drawings are honest by the fact that the numbers are drawn by little girl inmates of an orphanage, who announce each number on a national radio network.

Batista's Fortune

Nobody doubts the honesty of the actual drawing; what everybody wonders is how much of the money is pocketed by government officials and how much is distributed among the holders of winning tickets.

Tourists returning to Havana after only a few years' absence are struck by the changing face of the city. New public buildings, new highways, new monuments are springing up throughout the city and its suburbs.

Batista's enemies say this is how he has accumulated a personal fortune estimated at between $200 million and $300 million stashed away in United States, Swiss and Spanish banks: the rakeoff on public works projects.

Talk of Corruption

Batista's foes talk about corruption; but, of course, they can't really document their charges with the sort of evidence that would stand up in court. Whether you believe the specific stories or not depends largely on your opinion of those who tell the stories. But even before you hear such stories, you sense corruption, and corruption as the dictionary defines it: "the state

Continued on Page 2

A Visit to Raul Castro's Rebel Hideout in East Cuba

Oriente Province Center Of Fight Against Batista

Continued From First Page

or effect of decay, impurity, taint, depravity, moral deterioration.

Havana reeks of such corruption; it is personified by the procurers on all the principal streets; the purveyors of pornography; the shills for obscene entertainment; the streetwalkers; the child beggars, two of whom threw stones at me when I refused them money; the shortchange artists.

Few Leave Havana

Unfortunately, only a very small percentage of American tourists ever see more of Cuba than Havana. Small wonder they have a low opinion of Cubans in general, that they can't get excited about a revolution which, they may have concluded, merely is an attempt by one gang of crooks to supplant the crooks in power.

But in Havana I had met people who bore all the earmarks of being as decent and honorable as any I had met anywhere: Senora Gomez, Jose, Captain Bradley, the priests, their superior in the Cathedral.

Even so, I had doubts about the character of the Fidelistas as a group, because the fetid atmosphere of Havana was overpowering; and within only a few hours after leaving the church where I had talked with Captain Bradley and the priest, I was assailed with doubts about the people of Cuba.

Bus on Schedule

The bus for Santiago de Cuba, 600 miles east of Havana, left on schedule, at 10.30 P. M. and was due to arrive at 11 the next morning. It was a most comfortable carriage, of the same type as our Greyhound buses, air-conditioned and with soft reclining seats.

It carried a crew of two—a driver and conductor, who punched the long triplicated tickets until they looked like strips from a player piano roll. There were about 50 passengers aboard, and I was the only one who spoke English.

The bus rolled out of garish, neon-lighted Havana into the darkness of the countryside, and I could see only the shadows of the palm trees, the banana trees and other tropical flora against the starlit but moonless sky. The headlights of the bus revealed a two-lane highway in fairly good condition.

10 Minute Halt

The driver gestured with his hand to indicate that I should rise, then said to the young soldier "Americano." The soldier smiled—it seemed apologetically—and waved his hand, palm outward, like a metronome to say that he would not bother me.

Procedure Repeated

The procedure was repeated outside of Holguin, and again I was spared.

At Cauto Cristo, between Holguin and Bayamo, we were halted at an Army post, and a mustached civilian in panamà hat and shirt sleeves came aboard, cursorily inspected the baggage racks, then took a standing position at the front of the bus, and he rode to Bayamo, about 20 miles along.

Between Holguin and Bayamo, the highway runs due south; and straight ahead one could see the forbidding Sierra Maestra. Somewhere in those mountains, I thought, is Fidel Castro, deploying his forces against a government offensive which, I had been told in Havana, had been going on for more than a month.

No Looks of Victory

How was he doing? There was no way of telling; but the government soldiers along the roadside and the ones who boarded our bus bore no expressions of victorious jubilation. It may have been my vivid imagination; but they all looked nervous and frightened to me.

Another search at Bayamo, this one more thorough than the others. But the driver's magic word "Americano" again kept my person and my combination attache case and overnight bag inviolate.

At Bayamo, the road turned east again, and we rode parallel with the Sierra Maestra. The mountains which had been only purplish silhouettes in the distance now assumed definition—some of the peaks were bare rock, others were verdant.

Somewhere in that vastness was Fidel Castro, perhaps relaxing this late forenoon with the works of Jose Marti, the poet-philosopher apostle of the 1895 revolution who, on the verge of the revolution's triumph, had been killed in the Battle of Dos Rios in Oriente province while advancing toward Havana.

Marti died at the age of 42;

Rebel Forces Operate on Three Fronts in Cuba

Fidel Castro, rebel commander, directs operations on the First Front deep in the Sierra Maestra mountains. His younger brother Raul, who was interviewed by Charles Shaw, of Station WCAU, commands the Second Front in Sierra Cristal area. A Third Front is near Santa Clara. There also is guerilla fighting at Holguin.

most primly, knees together, hands folded in her lap. A breeze flicked the hem of her dress, and she gathered it tightly under her. Other girls came in and out, and they gave me friendly smiles. One of them suggested coffee, and I resumed the beverage routine of my bus trip.

With a mixture of halting Spanish and English, I learned that one had not yet finished high school, another was a secretary, one was a teacher, still another was a nurse.

And the difference between their actions and attitudes and those of the run-of-mine Havana women whom the average American tourist sees was the difference between day and night.

Asks for Letter

A great babble of voices heralded the arrival of Yolanda, a 21- or 22-year-old in white blouse, pedal pushers and sandals. Her hair was cut boyishly short; she wore shell-rimmed glasses. She was brisk and direct. The others cleared out of the room, and Yolanda said to me: "You have letter?"

I took Captain Bradley's letter from its hiding place, and you might express the wish that your association with this young lady extends over a period of several days. The people at the hotel, I'm sure, will be most *simpatico.*"

At the hotel desk, I began to inquire about the location of San Juan Hill when I was addressed by a tall, thin dark-skinned Cuban, a genial fellow who introduced himself as Herbert, "the hotel's official interpreter." He was at my service, to help me in any way.

I thanked him and explained that a friend at our Havana Embassy had arranged an escort for me.

Avoids Americans

"What's his name?" Herbert asked quickly. "I know a lot of people from the Embassy. There are two of them out on the porch right now."

"Look," I told him, "do me a big favor, will you? Don't tell them I'm here. This is the first city I've ever been in that wasn't crawling with Americans, and I like it that way. I can see Americans at home; let me enjoy this, will you?"

I handed Herbert a deposit for his services, and he grinned. And he kept his promise of not introducing me to any Americans.

more friends has Castro," somebody replied. "It's like—how you say?—he sows the teeth of *dragones.*"

"How about the priests in the Cathedral?"

Gift From Batista

"Batista, he tries to make friends. He gives $100,000 and his wife give $100,000 to fix up the Cathedral. But the Archbishop, they say, is a friend of Castro. He save Castro's life on the 26th of July in 1953. He hide Castro until he's promised that Castro won't be killed; then he give him up to Batista, and Batista keep his promise."

"But Batista's men do a very bad thing after Castro come back. They hear that one priest is helping Castro; and they go right in the Cathedral after him. Never before was a Cathedral in Cuba violated.

Arrested a Priest

"They arrest the priest, Padre Sardinas, and they hold him 74 hours. But they finally let him go . . . so much trouble was caused. They let Padre Sardinas go, and the Padre go to the Sierra Maestra. There he is now, with Fidel. Fidel also has a Protestant minister with him . . . they hold services all the time."

that he had expected my friend in the Embassy to have arranged something a lot fancier for my companionship.

Outside, the women pointed to a jeep, at the wheel of which a man was waiting. The younger woman, Dolores, climbed into the back seat and beckoned for me to follow; the older one, Luisa, sat beside the driver, whom I call Juan. He drove me to Yolanda's neighborhood, but to a house other than Yolanda's, ushered me into a bedroom, bade me open my case and helped me select some picnic-type clothes.

Juan knew a few words of English; and it wasn't long until we seemed to be conversing fluently with his little English, my little Spanish and gestures by the armload.

Attired in lightweight trousers, a pullover sport shirt and rubber-soled shoes, I rejoined Dolores in the back seat of the jeep. Juan got behind the wheel, and we headed out of town.

Takes a Wife

A half a mile out of town, Juan stopped suddenly, having remembered something important. He pointed to Dolores and said, "Wife."

his belt. On his left arm, a brassard with the words "26 de Julio." His pants were tucked into paratroopers boots.

Climbs Into Car

He seemed to know Esposa, and the two of them chatted a while; he shook hands with me heartily, and climbed into the front seat beside Luisa. He escorted us for several miles, leaving us to join a half dozen other rebel soldiers who were mingling with the local peasantry outside a thatched hut.

We now were well within rebel territory, and the soldiers became more numerous. They waved and smiled as we passed by.

By this time, the road was a road only because it was called a road. It was slashed every few miles by streams, some of the ruts were two or three feet deep and Juan had to pick his way along as best he could. He played with the brake and clutch pedals as he changed gears and shifted in and out of four-wheel drive like a pipe-organist.

Higher and higher we climbed, the hardy jeep responding to seemingly impossible commands, and we crawled along for at least several more miles.

Time Out for Lunch

No point in my asking how much farther we had to go, because not even Esposa knew where we were to meet Raul. All she knew was that his headquarters were a good ten hours out of Santiago, but she hoped that he would come part way to meet us.

"Soon we eat," said Juan, and that was the best news I had had all day. With that, he turned off the road and traveled down a narrow lane that led to a veritable village of rebel soldiers and civilians.

The center of this community was a large wooden building, probably once a barn, which served as the command post for Compania A, Ejercito Revolucionaria, 26 de Julio (Company 3, 26th of July Revolutionary Army).

The building, its one floor containing a center hall which served as a mess hall, an office for the company commander and four other rooms, was teeming with people. There were dozens of young women, busy making and altering uniforms, cooking and performing other chores.

A 14-year-old Soldier

Soldiers arrived and departed by jeep; others conferred with the captain. Everybody was laughing . . . except one boy—he

like woods to visit a small building where the rebels manufactured grenades and crude but effective bazooka shells, which were fired from Springfield rifles. Every command post had an arms factory, some of which made mortars, the heaviest weapons the rebels have.

Raul Arrives

As Hector and I strolled back toward the building, we heard a great commotion from the direction of the front, and Hector explained, "The commander has arrived. Ah, yes, Deborah is with him. You will be able to talk much."

The new arrivals were about a hundred yards away, and I strained my eyes to pick out Raul and the mysterious Deborah.

In the distance, I could see two persons with long hair—hair hanging a good six inches below their shirt collars, and apparently smooth faces. One of them wore a cowboy hat and striped shirt; the other a plain grey shirt and pillbox-type peaked cap. It wasn't until I was quite close and saw the wisps of beard on the face of the one in the striped shirt that I picked him as Raul and the other as Deborah.

Both were interesting, but Deborah more so. She was a young Dolores del Rio—tall, slim, with straight jet black hair pulled back tight and caught in the back to form a pony tail. She wore ankle-height flat-heeled boots as if they were dancing pumps.

A Daring Leader

Raul's face, in repose, was the face of a boy, almost the face of a young woman. But when he talked, his face became that of a young man. He gave the impression of gentleness and softness, which, I was told by everybody who knew him, was not a correct impression. He was known by his men as one of the toughest, most daring of all the rebel leaders.

The rebel soldiers were clustered about Raul, who shook hands, slapped backs and shouted like the class president at a college reunion. The girls just stared, and when Raul smiled at them, I expected them all to swoon. They smiled back in ecstasy.

Hector took my arm and started elbowing through the group, but I stopped him.

"Let them finish," I asked. "This is great for them."

I meant what I said, but I also wanted to observe the way the men acted toward Raul. . . . I feel that you often can judge

fairly good condition.

10-Minute Halts

Once every two hours we would halt for ten minutes, the bus to get gasoline and the passengers to refresh themselves. It would give me time for two cups of cafe con leche—hot milk with about an ounce of syrupy coffee so strong that it colored the milk medium to dark brown, and whatever kind of solid food I could order with my halting Spanish.

Abont nine minutes after we halted, the driver would start the engine, honk the horn, and he would be off promptly.

I followed our progress on a gasoline company's road map; but I needed no map to tell us when we were nearing Oriente province. Floodlights ringing army posts bathed our bus as we drove by at reduced speed; more and more government soldiers appeared. All this a good 150 miles west of the Oriente boundary line.

Daybreak found us in Ciego de Avila, in western Camaguey province, pretty much on schedule. Ten minutes there for breakfast—more cafe con leche and cakes—then on to Camaguey City, and ever closer to Oriente.

There were no signs to tell us that we had entered Oriente. Nobody on the bus informed me. But I could tell almost as surely as if there had been a high wall and a moat a mile or so east of Guamaro and we had crossed over a drawbridge.

Zone of Hostilities

Oriente province is, by official proclamation, a "Zone of Hostilities." Here again is one of those official acts which belie the government claims that there is no substance to the 26th of July Movement.

The Fidelistas pose no threat, the government says, yet one-fourth of the nation is a Zone of Hostilities. Batista has committed at least one-third of his army to Oriente. The whole country is under what is known as the "Emergency Law."

It was eight o'clock in the morning when we crossed into Oriente. The countryside was flat and green. More palm trees, more banana trees... corn fields now... a few cows here and there... small thatched huts. Few civilians in sight, but squads and platoons of Batista soldiers every mile or so.

Frisks Passengers

The town of Victoria de las Tunas (Victory of the Prickly Pears) lay ahead, and there we stopped. A young soldier, his United States-supplied helmet at least one size too large and wobbling on his head, boarded the bus and ordered everybody up.

He quickly frisked the passengers in front of me, glanced at the luggage on the racks. When he approached me, I pretended not to have the slightest idea of what was going on.

Marti died at the age of 42; he was ten years older than Fidel Castro is at the moment.

Stopped Once Again

At Palma Soriano, about 30 miles west of Santiago, we were halted again, and everybody was ordered out of the bus. The other passengers took their luggage, but I walked out unencumbered. The driver pointed to another man's attache case, pointed to me and pointed to the inside of the bus. I went and got my case.

This time I had to open my case; but the soldier only glanced at the contents. While others emptied their wallets, he waved me aside. Soon we were on our way again, with two soldiers riding with us through the town.

We were on the last leg of our journey, and only about an hour behind schedule, despite all the stops. At about 11.45, we reached the outskirts of Santiago, where we were stopped for another search. This was the last time; and, once again, I was the only passenger who didn't get a thorough going over.

And I dare say that I was the only person on that bus who was carrying something incriminating. But I was a *turista Americano*, and the Batista policy is to be nice to Americans.

Cake in the Terminal

At the bus terminal in Santiago I tried to act as if I wasn't quite sure what I wanted to do; and in the meantime, I ordered some coffee and cake. I felt it would be best to wait until the terminal contained fewer people before I asked to be taken to the address of my next contact.

As I chewed on my cake and sipped my cafe con leche an English-speaking cab driver approached to offer his services. I inquired about hotels; and when he suggested the Casa Grande, I asked him to take me there.

Once under way, I tapped him on the shoulder and said, "I've got a better idea. A friend of mine at the United States Embassy gave me an address, and I think I would like to go there first." I repeated the address which I had memorized in Havana, and he understood.

The house was that of a middle economic class family, similar to hundreds of houses in provincial Cuba. My knock was answered by a young woman, no older than 21, and I pronounced the name of the person I was supposed to see. I shall call her Yolanda.

Calls Yolanda

The young woman who greeted me obviously was not Yolanda. She took my case and camera, bade me sit in a rocking chair and began to telephone. After about four calls, she said to me, "Yolanda come . . . pronto."

She sat across from me, after from its hiding place, and handed it to her. She read it quickly, then went to the phone. I could tell that she was summoning a *companero*.

The call completed, Yolanda disappeared, to return in about five minutes with a bag of food. Two small fried chickens, still hot; potato chips, pickles, beer and orange soda. When I declined the beer, it remained untouched.

Most of the 26th of July people, I learned later, are abstainers; and the abstinence rule is rather strictly enforced in the mountains. It's a matter of common sense: Those people play for keeps, and they have to have their wits about them at all times.

Taken to Another House

When lunch was finished, I was taken around the corner to another house, motioned to a chair and left alone. A middle-aged woman — she turned out to be Yolanda's mother — appeared with a huge glass of fruit juice; then she disappeared.

I dozed off in my comfortable chair and was awakened by a gentle tug at my sleeve. I awoke to see Yolanda and a young man, who had come to give me final instructions.

"You want to see Fidel?" he asked.

"That's why I came," I replied.

"And he is anxious to see you," the young man said. "But there is the question of time. How much time do you have?"

Patrols on Every Road

The young man explained the problem. The government had patrols on every passable road leading into the Sierra Maestra. Rebels were going in and out, but by circuitous routes, which took at least four days to chart.

Before they would let me go in, they would have to send a man ahead to plot a safe course, have him return and have him lead me to Castro's headquarters. It would take eight days, four in and four out, for the explorer to plot the course and four more days before I could reach Fidel's headquarters.

And all that depending on the explorer's survival.

"But," said the young man, "I can take you to Raul's headquarters in the Sierra del Cristal tomorrow morning. We already have mapped a course for that trip."

We agreed quickly that I would go to the Cristal in the morning.

Receives Instructions

Then the young man gave me instructions:

"I suggest that you take a room at the Casa Grande Hotel. Tomorrow morning a young woman will call for you, and you might explain to the hotel people that you are expecting a caller to take you sight-seeing.

"If you happen to be talking with anybody else at the hotel, ducing me to any Americans, but he introduced me to plenty of Cubans, with whom I talked in walks around the city and on the porch of the Casa Grande.

They talked about "the trouble," which I affected not to understand, and they explained that they meant the revolution. I told them we knew very little about that in the States and that I had wondered about all the searching during my bus trip.

Tell of Censorship

We in the States had heard nothing, they said, because of the censorship; the only news even in Santiago is transmitted by word of mouth.

My fellow conversationalists would disavow sympathy with the 26th of July Movement; then they would tell one tale of horror after another.

"You see that bank across the square?" one Cuban said to me, "that new building over there. Just last Saturday, at 6.30 in the evening . . . the square was filled . . . two boys threw a grenade into a Shore Patrol car.

"The grenade failed to explode. The soldiers jumped out of the car and killed the boys right there. They were only 14 or 15 years old. An American businessman ran over there, and he cursed those soldiers as murderers and butchers. It's a good thing those soldiers didn't understand English."

No Young Men Around

"Almost every day, something like that," another man said. "Look around . . . do you see any young men? No . . . they're all in the hills, or their parents keep them inside their houses. Just to be young in this province is to be suspect."

"Silly dam' kids," Herbert remarked. "They say they fighting for cause. Huh . . . you and I, we know better . . . but what do they know? They fight for cause, and they die. Sometimes I think they die happy. Silly dam' kids."

Twilight had come as we sat on the verandah of the Casa Grande Hotel, which extended along one side of the City Square. Over to our left was the Cathedral of Santiago (St. James); to our right was the City Hall and across the square was a row of business buildings, including the bank.

Square Is Empty

"Observe the square," one of the men said; "it is almost empty. Before the trouble, it would be filled at this time of night. This is July, the month of the Carnival, the greatest carnival in all the world. This is the month of San Tiago. But there is no carnival these days. Almost every family is in mourning. Maybe six thousand young men have been murdered . . . murdered, not just killed in battle."

"I don't suppose the people are too happy about Castro then, are they?" I asked.

"The more Batista kills, the time."

"Another priest go up in the hills two days ago," another member of the group said. "He go up to Raul . . . to hear confessions of the men. But he came back, I think."

"What about the Castros?" I asked. "What kind of men are they?"

"Crazy dam' fools. Their father die, leave them $14 million . . ."

Another man interrupted: "No, no, not $14 million . . . maybe not even a million."

Live In Mountains

"He leave them lots of money, anyway," and all the others nodded in assent. "And what they do? They could have everything they want, and they live up in the mountains like poor men. Crazy dam' fools. But they have lots of friends."

Two 1957 Oldsmobiles went by, in tandem. "Shore patrol," I was told, "always two together."

Two women walked by, and the men lowered their voices.

The man next to me whispered: "That one woman, the good looking one . . . her husband is chief of the Secret Military Intelligence here in Santiago. She's *chivato* for him. She says she no understand English, but she understand English as good as you do. She listen all the time and tell husband. Some Cubans talk English to be safe, but they no safe from her."

Two more Oldsmobiles sped by, then two more. They screeched around the corner and streaked toward the airport. "More boys will die tonight," the man next to me whispered, and Herbert remarked, "Silly dam' kids."

Back in the Hotel

We talked about nonentities for a few minutes, strictly for the benefit of the SMI chief's wife. Then we broke up . . . Herbert headed for his home, the rest of us for the hotel elevator. I fell into bed for the first time in almost 40 hours.

The phone rang at 8 o'clock the next morning, and I heard a woman's voice, speaking Spanish. I replied in English, but she came back in Spanish. So I said, "I come down. Uno minuto."

Already dressed and waiting, I walked down the one flight of stairs from my floor to the lobby and found two women, one looking very much like Yolanda and the other a buxom 35 or 40.

It was obvious that neither knew one word of English, but I had to assume that they were to be my escorts to the Sierra de Cristal. I gestured to indicate that I would return to my room to put on a tie and get my case, and they nodded.

Leaves With Women

Five minutes later, I was walking out of the hotel with them; and I looked out to the porch to see a very puzzled Herbert. His expression indicated I pointed to myself to indicate possession, pointed to Dolores and asked, "My wife?" Then I opened my Spanish-English dictionary to the word "wife," and asked. "Mi esposa?"

"Si, si," they all replied, grinning. I not only grinned, I laughed at the absurdity of the situation. Here I was with a girl young enough to be my daughter, a girl who spoke no English while I spoke very little Spanish who, in case we were stopped by Batista soldiers, was supposed to be my wife.

At any rate, I no longer called my companion by her right name . . . from then on she was "Esposa," and I to her was "Esposo." To Juan and Luisa, who actually were man and wife, I was "Mister Charlie," and then merely "Charlie."

A Car Ahead

Up the road a car was stopped. "Esposa" took my left hand and signified that I should put my arm around her.

As soon as we had turned a curb and left the car behind, she returned my arm, and I remarked, "That sure was a short marriage." None of the others understood.

The route Juan took showed that he had well cased the roads leading to the Cristal. He would follow the highway for a while, then take a dirt road or cut through a sugar plantation, return to the highway and detour again.

In mixed Spanish and English, he explained: "This road is bad but no soldiers. That road over there is good but there are soldiers." Thus we wandered about the countryside for more than two hours.

Nearing Rebel Area

By then it was obvious that we were in or nearing rebel-controlled territory, because we were moving straight ahead and turning only at intersections. Esposa took over as navigator, and Juan obeyed her polite commands. Esposa was clearly the boss.

We had long since run out of cement roads, but the dirt road we were traveling was fairly smooth. They worsened gradually so that you got used to the increasing discomfort.

Two and a half hours after take-off, we were riding along little more than a lane through jungle-like growth when we saw the branches of a bush ahead quiver and a uniformed young man step into the middle of the road. He was the first rebel soldier I saw and Hollywood could not have done a better job of casting.

A field cap sat jauntily on long, wavy coal-black hair, which lapped over the collar of his blue-green uniform. His bronzed face seemed to be sculptured . . . a good sized straight nose, a strong jutting chin and large black eyes. He carried a Winchester rifle.

Two hand grenades hung from couldn't have been more than 14—who carried a pistol and tried to swagger without too much success. His face was beardless; his hair was short, both indications that he was just a novice.

The rebels let their hair and beards grow as a sort of an act of faith and as a measure of their length of service. The second worst punishment that can be inflicted on a 26th of July soldier, I was told, is to cut his hair and beard, beacuse that strips him of his marks of seniority. The very worst punishment is not to let him fight . . . to assign him to desk duty.

I was turned over to a civilian with the cover name of Hector. His was a job like that of Captain Bradley . . . he traveled in and out of the mountains; and he gave me the impression that he might be on the ragged edge emotionally. He was hoping that Raul would let him remain in the mountains and fight.

"Where Do They Stay?"

I asked about all the girls at the command post. "Where do they stay over night?"

"They don't. They return to Santiago or Guantanamo or their villages at nightfall. They're here to help and not to cause any mischief."

There was only one exception to the no-women rule at Company A command post—the captain's wife, chubby, gray-haired and about 50, who was in fact if not in title, the chief cook and bottle washer.

But one of the rebel soldiers wore an apron on which had been stitched the letters "26 de Julio—Jefe Cocinero," the last two words meaning "Chief Cook."

I asked Hector about the distance to Raul's headquarters, and he reported that Raul was coming here to meet me.

"Does he speak English?"

"Not very well, but he's bringing with him a woman who speaks perfect English. She will be his interpreter."

Wander About Post

Hector and I wandered about the post. In the captain's office, the company commander showed us a map of the area he commanded and proudly displayed his small library, a mixture of books on military science and the writings of the poet-philosopher Marti.

In one corner was a bust of Marti; in the opposite corner, a shrine to Nuestra Senora de la Caridad del Cobre—the Virgin as, all Cuban Catholics believe, she appeared to save two children who were lost and facing death near the town of El Cobre in the Sierra Maestra many years ago.

Almost all the rebel soldiers wore necklace medals of Nuestra Senora de la Caridad del Cobre, who has become Cuba's patron.

We walked into the jungle- I feel that you often can judge a man better by how others react to him than by what he says and does himself.

Kidnaper of Americans

Had I met Raul alone, my snap judgment might well have been most unfavorable. Even after my brief association with him, I could not think of him as one whom I would like to have as a close friend. He was brash and cocky; but he is only 27 and how brash and cocky was I at the age of 27?

This 27-year-old, after having lived in the shadow of his revered brother, Fidel, had just been the object of world attention because of the kidnapings of 47 Americans and two Canadians he had engineered, and it was pretty heady wine he was drinking.

Raul, Deborah and a few others moved away from their admirers and into the captain's office. Hector presented me to them.

I asked questions as they came to mind, not necessarily in the order of their news value but mainly because that's the way the conversation ran.

"Why a revolution? Elections are scheduled for November 3. Why not settle this with ballots rather than bullets?"

Denounces Elections

Raul smiled, replied in English, "The elections are a fake," then went on in Spanish, which Deborah translated:

"Batista doesn't dare hold honest elections. If he did and the people's choices would be elected, the crimes of his administration would be exposed and just about everybody in the government would be put on trial. All the government officials are in this together, and they have to stay together for mere self-preservation. If the elections are held, they will be rigged. But they'll probably be postponed under the Emergency Law."

"How are you doing up here? Are you gaining or losing, or standing still?"

"We are gaining day by day, and if you want proof, consider this: Fidel went into the Sierra Maestra in December 1956, just 19 months ago, with 12 men. Today, he has thousands. Don't take my word for it. You saw for yourself some of the army activity in Oriente province along the road to Santiago. Batista has committed one third of his army to fighting Fidel. Fidel must have made a lot of gains.

Lists the Fronts

"Fidel commands the First Front, all of the Maestra.

"On March 10, 1958—last March—he sent me here to the Sierra Cristal with 150 men to establish the Second Front. Today, we have between five and six thousand men. It is a big front, extending from Sierra de

Continued on Page 3, Col. 1

Revolt Leaders Defend Kidnapings

Charge U. S. Bombs Fell On Civilians

Continued From Page 2

Nipe on the west, through the Sierra del Cristal and all the way north and east of Guantanamo.

"Then there is a Third Front, in Las Villas province, south of Santa Clara. It covers a large area.

"Finally, there is a guerilla front, which, of course, is very fluid, around Holguin."

Rebels' Organization

"How are you organized?" was my next question.

Raul proceeded to draw a diagram of the organization of his own command, at the top of which, however, was his brother's command. I explained that I was more interested in the organization of the entire 26th of July Movement. This is how he explained that:

The leadership is vested in a so-called National Council of Twelve, of which Fidel is chairman. Militarily, the movement is divided into an army, which fights from the mountains and conducts guerilla warfare, and a militia, which operates in the cities.

There are divisions for propaganda, education, administration, supplies, plans, finance and all the other needs of a military and political movement.

Why the Kidnapings?

Then I asked a question which had been asked of Raul many times in the two or three weeks before my arrival: "Why the kidnapings of Americans and Canadians?"

Raul replied in volleys, and Deborah waited until he had finished. She took a deep breath, adjusted the collar of her shirt and began:

"Well, the Batista army had been attacking us here, as well as Fidel's forces in the Maestra, since April. Their bombers came over twice every day.

"They killed very few of our soldiers but lots of civilians. The people were nearly crazy . . . they were living in caves . . . they were going hungry. And when some of them did get out and picked up bomb fragments, they would see United States markings on them.

"We staged the kidnapings first of all to try to stop the bombings. We figured Batista would not bomb if he knew our country people had thought they were being bombed by Americans. They had come to believe that Americans were beasts. They had never seen any Americans; so we took our guests around to see the people and let the people see them.

"I must say that the Americans we had up here were wonderful representatives of your country. The people liked them immediately, and they at least understand now that the American people are their friends, if not the United States government. We hope that they can come to believe that your government as well is their friend.

"One other thing: we got through the censorship and proved that we're in business."

Lunch Is Ready

The *jefe cocinero* peeked into the office to announce that lunch was served. Raul and Deborah suggested we continue our conversation at the table, and I welcomed the invitation after having barely staved off starvation by emptying a bowl of bananas and mangoes.

One of Raul's chief lieutenants engaged him in conversation at the table; and, after I had piled my plate with rice, thick red bean soup, a meat dish faintly mindful of chili con carne, a banana shaped corn meal preparation which tasted like a meatless tamale, and cold string beans, I turned to Deborah and asked:

"What about you? May I write anything about you? Frankly, I had never heard about you until today. . . and I find you're quite a woman. . . educated in the United States . . . high up in the movement. I would like to write about you. What may I say?"

"Well," she replied, "I believe it is now known that I am here and that I am called Deborah. That is not my right name. I shall tell you my right name, but I ask you not to use it for a while."

Attended MIT

To other questions, she said this:

"I am a member of the Council of Twelve. I am 28 years old. I studied chemical engineering at the University of Havana and at Massachusetts Institute of Technology. . . for one year.

"I wanted to be a chemical engineer, but I knew that one could do nothing worthwhile until Cuba is freed. So I joined the 26th of July Movement to do organization work. I worked in the cities until a few months ago, and then I came up to the mountains. I shall remain here until we have it was time for the girls to start back to their homes.

"Mi esposa" reappeared to say good-by. I took her hand and kissed it, saying, "It's been a lovely marriage," and when the remark was both translated and explained, the bearded rebels, the women, Raul, Deborah, even the pistol-packing kid joined in laughter.

I talked a while longer with Raul, Deborah and some of the others. . . then they took off, Deborah to her thatched hut which, I was told, was guarded constantly by four of the toughest rebels who were responsible only to Deborah, not even to Raul.

I was ready to go home now, but I had committed myself to spend at least another day and night in the mountains. It was little enough to do in exchange for all that had been done for me.

Rides on the Front

I slept that night in a hammock under the porch of the command post as the bearded teenagers and others just a little older went out on patrol and returned.

The next day, I rode around with them over much of the Second Front; I talked as best I could with them about their hopes and dreams.

I recalled a remark that Raul had made when I asked him what kind of weapons he had:

"We have rifles and pistols and home-made grenades, bazooka shells and mortars. Nothing heavier than mortars. But our best weapon is the morale of our men."

The men with whom I toured the Second Front represented a mighty arsenal.

Returning Home

Late the following morning, Juan and Luisa reappeared with their jeep to fetch me home.

We retraced our course and they took me to their home to spend the night. We decided that I should fly back to Havana rather than run the gauntlet of searchers on the highways; so Juan drove me to the airport, dropping me off briefly at the hotel so that I could check out and pay my bill.

Herbert was there, bursting with curiosity.

"You have a good time, my friend?" he asked.

"I had a wonderful time," I replied.

At the airport, a Cuban soldier wearing a Spanish-American War-type hat and leather puttees made me open my luggage; but he found nothing amiss. I booked a seat on a plane that was to leave in about four hours, and I insisted that Juan return home, and he said good-by.

Back in Havana

At midnight, I was back in Havana; at 5.15 the next day, after brief reports to my Havana friends and conversations with new friends, I was on a plane headed for Miami. My sojourn with the rebels was ended.

Looking down at the receding coastline of Cuba, I asked myself: "What do I think now?"

I silently replied to my own question like this:

"I hope that Fidel Castro and his brother are everything their followers think they are; although it would be impossible for any man to be the kind of man Fidel's followers think he is.

"But Fidel Castro is not nearly so important as the people who follow him—the Senora Gomezes, the Joses, the Padres Gonzaleses, the other priests, the ministers, Yolanda and Juan and Luisa and Mi Esposa. They, to me, are Cuba as I would like to think of Cuba . . .

Nameless Heroes

"I don't suppose I shall ever see them again. If their Movement succeeds, and I should cover the inauguration of their President, I'm sure that none of them will be in the Presidential Palace. None of them expects to be. They are the nameless heroes and heroines without whom no fight for freedom can be won.

"Those who have survived will listen to the ceremonies by radio, and perhaps they will remember me for only one thing . . . for passing on to them what Deborah said to me that afternoon in the Sierra del Cristal: " 'Freedom! It's a big word.' "

Optometrists Elect

Dr. Harry Kaplan was reelected president and Dr. Eli Pronchick was named president-elect at the annual meeting of the Philadelphia County Optometric Society, it was announced yesterday. Other officers are Dr. Jerome L. Goodman, vice president; Dr. Robert Berman, secretary; Dr. Charles Bertotto, financial secretary, and Dr. Sarah Tice, treasurer.

Americans might get killed, because he needs American help.

"And we wanted to bring some Americans up here to show them proof that United States arms were being used to kill Cuban people in hopes that they might make your government stop sending arms to Batista."

Argues With Him

"Now, wait a minute," I interrupted. "I am not unfriendly to you, but I want to show you where you're very wrong. We have not shipped any arms to the Cuban government since March 7, except for the replacement of some defective rockets we had sent earlier. You must believe that that is true."

"If you say so, we shall believe you," Deborah replied after she had translated my remarks to Raul and had heard his reply, "because Dr. Llerena has sent word that you are a truthful man."

I noticed that Raul was glancing at a paper on which my name appeared. . .apparently it was a letter from the outside.

"But," Deborah went on, "there is a point you all seem to miss. Batista is killing Cubans with United States arms. You say he has received none since March 7. But under terms of the Mutual Security Agreement he was to use those arms you gave him only to repel outside aggression.

An Internal Affair

"Your government has never charged that we are supported by any other country, as you have charged in the case of the rebellion in Lebanon. The mere fact that you suspended arms shipments would indicate your government's belief that this is purely an internal Cuban affair.

"Therefore, we are not asking that you stop sending arms to Batista, if you already have stopped. What we are asking is that you compel Batista to live up to the terms of the Mutual Security Agreement and not let him use United States arms against Cuban people.

"Or else let us buy arms from the United States. We have the money to buy them, and we can get more money."

Getting back to the kidnapings, I said, "There have been stories that Fidel was angry with Raul, and some people have said that Raul might try to take over the Movement."

Fidel Is Boss

Raul seemed to be amused, and his reply was this:

"Fidel is the chief. He is the great disciple of Marti. He is the man around whom we rally . . .here in the mountains, in the cities, and in exile. He did not approve of the kidnapings; but I am convinced that I did the right thing in the circumstances.

"And there was an unexpected benefit from the kidnapings . . .to your country. Many of won."

What about the philosophy of the revolution?

"It is simply the philosophy of Marti, who led the last real revolution that Cuba has had. There have been changes in government since then, but changes only in personnel. We fight for human freedom and decency.

Fidel's Pledge

"Let me tell you what Fidel has pledged:

"Immediate freedom of political prisoners, both civilian and military; re-establishment of individual and political rights of all citizens; unlimited freedom of information and opinion; extermination of illiteracy; land reform, with compensation for any land expropriated; and elimination of corruption in public life, particularly among the rapacious chiefs of the Army."

"Maybe you can make Havana a more attractive place for decent visitors," I observed.

"That," she replied, "is a sympton of what we fight against. When we win, you will see a different Havana, a different Cuba."

Interested in Freedom

I looked at Deborah and said, "I am not particularly interested in Cuba, but I am interested in freedom. . . for a very selfish reason. Today, I am free. But I shall have a greater assurance of retaining my freedom, and of my son's living the life of a free man, as freedom is extended.

"Just as John Donne said that 'any man's death diminishes me,' so do I feel that any man's loss of freedom diminishes my freedom.

"If you are telling me the truth, and only time will determine that because I don't know any of you well enough to judge for myself, you are doing a great thing. As far as I am concerned, you are not fighting for Cuban freedom. . . you are fighting for freedom."

Deborah looked at me with her big black eyes, then glanced toward the ceiling of that ramshackled old barn and said:

"Freedom! That's a big word."

Dear Ed:

We're going to pick up Kip at his New Hampshire camp August 24, spend the next day with some friends at Squalm Lake, drive around Maine for a few days and then head for home. We hope to be in the vicinity of Pawling Thursday, August 28, and would like to accept your invitation to call on you. Shall you all be home then?

I now have written 165 pages of my opus and, right now, I am reliving my first months in London. There never will be a writer with sufficient talent to tell the story of CBS London properly.

Nancy asked me to tell you she's looking forward to seeing all of you, especially that once tiny fellow she once wheeled to Regent's Park.

Sincerely,

Charlie

Charles Shaw

Dear Ed:

Our brief encounter last Thursday was the most pleasant experience I have had in a long time. I spent the weekend going over a lot of old scripts and they provided me with additional reminders of how much I owe to you for personal as well as professional reasons.

In line with our political discussion, I thought you might like to see a letter I have just received from Dick Dilworth. It is rather poignant testimony to the fate that befalls a man who tries to be sincere.

Nancy and Kip are overjoyed by the thought that we might see you and Janet and Casey at your farm on our return from New Hampshire next August.

Sincerely,

Charles

Enclosure

Richardson Dilworth
City Hall
Philadelphia 2 Pa

March 13, 1956.

Mr. Charles Shaw,
News Director,
WCAU Radio-WCAU Television,
City and Monument Avenues,
Philadelphia 31, Penna.

Dear Charlie:

I want to tell you how deeply moved I was by your letter and the copy of your broadcast which you enclosed.

I was, in one sense, relieved when everything was over, as my two years here as Mayor have been the happiest and most productive years I have ever had, whereas the one four-year term in Harrisburg has certainly ground up every Governor in this century, except Gifford Pinchot in his first term. What's more, it is wonderful to be able to head up as fine a City Government as I inherited, and also to be able to work in a community where the citizens, civic organizations, business organizations, newspapers, radio and television stations are all dedicated to active cooperation and participation in our programs.

However, there is, of course, the disappointment of the loss of opportunity to take a crack at such a challenging job.

I think there is no doubt that the two most powerful bosses in the State at the present time are Dave Lawrence in the West and the Green-Jim Clark combination in the East. They pretty well decided - in the past month - that things

Richardson Dilworth
202 City Hall
Philadelphia 2, Pa.

looked so good for the Democrats, they can win with any respectable candidate and, therefore, had no desire to take on someone who would be independent of their control.

Lawrence did try very hard to push across Knox, but when Leader flatly turned thumbs down on Knox, he made his deal with Green and Jim Clark and stepped into the picture himself. I think this was probably the worst deal Green and Clark ever made as Dave will keep them in short pants, and their only hope in the situation is that Dave may not survive his four year term. However, I think that is a very faint hope.

I like Dave Lawrence and think he is - far and away - the ablest politician in our State, and I also believe he will make a good Governor.

Again, many thanks for your kind comments.

Sincerely,

RD:MD

March 4, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York 22, N.Y.

Dear Ed:

I am going up to New York Thursday, March 13. I hesitate to tell you this, but a literary agent--Marie Rodell--wants to talk with me about writing a book on my experiences. I should be thinking of such a book when you, with so much more to say, record nothing. Just one more bit of proof that you're so much smarter than the rest of us, that your ego has no hunger like ours.

Anyway, could we by any chance have that lunch on March 13? My appointment is for 11 A.M., and I certainly should be free by 12:30 or 1 o'clock. If lunch is no good, could I park on your office couch for a brief period?

Sincerely,

Charlie

January 27, 1958

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York 22, N. Y.

Dear Ed:

I've been trying to arrange things to avail myself of your invitation to lunch, but I keep getting in a bind. I've been doing a lot of speech-making for the upcoming Cancer Crusade, I've had a few money-making speeches besides, and the Governor has named me to his committee which meets tomorrow and Wednesday to discuss ways of improving Pennsylvania's public education to meet current problems of various kinds. It should be an interesting meeting. I keep busy with daily radio and television shows as well as trying to run the store; so I find it hard to do some of the things I really want to do.

I hope I can be shouting to you sometime next month, because there are a few things about which I would like to talk with you; and, of course, it's always most stimulating just to exchange a few words with you about anything.

I can't shake this idea of a show on the world's religious faiths; so I've worked up a proposal for local presentation. I'm sending along a dopy of the proposal, and if you see anything too bad about it, I'd appreciate your telling me. I can't be entirely confident that Vanda will buy it; but I feel it would be good program material, it would weem to be of public service, and it shouldn't cost much. I'm hoping that if he does go for it, he'll agree to do the suggested show on Atheism, because I believe there's just as much public interest in the atheists' ideas as there would be in some of the other beliefs and this would be a good way of presenting a very provocative subject without giving undue offense to those at the other extreme.

I am looking forward to watching your conversation with Harry Truman with perhaps even more pleasure, if possible, than that afforded by your Marian Anderson show. Nancy asks me to give her best to you and Janet and Casey.

Sincerely,

Charlie

A New Television Series

THE SEARCHING MIND OF MAN

A examination of the religious faiths
and philosophies by which mankind lives.

Told in conversations between Charles Shaw and representatives of these religions and religio - philosophies and with film and exhibits illustrating and explaining the beliefs.

THE SEARCHING MIND OF MAN

From the beginning of human existence, man has sought an explanation of life and the universe, the reason for his existence and an understanding of his destiny.

That seeking continues today...it has been intensified as man probes the heavens with missiles and satellites.

The search is responsible for best-selling books, both fiction and non-fiction. Major magazines, like LIFE and LOOK, have increased circulation by running comprehensive series explaining major religions or major denominations of a few major religions.

Mankind is divided into three groups: those who believe in a divine ruler of the universe, those who deny the existence of such a divine sovereign, and those who say they do not know whether there is or is not a supreme being. But all men, with insignificantly few exceptions, remain fascinated by thoughts of where they came from, where they are and where they are going.

The different opinions, or bodies of opinion, which men hold about their spiritual state are the world's religions and philosophies. But what do we really know about these faiths by which men live?

Most of us think we understand Christianity, a lot of us think we understand Judaism; but do we really understand even the religions to which we adhere? And how much do we know about the other faiths that provide a way of life, as well as a hope or idea for that which follows life, for millions of others?

To provide that explanation----------

Would be truly a searching examination.

Guests would be subjected to blunt questions...the questions would be blunt, but they would be asked respectfully and with the sole purpose of eliciting information, the kind of information viewers would seek.

The questions would be based, in part, on the information gathered by Charles Shaw during a long period of investigating the world's religions, investigation consisting of intensive reading, questioning of theologians and historians visits to many religious centers, and conversations about religion with many laymen from all walks of life and of many nationalities and religious persuasions.

But additional, and highly important, assistance would be sought from scholars and theologians, local museums such as that of the University of Pennsylvania, organizations like International House and other sources.

The number of programs could be almost limitless, if the series concerned itself with the numerous denomations and sects of the Protestant branch of Christianity. But these could be the main programs:

THE SEARCHING MIND OF MAN

1. IN THE BEGINNING...a program featuring an historian with museum relics on the primitive religions, the program perhaps originating in a room of the museum. First belief in good, evil and neutral spirits. First rligion was in hiding from evil spirits...mourning clothes originated as disguise to hide from spirits of dead, which were considered evil. Rituals to win friendship of spirits - fetishes and medicine men. Fetishes became idols or totems...houses for idols became temples or churches and medicine men became priests. Worship of natural objects and forces...origin of sacrifices...taboos, festivals.
   Druids of Celts...Egyptian Gods (Book of the Dead), Babylonians, Sumerians. Greek, Roman and Norse mythology...
   Aztecx and Incas (Similarity with Judaism and Christianity.)
2. JUDAISM...an explanation by Orthodox, Reformed and Conservative rabbis. Origin of Yahveh or Jehovah. The basic beliefs: importance of right conduct over right belief...obligations...life after death...resurrection... heaven and hell...Messiah concept...Position of Jesus of Nazareth... position of Prophets...dietary laws...Torah and Talmud vis-a-vis Christianity's Old Testament.
3. CHRISTIANITY - ROMAN CATHOLIC...with spokesman for Philadelphia Archdiocese. Origin of Christanity...Virgin Birth of Jesus and life-long virginity of Mary, Immaculate Conception - why? ...Crucifixion and Resurrection - physical or spiritual?...Trinity...Original Sin... Roman Catholicism only true faith - can non-Catholic enter Heaven? Purgatory...Hell...Papal Infallibility...Bodily Assumption of Mary... Transubstantation of Communion Bread.

THE SEARCHING MIND OF MAN

4. CHRISTIANITY - PROTESTANT...with representative of Philadlphia Council of Churches. What is basis of Protestantism? Differing creeds... do all believe in Virgin Birth, physical resurrection?...Varying beliefs about Heaven, Hell and equivalent of Purgatory...Faith versus works...Bible only authority?...Fundamentalists versus Liberals.

5. ISLAM...with guest from new Moslem Mosque in Washington or Moslem scholar from Philadelphia university. Position of Mohammed, the last of the prophets, the "real" prophet...Respect for Adam, Noah, Abraham, Moses and Jesus...Quarel with Christianity in worshipping a Son as well as a Father-God...Koran...Angels...Five Pillars of Islam: Belief, Prayer, Fasting, Almsgiving and Pilgrimage...Polygamy...Heaven and Hell...Jehads (Holy Wars).

6. HINDUISM...with guest detailed by Indian Embassy. Origins: Brahmanas, Upanishads and Great Epics ...God is reality, the true nature of the universe, beyond human representation. Brahma, Vishna and Shiva: Hindu trinity...Creation a continuing thing...Reincarnation: man leads many lives until he discovers who he really is, then leaves life...Caste system...Way to worship.

7. BUDDHISM...with perhaps priest of local Buddhist temple or representative of Buddhist Churches of America, headquartered at 1881 Pine Street, San Francisco. Prince Gautama who became Budda...Four Noble Truths.. Holy Eight-Fold Way...Yoga...Nirvana and Parinirvana...Various sects of Buddhism.

8. TAOISM...with spokesman for 15 thousand Taoists in North America. Originated by Lao-tse. Tao is "the way" - not God but reality, the law of nature. Must live in harmony with Tao or suffer consequences.

THE SEARCHING MIND OF MAN

9. CONFUCIANISM...with spokesman for 86 thousand Confucianists in North America, probably obtained through Chinese Embassy. Relation of Confucius with Lao-tse...Five Constant Virtues...Right Relationship.. Family Love and Devotion...Ancestor Reverence...Ways of Worship... Confucianism a religion?

10. SHINTO...with spokesman detailed by Japanese Embassy. National religion of Japan, mixed with Buddhism...Divine descent of Japanese.. Kinship with nature...Importance of purity...Willingness to learn... Goodness of man...3,000 gods...No teaching about life after death: that supplied by Buddhism.

11. ZOROASTRIANISM...with spokesman perhaps suggested by Iranian or Indian Embassy. 140,000 members in Asia: Parsees of India most numerous. Founded by Zarathustra or Zoroaster, born 660 B. C. in Persia... Teaches monotheism, love of God, truth and charity...believes in angels, immortality, after-life of rewards and punishment...Three Wise Men were priests of Zoroaster.

12. SWEDENBORGIANS (CHURCH OF NEW JERUSALEM)...with bishop from magnificent cathedral at Bryn Athyn (Raymond Pitcairn richest member). Story of Swedenborg and his clairvoyance...his trip into Spirit World...Heaven and Hell.

13. BAHA'I...with spokesman suggested by Bill Hart. Baha'ullah (1817-92) the newest prophet...Belief in Judaism, Christianity and Islam... Command for present is unification of mankind under one faith... Importance of love.

14. SPIRITUALISM...with spokesman of recognized society on psychical research. Spirit lives after death and can affect terestrial affairs... Sir Oliver Lodge et al...Seances...other experiences.

THE SEARCHING MIND OF MAN

15. ATHEISM...with spokesman for group carrying on Ingersoll's work. How do they account of creation and maintenance of universe...why insist on no Supreme Being...sincere effort to find out their motives and impulses.

EPISCOPALIAMS

PRESPYTERIANS

METHODISTS

EASTERN ORTHODOX

BAPTISTS

LUTHERANS

CONGREGATIONALISTS

ETC.

and

FUNDAMENTALIST GROUPS:

Represented by American Council of Churches and other groups.

Shaw, Charles.

December 6, 1957

Dear Charlie:

Leave me know when you can come up for lunch.

Your references to me were not inadequate. They were superlative and warmed my heart. In that particular passage, you were guilty of over-writing, which is something I warned you about repeatedly. Don't do it again.

As ever yours,

Mr. Charles Shaw

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Ed:

Naturally, I was a little disappointed in not having you advise me to get masses of visas. But I would like very much to call on you soon after the new year begins.

I'm sending you scripts of three recent broadcasts, one of which contains some inadequate references to you. My sponsor, learning that I had wound up 25 years in news, suggested this series. I was pleased to accept the suggestion.

Sincerely,

Charlie

Good Evening:

Twenty-five years ago last summer, I walked into a newspaper office in McKeesport, Pennsylvania, talked for a little while with the City Editor, sat down at a typewriter and began pecking out a story of a unique new enterprise in McKeesport called the Barter Mart.

As I took my seat in front of that typewriter in the City Room of The Daily News, I actually was taking a seat in the grandstand to watch and report the game of life, to be what William Hazlitt called "a spectator of the mighty scene of things." Most of the time, I tried to do what Hazlitt tried to do: "to take a thoughtful, anxious interest or curiosity in what was passing in the world, but not to feel the slightest inclination to make or meddle with it." Had I been able to do that, I suppose I would have been the ideal reporter; I had been told that a reporter should have no emotions lest he lose his objectivity. Later I was told that it's all right for a reporter to have emotions so long as he doesn't let them show.

But reporting has undergone a great change in the last quarter of a century, and I think the change began about the time I entered the business. We all tried to stay in the grandstand, or at least in the press box, and look objectively at this mighty scene of things; but, without being able to do anything about it, we found ourselves out on the field, part of the mighty scene we were, at the same time, trying to report. At times, it was like those dreams all of us have - dreams in which you are standing apart from a spectacle and yet seeing yourself as a part of that scene; or like showing home movies to company - narrating events in which you are plainly taking part.

For a quarter of a century now, I have been a spectator at the game of life and at the same time a participant - at once a grim and exciting game, a game that has been played for keeps every year, every day, every hour, every minute. There are those who will tell you that this has been perhaps the most eventful quarter of a century in the history of mankind, and it would be hard to think off-hand of any period that has been more eventful. There are those who say that these have been dark days - days of depression, war and fear, climaxed by spectacular scientific discoveries which mankind is using to fashion weapons that could be the means of its total destruction. But if I viewed my twenty-five years as a reporter and editor in that light, I should not be here to talk about them tonight...I would be secluded in shame.

Rather I feel as Winston Churchill did when he addressed the Boys of Harrow in perhaps the most critical stage of World War Two - back in October, 1941. "Do not let us speak of darker days," Mr. Churchill said. "Let us speak rather of sterner days. These are not dark days; these are great days - the greatest days our country has ever lived; and we must all thank God that we have been allowed, each of us according to our stations, to play a part in making these days memorable in the history of our race."

This then will be AS I HAVE SEEN IT, as I have seen a great quarter of a century - almost ten thousand days that have been stern days but great days...which will turn out to be dark days only if we are faithless to those with whom we have shared those days and negligent of the gifts which God has given us, ungrateful to God that we have been allowed, each of us according to our stations, to play a part in making these days memorable in the history of our race.

I began my quarter of a century by writing two paragraphs about the Barter Mart, a place where you could buy and sell without using money. Money was a very scarce commodity, because the year was 1932, and 1932 was the worst year of the Great Depression. At the Barter Mart, you tried to trade possessions you could do without for items you needed, and a public spirited citizen supervised the exchanges, which also gave the people something to do to relieve their idleness.

My first newspaper beat also included the Helping Hand, a private charitable organization, and it was enlarged to include the city's four leading undertakers, from whom I gathered obituaries. I asked one of the undertakers why the cause of death wasn't included on one obituary form, and he said, "You wouldn't print it if it were on there. It was starvation."

Yes, some people starved; multitudes were hungry; Ph. D.'s were grateful for jobs sweeping-up in silent, desolate steel mills. Fresh out of Allegheny College, soon associated with Socialists, worshipful of Norman Thomas as he campaigned for the Presidency that fateful election year, almost respectful of Communism but not, however, of the individual McKeesport Communists whom I had known since childhood as ne'er-do-wells and malcontents, I was convinced in my callowness that capitalism was doomed, that the next major sound would not be that of reviving steel mills but the death rattle of the American free enterprise system.

Each Saturday, after having spent a week looking into the haunted faces at the Helping Hand and the Barter Mart and the various breadlines and the long lines of applicants for a half dozen jobs now and then, I felt guilty as I accepted my 20-dollar pay, setting aside a dollar-14 for six 19-cent lunches, a dollar for a weekly street car pass, seventy cents for seven packs of cigarets, five dollars for room and board at home, three dollars for movies and other recreation and the rest, almost ten dollars, for the bank. I wanted three hundred dollars for a certain type of second hand car. I was close to that three hundred dollars, when my bank, like many others, had to close.

It seemed there for a while that even the sun didn't shine; and the jokes we made were tired ones. Around Pittsburgh, they speak of the mills running - running, not operating - so many days a week, and one wit said, "Things are so bad that the river's running only three days a week." They sang, "Hallelujah, I'm a bum," and "Brother, Can You Spare a Dime?" And, all the time, as I looked at food displays in store windows and on the sidewalks outside produce markets, I asked myself, "When will the people just decide to take what they can't buy? How long can they be so tantalized?"

That was the beginning - call it a dark beginning, or call it a stern beginning. My path led me next to Pittsburgh, back to McKeesport, throughout the United States, Canada and Mexico with a trailer, to Europe, the Middle East, the Far East; finally - and I would like to think of it as finally - to Philadelphia. I have seen tragedy, and I have known tragedy; I've also had an awful lot of fun.

Maybe it's because beginnings are most impressive, but I feel that I learned more from my first few years than I have learned in all the rest...certainly it was invaluable preparation and background for a career and private life that at all times have been intensely human.

It was then, almost at the very beginning, that I formulated my creed, composed my testament. Because we did hear the roar of the steel mills again and not the

death rattle of American enterprise; the people were patient until it became sinful not to become impatient and they saved themselves with the help of Him who had so richly endowed them; they did not despair for long...they quit singing "Hallelujah, I'm a bum" and "Brother, can you spare a dime?"

They were bled, the American people were; bled therapeutically, so to speak, and they rebounded with a vigor that was as truly characteristic as their temporary despair and bewilderment were uncharacteristic.

My bank, like the majority of the closed banks, reopened, and I got my 300-dollar car; with a salary increased to the staggering figure of 40 dollars a week by 1935, I did the one unquestionably smart thing of all my life in marrying the girl who now has shared all but three years of this quarter of a century. By that time, I had developed an abiding faith in humanity, especially in the American branch of humanity, and I have never been surprised by our most spectacular achievements; I have been surprised only by our foolish, needless failures.

I have seen every part of this country of ours, which Thomas Wolfe called "a fabulous country, the only fabulous country." I have heard America singing...and I have heard America crying, her tears mingled with the tears of mothers, fathers, wives and sweethearts all over the world when we had to prove our devotion to our principles in the arena of war; when some of us, without understanding why, suffered losses far removed from that arena. But failure to understand the reason does not mean there is no reason; you can always find someone who has suffered greater loss; and, while you would prefer that tragedy pass you by, you might accept it - as accept it you must - as a bond with all who suffer or have suffered and use it, rather than charge injustice, as a tool for understanding others. Without understanding, one has eyes that see not, ears that hear not.

This has been the beginning; philosophically, it could, perhaps, be the end. But there have been some experiences to document my beliefs, which I shall report Monday and Tuesday. And I might say, however, briefly, that among the most valuable, the most enjoyable experiences has been my privileged association with the farmers and families of the Interstate Milk Producers Co-operative, for whom I do these nightly broadcasts, and who have surrendered the time they pay for to tell their story commercially so that I could use all available time tonight.

For the moment, that's AS I SEE IT, recorded Monday through Friday for the Interstate Milk Producers Co-operative. This is Charles Shaw, wishing you Good Night.

AS I SEE IT! This is Charles Shaw, speaking for the Interstate Milk Producers Co-operative, tonight recording the most memorable experiences of a quarter of a century in news.

The memory of 25 years is a montage...one picture cut into another; a picture superimposed on another; pictures changing form like the bits of colored glass in a kaleidoscope. They could be put in order, into sequence by proper organization; but one can evaluate his experiences properly only if he lets memory operate spontaneously, without notes - and I don't have any scrapbooks or diaries, anyway - if he lets his experiences crowd each other for recognition. Those which crowd their way to the front are the most important, if not the most dramatic.

I recall my service as a correspondent in World War Two. I am at the front... the MP's have told me and a companion that we should go back...it had been pretty hot up there and would be again. It did get pretty hot again; and, as I started back, I remembered seeing a young American soldier lying peacefully in the lacey shade of a shattered building, and I thought I should wake him to warn him of renewed danger. If I shouted at him or shook him, I thought, I might startle him and he might instinctively jump me; so I leaned over to call him softly, as I sometimes had called my son when he was in a deep sleep. I leaned down over him...I was about to call when I saw, between the back of his head and the ground, a thin strip of light - maybe a sixteenth of an inch. His head was not touching the ground; unmarked so far as I could see, this young soldier - his eyes closed, his face composed - was sleeping the final sleep.

How many millions died in World War Two? How often did I see the bodies piled high...often on trucks, piled like cordwood? But I remember one body; and, for the life of me, I couldn't tell you where it was. I remember another young American who had given his life: His face registered surprise...he had been hit as he was climbing over a little hillock. And why shouldn't he have been surprised... don't we all believe that death marks only other people?

That was my war...not the tidal sweep of great forces, not the grand strategies, however impressive they were...but a single soldier here, a single civilian there, masses of people broken up into individuals. War is an intensely personal thing... if we think of it in any other way, we shall continue to have wars.

I didn't like to look upon the faces of the dead; but I remembered the words of a friend: "If men will not look upon the faces of those who died for them in battle, then surely those who died have died in vain." And I didn't like to look upon the faces of some of the living...like the wretched refuse of the concentration camps. I am sure that one reason was that I felt a share of guilt for their wretched state...they were victims of inhumane humanity.

I asked one girl, a teen-ager who had been subjected to nightly indignities by her lecherous Nazi guards, if she would like to go to America, and she said, "No." I want to go to Germany...and kill, kill, kill Germans. She would have been able to give the world - all of us - much. I shook hands with her in parting, and another correspondent told me I should not have done that; I might contract disease; I should wash my hands. I did, and I thought of the words, "Pilate took water and washed his hands before the multitude, saying, I am innocent of the blood of this just person."

No, the living weren't always pleasant to look at either. A few months after the war, I broadcast an interview with three children who had spent more than half their lives in concentration camps...they had watched their parents being led off to the gas chambers. Their bodies and souls also had been violated. As we rehearsed the script, they giggled at the starkest parts. I said, "When we get on the air, please don't giggle, please control yourselves. I understand why you do, that you either giggle or scream out in agony; but those who hear your stories will not understand because they can't."

Was it all bad, this war? Yes, it was all bad; but I would lie if I denied that I had been thrilled at times. One should be ashamed to be thrilled; but that's the part of us that remains uncivilized, the part we have to work on.

I was thrilled by the sidelights of war - the many acts of unselfish devotion, the many deeds of heroism; but I grieved that there had to be a war to provide the opportunity for such noble conduct.

I was thrilled by the sights of freedom's restoration...in the cities and villages of France but, more impressively, in Denmark and Norway, where I arrived before the Germans had surrendered and, in Copenhagen, broadcast to America while the Germans still controlled the country. I was thrilled to see people awakening, like Sleeping Beauty, from the sleep of subjugation; but I grieved again that any people had taken freedom so lightly that it could be so easily lost...as well it could be lost anywhere, even here.

But there were unadulterated thrills, the greatest of all perhaps which came to me in London's Central Hall on January 10, 1946, when, after I had set the scene in a special broadcast, I said, "The next voice you hear will be that of Doctor Edouardo Zuleta Angel, president of the United Nations Preparatory Commission," and then listened to Dr. Zuleta declare, "La seance eh t'ouvert," "The meeting is opened," the meeting being that of the First Assembly of the United Nations, which I had called "the last, best hope on earth." I was thrilled at other meetings of the UN... also disappointed, but never disappointed in the UN - only in the people who controlled it.

There was an August day in 1944: Tom Treanor of NBC, Sonnee Gottlieb of International News Pictures and I, with Private Floyd Williams at the wheel of our jeep, were on our way to Paris...we had plans for getting there ahead of our troops and broadcasting and photographing their arrival. We had told General Patton of our connections with the French underground, asked him what he would do if we broadcast without censorship, and he replied, in his high-pitched voice, "If anybody complained, I'd have to suspend you...But don't you think it would be worth it?" We intended to travel with our troops until we outdistanced them and then strike out on our own. We arrived at a cross roads at exactly the instant a Sherman tank made a sharp left turn and climbed over our jeep. The right tread of that Sherman ground right over Treanor; the only wonder was that he lived the few hours he did after the crash. I suffered a simple fracture of the fibula.

Five minutes before that accident, I had been riding in the front seat...we had stopped to stretch and, trying to be a good fellow, I insisted that the long-legged Treanor take the front seat, where he would be more comfortable. Gottlieb was already in the back, and I jumped in beside him, leaving only the front seat vacant for Tom. I did him a favor: he died, I lived.

But there has been more to this past quarter of a century than a war, although it seems that everything in 1932 was leading up to World War Two and everything since 1945 has been an aftermath. Perhaps the truth is that the first World War has never ended - the period from 1918 to 1939 was an armistice because nothing was resolved by Versailles and the other peace treaties and there still has been no resolution of the basic problems remaining from World War Two.

My baptism as a reporter was one of fire because, as I reported Friday night, it began at the very depth of the Great Depression. It was also the Prohibition Era and the Day of the Gangster. The first real celebrity with whom I worked was a reporter who had interviewed both the Prince of Wales and Al Capone, and those who heard that would say, "You mean you really talked with Al Capone?"

Our leading gangsters in Pittsburgh were the Volpe brothers, who said they came of princely Italian stock; and one day, all three of them were machine-gunned to death as they walked together along a Pittsburgh street. The lead on The Pittsburgh Sun-Telegraph story was: "They shot down the Volpe brothers today and left them lying in their own blood," while The Press lead read, "The princely blood of the Volpe brothers was spilled in a Pittsburgh gutter today." I envied those two rewrite men for the magic of their words; but, after all, they had something to write about.

Yes, it's all a montage...a year of free-lancing on a trailer tour of Canada, the United States and Mexico. The great Pittsburgh flood of 1936, when I was to learn for the first time that people are kinder to each other when they're in trouble than when they're not. Small-town council meetings and national political conventions, where the difference in behavior is only one of degree.

As a reporter, you see both the good and the bad, but you write most about the bad. And why is that? Because news is mostly information about the unusual - the man biting the dog rather than the dog biting the man - and when you realize that, you can come to only one conclusion: Evil is more unusual than virtue. And that makes you glad to have been, and to be, a reporter.

And that's AS I SEE IT, recorded Monday through Friday for the Interstate Milk Producers Co-operative, to whose members I express my thanks for foregoing the time usually devoted to their commercials so that I might use all the time available for these broadcasts commemorating my quarter of a century in news. The final one tomorrow night on the most unforgettable people I have met.

This is Charles Shaw, wishing you Good Night...

AS I SEE IT! This is Charles Shaw, speaking for the Interstate Milk Producers Co-operative, tonight recording the last of 3 broadcasts about my quarter of a century in news.

After 25 years in the news business, of mingling with the great and the near great, but more often with the little people, I often am asked, "Who is the greatest person you ever met?"

And I answer unhesitatingly, "My son, Bryan, who died almost seven years ago. In less than 11 years, he taught me much about how to live and everything about how to die. In his fatal illness, his concern was for us, his parents, not himself. I often think he believed he was shielding us from the knowledge from which we believed we were shielding him - the knowledge that he was going to leave us; and when he left, he left as Percival, following the gleam.

Also his mother, my wife, who bore her first-born's fate in what someone truly called a living sermon for all those bereaved and to be bereaved. And my second son, so very much like his brother, who also teaches me how to live but who, we pray, will never have to add to my instruction in how to depart this life.

My mother and father, of course unappreciated while they lived, but whose training, often hard to understand at the time, was the only kind of training for the life I chose to lead.

But then I'm asked, "Who among the famous was the greatest?" and again I reply unhesitatingly, "A boss who let me call him friend - Edward R. Murrow. His was the greatest mind I have ever known; his was the greatest compassion. To eulogize him properly would be to embarrass him; to eulogize him properly would require a greater gift of expression than mine. Edward R. Murrow taught me more about integrity in the three years in which I was privileged to work with him than all my other acquaintances combined - and for the simple reason that, as a reporter, he never preached integrity...he lived it.

Murrow never talked about his compassion. He lived that, too - he was living it when you saw him leaving his flat in London's first light to head for a bomber base and fly again with the B17's and the B24's on another bombing mission to Germany. How can you talk about these fellows, he was saying by his action, without sharing their experiences? Living his compassion, too, when he refused to let you take a single needless risk - forcing you sometimes to defy him secretly - with the almost gruff comment, "I don't want to make any widows or orphans." Short periods of deep depression, irritability - not temperament, as some have called it...he was - as he remains - involved in mankind.

The greatest, the most unforgettable - Ed Murrow - among many to whom I owe thanks for help and inspiration and friendship.

Larry Fagan, city editor of The Pittsburgh Press, who told me, and proved to me, that you have to have guts - and there's no other word for the sort of thing that Irishman named Fagan meant - if you would deserve that honored title of Reporter.

Younger men, whom I thought I was helping but who, in their enthusiasm and ability and sincerity, helped me more - Richard Amper, now of The New York Times; Dave Teitlebaum, of NBC's "Today"; Ralph Paskman, foreign editor of CBS Newsfilm; the men of my staff here at WCAU, those who have gone to other jobs as well as those who remain. You never really help anybody without helping yourself; and, sooner or later, you probably do it selfishly, having learned the truth about casting your bread upon the waters.

The memory of 25 years is a montage - faces, some distinct, some blurred, of the millions you have seen and the thousands you have met. Those whom you met, spent some time with and would like to have known much better.

I remember a lunch at Fort Sam Houston, Texas, and a balding young colonel engaged in earnest conversation by brigadier and major generals. I asked an officer beside me, "Who is that young colonel over there - the one with all those generals?" And he replied, "His name's Eisenhower. You're going to hear a lot about him." I was to see and hear about this brilliant officer in years to come, but what I remember most, I believe, was watching him receive the Freedom of the City of London and getting goose-pimples when I read The London Evening Standard's headline that night, THE MAN FROM TEXAS IS A LONDONER NOW. Somehow, that ceremony seemed to link our countries more than anything else.

This has been a quarter of a century of great personalities: Franklin D. Roosevelt, singing out a creed for the stern days of 1933 that also is a creed for today. "The only thing we have to fear is fear itself," telling us in 1936 that "This generation of Americans has a rendezvous with destiny." The night of April 12, 1945, as I sat in the dining room of Stockholm's Grand Hotel, telling my companions that my son, Bryan, was five years old that day, then being called to the phone to be told that President Roosevelt was dead. I returned to the table to tell my friends, and the news spread over that immense dining room like a wave which stunned and silenced.

Another giant of the generation - Winston Churchill, who galvanized a people by promising them only agony. Churchill in Commons, Churchill in the bomb ruins, Churchill at railroad stations, coming from or going to meetings across the Atlantic or across Europe, behaving always as the incarnation of courage and dedication.

King George the Sixth, inspirational in his gentleness and domesticity - a perfect complement to the rugged, dogged Churchill.

A memorable audience with Pope Pius the Twelfth, the only man I ever met who seemed both ascetic and dynamic...another giant in a generation of giants.

These and other famous men...all of them inspiring. But who is to say whence one draws his greatest inspiration? And is it not true that fame does not always accompany greatness...that, truly, one may draw inspiration only from the great but that one may find the great in many places?

I have seen people by the millions and have met them by the thousands, and each one has made his or her impress. Brief encounters, sometimes more impressive than long acquaintances - "Ships that pass in the night, and speak each other in passing,/ Only a signal shown and a distant voice in the darkness;/

So on the ocean of life we pass and speak one another,/ Only a look and a voice; then darkness again and a silence."

And what have I learned from all these people - the great and the near great, the famous and the infamous, the little people who included some of the greatest? While carrying on a real love affair with America, I also learned the truth of what William Lloyd Garrison once said, "My country is the world; my countrymen are mankind." As a child in a region that had been invaded in force by immigrants, a region in which I also began my professional life, I was subjected to many prejudices. I rejected those prejudices instinctively; but it was my work, which took me to the lands from which my fellow townsmen came, which utterly destroyed them.

I learned that you can love America all the more for loving, or at least respecting, other lands as well, because America has drawn her strength from all the world.

I learned to love liberty by seeing liberty destroyed, or viewing the fruits of its destruction, and by being forced to plumb my mind for convincing arguments for democracy - as when a Greek Communist scoffed at my assertion that democracy was preferable to Communism by asking, "Democracy? Can you eat it, can you wear it, will it give you shelter?" My replies, while they may not have converted the Communist, silenced him momentarily, and they at least strengthened my faith. And so, another debt I owe - to one whose masters seek our destruction.

These past twenty-five years have been crowded years, but - and the best way I know of summing up is to repeat these words of Edward R. Murrow with which he concluded his first "I Can Hear It Now" record:

"If the universe is as many million years old as we think it is, our crowded little era is but an instant of yesterday when it is past. 1933's unemployment, September at Munich, that June 10th at Lidice, December 7th at Pearl Harbor, 9:15 over Hiroshima were all part of the identical moment. The one question remaining then: was it 23-59 o'clock or zero-zero-zero-one... was there to be still another cycle of affliction, appeasement and annihilation or had we walked through midnight toward the dawn without knowing it?"

And that's AS I SEE IT, recorded Monday through Friday for the Interstate Milk Producers Co-operative, who have relinquished their commercial time these past three nights so that I could tell my story of my quarter of a century. This is Charles Shaw, wishing you Good Night.

Shaw, Charles

November 1, 1957

Dear Charlie:

I have your letter of October 23 and am extremely sympathetic to your problem. Unfortunately, I see absolutely no chance of expanding the SEE IT NOW operation at this point. As a matter of fact, I am having trouble keeping it at its present level.

However, I shall be delighted to sit down and discuss the possibilities with you. Give me a ring and let me know when you would like to come up.

Sincerely yours,

Mr. Charles Shaw

October 23, 1957

Dear Ed:

I'm going to ask you for a great favor - there's no point in my trying to make this letter appear to be anything else than that. But I would like to think that this favor to me, if you could grant it, might be of some benefit to you also.

I am terribly restless, Ed. Natural for one in his middle forties? Perhaps that's the most of it, but it's not all by a long shot. As you may know, I went to Japan last summer...it was my first trip abroad since 1946... and I haven't been the same since. Despite the fact that I am more successful in my WCAU job than I ever dreamed I would be, despite the fact that I am making more money, as a combination administrator and radio-television airman, than I ever dreamed I would make, despite a certain "belonging" in a city where much time must elapse beforeyou can "belong," I realize more than ever that I am basically a reporter, not an administrator or a showman. I want to become a reporter again.

It wasn't long after I returned from Europe that I determined to make this Philadelphia stint a temporary affair. But I realized that I had some personal problems to solve before I could conscientiously seek a change. I set about solving those problems and met with great success and, in the summer of 1949, I was picked to handle Bill Henry's show during his vacation. The time had come for me to try to do what I really wanted to do; but, then, Bryan got sick, and he died in January 1951. That took a bit of getting over, but I think we did pretty well. I didn't think, however, that I should seek a job that would entail considerable separation from Nancy and Kip - for my own sake as well as theirs - until the wound was as nearly healed as we ever can expect it to be.

A little more than a year ago, Nancy went to work as an interior decorator with a real nice Ardmore concern, and she's been very successful and very happy. Kip is in fifth grade at Episcopal Academy and about as healthy, well-balanced, good-looking and capable a child as you can find. I have reason to believe that I have been doing very well - I feel certain that Don Thornburgh and Charlie Vanda would speak rather well of me.

The invitation to visit to Japan seemed to be heaven-sent, if only because it represented a chance to go abroad again. But it turned out to be something much more than that. It was as water to a thirsting man who hadn't realized the extent of his thirst. I found that my curiosity was infinitely greater than it had ever been before and, at the same time, I experienced a tremendous happiness - happiness, not just pleasure - in satisfying that curiosity. I worked harder on that trip than I ever had worked before, and I did so with a light heart...I was doing what I wanted to do more than anything else in the world. The radio and television shows I turned out were the best I have ever done. Perhaps one reason was that I was in full control of myself at all times, and my great thrill right now is the realization that the temptation such a trip offers to relax one's controls was no temptation at all. I wouldn't exchange that satisfaction for anything in the world.

W
C

U

Philadelphia 31, Pa. / city and monument avenues • greenwood 7-8300

So what I would ask you is this: Could you make use of me as a member of your SEE IT NOW staff? I would knock myself out for you - and I guess I wouldn't be doing it for you, but for myself, because I have a terrible longing to knock myself out in helping you do the sort of thing that only you are doing on television. There are so many things I want to learn, and, while I would be working for you as a reporter to inform your audience, I would have the selfish motive of informing myself. I had thought of writing that "I would never let you down"; but somehow that seems vulgar. I would ask to become a member of your staff only for what I could do, not for what I would not do.

The greatest interest I have now is in mankind's ethics, philosophies and religions. I found something in Japan which can be explained only by a philosophy, a code of ethics, a religion or combination of religions that I have been trying to examine since my return. The opportunities for such examination are limited here.

There is one great project of which I would like to be a part - a television report on "The Searching Mind of Man," a report in depth on the faiths by which men live around the world - an examination of Buddhism in its various forms, Taoism, Confucianism, Hinduism and Shinto, as well as Judaism, Christianity and Islam. I should not presume to suggest this as a SEE IT NOW project, but I shall. If I could be part of only that one show, or series of shows, I would feel that I had done something worthwhile, that I would have made up in part for some of my derelictions, recaptured some of my lost opportunities.

But I feel I could do more. I remember the title of the exchange show we did with BBC during the war: TRANSATLANTIC CALL: PEOPLE TO PEOPLE. I assume that that suggested your PERSON TO PERSON title; but isn't there much to be done along the line of PEOPLE TO PEOPLE also...how people elsewhere work, how they play, how they study, etc.?

I know, Ed, that I am a good reporter. I feel that I am a pretty fair writer. I have been pretty successful as a broadcaster on both radio and television. My experience as a newspaper editor and now as a radio-television news director has acquainted me with the problems of production, which I always would bear in mind in the field. I get along well with people...I seem to do all right in interviews. Personally, my health, both physical and emotional, is excellent.

Would it be possible for us at least to have brief conversation about this? I could arrange to run up to New York almost any day by recording my radio show in advance and arranging for a suitable television substitute. Or perhaps you could see me some evening after your radio show.

Thanks for reading this. And all the best to Janet and Casey.

As ever,

Charlie Shaw

Dear Ed:

As always, it was real good to see you; the only trouble was that your visit had to be so short. Nancy and I are looking forward to accepting your invitation to spend some time in New York with you, and as soon as her ankle heals, we will be in a position to make some plans.

I want to thank you especially for your kindness to Jim Eadline. Your conversation with him was a better morale-builder than a $10 raise, and as long as Eadline's here, what helps Eadline helps me. I imagine he will be calling you real soon, and while I realize that you don't have anything in view, you might be in a position to turn him over to somebody who would need a good man. As I said to you down here, recommending Eadline is a favor to the person to whom the recommendation is made as well as to Eadline himself.

Good hay-baling, or whatever you farmers do at this time of the year.

Regards,

Charlie

Dear Charlie:

Many thanks for letting me see your piece on the French students of baseball. It was not only diverting but, as usual, you have succeeded in saying something well worth saying.

I will be working from your cordial Studio on Thursday night of next week if all goes well.

As ever yours,

Mr. Charles Shaw

Dear Ed:

Listening to your baseball piece last night, I thought you might like to see a piece I did last week. It seems to have amused and otherwise pleased a few people.

It's sure good to hear and see you again. Hope the family's all well. A bit of incidental intelligence: Nancy's having her first art exhibit beginning this Friday night. She's come along very well.

All the best,

Charlie

RADIO BROADCAST

By Charles Shaw
News Editor
WCAU/ WCAU- TV
presented over WCAU Radio
7:30 PM, Monday, August 29,1955

Good Evening:

The tremendous battle that is being waged for the American League baseball pennant and the recent renaissance of the Philadelphia Phillies have set me to thinking more than usual about this so-called national pastime of ours. Some people, who don't particularly like baseball, call it our national madness. But there are others who would have you haled before a Congressional Committee as a suspected subversive if you said anything uncomplimentary about baseball. If baseball can be criticized with impunity, is nothing sacred?

I've often wondered what a person who knew absolutely nothing about baseball, who had never had any experience with baseball in any shape or form would do and say if he went to a game. We all know of women who say they know nothing about baseball, but they aren't telling the whole truth. They've watched their brothers or their sons playing at some kind of baseball; they couldn't have managed to avoid seeing at least a fleeting glimpse of a baseball game on a television screen or a movie newsreel; they must have heard a few snatches of a play-by-play broadcast. Every American woman knows something about baseball; otherwise, how could those who say they know nothing about baseball say they hate it so much?

But I finally found somebody who actually did not know a thing about baseball - ten such persons, in fact. They were ten young Frenchmen -- seven young men and three young women to be precise.- who are spending a month in the Philadelphia area as part of a project called "Experiment in International Living." The French visitors are living in ten different homes, each living the kind of family life his host and hostess and their children live. On a very few occasions, the ten visitors and their hosts and hostesses have got together for a special event.

They got together for such an event last Friday night, and the event was the baseball game at Connie Mack Stadium between the Philadelphia Phillies and the St. Louis Cardinals. One of my colleagues is host to one of the Frenchmen; and, since he is a darned good reporter and a keen student of human nature, I asked him if he would report to me on what these Frenchmen, who literally knew nothing about baseball, did and said at the game.

Now, it's one of my rules never to preconceive a story - that is, never to decide in advance how a story is going to work out, but I couldn't help but expect my colleague to come back with titillating stories similar to those told about Dumb Dora and her first baseball game.

He had some funny stories to tell, no doubt about that. But his report was quite different from what I had expected, and, I'm sure, from anything you would expect.

The first thing you must understand, he said, is that the Frenchman has no frame of reference for judging baseball. There is nothing remotely resembling baseball in France, nothing resembling it as closely, for example, as Great Britain's cricket. Their sense of games just doesn't include anything like baseball. Perhaps if we went to Mars and found the Martians engaged in a sport in which a pellet about the size of a pea was used and the idea was for a member of one team to blow that pea through the air as far as he could and for members of the other team to catch that pea behind the right ear and then do a lot of other strange tricks, we would be no more puzzled than a Frenchman seeing his first baseball game.

All the Frenchmen rather quickly decided that baseball was a very violent game, and that, of course, is a most surprising reaction to the average American who doesn't think of baseball and violence at the same time. But there were three things in this one game that convinced the Frenchmen that baseball is terribly violent and dangerous - a body-block charge by a baserunner into second base in an effort to upset the second baseman and prevent a double play; a hot grounder that almost tore the glove off the shortstop, prompting a French girl to ask, "Why didn't he get out of the way?" and, most convincing

of all, the rundown of a baserunner between third base and home. And the way my friend translated the thoughts and emotions of the visiting Frenchmen during that rundown, I can fully appreciate what a startling experience it must have been. This was the situation:

The Cardinals had runners on first and second when the batter knocked out a double. The runner scored from second, and the man who had been on first headed for third. A Philadelphia outfielder toyed with the ball as if he didn't know where he should throw it; so the runner decided to round third and try for home. With that, the outfielder rifled the ball to the catcher well in front of the runner. The runner turned back toward third, which was well covered by a Phillies player.

The runner was trapped and the crowd rose to its feet, yelling at the top of their voices. The Frenchmen rose automatically but only one of them was tall enough to see what was going on. The other nine kept tugging at his coat and calling, "Comment, Comment? What's going on?" but the Tall One could not answer. He was seeing something that was enough to give you cold chills.

He saw what looked for all the world like a terribly frightened man in the uniform of a St. Louis Cardinal running first in one direction and then in another like a trapped fawn as seven or eight men in the uniforms of the Phillies converged on him. The hulking catcher, with bulging chest protector and leg pads, held the ball in his ham-like right hand, ready, so it seemed, to clobber the lone Cardinal, then he would throw it to a brother assassin who would gesture menacingly with the ball. Finally, there was no more room for the Cardinal to run, the Phillies swarmed around him, the big right hand bearing the hard ball came down on his body. Amazingly, though, he got up and walked away, apparently unhurt.

The roaring crowd was seated, and so were the Frenchmen. The nine who didn't see the play kept quizzing the Tall One who did. They didn't ask the Americans to explain the rundown, probably because they weren't sure they'd get a completely honest answer.

And, as a matter of fact, they had some reasons to question the Americans' reliability. Before the game, each host told his guest how important it was to know everything you could know about each player...the more you knew, the more you could enjoy the game. And, of course, it's absolutely vital that you know everything about the pitcher: he's the key man, the most important player by far and so on and so on. At that point, the P.A. announcer began reeling off the lineups and the Americans comment to their French guests on each player: Ashburn - leads the league in batting; Morgan, red hot shortstop and so on down the line to Simmons, the pitcher, hurt his feet on a power lawnmover, has had a bad arm this year, but still has lots of promise. The St. Louis lineup: Comments on each player until the announcer reaches the pitcher: "No. 4, hrumphh." The name is indistinguishable, but that's all right. Look up No. 4 on the scorecard. There is no such number. So you ask some other fans, "Who's that pitching for St. Louis?" "Never heard of him." "But, you've just told the Frenchmen that you've got to have heard about the pitcher and a lot more than just heard of him. As my friend expressed it, "We lost 50 points right there."

But there was still another crisis of confidence - maybe even a worse one. In the eighth inning with the Phillies trailing, the pitcher, Mrozinski, was due to bat, but my friend explained to the Frenchmen that pitchers can't hit; so Manager Mayo Smith certainly would have somebody else bat for Mrozinski, somebody who could hit: Sure enough, Mrozinski was lifted; but who batted in his place? A pitcher, Robin Roberts.

Before the game, every host had told his French guest about the great Robin Roberts, the best pitcher in baseball today, truly a sensation. So, when Roberts was inserted into the lineup, most of the Frenchmen, who were still able to think anything about the game, concluded that although he couldn't hit, being a pitcher, he was going to pitch.

Roberts got a walk, a base on balls, and then he moved to second. Whereupon, a player named Lowery went out on the field, stepped on second base and Roberts stepped off and went to the club house. He was through for the evening. Being a pitcher, he had done what he was not supposed to be able to do, which was bat; but he did not do what he was most able to do, which was pitch.

At that point, the Frenchmen seemed convinced that this was a horribly disorganized, senseless game, which, by some accident, had come to be known as our national pastime and which we Americans, therefore, had to protect and explain. The Frenchmen seemed downright embarrassed for us.

One of the visitors did say that he thought the crowd was to chauviniste - too partisan - and to illustrate his contention he cited the booing which followed a third-called strike on a Phillies player. The Frenchman said, quite logically, "The umpire can see it much better than you or I. How can we possibly know?"

One fan, quite gay and noisy, rolled his scorecard into an improvised megaphone and shouted some untranslatable epithet to the umpire. One of the French girls thought he was shouting instructions and asked innocently, "Can the umpire understand him?"

The visitors, even though they regarded the game as a melange of violence, confusion and fear, enjoyed the game as a good crowd experience and something that made them feel very American. Anxious to get into the spirit of the game, one of them asked my friend if he could suggest an appropriate cheer which they could chant as the occasion permitted or demanded. My friend suggested the French words for "Down with the Umpire", and the suggestion met with a ready reception. And so, if a fielder muffed a ball, a batter struck out swinging, the Cardinals scored a run or anything happened to produce groans in the crowd, the French would chorus out, in their own language, "Down with the umpire", while cigar-smoking, shirt-sleeved fans on all sides would switch their attention from the playing field to that section of Connie Mack Stadium which had become a little part of Paris for a couple of hours. None of the umpires understood French or understood it well enough to know that he was being blamed for everything that went wrong with the Phillies and was being consigned to a tumbril for a ride to La Guillotine.

But if the visiting Frenchmen think we have adopted a pretty silly game for our national pastime, they think we're pretty good and capable and smart people in other respects. I've met a few of these visitors and I've talked with their hosts and hostesses, and I think they're going to tell a pretty good story about the United States when they go home. I hope they like us, because the ten young men and women who are staying in this area, now aged 18 to 26, are potentially influential, powerful politicians, journalists, businessmen and members of other professions. One of them may well become Prime Minister.

They are favorably impressed by American methods, and they think that many of our methods may be adopted with profit in France. They are anxious to get to work and help solve France's problems with modern, direct methods. They seem fed up with tradition where tradition stultifies; yet tradition is such a part of them that they can't help but respect it. One of the young men was asked if all his ancestors were French. "No", he said, "Only since the 11th Century. The DuPont Corporation, which we consider about as American as ham and eggs, is to the Frenchmen "DuPont de Nemours" founded by a French boy who made good just a couple of hundred years ago.

They don't like to see women drinking for pleasure - it's all right the way they do it in France, where the right women sip a little wine just to be sociable, but not to have any fun. For a woman to be intoxicated is unthinkable. But all the Experiment visitors in this area approve of the independence of American women, and they like the way we raise our children, making them part of the family and dispensing with formality.

All of the Frenchmen I've talked with here like our casual dress; they love our cooking. The one I've come to know best loathes onion soup and cheese, which every good Frenchman is supposed to love, and he drinks much more milk than wine - a lot of milk, very little wine.

All of these visitors are very much like us - yet very different from us. The distinction results from their experiences in war. All of them have been touched by war in a manner which none of us Americans have known. One of them, for example, had a five-year old brother who died just for lack of medical attention. They could easily have paid the fee charged by the most expensive doctor in France; they could have paid for the most expensive medicine in the world, but there was no doctor to examine the child; there was no medicine.

Hearing this story, I remembered the story told me by an Austrian noblewoman who fled Austria with her two children and headed for Italy. Just before arriving in Italy, one of her children died ... of starvation. The other was near death. The mother said to me, "If I had had just one can of dried milk, my child would have lived." At one time, she could have bought a whole dried milk factory.

And so, these young visitors are young people who have lived a lot, and they don't like some of the things they've been through. They don't want to go through them again, and they don't want their children to go through them.

If these youngsters are typical of their class and if they keep the resolutions they've made over here, this younger generation may well restore France to her past glory. And I think they'll keep on liking us, thanks to the Philadelphia men and women who have entertained them, keep on liking us even though they'll never understand what we can see in baseball.

And those are some of tonight's stories from The World Around Us....Good Night.....

"AS I SEE IT" with Charles Shaw Tuesday May, 10, 1955

INTERSTATE MILK PRODUCERS COOPERATIVE 7:30 - 7:45 P.M.

SHAW: This is the story of two small-town newspapermen and their great idea for helping advance the cause of peace and freedom. It is story also of other men and women with great souls and spirits and minds which they have dedicated to the brotherhood of man in a peaceful world.

These people literally are our neighbors; for they all live in Pennsylvania's Bucks County. The two newspapermen are George R. Thompson, editor of The Doylestown Daily Intelligencer, and Barry R. Nemcoff, managing editor. The others are many of the artists, writers, sculptors and scientists who live in Bucks County.

Spread across the top of Page One of The Intelligencer yesterday was an editorial headed: "'Voices for Peace:' About Arms and Armament, Men and Morals, and Peace and War." Signed by Thompson and Nemcoff, the editorial began: "We have become increasingly concerned with the dawning of each day's news at the possibility of another war in which millions may become victims of nuclear bombs. As newspapermen we can offer good excuse for our attitude since in the course of our working day we are constantly reminded of the ominous state of world affairs by the teletype machine which monotonously and persistently clacks off words like these: U. S. DEVELOPS MOST POWERFUL H-BOMB...RUSSIA CLAIMS SUPERIORITY IN ARMS RACE....U.S.SENATOR CALLS RUSSIAN PEACE BID PROPAGANDA...RED CHINA REFUSES TO RELEASE AMERICAN FLYERS...MILITARY OFFICIALS CALL FOR ATOMIC BOMBING OF CHINA MAINLAND."

And so, Thompson and Nemcoff wrote, they wondered what they could do to change thoughts of war to thoughts of peace. They recalled General Douglas MacArthur's January speech in which he said: "The build-

up of nuclear weapons on both sides can lead only to another world war, a war which would be so disastrous as to leave neither side the victor." They recalled Harold Stassen's appointment to a government post amounting to that of Secretary of Peace and Stassen's request for ideas. Solutions to the world's problems, they realized, had been sought and sought earnestly by the world's statesmen, politicians, those with axes to grind; but no great hearing had been given to the artists - those who are most concerned with the "little man" since they contribute the most lasting and most intimate element of his civilization: his culture, which is the only tale of our times which will be left if the bomb falls.

So Editor Thompson and Managing Editor Nemcoff of The Doylestown Daily Intelligencer sought out the views of the many artists who live in Bucks County. They wrote to 35 of them - to people like Oscar Hammerstein the Second, Pearl Buck, James A. Michener, Budd Schulberg, George Nakashima, asking for the opportunity to interview them. The response was tremendous, and those who agreed recommended others who were willing to help.

Thompson and Nemcoff went into each of the artists' homes with tape recorder and wrote their stories from the tapes, so there would not be even a remote chance of misquoting. The stories are copyrighted by The Intelligencer, but any newspaper that will run them in their entirety may have them free of charge.

Thompson and Nemcoff have furnished me with proofs of all the stories written so far and have granted me permission to use excerpts because of the limitations of a broadcast. It is a privilege to read the stories and a greater privilege to be able to quote from them.

The interviews have at least one common denominator. None of the artists likes war. Many of them are staunch advocates of the United Nations, which they believe should be strengthened. All of them believe that individual man, wherever he may be, is the most important thing in the world; and if we forget that, we're in trouble.

The first interview, published today, is with Oscar Hammerstein, the man who wrote the lyrics for some of the biggest shows that ever hit Broadway. Hammerstein's statements on the condition of the world are as arresting as his songs. "Anarchy is a nasty word, "he says, "Nobody likes it, but that's what we've got. You've got to convince the little man that he is living in a world of anarchy."

Hammerstein complains that we attempt to govern the world with no government at all. Even the tiniest hamlet has the basic prerequisites to a social order - education, religion and law. Yet, on a world-wide scale, we have only little education - and this thanks to the United Nations - no international concept of religion and no international law. This is anarchy. We can enjoy the luxury of anarchy when we have reached the perfect spiritual life; but if we want to save the world from destruction now, we need laws."

Hammerstein pleads for an international police force and world law to prevent war, declaring that "the diplomacy of Metternich and Disraeli is obsolete...about as obsolete as a cavalry charge in modern warfare."

"We have to do something bold and original," Hammerstein continued, "and the United States must lead the way. We must admit that we need international laws, and that the Russians must obey them and we must obey them ourselves." We can't allow the establishment of world law to be impossible because we would then "face

mutual world-wide destruction."

To those who contend that the United Nations should be scrapped because it is weak, Hammerstein says we should strengthen it because it is weak.

"We must accomplish the impossible feat of establishing world law enforceable by a world police force. The alternative to this task is marching straight into wholesale destruction of the modern world. We must prevent this by doing the impossible. And we can do it if we try - if we all try."

Soon to be published in TheDoylestown Intelligencer is the Interview with Pearl Buck who, by virtue of her 40 years in China and the intense study which produced her great books on China,knows as much about Asia as any American. It would not be right for me to report too much of the Pearl Buck story in advance of publication, but a few excerpts are in order.

Miss Buck believes the road to peace lies through Asia. "The Asians," she says,"are seeking a political structure, and it is a temptation for them to fall into the simple path of communism rather than try - to them - complex and incomprehensible ways of our form of democracy. We are a relatively new nation which has been pushed into a position of leadership about 500 years too soon. We are confronted with the problem of a new nationa leading many old nations. We have been called to opportunity, duty, responsibility - or whatever you want to call it - much too soon, and we need the perspective of history. All of this is a curious and dangerous concatenation of human events which, without the hydrogen bomb, would have been bad enough; but on top of that our industrious scientists have given us the bomb. Now the real danger lies in that some foolhardy, ignorant,

p

pig-headed man will drop the bomb; and in our country every possible control through government must be put on these men. They must not be allowed to have their way.

"If you ask for a solution," Miss Buck says, "the only solution I know is time. Because we have so many nations living in so many eras, once they start fighting, there will be no end. Time, delay - this is not appeasement. Let us avoid announcements we cannot fulfill.... let us keep calm...these are the only immediate actions we can take."

Miss Buck also advocates strengthening the UN, as does Artist Walter Emerson Baum, who says: "Like the 48 states in the nation which learned to live together peacefully and, at the same time, maintain a degree of independence from each other, so must the nations of the world find harmony through the United Nations." Artist John Folinsbee calls for a strong United Nations comparable to a united world federation.

Author-Historian David Taylor says: "The Eastern world has the long-range view and is ready to wait a long time to get its way. We are like children and must have everything immediately. We have to convince the East that we are impatient for peace and not for war, that we are impatient to get the menace of war out of the way."

Throughout all the interviews runs the stream of spirituality, expectable from people who have to be sensitive to follow their trades, who have to know people and appreciate their value, who recognize the sin of using rather than serving people.

N. J. Toomer, writer, scholer and student of India, says: "Life was not put here accidentally; it was put here for a purpose. Man must therefore meet the crisis with reason and human values; he must realize we must grow up inwardly in spirit, conscience and ability to bring human values into action in daily life."

George Nakashima, called the world's foremost designer of furniture, spentWorld War Two in an American relocation camp. He also spent a contemplative two years in a Hindu assram, or monastery. The essence of his belief is contained in these words:

"We have to arrive beyond intellect to solve anything. We can't save ourselves by being smart. We have to have an aspiration of inspiration, which must come from a completely different source. The answer to this riddle does not lie in the mind of man...it lies in his soul."

Good Night.

Dear Ed:

Dr. Reimann has just sent me the names of the CBS people who sent checks to the Cancer Institute in Bryan's name.

Thanks very much for your contribution and for your suggesting to the others such a thoughtful and practical memorial.

We appreciated Janet's letter to Nancy, and Nancy will be telling her so in a note one of these days.

We're off to Texas on April 7th to investigate the possibility of taking up the new work I was telling you about. A clergyman friend of ours in Texarkana wants me to study privately under him and work for the Church down there. Nancy and I are most enthusiastic.

Sincerely yours,

Charlie Shaw

Shaw, Charlie

December 10, 1948

Dear Charlie:

I am afraid that Brother Scott's recent action doesn't come as much of a surprise to either one of us. The source of power, and therefore decision, is so seldom in the hands of the politician.

Maybe we can take comfort in the fact that eventually he may be horsed on his own timidity.

Like always,

Mr. Charles Shaw
Radio Station WCAU
1622 Chestnut Street
Philadelphia 3, Pennsylvania

YCAU of The Philadelphia Bulletin
1622 CHESTNUT STREET, PHILADELPHIA 3, PA.

December 1

Dear Ed:

The enclosed, which you probably have seen, represents to me a stark, but probably expectable, turnabout by Brother Scott. It should be proof positive that he is dancing and will continue to dance to the Grundy tune.

During my conversation with him two days after the election, part of which you overheard, Scott told me that the Republican party had a lot to learn from the elections, and one of the first things it should learn was that its program did not appeal to the people. Bitterly criticizing Joe Martin, he said: "Joe Martin has always been wrong in everything he's advised us to do. His has been a policy of obstruction - opposing the administration on everything, no matter what. I always knew he was wrong (said Scott without even putting his tongue in cheek) and now we have proof that he's wrong."

Then he repeated the rather revolutionary and impractical proposal that there be a bi-partisan policy on social gains and he said to me: "I thought that up on the spur of the moment. I think that was pretty good, wasn't it? I think I'll talk some more about that."

When I reminded him that our social gains were the heart of the New Deal and the Republicans are supposed to oppose the New Deal, he reminded me again of Joe Martin. Enlightened Republicans, he said, aren't going for that stuff anymore.

That's how he talked in his home after he had led his party to defeat. Of course, Scott, who never expected to be chairman, had dreamed of being the first Republican chairman to lead his party to victory in 20 years, and his dream was shattered. He seemed to be taking honest inventory of himself and his party.

Since then, he obviously has been talking with his mentors, and how different he sounds. I think it's safe to assume that he will not, as he told me he would, lead a fight to deprive Joe Martin of his party leadership in the House. Hugh Scott has reassumed his role of errand boy.

As ever,

Charlie Shaw

POLITICS

WASHINGTON, DEC 1-(AP)-THE DEMOCRATIC AND REPUBLICAN NATIONAL CHAIRMEN SWUNG A COUPLE OF ROUNDHOUSE POST-ELECTION BLOWS AT EACH OTHER TODAY.

GOP CHAIRMAN HUGH SCOTT, JR., IN A BRISTLING LETTER TO PARTY WORKERS YESTERDAY, URGED THEM TO "SLUG TOE-TO-TOE, DAY IN AND DAY OUT, WITH THE DEMAGOGUES.

"WE HAVE LOST A BATTLE WITH THE RADICAL SPENDTHRIFTS AND THEIR ALIEN PHILOSOPHY OF GOVERNMENT," HE DECLARED, "BUT WE HAVE NOT LOST THE WAR."

THAT BROUGHT THIS RETORT FROM HIS DEMOCRATIC COUNTERPART, SENATOR J.HOWARD MCGRATH OF RHODE ISLAND:

"APPARENTLY THE REPUBLICAN LEADERSHIP AS IT IS NOW CONSTITUTED HAS LEARNED NO LESSON FROM THE NOVEMBER 2ND ELECTION."

DECLARING THAT SCOTT'S LETTER "SPELLS OUT STAND PAT REPUBLICANISM," MCGRATH SAID:

"HE STILL DOES NOT RECOGNIZE THE POWER OF THE PEOPLE. HE STILL EXPRESSES OPPOSITION TO ALL THE THINGS THE PEOPLE THEMSELVES HAVE GIVEN THE DEMOCRATIC PARTY A MANDATE TO CARRY OUT."

SCOTT, SPLITTING SHARPLY WITH SOME OF HIS OWN PARTY MEMBERS, INSISTED THAT THE REPUBLICANS "HAD A GOOD PROGRAM AND AN HONEST PROGRAM" DURING THE ELECTION CAMPAIGN, BUT FAILED TO SELL IT "ADEQUATELY AND AGGRESSIVELY."

A NUMBER OF GOP LAWMAKERS IN BOTH THE HOUSE AND THE SENATE HAVE CRITICIZED THE REPUBLICAN PROGRAM AND LEADERSHIP SINCE THE ELECTION. SOME OF THEM, SAYING REPUBLICAN AIMS HAD NO POPULAR APPEAL, URGED THE OUSTING OF WHAT THEY CALLED THE "OLD GUARD."

BUT SCOTT, HIMSELF A MEMBER OF THE HOUSE FROM PENNSYLVANIA, INDICATED THAT HE, FOR ONE, INTENDS TO STAND FAST.

"WE HAVE DECLARED OUR CONVICTIONS THAT CERTAIN THINGS ARE WRONG AND THEY ARE JUST AS WRONG AFTER THE ELECTION AS BEFORE," HE SAID. "WE SHALL AUDIT AND POLICE THE TRUMAN NEW DEAL. WE WILL START RIGHT NOW."

HE SAID THE REPUBLICAN PARTY IS BEING "CHALLENGED TO PROVE THAT OUR WAY IS THE BEST WAY FOR THE AVERAGE AMERICAN," AND DECLARED THAT THE GOP WILL MEET THE CHALLENGE AND "GO FORWARD TO VICTORY IN 1950 AND 1952."

April 21, 1950

Dear Ed:

It was good talking with you the other night. Your re-expression of friendship raised my spirits considerably, and having you in my corner - which certainly is crowded now with wonderful people - helps a lot.

Dr. Stanley Reimann is working hard on Bryan's case. He offers us no hope, except that which comes from life itself, but he keeps reminding us that we may be on the eve of great discovery. His efforts now are devoted to keeping Bryan alive as long as possible.

Personally, I feel that Bryan is going to live. I believe that God is going to save him, because I think Bryan was born and endowed with a great mind and spirit for a purpose. So far as I am concerned, only a miracle of God will save Bryan, but I feel that God will work that miracle through the doctors who are treating him. Nancy and I pray for that, and hundreds - perhaps thousands - of others are praying for us. Catholics, Protestants and Jews are praying for us to provide the most beautiful spiritual experience of my life. One of our women broadcasters told me the other day that if Bryan should go, he would have accomplished much in his short life, because the news of his illness seemed to set off a spiritual wave that has engulfed WCAU. Several hard-bitten men flabbergasted her by talking of prayer for Bryan. And this certainly has changed my thinking - for the better.

Incidentally, I cut a four-minute tape with Dr. Reimann for your cancer show of April 30. I told Tony Kraber that I must be considered as nothing more than a reporter - that no reference be made to my personal interest in this illness - because Bryan, who doesn't know what's wrong with him but who does know how deadly cancer is, might hear the show and suffer a terrible psychic shock. So, would you watch the copy pretty carefully, Ed? And then some day, we can put on a show called "The Working of a Miracle" - the story of how prayer and faith in God saved a life in 1950.

Nancy joins me in wishing all the best to you and Janet and Casey. I hope to see you soon.

As ever,

Charles Shaw

SEPTEMBER 28, 1948

DEAR ED:

BILL STEPHENS' WIFE TELLS ME HER HUSBAND FLEW BACK FROM EUROPE WITH YOU LAST WEEK. I HAVEN'T SEEN BILL SINCE HIS RETURN; BUT I'M CERTAINLY ANXIOUS TO GET HIS REPORT. UNFORTUNATELY, I'VE HAD TO BE AWAY FROM THE RADIO AT 7:45 MOST RECENT EVENINGS; SO I HAVEN'T HEARD YOU AS REGULARLY AS I WOULD HAVE LIKED. I SHALL NOW BECOME A STEADY LISTENER AGAIN.

I HAVE BECOME RE-ESTABLISHED HERE AT WCAU - THE HOURS ARE GOOD AND SO IS THE MONEY. I AM NOW ABOUT TO DO SOME WRITING - I SHALL TRY A BOOK WHICH HAS ONLY A FAINT PATTERN AT THE MOMENT.

SOMEBODY SHOWED ME A CLIPPING FROM "VARIETY" WHICH SAID CBS IS "MULLING A SUCCESSOR TO GEORGE POLK." WONDER IF THEY WOULD MULL CHARLES SHAW. I'VE AT LEAST VISITED THAT PART OF THE WORLD, AND I LEARNED AT LOT ABOUT BEING ALONE IN STOCKHOLM. YOU SEE, ALTHOUGH I'M COMFORTABLE HERE, I'M STILL NOT CONTENTED. FORTUNATELY, THOUGH, THERE'S NO URGENCY ABOUT MY MOVING, AND I SHALL TAKE ADVANTAGE OF ALL THE OPPORTUNITIES THIS SPOT AFFORDS.

WISH YOU'D BE COMING DOWN TO PHILADELPHIA AGAIN. I'D LIKE TO ASK YOU A LOT OF QUESTIONS AND JUST PLAIN SEE YOU.

AS EVER,

Charlie Shaw

Philadelphia 31, Pa.

Dear Charlie:

Many thanks for your letter of August 11th.

It's good to hear of your new job with WCAU, and I wish you luck on it. If I should hear of anything else here, I'll be glad to put in a good word for you. Meantime, I hope your new spots will work out satisfactorily for you.

As ever yours,

WCAU of The Philadelphia Bulletin
1622 CHESTNUT STREET, PHILADELPHIA 3, PA.

August 11, 1948

Dear Ed:

Here's a report on what's been happening to me since I last wrote you:

I sang my WCAU swan song July 17 and went home, wondering where my next job was coming from. I was idle one day when WCAU asked me if I would do John Raleigh's morning news shots while he vacationed for three weeks. I did. Then the sales manager informed me that he had sold me on two afternoon spots, each paying $90 a week, beginning September 6.

Meanwhile, I went to New York to talk with Ed Beattie, and he told me there was nothing imminent with the State Department and probably wouldn't be for some months. He said he would like to hire me, if for no other reason than that you asked him to. So, I asked him to keep my application active, and I accepted the two WCAU shows. Now, I am beginning a four-week "hiatus."

One of my shows will be a so-called "commentary," and I agreed ~~that~~ it would be light enough to satisfy the kind of audience Dr. Levy thinks WCAU has. I couldn't do anything else but agree.

I am deeply grateful to you, Ed, for all that you have done for me with the State Department. And I don't suppose anything more can be done at the moment. I would ask you if you would do just one more thing for me: if you hear of any opening with CBS in Washington or overseas and you think I could do the job, would you suggest me to Ted Church? I'm fixed at WCAU for at least 26 weeks; but I have told them that I might give them notice during that period, and they understand my attitude. I must say that my relations with WCAU have improved vastly since my short-lived departure.

Thanks again for all you've done, Ed; and it's good hearing you back on the air.

As ever,

Charlie Shaw

P.S. I'm going away for about ten days, beginning Friday; and, in event of a miracle, I'll be reachable at the home of J.E. Jones, 1608 Lee Avenue, McKeesport, Pa. (McKeesport 22265) and thereafter at my home, 106 Rolling Road, Carroll Park, Philadelphia, 31, Pa. (Ardmore 4635-R)

Shaw, Charles

August 4, 1948

Dear Charlie:

I'm just back from holiday and take this first opportunity to answer your letters. I'm glad to hear that things are working out well. Give me a shout when you get to town and we'll arrange that lunch.

mar
yes

July 20, 1948

Dear Ed:

I've been granted an eleventh-hour reprieve. John Raleigh decided all of a sudden that he needed a three-week vacation; so WCAU asked me if I would fill [redacted] in for him. So, after one day of idleness, I'm now back on the air.

This is just what the doctor ordered. It gives me time and money with which to wait [redacted] the State Department job. And if the job, eventually certain, is still a little slow in coming, I have an idea for filling the extra time.

I'd like to tell you about that over a lunch that I would buy you in New York about three weeks hence.

Innidentally, you were sure swell to me last Thursday, considering the fact that you had gone sleepless and were being additionally harassed by the ailing CBS girl. I'm afraid that I wouldn't have been nearly so gracious.

You might like to know that, when I thought I was leaving WCAU forever, Dr. Levy and I parted the very best of friends, with a certain understanding of each other, and he made quite a handsome settlement on me. That, together with a little saved and the money I'll get for being Raleigh, will enable me to sweat out the State Department job longer than I thought I could.

I do hope you'll have lunch with me when I finally wind up here.

As ever,

Charles Shaw

July 1, 1948

Dear Ed:

Here's what's been happening to me:

I received a letter from Parker May, acting executive officer of the Office of International Information, who told me that Charles Thayer "has been informed of your interest in becoming associated with the Department's international information program" and suggested that I contact Thayer to "ascertain the present status of your application." I wrote Thayer briefly, informing him of May's suggestion and saying, "I am writing merely to express my hope that you will see fit to act favorably on my application."

Then, I received a letter from the Civil Service Commission, which said, in part: "A preliminary review of your training and experience indicates that your application is acceptable...as vacancies occur, your application will be given final evaluation in relation to the specific positions to be filled...it is impossible to predict when vacancies may occur in these high level positions."

That's the way it looks from here. Thanks to your good offices, it looks as if I might soon be getting out of your hair.

As ever,

Charlie Shaw

June 7, 1948

Dear Ed:

I thought you'd like to have some background on Philadelphia itself; so I'm sending along some clips from the magazine "Philadelphia," which is published in co-operation with the Chamber of Commerce. The facts about Philadelphia industry, entertainment and the like are O.K.; the stuff about Philadelphia friendliness, hospitality and so on are so much tripe, as see enclosed editorial from The Bulletin.

Philadelphia, as you've probably heard many times, is called "corrupt and contented." Philadelphia's had Republican administrations for almost 70 years; and that tenure has brought everything you'd suspect.

Right now, we have a first-class scandal, which prompted me to report on "News of America" this morning that "Philadelphia is sort of like a family which planned a big party and then went on a binge just as the guests were due to arrive." Perhaps as much as two million dollars has been stolen from city amusement tax funds during the last eight years. One suspect, a city employe, has killed himself and has involved a half dozen others in his suicide note. One of those named died of heart failure soon after the other's suicide. Several city employes are under arrest, others have been suspended, a former state legislator is being sought on an embezzlement charge. Mayor Bernard Samuel, prodded by the new Republican city chairman, is demanding the city purchasing [redacted] director's resignation; but the purchasing chief says he won't quit. The Republican chairman also demands the city tax receiver's resignation; but the tax receiver won't quit either. There have been suggestion that a committee of Councilmen and private citizens (the Committee of 15 you've seen mentioned in other clippings) postpone its inquiry until after the Republican convention. But that suggestion has been rejected. There's talk of a Grand Jury investigation.

As for convention news itself, I've been talking with as many people as I can about how the Pennsylvania delegation will act; and what I have found coincides with that reported by Ray Brecht in the enclosed clipping. This Grundy boy is really powerful; and if I had to bet on him or Duff, I'd lay my wager on Grundy. But Vandenberg's action in fighting for full ERP funds has certainly helped Duff, and it may influence Grundy, who likes to have a winner as well as the next politician.

I'm sending along another feature clipping - on telephones.

Hope you won't be off the air too much this summer.

As ever,

Charlie Shaw

Shaw, Charles.

May 24, 1948

Dear Charlie:

The attached is self-explanatory.

I'll give you a shout as soon as

I hear anything.

As ever yours,

Mr. Charles Shaw
Radio Station WCAU

Philadelphia 3, Pennsylvania

May 21, 1948

Dear Mr. Secretary:

I don't know where to send this so I am sending it to you. It has to do with a young man who has applied for a job with the Department as Public Information Specialist. His name is Charles Shaw. Perhaps you would route the following comment to the proper quarters.

I have known Shaw since 1942. I found him broadcasting news on KTSA, San Antonio, Texas, hired him, and took him to Europe as a member of a small, but I think, pretty competent staff. Shaw's application, I assume, will reveal the pertinent details of his career. He has very considerable experience in both print and radio. While he worked with me in London he was industrious, got on well with his colleagues and British officials, and was a first-rate broadcaster. He went from London to Stockholm where he ran the OWI bureau single-handed for a period of seven months. He covered a considerable part of the Normandy campaign. He is now employed by WCAU in Philadelphia as a newscaster where he has done an outstanding job.

I am acquainted with the USIS and can, I think, claim with modesty to be familiar with some of the tasks confronting it. I am persuaded that Charles Shaw merits the careful consideration of the Department, and I shall be pleased to furnish any additional data.

Respectfully yours,

Edward R. Murrow

The Honorable George V. Allen
Assistant Secretary of State
Department of State
Washington, D.C.

May 12, 1948

Dear Ed:

It was good seeing you again yesterday; and, like you, I was only too sorry that we didn't have more time for a chat. I'm banking on a rendezvous come Convention time - at our little house in the suburbs.

This is a reminder that I'm very much interested in that State Department job, and I would deeply appreciate anything you could do in my behalf. I'd prefer going back overseas for CBS; but Ted told me recently that there's nothing on the horizon. I can understand the situation.

However, the State Department job also appeals to me. I think it could be a real opportunity for service, and I'm beginning to feel that service is eminently satisfactory. I don't think that I told you that I've been talking recently with the American Friends Service Committee about doing work for the Quakers. Nothing has come of that because, as you know, the Service Committee's budget is based mainly on work by volunteers or those people, particularly single men and women, who don't need a very large income.

Of course, I'm not so naive as to think that everybody who works for the State Department has stars in his eyes, and I wouldn't expect the job of Information Specialist to be the perfect job. But I know that I would enjoy it as much as I enjoy this job. If nothing else, it would provide me with a more intimate knowledge of government affairs and, I hope, it would let me do the traveling I want to do.

The application for the $9975 job demands certain information which you might like to have in stating my case. As for administrative experience, I was managing editor of The McKeesport (Pa.) Daily News (circulation 25,000) from Jan. 1, 1937 to June 1938 and I was in charge of about 25 employes. I was News Editor of KTSA, San Antonio, Texas, from 1939 to 1943 and had a small staff. You left me alone in London quite a bit and, of course, I had the Stockholm bureau (myself and a secretary) for seven and a half months. As for other experience, I was a reporter on The McKeesport Daily News from 1932 to 1936 and a general assignment and rewrite man on The Pittsburgh Press from 1936 to 1937. I've been here from October 1946 as a news broadcaster and commentator and have been broadcasting news and news features for CBS on assignment.

They might like to know also about my familiarity with this country and others. I've been in every state of this country and large parts of Canada and Mexico. Nancy and I spent a year in trailer-touring the country, during which I performed odd jobs and gathered material for magazine and newspaper articles. Then, I spent three years in Europe: Britain, France, Sweden, Denmark, Norway,

WCAU of The Philadelphia Bulletin
1622 CHESTNUT STREET, PHILADELPHIA 3, PA.

Italy, Greece, Switzerland and Trieste. You're the best judge I know of how well informed I am about foreign affairs. As for languages, I have a fair speaking and understanding knowledge of French, and I read it well. I can also read Swedish and Spanish to a fair extent.

I am a graduate of Allegheny College, Meadville, Pa., having received an A.B. there in 1932. My health is good, my vices have been considerably reduced. I'm an Episcopalian and a political independent. Married, with two sons.

That's my story, and I hope it's sufficiently attractive to get me the job. Thanks for whatever you can do. It seems that you are destined to keep altering the course of my life; and I am grateful that you are around to do it.

As ever,

Charlie Shaw

Ed:

In case you might want to send my letter to the State Department, I thought I would tell you on a separate page that I am desperately hoping to get that job or some other work that would let me do more than I am doing or can do here. I repeat that I have nothing but the highest regard for Doc and I.D. Levy - they've treated me swell - but I find myself facing a very high stone wall here.

I don't regret coming here. It was ideally suited to the situation Nancy and I were in back in 1946. But now I need more scope - I feel that I am in a state of semi-retirement, and I don't want to retire at the age of 36. I feel that I'm capable of doing a lot more than I am doing - for myself as well as others.

There's no reason that you should worry about me; but it's great to think that you will help. Maybe some day I can do something for you.

Ed

March 30, 1948

Dear Ed:

Thanks a lot for your letter telling me that "something will be done soon." I'm ready to move into the staging area.

This next may sound for all the world like pressure, and I hesitate to write it; but I do have a real fear that our sales department may be on the verge of selling my 6:10 commentary at long last. Our sales manager told me last week that he was going to make a real effort to sell the thing; and, with interest in foreign news increasing, the job may not be too difficult.

If that should happen before anything developed CBS-wise, the job would be to convince Dr. Levy to convince the sponsor that John Raleigh could do the job after I left. John hasn't become a very big part of the WCAU organization, and it might be a job to sell him to Dr. Levy as a commentator. I do think, however, that a sponsor would find him very amenable.

I'm enclosing a couple of clippings from The Collingswood, N.J., Weekly Retrospect, out of which you might glean a paragraph. I promised Raymond Bancroft, the editor, I would send them to you.

As ever,

Charlie Shaw

THE WEEKLY RE

and Collingswood American

Many Stores To Close Three Hours Good Friday

Members of the Collingswood Business Association announce that their stores will be closed on Good Friday, from noon to 3 p. m.

These stores request that shoppers arrange their buying time on Haddon avenue to cooperate with the project. They trust that no inconvenience results.

Wide Acclaim For 'John,' Ambassador Without Portfolio

Charles Shaw, WCAU's ace news commentator has joined us in saying "hurrah" for the worth of John Giuliano as an American ambassador without striped pants.

In last Thursday's issue, we commented upon the Haddon avenue shoemaker's visit in Sicily, and said that as an exponent of true democracy, he was more convincing than many sessions of the U. N. and the visiting committees who are constantly trying to sell our way of life to impoverished, confused peoples of Europe.

John, who works for a living, prays at nights, walks straight and looks his fellowman in the eye, is a plain ordinary guy, who has read more about the American Revolution than he has the Russian one. He is sold on democracy because he is a product of it. He doesn't have to talk it—because he is it!

On Monday Shaw took up our evaluation of John's worth "over there" and voiced it over the air waves at 6.10. Thanks, Mr. Shaw.

Last week we suggested that the Government or some agency sponsor trips to the old countries for the Johns, the Jabobs, the Toms, Dicks and Harrys. We are still for it.

John [illegible] walking with the common men over there, because he is a common man. But he is an American man, and that must be strange to them at first.

John isn't a pauper. He isn't rich, either, and he has earned his modest wage honestly. He is an individual, not a robot. He is not envious of those who possess more of worldly goods. He is good.

Because of all these things, they will like and trust him. They will find in him all that they want to be—all the things they have a right to be. Certainly they must wonder, and feel some respect and even new faith, for a country which breeds men like John—and a government which encouraged him to grow as John has grown.

We [illegible] Europe our politicians [illegible] and they are [illegible] have sent them our [illegible] and they have been [illegible] as our ambassa- [illegible] men like John!

THE WEEKLY REC

and Collingswood American

Vol. 48, No. 24 Collingswood (Camden P. O.), New Jersey, Thursday, M

LOCAL SHOEMAKER, NOW IN ITALY, EXPONENT OF TRUE AMERICANISM

John Giuliano is a friend of ours. We met him first in pre-war days, and came to know him better when his "boss" was called into the armed forces to fight in War II, and John was entrusted with the shop's management.

Despite daily association with John over a period of years, we do not know his religion nor his political opinions. We do know, however, that he is a religious man, interested in the policies of his country and community. We know, too, that he is a conscientious fellow, who learned a trade and who has been given an opportunity to work at it, for a wage which has made possible the modest and comfortable care of a wife and three children.

He pays his bills and expects to be paid that which is owed to him. He takes pride in his work at the Lincoln Shoe Repair shop on Haddon avenue, and his own industry and application, as well as his honesty, has won him a partnership in the small but growing business.

Although born here, John was taken back to Italy when he was two, and did not return until he was 18. He attended night school and there learned not only the English language, but the views and ideas of other young Americans who were going to night school. In short, John's modest success, health, and outlook, is typically a product of America.

On election days, John goes out and votes for the candidate of his choice. Oftimes there are so many that the issues tend to become confusing, but he has listened to radios, read newspapers, and talked freely with his friends and neighbors and heard both sides, and so casts his ballot for the candidates he believes best. No one tells him how to vote. No one has told him that he must vote. No one has ever arrested him on a trumped-up charge, no one has ever spied on him, nor thrown him in jail because he has expressed an opinion, when he feels that some politician has been wrong or that his government is wrong. His government gives John all those privileges. There is some violence and prejudice, and these worry John, but there is not enough of them to cause great concern. They, too, will be righted, John feels.

Should someone violate John's rights, cheat on a job him, or do him bodily injury, he goes to the police and they will arrest him. If the case goes to the courts, John can get a lawyer to assist him, or defend his rights, confident that the courts of his country are just. John knows all this. After John's wage had been t[illegible]

After John's wage had been used for adequate food, clothing, fuel and a home, there was still enough left for the movies, for church donations, the various charities and civic projects. There was enough left, too, for John to [illegible] for week, for enough money [illegible] a vacation to Sicily, to visit his aged father. He is [illegible]

This [illegible] and happiness [illegible] In

CHURCH GROUP NOTES

St. Cecelia's Guild of Christ P. E. Church, West Collingswood, are spo soring a cake sale this Saturday, in the church basement, beginning at 11 o'clock. Mrs. Amy Smith is president of the organization, and Mrs. Charlotte Havens is chairman of the soliciting committee.

The Girls Friendly Group of Holy Trinity Church met on Tuesday evening at the home of their advisor, Mrs. Clarence Layer, on Oriental avenue. The girls completed five dresses and five pajamas, and packed them ready to be sent to the missionary field of the Mississippi.

The girls are selling tea, the proceeds to be applied toward the Presiding Bishop's Fund during Lent and after Lent, the proceeds will go toward the Building Fund.

The Women's Missionary Society of St. Paul's Lutheran Church held their luncheon on Thursday in the lower church. Mrs. Helen Albright, president, presided. Rev. Gries, assistant pastor, spoke on "India." Following the luncheon, members worked on cancer pads.

Mrs. Dorothy Noll's Sunday School Class of the First Baptist Church met last evening at the home of Miss Jean Barth of Lincoln avenue.

The Nu Nu Sigma Class of St. Paul's Lutheran Church are making a trip to Campbell's, at 1 p. m. Tuesday, and on their return will meet in the lower church, where they will pack four layettes and twelve "kitty-paks" to be

St. Cecelia's Guild of Christ P. E. Church met Tuesday for their weekly Lenten luncheon, as guests of Mrs. M. Ward, at her home, 804 Grant avenue. Plans were completed for their food sale, to be held Saturday, March 20, in the parish house. Mrs. George Smith presided.

ENGAGED

Mr. and Mrs. Hugh M. O'Donnell of 530 Narberth avenue, Haddonfield, formerly of Collingswood, announce the engagement of their daughter, Miss Rita Marie O'Donnell, to Robert A. Maguire, son of Mr. and Mrs. A. A. Maguire, of 9 W. Narberth terrace, Collingswood. They will be married June 19.

Miss O'Donnell and Mr. Maguire are both graduates of Collingswood High School. Miss O'Donnel is a member of Eta Sigma Theta sorority, and Mr. Maguire a member of Alpha Gamma Sigma fraternity. He was with the Signal Corps of the U. S. Army in the European theater for months.

Shaw, Charlie

March 23, 1948

Dear Charlie:

I had a talk with Ted Church since coming back, and the business of a new assignment for Charlie Shaw is as much on his mind and conscience as it is on mine. Something will be done about it soon, and I don't anticipate much difficulty from the Levy brothers. Let's keep in touch.

As ever yours,

Mr. Charlie Shaw
Radio Station WCAU

MARCH 17, 1948

Dear Ed:

If I seem impatient, perhaps it's because I am. Since you were here, I've been able to think of little else than my returning to Europe for CBS. In view of the President's speech today, I am all the more anxious.

What do you think? Does protocol demand that I do any additional letter-writing or should I wait until I hear from you? Also, should there be a place for me with CBS, what about Doc Levy? Bill Campbell, our sports editor, told me he was offered a job by Red Barber but Doc Levy killed the offer. I have no proof of that; and I really don't think the Doctor would interfere with my change of job, provided it was not presented to him as a fait accompli.

I think you understand, Ed, why I want to return and why I think I could do the job. I can promise you that I'll do a better job than I ever did before.

If I should tell you how much I enjoyed your visit here, I might be accused of being too sentimental. It was wonderful seeing you and talking wi you; it gave me a much-needed lift. I hope it won't be too long until I can once again consider myself your junior colleague.

Sincerely,

Charlie Shaw

Siepman, C.

September 30, 1964

Dear Charles,

I will send along a modest contribution for the A.C.L.U.

It was great to see you and Janie, even so briefly.

The disposition of our mutual financial problem will require a prolonged and liquid lunch at the Century Club and I will propose a date when next I come to New York.

As ever,

Yours,

Edward R. Murrow

Dear Ed,

I know you won't want to come, though it's a good play and a fine cast, but can I prevail on you to contribute? You know that this is what I give all my spare energy to and we're in extra trouble this year. We're opening an office in the South and every affiliate is contributing 10% of its income to get it going.

By good luck I can write to you not only as a beggar but as a debtor who is coming clean. Years back you lent me, bless you, $50 when I was in dire need. All these years I haven't been able to save it, but I've just been paid (correction, am about to be paid) the precise sum for a "position paper" I was asked to write. So at long last I can repay you – in cash, though never in terms of gratitude. Please, please, let us make sure of being together soon. Yours ever Charles

Dear Charles,

Your letter to Ed arrived on Friday last, and I regret to report to you that when I read it to him he said the answer is no.

Ed's convalescence has not been going on as well or as speedily as we had hoped, and at the moment he feels he is in no position to make any plans at all; in fact our only plan is to get back to Washington about the first of May and to establish ourselves in Pawling by the first of June. We will hope to be seeing you and Janey there before long.

Sincerely yours,

NEW YORK UNIVERSITY

My dear Ed,

Dick Heffner had lunch with me yesterday and made me green with envy. He reported having seen and talked with you. But at least I'm glad to have recent news. I'm afraid (I realise) you've been through hell and that convalescence after such an ordeal is a hell in its own right, and my distress and affection for you can't help one whit. It makes me sad that our mar thirty years of friendship is in ~~a~~ kind of permanent moth ball.

God knows if you can bring yourself to think of future plans and I write at a venture. I'm on a committee at the University of Pennsylvania (I'm again visiting professor there) to select the man to give the inaugural address in a new series of annual lectures (for which endowment has been found) on communications. They're looking for someone who can speak as a statesman, not as an operator, and for me there's only one man who can give to the inaugural lecture the perspective and the vision that would set the tone and standard for the series. It's of course you. Is there even a remote possibility that you might see in this an opportunity to give expression to a lifetime's work and say what, as you see it is "the conclusion of the whole matter". I know you have stomach for correspondence, but would you scribble 'yes', 'no', or 'perhaps' on a postcard? My love to you both

Charles

Janet Dear,

I'm longing to see Ed again, as you can well imagine. Could he tolerate seeing me? Summer school starts on Monday. We'll be weekending here, alternating with weekends in Vermont. But, given notice, I could cut out from summer school around noon and drive up (any weekday barring Thursday) to see you in Bowling and so home to New Canaan. Is there prospect of my doing this at your convenience? Be candid about it.

My very best to you both.

Charles (Siepmann)

BROADCASTING AND THE PUBLIC INTEREST

Facts and figures on broadcasting

There are, today, some 3800 radio and 530 television stations on the air, transmitting programs throughout and far beyond a normal person's waking hours. More than 94% of American homes have radio receivers and there are 43 million television homes. (This figure exceeds that for homes with bath tubs).

Radio's metamorphosis

Radio has survived the assault of television, but at a price. The plastic surgery to which it has been subjected has changed but not improved its appearance. Radio networks are in the red. Most local stations do good business, but only by drastic reduction of the services they offer. An engineer, an announcer and a disk jockey suffice nowadays as the skeleton staff for the standard fare of news, mood music and hillbillies that most stations purvey.

Broadcasting as business

Despite which (or, if you like, because of it) broadcasting as a whole is a growing and, by and large, a highly profitable business. Only thirty years ago radio time sales amounted to a mere 45 million. By 1944 the industry's net income had jumped to $90 million, and annual profits to 108% of the original cost of tangible property or, if you take account of depreciated values, to 223%. In 1956 the Columbia Broadcasting system earned $16,283,462, the highest profit

figure of its then 28 year existence - and in 1957 topped this by another $6 million (actually $5,909,915) I don't have to tell you that broadcasters do the bulk of their business with advertisers who buy time to channel the public's needs and preferences toward particular brands and commodities. Through radio and television the salesman has added a cubit to his stature. "Facts", Ronald Knox once said, "are the steam that obscures the mirror of truth". But for what they are worth, these are the crude facts and figures of a hurricane that swept in on us thirty-five years ago and whose force is not yet spent. What has it done to our cultural landscape?

Influence & effects

There is surprisingly little that can be said with certainty in answer to this question- mainly because we have no means as yet of separating broadcasting out from other, concomitant influences on our culture. Most of what is important (as it relates to character, to conduct and to values) thus remains matter for surmise.

Those who had high hopes of broadcasting as a revolutionary force, conceiving of communication's golden age as precursor of a golden age of culture, have had to pocket them. And, as the Book of Proverbs tells us, "hope deferred maketh the heart sick." There are, in this sense, quite a lot of sick people around. The prophets of doom have likewise been confounded. Radio,

for instance, was not the ruin of the press, as television has not ruined radio- at any rate financially. Some of us may have fears and indignations (fear, for example, of the effects, particularly on the young, of the amount of murder and mayhem on the air; indignation at the intrusions on privacy and the high status accorded to vulgarity). But we cannot "prove" that they have substance, other than for ourselves. Though, one might ask, what good men ever waited upon proof when they smelt danger in the air. I confine myself, therefore, to a few pretty well substantiated facts about effects.

1. Leisure

1. Broadcasting has come virtually to monopolise our leisure life. Discount the despised "egghead", and you will find that it is only to work and sleep that we surrender more of our time. This is true of the mature (in years, at least) and even more true of the young. I use the word "surrender" advisedly, for, as we attend to broadcasting, activity of thought, high sensibility or nice critical discrimination, being rarely invoked, are rarely engaged. By and large, broadcasting offers us "inert ideas". Passive and supine, we lend ourselves to its "lulling charities" as to a tranquilizer. It is thus we use (or, as some claim, abuse and dissipate) our leisure.

2. Cultural Communism

2. Broadcasting has brought to millions upon millions a variety of experiences hitherto available only to

the privileged few. Predominant is entertainment. Broadcasting is the poor man's theatre, his music hall, his circus, his Sportspalast. It did not create , but it has catered, and amply, to this insatiable appetite. It is to forces, social and psychological, outside broadcasting that we must look for its occasion.

Within the broad confines of entertainment broadcasting can stake out one substantial claim for the achievement of a revolutionary change.

3. Music Education

It has helped convert us into a nation of music lovers. More than one third of music records sold today are "classical". Ironically enough, having helped create this audience, broadcasters have deserted it. There is, proportionately, less good music on the air today than there was ten years, and less still than twenty years ago. Barring some thirty local stations, the musically hungry sheep (outside New York City) look up and are not fed.

4. News consciousness

Broadcasting has made us newsconscious, by swift and accurate reporting of events the world over. Listeners cite news as the service they would chiefly miss were they deprived of it. Broadcasting cannot be blamed for the fact that despite this,

some 23% of us remain largely ignorant of personalities and issues in the realm of public affairs. Balanced interpretation of the news is something else again. Such service is scanty, some of it unprofessional and largely exclusive of liberal, to say nothing of "leftist" opinion.

5. Consolidation of existing mores and opinion

Broadcasting has done little to change opinion. This is in part due to the fact that the public is ill served with programs discussing vital questions from many points of view. In politics, despite changes in style induced by broadcasting (e.g. the cult of personality, political slogan/spot announcements modelled on the singing commercial, and the dramatization of political conventions), there is no evidence that people in large numbers are swayed by the barrage of broadcast propaganda to which they are subjected at election time. Generally speaking, broadcasting tends to consolidate existing mores, to confer status on radio-TV personalities, to indulge rather than to educate us and hence to keep us where we are rather than help us discover that which we have it in us to become.

Variant exposure as the condition of cultural growth

The public interest requires that broadcasting, if it is not to function as a break on our cultural development, shall offer us variant exposure to the widest conceivable range of intellectual and emotional experience. It can and should put

at our disposal the funded knowledge of mankind. By, supposedly, "giving the public what it wants" it has defaulted on this responsibility and, in the main, foregone this opportunity to help us win the desperate race against time that all of us are running. Over a hundred years ago, J.S. Mill foresaw the consequence of such restricted cultural dieting. "Capacity for the nobler feelings is in most natures a very tender plant, easily killed, not only by hostile influences, but by mere want of nutrtenance; and in the majority of young persons it speedily dies away if the occupations to which their position in life has devoted them, and the society into which it has thrown them, are not favorable to keeping the higher capacity in exercise. Men lose their high aspirations as they lose their intellectual tastes, because they have not time or opportunity for indulging them; and they addict themselves to inferior pleasures, not because they deliberately prefer them, but because they are either the only ones to which they have access, or the only ones which they are any longer capable of enjoying." These seem to me pregnant and prophetic words.

Changed attitudes & practices in broadcasting

Retrospect gives us perspective on ourselves and underscores the truth of Bernard Shaw's warning that you had better " get what you want, or you will be forced to like what you get." I doubt if

many of you realize how much, in broadcasting, we have got used to. Let me give you some examples.

In 1929, the Chairman of the Board of N.B.C. stated publicly that "its aim has never been to make money, but rather to offer programs of such varied interest that our people could not afford to miss them."

In 1922, the then Secretary of Commerce, Herbert Hoover, held that "it is inconceivable that we should allow so great a possibility (as broadcasting)...to be drowned in advertising matter." As late as 1929 the Broadcasters' own "Standards of Commercial Practice" barred commercials between 7 and 11 P.M.

In 1942, the Readers' Digest received 80,000 letters of support for an article protesting radio's commercial "plug uglies". But by 1948, 32% of the public were "in favor" of advertising, while another 35% didn't "particularly mind" it.

In 1934, the Broadcasters Association asserted that "it is the manifest duty of the licensing authority (i.e., the F.C.C.)...to determine whether or not the applicant is rendering or can render an adequate public service. Such service necessarily includes broadcasting a considerable proportion of programs devoted to education, religion, labor, agricultural and similar activities concerned with human betterment.

In 1934, the F.C.C. studied a proposal by the U.S. Congress that a fixed percentage of radio facilities be reserved for use by nonprofit stations. The F.C.C. decided not. "Commercial stations", it reported, "are now responsible under the law to render a public service, and the tendency of the proposal would be to lessen this responsibility. In order for the nonprofit organization to obtain the maximum service possible, cooperation in good faith by the broadcaster is required. Such cooperation should, therefore, be under the direction of the commission."

Such "cooperation in good faith" has since been wanting. Conceivable awareness of this fact may have influenced the F.C.C. to eat its own words to the Congress in 1934 and to set aside, in 1951, 258 television frequencies for use exclusively by nonprofit organizations. We shall soon have 40 of these stations on the air. The prospect of their expansion makes for a glimmer of hope on an otherwise dark horizon.

In 1946, in a document entitled "Public Service Responsibilities of Broadcast Licenses", the F.C.C. spelt out in part what public service meant and said that these criteria, among others, would be used in considering the fitness of a station for renewal of its license.

These concepts and principles are part of the history of broadcasting. But they are dead, even if recent, history. With rare exceptions the policy and practice of networks

and local stations alike are today geared to profit making- and to profit without end. Advertisers, not station licensees determine the main flow of broadcast communication. Audiences are "rated" by their size, and in the frenzied competition for mass markets, major minorities and minor majorities, though they may muster millions, are scouted. Scan your television program schedules and judge for yourself, (outside what Edward R. Murrow wryly terms the "intellectual ghetto" of a Sunday), the kind of public service you are getting. Count (you can do it on two hands) the number of programs on television in which controversial subjects are discussed by two or more men of contrary opinion. Don't waste your time investigating the number of stations whose license has been suspended by the FCC for breach of promise. You will not find any. Yet, to quote Mr. Murrow again,"every licensee (applying to the F.C.C.)...makes certain promises as to what he will do in terms of program content. Many recipients of licenses have, in blunt language, voided on these promises."

Broadcasting, as we have it, is clearly not the kind of broadcasting conceived by those who wrote our system into law or by its early practicioners. How do we appraise it in relation to the common good?

[illegible] of its improvement?)

What are the causes of its default? What are the conditions of its improvement? If we are to avoid totally subjective answers, we must define criteria by which to make our judgment.

If we conceive of broadcasting as just another business, there is nothing much to say. It's sitting pretty. Its profits are enviable. If we ask if the public is satisfied the weight of the evidence forces an affirmative answer - at least if we count heads and attach any significance to so broad a question. But I suggest that neither question is pertinent to the public welfare, properly conceived. Like it or not, the circumstances of our time put a high premium on intelligence. They put a like premium on courage and moral integrity. To be civilized, moreover, is no longer a luxury but a competitive political necessity in a world shaken by rival ideologies. I believe these to be inexorable laws for modern man's observance. Flount them, and we perish.

Judged by these criteria, I think we are driven to conclude that, while there is nothing particularly "wrong" about broadcasting, there are certain positive requirements of it which are not being met and which are crucial to our future welfare. Broadcasting is not destroying either our intelligence, our courage or our integrity. It may be stunting them. And it is certainly not lending them the support it might. I have already suggested the principle which, if honored,

would enable it to do so-the provision forall of variant exposure to all that mankind, through the long ordeal of suffering and aspiration which is history, has learnt gives solace and inspiration and significance to life. Even in broadcasting we are members one of another. As we starve or stunt one, we starve or stunt all.

Broadcasting, for reasons of its own, has tragically underestimated what, given time and a opportunity, quite ordinary people are capable of rising and responding to. In this day and age it is perilous to take us for what we are and thereby keep us where we are. The race today goes to the swift. Public interest requires that broadcasting help us run. Fat, complacent and unaware, we dawdle only to our doom.

Why has broadcasting defaulted so much on society's positive requirements of it? The reasons are complex and I can suggest only a few.

1. Like Midas of old, it seeks to turn everything it touches into gold. And when the gold was counted what was left to Midas? What is left to us?

2. It has long suffered from a failure of nerve. Hag ridden with anxiety lest it give offense, it skirts issues which, precisely because they are controversial, are live and vital issues, touching us

at the quick of what should be of deepest concern to us.

3. Broadcasters boast of the virtues of private enterprise. Private they are - though not under the law, but they are not enterprising. One man's invention is aped slavishly by the rest. Quiz programs spawn more quiz programs. Westerns proliferate in geometrical progression. And so it goes. From competitive enterprise those who designed our system looked for diversity of service born of initiative. Broadcasting has many virtues, but diversity is not now one of them.

4. But what should be its greatest pride is, as I would judge its greatest shame. Despite a spate of verbiage put out by its public relations offices and some of its highest executives, it has failed signally to recognise that power without a high sense of responsibility smells of corruption and that the price of power is exercise of a courageous leadership. Great statesmen have never fawned and pandered to the public. They have led and inspired it, and earned respect and gratitude. Broadcasters are (or should be) statesmen in a realm more crucial even than that of politics- the realm of our enlightenment.

But the defects of broadcasting cannot all be laid at the broadcaster's door. Would that they might be. The malaise from which we suffer is endemic, a universal failure of nerve, of moral integrity, true feeling and clear eyed perception of the abyss at whose very brink we stand. All of us, in our degree, are accessories before the fact.

5. The F.C.C. stands guilty, as guardian of the public interest, of a quarter century of flagrant default.

6. There are not a dozen broadcast critics who speak out loud and bold. In most newspapers the socalled critic is a publicist disgorging network handouts and gossip from talent agencies.

7. Sponsors, obsessed with quick returns on their investment are for the most part too myopic to recognise their own crucial stake in the only investment worth anything to anyone - the spiritual and intellectual welfare of our people.

8. We teachers are guilty. Our collective silence where protest was in order, echoes down the years to shame us. We have done little to guide or influence the listening and viewing of children. We might have done much.

This, you will say, is a long, grave, indictment.

It is indeed. I take no pleasure in its composition. But these are not times for honeyed words and mutual self congratulation. The time is short and, despite all the efforts of our forefathers, the three great enemies of a democracy - ignorance, indifference and inertia - still stare us in the eye. Pray God they won't stare us down. But they will do so yet, other than as we heed a wise man's warning. "In the conditions of modern life the rule is absolute. The race that does not value trained intelligence is doomed." From that challenge neither you nor I nor broadcasting can claim an alibi. This is the first, last measure of its relevance to the public interest. Service to this end is its transcendent opportunity and duty.

Siepmann,

August 20, 1958

Dear Charles:

Alas, there is no possibility of our coming up to see you. The reasons are complicated and I will explain them when we meet. All three of us are desperately disappointed. When do you return to town?

As ever yours,

EHM:skh

Mr. Charles Siepmann
Route 1
Newfane
Vermont

Dear Ed,

This, in a lovely small town newspaper (The Brattleboro Reformer), seemed heartening to me, though I fear it'll be cold comfort to you. But I thought you might like to see it.

We await you here, with joy at the very thought and with tempered hope of the event.

Bless you

Charles

THE END OF "SEE IT NOW"

If you have a good television memory, you probably recall with millions of other Americans the tense and telling insights we have experienced since Edward R. Murrow and Fred W. Friendly took to television with their CBS documentary series "See It Now."

The lives of many of us have been enriched by the humanity and intelligence of the Murrow-Friendly programs, such as those on Nuclear Power, England after Suez, Gumulka's Poland, and Nasser and the Suez Canal. We saw Danny Kaye bringing joy to the blind, benighted poor of Tunisia and dancing with the lepers in French Equatorial Africa. And the now-famous "See It Now" depiction of Senator McCarthy and his methods is one of the monuments of American journalism.

On Monday night the Murrow-Friendly team presented "Watch on the Ruhr," a film study of the devastation and rebirth of Germany and its people after World War II. The critic of the New York Times called it "visual reporting of crispness and discernment." But, according to an announcement by the Columbia Broadcasting System, it will be the last "See It Now" to be seen.

The vanishing of "See It Now" raises certain questions about the obligations of the television industry to its audience. CBS officials have stated that the "See It Now" series was graphic and eloquent, but very expensive. We wonder how expensive it must have been for the cost of the Murrow-Friendly series to outweigh its immense educational value to the millions who watched it. After the cries of insufficiency which followed the Sputnik launchings, nothing much has been done for our defective defense and education programs. At this time Americans need, if anything, more information programs like "See It Now." We can only weigh the portent of its passing.

The American people have underwritten many times over the expenses of "See It Now" by their purchases from the advertisers who have made the Columbia Broadcasting System such a profitable enterprise. A responsible communications industry must reciprocate with the proper information of its public prescribed by law and the terms of the FCC license. Without such civic participation, free enterprise becomes a polite word for economic chaos, and democracy a euphemism fo[illegible] rule of the ruled.

[illegible]

See you
Chas.

My dear Ed.

It was so good to see you. I miss you steadily. I could wish things stood better for you, but it is an ugly world we live in, and yours is a dirty corner of it. We're overdue for a long talk. Try hard to make it to Vermont this summer. You little know the deep affection that awaits you.

It was good of you to sign up Jeremy for a lunch. Give him courage and watch him work. I'd value your appraisal.

You've probably seen the enclosed, but I thought I'd send it on the chance you'd missed it. Bless you a thousand times. Charles

London Times

BACKGROUND TO THE ALGIERS INSURRECTIONARY MOVEMENT

ARMY OFFICERS' OATH AT TIME OF DIEN BIEN PHU DEBACLE

From Our Special Correspondent

ALGIERS, JUNE 1

The organizers of the Algiers insurrection of May 13 have now been encouraged by their apparent victory to talk openly about how their plans were laid. It is an astonishing story. The following version was told to your Correspondent by someone who has collaborated closely during the past five years with M. Delbecque, the principal supporter; it has been verified by opinions from other reliable sources.

It suggests that the supporters sounded the views of General de Gaulle before carrying out their plot, and that M. Lacoste and M. Chaban-Delmas were both to some extent privy to it. Several Army officers between the ranks of captain and colonel were directly involved, but this does not appear to have been true of General Salan or General Massu. M. Delbecque emerges as the key figure in the drama, with M. Soustelle promising him political support.

TO END HUMILIATION

It all began about four years ago, at the time of Dien Bien Phu, when several young officers in Indo-China swore a solemn oath to devote themselves to restoring the grandeur of France and putting an end to the humiliation caused by weak governments. This sowed the seed of insurrection in the Army. For a year or two nothing was done. Then M. Delbecque, a young textile magnate from Tourcoing, with a strong Gaullist background, began to develop the same ideas.

Last year he made contacts with certain politicians in Paris and civil personalities in Algiers, and also with a major at the War Ministry in Paris who promised him the support of certain sections of the Army. In political circles M. Delbecque made no secret of his plans. He explained that his plot was aimed not at any particular person, but at the "système" as a whole. He wanted to secure the return of General de Gaulle.

At about this time last year two things were happening in Algiers. First, some extremist civilians—"ultras," as the French call them—were organizing their own *coup d'État*, with the aid of a few Army officers. This *coup* failed: General Faure, one of its ringleaders, was arrested before he could take action, and the bazooka attack on January 16 on General Salan, who was considered too "soft" with the rebellion and with Paris, succeeded only in killing his principal adjutant. There is no evidence that M. Delbecque himself was involved in these incidents, which his collaborators now denounce as the work of a "band of fanatics." But several of those who were involved are now sitting happily on the various public safety committees.

THIRD DEGREE

The second main event in Algiers last year was the handing over of police powers to the parachute troops, with the purpose of cleaning up terrorist cells. General Massu, a practising Roman Catholic, is known to have been profoundly disturbed at heart by the third degree methods which sheer necessity obliged him to use in order to wipe out the cells and so save hundreds of other innocent lives from terrorism and restore the city to calm. On several occasions he consulted the Church authorities here in an agony of spirit, but finally decided that it was his duty as a Christian and a soldier to go on with the work.

This must be said to put into perspective the various wild stories about tortures which circulate in liberal circles in Paris and London. But several of General Massu's subordinate officers were less scrupulous than he.

When the parachute troops had finished their work, security duties in the city were handed back not only to the police but to specially organized groups of civilian auxiliaries, both European and Muslim, totalling several thousands. It is suggested that the *coup* of May 13 could not have been carried out without the disciplined aid of these men who, operating in plain clothes among the crowd, gave force and direction to what would otherwise have been a rabble.

When M. Gaillard came to power last November M. Delbecque managed to get himself appointed *chef de cabinet* to M. Chaban-Delmas, the Gaullist Defence Minister. In this guise M. Delbecque arrived in Algiers in January and set up his headquarters in a delightful white villa on a height overlooking the city and the Bay of Algiers. Rarely since the days of Alcibiades can revolution have been plotted from so romantic a site. The villa, cool and luxurious, belongs to M. Nouvion a rich agricultural engineer. Mme. Nouvion, a pre-war member of Laroc's pro-Fascist Croix de Feu—the French Mosleyites—gave M. Delbecque all the help he needed.

FORCES JOINED

Here during January and February M. Delbecque joined forces with some Army officers and with 16 leading Algiers citizens who were also in favour of preventing the Paris Government at all cost from negotiating with the F.L.N. or relaxing France's hold over Algeria. The original public

As most of the civilians in this group were anti-Gaullist and former Pétainists, M. Delbecque had some difficulty in convincing them that the best course was to secure the return of General de Gaulle.

He also emphasized the need for fraternity with the Muslims, and for the absence of all racialism. M. de Sérigny, owner of the *Echo d'Alger*, was brought into the movement because it was thought that his wide influence might be useful, but he was never very popular with it. M. Delbecque and his friends are believed to have feared that M. de Sérigny was really more interested in preserving settler interests in Algeria than in bringing about a wonderful French national resurrection.

Various Gaullist officers were allowed to infiltrate into Algiers from other parts of the country and from France. M. Chaban-Delmas, it is said, knew something of what was going on and is believed to have been secretly sympathetic. The same is said to be true of M. Lacoste, who would anyway have found it hard to take action against the movement by this stage because of the strength of feelings among the settlers and part of the Army.

M. Soustelle pledged M. Delbecque his support, but did little active work. Finally, when the Gaillard Government fell and it appeared that M. Lacoste would be replaced in Algiers, M. Delbecque decided that the time had come for action. The peaceful demonstration in Algiers on April 26 was a dress rehearsal for the actual *coup*. By this time the leaders of the crowd, especially the police auxiliaries, and the students, had been carefully briefed. At about the same time M. Delbecque met General de Gaulle in France and secured a promise that the General was prepared to return to power "if the people wanted it." Then M. Pflimlin was asked to form a Government—the man who M. Delbecque knew for certain was intent on abandoning Algeria. All was laid ready here for the night of his investiture.

GEN. DE GAULLE SEEN

On May 9, according to one version, M. Delbecque asked M. Lacoste to remain in Algiers and lead the *coup*, but the last-named refused, saying that he could not bring himself to make a complete break with the Socialist Party. According to another version, M. Lacoste agreed the same day that demonstrations should be organized in Algiers in his absence, so as to prevent M. Pflimlin from sending a new Minister Resident to Algeria.

But this time M. Pflimlin had decided to appoint M. Mutter, the Independent, whom people here suppose would carry out the Pflimlin policy. There is some evidence that at this stage M. Delbecque and his friends put their trust in M. Lacoste and would in some way have preferred him to M. Soustelle. They hoped he would be able to prevent the policy and Army from intervening against them.

On May 9 M. Neuwirth, a close colleague of M. Delbecque and now chief press officer of the public safety committee, saw General de Gaulle in France and secured a further promise of possible support. It is not clear, however, how much the General was told of what was really being prepared. It would be wrong to suppose that he was necessarily privy to the plot: more probably M. Delbecque and M. Neuwirth merely sounded his views on a possible return to power.

By May 11 M. Pflimlin began to fear trouble and is reported to have secured from General Salan and General Massu a promise of their loyalty. On the same day M. de Sérigny launched an appeal to General de Gaulle in the *Echo d'Alger*.

On the afternoon of May 13 the crowds began massing according to plan. M. Delbecque's aim was to shock Parliament into rejecting M. Pflimlin and calling on General de Gaulle. He was taking a great risk, but he had received some assurances from M. Lacoste and from parachute officers up to the rank of colonel. But the storming of the Government building was not part of the original programme.

TEAR GAS USED

M. Lacoste was now back in Paris, and M. Delbecque had arranged with M. Maisonneuve, M. Lacoste's political director, that the Government building would yield peacefully, and that he, M. Maisonneuve, would receive a delegation from the crowd and allow a public safety committee to be installed officially. But when the security police started using tear-gas bombs the crowd went wild and stormed the building. The police were too weak to stop them and many were probably sympathetic. For a while it looked as if things were getting out of hand.

Then General Massu arrived. According to reports neither officially confirmed nor denied, General Salan ordered him to telephone to Paris for instructions as to whether or not to open fire on the crowd. M. Gaillard replied that he had resigned and so could not answer; M. Pflimlin replied that he had not yet been elected, and so could not answer either. This reported incident is being widely quoted as the supreme condemnation of the Fourth Republic.

So General Massu made his famous snap decision—to join and control the movement rather than suppress it. As he told your Correspondent afterwards, "I jumped on a moving train and now there is no going back." All observers agree that he, General Salan, and the other leading officers had no direct part in the plot before it took place, even though they must have sensed that something was being prepared.

HISTORIC NIGHT

Later that historic night other things began to go wrong with the plot. First General Massu, to appease the crowd, announced that M. Soustelle was on his way. This had in fact been prepared, but the Paris police were alerted by the announcement and arrested M. Soustelle as he was about to board an aircraft that was waiting for him at Villacoublay, near Paris. This set M. Soustelle back by three and a half days.

Secondly, the National Assembly, far from collapsing like a pack of cards, elected M. Pflimlin by a large majority, and so set in motion the 19-day crisis. Code messages have been passing by radio between the movement here and its secret contacts in France. M. Soustelle's code message was "*La bouteille de Muscadet est arrivée.*" M. Delbecque claims that the movement has organized 120 cells in France. But after the National Assembly's failure to collapse on the night of May 13-14, they were unable to rise up openly in favour of General de Gaulle.

General Salan's role has now become clearer. On May 14 he wanted to canalize and subdue the movement and remain *dans la légalité*, under the orders of Paris. But when he saw the extent of support for the insurrection, among the civilians, and more especially within the ranks of his own officers, he gradually realized that this was impossible. He hated to turn against the Republic, and was therefore profoundly relieved when General de Gaulle's two statements seemed to offer moral support for his disobedience. He was suspicious of M. Soustelle on the latter's arrival, but soon the two men began to cooperate easily. By May 20 General Salan had decided to break with Paris and throw in his weight wholeheartedly with the insurrection. As he had always shared his junior officers' contempt for the politicians and for the Fourth Republic, this was not really so difficult for him. General Massu, a stronger man than General Salan and a keener Gaullist, reached the same decision several days sooner.

As for M. Delbecque, he has won on the short term, in spite of the delays, but whether General de Gaulle will now give him what he wants is another matter. Even if he fails in the long term he will still be able to teach Cataline and Alcibiades quite a lot about how to make your conspiracy successful. He is an odd mixture of ruthlessness and idealism. He and his friends have a profound sense of vocation

upcoming

yes I hear called 1 Century

My very dear Ed.

Are you free for lunch next Thursday? Or any other day next week? I'm likely to be in town each day and, being a traditionalist, I want to keep our club alive and active. I'm spoiling to see you and propose to dump the manuscript of this damned book in your lap. That prostituted character, Kip Fadiman, has volunteered to say nice things about it! How are you? I've got a new TV set, so make me know when your next show is on. My publisher had the insolence to suggest you put me on Person to Person !!! This world is full of insolence. Bless you + love

to Janet. Call me. Charles

Siepman C

October 31, 1957

Dear Charles:

I feel that it will not be possible for me to go to the Civil Liberties Educational Foundation Benefit on December 11th, but I would like to take a couple of tickets anyway, so here is my check for that purpose.

As ever yours,

Mr. Charles Siepmann
240 South Main Street
New Canaan, Connecticut

mcc
Enc.

240 SOUTH MAIN STREET
NEW CANAAN, CONNECTICUT

Dear Ed.

That was good. I'll call you when there's prospect of my being in town again. And do you call me, whenever the inclination for lunch is on you.

The Civil Liberties Education & Research Foundation benefit is on December 11. Maybe we could all four go together? Anything you can do to help will be entered in your credit account in heaven.

Bless you, dear Ed.

Charles

CIVIL LIBERTIES EDUCATIONAL FOUNDATION

Statement of Purpose

THERE ARE many fighting agencies devoted to the cause of civil liberty. There is perhaps need for more. But such is not the purpose of CLEF. Its proposed functions are complementary.

The goals of CLEF are threefold, each of them designed to meet long-felt needs which, until met, retard the work and limit the success of militant organizations. It aims: 1) to pursue careful, objective research into the facts, 2) to further public education on the vital significance and present state of civil liberties and, 3) to provide defense funds, not obtainable elsewhere, for those unable to defend themselves in cases involving civil rights. More knowledge about civil liberty, and its wider dissemination in terms that ordinary people can appreciate — these are the twin, major objectives. "Democracy", as Jefferson put it "cannot long survive without frequent return to fundamentals".

CLEF will circulate its researc
at large, to educational institu
tions active in the field of civi
ings will also be part of the ra

30 WASHINGTON PLACE
SPRING 7-2000, EXT. 438

Dear Ed.

Bayard Stockton is my American nephew (in law) whose letter I sent you last summer + of whom I've talked to you. He's back from Munich where he's on some hush hush work for, I'd gather, the CIA. His mother is to have a critical operation in about 10 days.

He's fed up with government and wants to get into public service work in TV or radio. I don't often plague you this way, but if you could see him, size him up + give him some steers on possible employment, I'd be immeasurably grateful. He's a very decent guy, able + with a public service bug that won't let him alone.

If you could see him (any time) this week, would you call him at EN 9-8094. ~~Address~~ Address 1105 Park Avenue. He has to be in Washington all next week but would be free the week after (subject to his mother's condition).

Do we meet Thursday? I'm sending you some first thoughts on humanicism + would love to talk further. There's nothing I care more about.

Yours Charles

P.S. Raymond called up after our lunch and confirmed his warmth, Saturday.

Siepman, Chas.

April 3, 1957

Dear Ed,

When you accept that award you will be speaking out of yourself, expressing your own thoughts. I am not impertinent enough to suggest to you, as you are not vulgar enough to ask me, what those thoughts should be. But the theme is tremendous, as is the opportunity to get something said that will give heart to others and to throw light on this dark world we live in. I offer you, therefore, "themes for your consideration."

The humanist is he who cares, and is preoccupied with what is worth caring about. T. S. Eliot put it beautifully. "Teach us to care, and not to care. Teach us to sit still."

Anyone who cares, comes ultimately to believe in what he cares for. Thus the humanist is always a believer.

All true belief, however, is rooted in doubt. This is because we are finite, and cannot know. And yet, to live an ordered life, we must believe. This recognition of doubt (of "that reserve of truth beyond what the mind reaches, and still knows to be behind") characterizes the beliefs of the humanist. From which it follows that he is never a dogmatist.

Another characteristic of the humanist is that he is preoccupied with the mystery of personality. People, for him, are always persons. This is what, these days, makes him lonely. For, in this age of science, persons are people, statistics on a chart, and tendencies and "charactertistics" symbolized by curves on graphs.

The humanist is distinguished from the scientist not only in this respect, but in two others. His preoccupations are subjective, not objective. His concern is not with manipulation, but with understanding. Hence, it is character, and not events, that centrally preoccupy him.

Distinctive of the humanist is his sense of himself -- as, with his fellow man, a caesura between the past and the future. He has, in wholly unacademic terms, a sense of history, and consequently an awareness of necessity, of laws of life which we can either learn or have drilled into us by suffering as, in our perversity, we depart from them. In wholly secular terms he recognizes with Shakespeare that "There is a divinity that shapes our ends, rough-hew them how we will." And from necessity derive two humanist concepts - that of duty + of reverence

One has only to list these aspects of humanism to see how television flouts them. Thus:

1) Audiences are conceived and treated as people, not as persons.

2) Quantitative response is consequently made the measure of quality.

3) People are seen as means to the end of profitable marketing, not as ends in themselves. Thus exploitation is substituted for honest service.

4) Events, not character, constitute the raw material of program. "What" and "how" not "why," is what television asks and answers.

5) Not being humanist, television has never taught itself "to care and not to care." It is not itself in search of anything. Hence it has no dynamic, no inspiration, no leadership. It functions like a prostitute, making itself available (at a price) for other people's pleasures. Taking us for what we are, it keeps us where we are. It lacks utterly the life giving contagion of personality. It is in fact afraid to be itself, whereas the essence of humanism is the urge to self-discovery. Television is faceless.

The Bishop of Beauvais in Bernard Shaw's St. Joan thus answers the truculent little English priest who asks him "What is a miracle?" "A miracle," says the Bishop, "is any event that creates faith." In this sense television, to put it mildly, is not miraculous.

I could go on!

Charles.

Monday

Thursday

3. 19. 57.

Dear Ed,

Twenty years ago you told me to visit Chapel Hill. I started out from Cambridge, Mass, but the hurricane of 1938 turned me back after 40 miles - railroad bridge washed out. Now, at long last, I'm here, and off again, home, tomorrow. Next week to Philadelphia, and then I'll have completed this 3 months odyssey for the Fund. For two weeks I'll be home (then to Oregon to make a speech + visit old friends in San Francisco) and I'm hungering for prospect of sight of you again. If you have inclination, name a lunch date between April 1 (3rd to 5th excepted) and April 14, and I'll be in.

Your silence on the book (out last Monday) suggests to you didn't like it. I don't blame you. Person to Person is cooking up. I liked your talk with Williams and with that photographer.

My love to Janet, and bless you.

8·14·56

Dear Sid.

The enclosed is from a nephew in law (if there is such a thing!) now working on secret intelligence in Germany. As you see, he's fed up. He's bright and has character. As raw material he'd be an asset. But experience? Has he any chance of breaking into TV anywhere on the public affairs or public service front? And if so, how? Will you give it a thought and talk to me about him when, as I fervently hope, we meet again in early September?

Teaching 44 AT+T executives has held me here at Dartmouth these last 6 weeks. We finish 12 days from now. It has proved as near an ideal life as a man can ask for. Four days of bachelor life, free from familial strains + responsibilities, with time to read and think; and 3 days on the farm with the family – and they only 65 miles off.. I'm momentarily in luck. There's prospect of repeating the experiment next year.

How's you? I miss you. Keep an early lunch free for me in September. Our love to you all. Charles

Wednesday, July 25th

Dear Mr. Siepmann,

My mother mentioned in a recent letter that she had talked to you about my aspirations after leaving my current job at Alexandria. You will probably also remember that I discussed the same general subject with you last March before we returned to Europe. This letter may be somewhat premature, but I feel that I must start thinking about the future now, despite the time and distance interval, so that I will have some idea of what my prospects are when we return to the States next Spring. I hope that it won't disturb your summer leisure too much by bringing up unpleasantly humid and warm thoughts of sweltering New York to conflict with the cool of Vermont and Hannover.

First, I should probably explain as freely as I am able to, why I intend to leave the government. The reasons are various and many - some of them undoubtedly petty. But they boil down basically to two: I see little future and less satisfaction in staying in an organization which is top-heavy and which offers only slow promotion based generally on tenure rather than merit. Secondly, I have come to experience daily almost complete frustration in my job, brought about by a towering bureaucracy which concerns itself more with internal power struggles than with the vital job at hand. There have been a number of blows to the ideology that initially led me into this employment. These have been cumulative in effect, to the point where I feel that there is more to be done for the "public good" elsewhere than in government. By this I mean that I have always felt that Americans should be aware of what goes on outside their own watery borders. This job, ideally, should contribute to that awareness, even if only to the knowledge of a restricted number of people. In the broader field in which my interest now lies, I feel that this awareness can be brought about best not by relatively dry newspaper accounts which all too frequently are lightly passed over, but rather in a manner which can be comprehended vividly. Television, and, to a lesser extent, radio are the media which are capable of bringing such knowledge and, perhaps, understanding; lamentably, this is probably because they present news and features in a more palatable and less strenuous form.

This belief, coupled with my complete disillusionment with government as a career make me feel that at the very least, I should like to investigate the possibilities offered by television and radio - specifically in the connected fields of news and special or public events.

Although I have rarely had the privilege of seeing Mr. Murrow's programs, I remember you mentioning that he does a magnificent job of presenting and documenting problems and issues on television. There are undoubtedly others who strive to achieve similar enlightening goals. This is the kind of thing in which I would be extremely interested.

Bad to say, I realize that there is precious little that I can offer in this highle specialized and competitive field. My knowledge of radio is almost rudimentary - production manager of the college radio station, some part-time work for local independents near Williams, and an intense interest in the entire problem of presenting news in an appealing,

but accurate, manner.

On the other hand, I believe that the past five-plus years have not been completely wasted. I have picked up a near-fluent knowledge of one language, and am acquainted with another. For more than four years, my work has brought me into close association with a variety of foreign people whose confidence I have had to win in order to fulfill my assignments. Naturally, the work has also involved considerable report-writing. (Albeit in that tortuous variety of the language admirably termed gobblydegook). The experience as a whole has been a rich one which cannot weigh against me if I am considered for a job in the news field. Perhaps the greatest single advantage I have derived from this time is a realization of some of the problems that face nations other than our own and of those pressures which make true mutual understanding such a difficult proposition.

I believe that I mentioned much of this to you when we last met. My resolve to leave the government has become even more strong on the intervening period. In the Spring of 1955, you suggested that I write you about a year before I returned. For a while, I thought I might have to come to the States this fall on business, so I delayed. Now, however, that that possibility has fallen through, I am at a loss on how I should proceed. Judging by the reception I have previously received when applying for a job cold, I don't imagine it would do much good to write a formal letter to the various networks now (or even when I returned). Another awkward consideration is that I shall not be able to discuss my present occupation with anyone in more detailed terms than the above. This, of course, is guaranteed to evoke fishy stares and chilly responses. To complicate matters further, I shall probably not be able to present a reference, specify the peculiar skills that I may have, nor dwell on the nature of my assignments.

The problem of finding a job will be rather pressing upon our return. I want to leave this organization with all possible speed; on the other hand, I don't want to throw up my present job (which I can hang onto indefinitely), until I am assured of another. I would like, if at all possible to lay the groundwork now. If there's anything that you think I can accomplish from here, I would be only too pleased to do so - whether it be submitting personal histories to prospective employers, going to Bonn, Paris or London to meet someone, or the like.

Thus I would be very grateful for any advice that you might be able to give me on how to proceed. I realize only too well that there's little I shall be able to accomplish from here, but if you have any ideas, I'll be delighted to act upon them.

Many thanks for toiling through this epic of breast-beating. I hope that the summer is a pleasant one - at least not as varied as ours where one day promises the quick advent of fall, the next makes one think about unpacking summer clothes finally.

Best to you and your family

Dear Ed:

I had hoped against hope that we'd be lunching today. As we're not, I must write to you about something that can't wait long for an answer.

A group of us approached Vice Chancellor Henry earlier this week about a project in which he showed keen interest. In brief the idea is this. We are concerned to feel out the possibility of securing the cooperation of networks (and maybe of the NARTB) in the formation of a non-profit institution for the selection of outstanding radio and TV programs for distribution to schools and colleges in much the same way as Teaching Films Custodians have made available selected films for educational use.

The idea would be to set up such an institution under the supervision of a distinguished group of educators. The financing of this operation, however, would be underwritten by the networks as a contribution to their public service responsibility. It occurs to me that, costly as this might prove to be, it might be seen as good public relations and is a form of insurance against those who complain of broadcasters as ~~being~~ paying mere lip-service to the public interest and as pursuing profit as the sole objective.

Vice Chancellor Henry suggests that the best way to go about the further exploration of this idea would be sound out the top-flight people on an informal basis before going further. He offered the hospitality of the university and himself as host for a luncheon or dinner meeting with a few such representatives of the industry. It was suggested that I discover through you whether the approach is warranted at all, and if so, who might be invited. As regards CBS, would it be Paley and/or Stanton and yourself? As regards other networks, would it be similarly the chairman and/or the president?

I'd like to move on this as soon as possible but there is no point in wasting time, If, in your judgement, we stand ~~any~~ no chance at all of sympathetic exploration of the possibilities of such a project, Could you give this a moment's thought and call me up some time about it.

Edward R. Murrow March 10, 1955

I'm going to Chicago for the week-end but will be back in the office on Tuesday. It would be a big help if you could maybe call me sometime that day.

Cordially yours,

Charles

OFFICE COMMUNICATION

To Mr. Seward

From Kay Campbell

Station

March 9, 1955

In reply to the memo from you to Mr. Murrow dated February 3, the check for $50.00 which was issued to Charles Siepmann on January 9, 1952 has never been presented to the bank because Mr. Siepman tore it up. He apparently had his own good reason for doing this and is never going to ask for another check. Incidentally, Mr. Siepmann apologizes for making a hash of our accounts.

Chas. keeping mail?

CBS RADIO

Office Communication

to: Mr. Murrow

from: Mr. Seward

February 3, 1955

On January 9, 1952 you issued check number 1223 to Charles Siepmann in the amount of $50.00 for "consultative service -- 7:45 show". This check has never been presented to the bank. I thought you should know.

J.M.S.

Charles - How come?

Ed

I tore it up. The thought that prompted the writing of that check was enough to move me more than I like admitting. I decided I could savor the thought longer and with more relish if I didn't "convert" it into a crider currency. But I'm sorry if I've balled up your accounts. Charles

Dear Ed.

For two days now I've had you in my head, as I always have you in my heart. I've hoped (a little wanly, I confess) that words would come to me to match my feelings, but they don't. And I know now that they won't. What you've done stirred such a turmoil of emotion in me that, beyond words, I've not yet found my own self again. 'Thank you' is a big word, but it isn't big enough for what I need so much to say to you. Neither big nor broad enough, for I want to say more. No, not say; convey. If I could write music, maybe I could get to you, and out of myself, what won't go into words. But I can't, and remain locked up inside myself, while this hurricane of feelings roars through me. I guess all I can do is bless you and thank God for you and for our friendship which, I envy apart, means more to me than any living relationship. Let's "Keep Loyalties young", Ed, and not let the world intervene. Hold Thursday if you can. It's too long since we talked and probed things to other.

Bless you again. Charlie

Wednesday

Dear Ed,

I've often been moved to write Murrow and Friendly fan letters,but this time I'm moved to the point of being unable to resist the impulse. That Oppenheimer show last night was beyond price. Most of us never meet in person the quality that makes that human being... and if there is so much as one such human being,the rest of us needn't feel we belong to a race of beasts. To have that transcendent mind and spirit in the living-room,with the camera steadily playing on that wonderful mobile face,was the rarest experience. And your own infinite skill in interviewing,plus some magnificent editing,of course made it the lovely full rounded thing it was. It was overwhelmingly moving, and life looks better this morning because of it.

As to your letter to Charles,my dear Ed,what another reflection of the quality that is you. We border here on the things one can't say,but only understand to be felt. You know I think what you,personally,with or without success,reputation, and fixings,mean to Charles. Take " affection" in the Oppenheimer rather than the market-place sense,and you have some of it. All I can say,bless you,in your private and your public characters both, - the so wonderfully fruitful for the rest of us public character being possible only because of the quality that Charles loves in the private one.

Love to Janet and let's see you some time,

Jane (Siepmann)

Siegmann, Chas
Prepared for Murrow
Ford Foundation
work.

First, then, the Proposition. This, as they say, is fundamental. It's obvious and inscrutable. The essential thing to probe is what people love. Hate is easy. It's the obvious manifestation of what you can observe in people. It requires no interpretation. It is manifest.

What people love--and why--that's what they don't understand themselves and what the rest of us find such difficulty in understanding -- because our self-esteem gets in the way. Love, at its best and worst, is the unconscious revelation of our insecurities. It ranges from true self-surrender to pure self-deception. It is the point for observation -- the clue. It's the clue to persons and to societies. What's wrong with us -- and with the communists -- is what we love. The business of anyone concerned with understanding is -- Love.

Now, and next, Procedure. This is simple. You reverse the procedures of the academicians -- the long-winded elaboration of the irrelevant. You state simple problems in simple terms - recognizing that the simplicity of the statement of the problem is in inverse proportion to the simplicity of the solution. You will go furthest in 'solutions' if you're dedicated to the proposition that most things are insoluble. Academicians chase non-existent foxes on illusory horses. Honest men pursue insoluble problems on verifiable premises.

I have two 'projects' for you that stem from my proposition. There are only two things to do today - to begin the process by which we may (it's doubtful) 1) come to understand ourselves; 2) come to understand others. This is at least intelligent and is the reverse of the process, born of the Puritain conscience of digging up the dirt about others. Muck raking is a peculiarly American and peculiarly unprofitable pastime. It looks good. In fact it feeds hate and the urge in everyone to find an alibi for themselves. We're all dodging ourselves and until we understand this will go on with this lunatic, unconscious game of hide and seek.

Understanding ourselves: This has two great merits of 1) being impossible; 2) corresponding to the only thing possible to finite man - which is an approximation to the truth. There is one grand little book in the whole dreary, methodical, and barren literature of communications research - "Mass Persuasion" - which analyzes why millions in the war loved Kate Smith. Note - they loved her, meaning they hated themselves. The sample was inadequate. The job needs doing on a larger scale. Take the 3 or 4 top ratings - Hooper, Nielson or what have you, in either TV or radio and probe people, on a broader sample basis than Merton could in "Mass Persuasion" - and discover what people love - and why. The why is all. Provide this clue and we'll begin to understand ourselves. It'll provide the spots by which the doctor can diagnose the measles. We haven't yet even got onto the spots of our social measles. We think, indeed, they're beauty spots!

Understanding others: Take the Voice of America and Radio Free Europe. Ask some simple questions. What are they out to do? How are they doing it? What happens? We don't have an answer to any one of these questions. Yet we poor, bloody taxpayers foot the bill for all this nonsense.

THE TWENTIETH CENTURY FUND

FOUNDED IN 1919 BY EDWARD A. FILENE

THE CHARTER of the Twentieth Century Fund, empowering it to seek "the improvement of economic, industrial, civic, and educational conditions," expresses the generosity and faith of the late Edward A. Filene of Boston, who founded the Fund in 1919 and endowed it with a series of gifts. Mr. Filene had an overriding concern for a wider public understanding of basic economic issues as an essential to the formation of sound public policies in a democracy. The trustees of the Fund have, until recently, concentrated its activities largely in attempting to meet this urgent community need.

In 1951, however, the trustees decided to enlarge the Fund's field of activity to include studies of the political and social forces that affect our economic life. The Fund will enter this new area gradually, as fruitful and feasible areas for research are developed, meanwhile carrying forward its studies of economic problems.

The Fund seeks to enlighten the public through research projects that usually involve five steps:

1 The trustees choose a problem of pressing public importance, seeking controversial subjects with respect to which the Fund's impartial, professional approach can be of high value to the public.

2 A competent research staff is engaged to assemble and analyze the facts relating to the problem.

3 A committee of representative people, of varying backgrounds and with special knowledge of the problem, is appointed to review the research findings and make recommendations for action in the public interest.

4 The Fund publishes the results of the study in book form, and seeks the widest possible distribution through its own sales efforts and through regular trade channels. The recommendations of the special committee are included as a final chapter.

5 The Fund undertakes the dissemination of the research findings and committee recommendations in popular media, including newspapers, magazines, pamphlets, radio and television programs, motion pictures, filmstrips, etc.

The work of the Fund consists solely of research and nonpartisan, nonprofit educational activities in the public interest.

REPORTS PUBLISHED IN 1952

BRITISH PLANNING AND NATIONALIZATION

by Ben W. Lewis

COSTA RICA: A STUDY IN ECONOMIC DEVELOPMENT

by Stacy May, Just Faaland, Albert R. Koch, Howard L. Parsons and Clarence Senior

BRITISH PLANNING AND NATIONALIZATION

BY BEN W. LEWIS

Professor of Economics, Oberlin College

When the British chose a course of nationalizing major industries and wide-scale economic planning after the war, they created new problems of understanding at this western end of the English-speaking entente. To help Americans evaluate this new turn in Britain, much of it seemingly so foreign to our political temper, the Fund sent Dr. Lewis, long a student of British affairs, to view the scene at first hand and prepare a brief factual summary of postwar British economics.

Dr. Lewis spent six weeks in Britain, and studied published material there and in this country. His report, titled *British Planning and Nationalization,* was published by the Fund in May.

Summarizing the financial returns, production, labor policies, and other results in each of the major nationalized industries to date, Dr. Lewis makes it clear that nationalization has not wrought a miracle for Britain. Some of the nationalized industries have done reasonably well, others poorly. Dr. Lewis also describes what the British have accomplished with their town and country planning, their housing programs, and their national health service. He gives much background material that is indispensable for understanding the condition of the British, sketching their shattered economic state at the end of the war, which made a high degree of economic planning seem to them necessary to survival. He shows that nationalization fits in with the long-term trend toward cartelization in British industry. The pragmatic character of British planning impressed

Dr. Lewis; he says that no doctrinaire blueprint guides the British, but rather an attempt to meet immediate pressures. "From an economic point of view," he concludes, "what Britain really needs is an industrial and commercial rebirth — inventiveness, mechanization, daring and drive."

Reviews and editorial comments on the study, in newspapers and other periodicals, characterized it as giving Americans a factual account of a subject too often obscured by the fogs of partisanship.

COSTA RICA: A STUDY IN ECONOMIC DEVELOPMENT

BY STACY MAY, JUST FAALAND, ALBERT R. KOCH, HOWARD L. PARSONS AND CLARENCE SENIOR

In September the Fund published *Costa Rica: A Study in Economic Development*, the report of a team of economists who went to Costa Rica for the Fund to study the economy and suggest the leverage points at which the Costa Ricans might lift the levels of production, consumption, capital formation, etc.

The team making the survey was headed by Stacy May, Economic Advisor to the International Basic Economy Corporation; and included in addition Just Faaland, on leave as economist with the Organisation for European Economic Co-operation; Albert R. Koch, on leave from the Federal Reserve Board; Howard L. Parsons, agricultural economist; and Clarence Senior, Latin American specialist.

Economic expansion in underdeveloped areas is, of course, one of the basic problems on which the long-range political stability of the world now depends. The study of Costa Rica was conceived by the Fund as a case history of the problems of industrialization in one nation, which might aid not only that nation but others — particularly in Latin America — with similar problems. A further objective was to show how both private and public aid under the U. S. "Point Four" and other international programs might be applied most usefully.

The survey team found that Costa Rica, dependent mainly on agriculture both for the major part of its food and for vital exports, can make its greatest immediate gains in national income by increasing farm productivity, thus lowering the cost of food, releasing workers for industry, and raising the quantities of the export crops. Although

lack of mineral resources, and the smallness of the market, preclude a profitable heavy industry, the nation can with great profit expand its light manufacturing and assembly activities. Many specific suggestions for improving farm productivity and for expanding light manufacturing are included in the report.

The report has been widely reviewed and favorably commented on in this country and in Costa Rica. The Fund prepared a series of extended news releases, with accompanying supplements of excerpts from the study, all in Spanish, which were serialized in whole or in part by leading Costa Rican newspapers, making the main findings of the study widely available in Costa Rica.

ECONOMIC STABILIZATION SERIES

Third Report: DEFENSE AND THE DOLLAR

Fourth Report: ECONOMIC CONTROLS AND DEFENSE

RESEARCH DIRECTOR: ALBERT G. HART

Professor of Economics, Columbia University

In a series of economic stabilization studies the Fund has sought to find how we can keep our economic system healthy while carrying the weight of our huge military and defense expenditures. The first two reports in the series were published in 1951. The final two were in preparation in 1952, for publication in 1953.

The Fund began the project in 1949 as a study of long-range stabilizing measures for reducing the swings of the business cycle, in the kind of full-employment peacetime economy that the whole country desires. The Korean War forced a sharp change of direction in the study, as inflation became an immediate and highly dangerous national problem. Four distinguished economists were asked by the Fund to participate, as a working committee, in the preparation of a series of reports which would cover the whole range of measures needed to keep inflation pressures from seriously damaging our economy. Albert G. Hart had primary responsibility for writing the reports. The Committee, or one of its members, also has prepared a special chapter of policy recommendations for each report, according to the Fund's usual practice.

Published in 1951 were *Defense without Inflation,* written by Dr. Hart, a general survey of the impact of the defense effort on the economy; and *Financing Defense,* by Dr. Hart and E. Cary Brown, in

which the authors considered in detail the effects of various federal tax and expenditure policies on inflation potentials.

In 1952 Dr. Hart completed his manuscript of the third report, which covers the use of monetary and credit policies to reduce inflationary pressure. The report will be published in 1953 with the title *Defense and the Dollar: Federal Credit and Monetary Policies.*

Donald H. Wallace, Professor of Economics and Director of Graduate Program, Woodrow Wilson School of Public and International Affairs, Princeton University, completed the manuscript of the fourth report in 1952: a study of the use and effectiveness of direct controls as anti-inflation measures. The report will be published in 1953 with the title *Economic Controls and Defense.*

EMPLOYMENT AND WAGES IN THE UNITED STATES

RESEARCH DIRECTOR: W. S. WOYTINSKY

For two decades we have watched wage negotiations in this country become more and more problems of public policy. Today it is clear to everyone that, in our complex economy, the public interest is heavily involved in the vital process of wage determination. The sharpening need for a firm background of fact and theory, against which wage policies could be measured wisely, led the Fund in 1948 to begin a comprehensive survey of wages and employment in the United States under the direction of W. S. Woytinsky.

The report, prepared by Mr. Woytinsky and a group of associates, was in type at the end of 1952. Publication was scheduled for mid-year 1953, with the title *Employment and Wages in the United States.*

The report includes an extensive survey of the make-up of the labor force and of wages and employment as they have developed in the United States up to the present. It also covers general theories of wage determination and employment demand; relation of wages to national income, to productivity, to the business cycle and to other economic factors; the social and political institutions that affect wages and employment; factors in wage differentials; and the actual patterns of employment and unemployment.

Mr. Woytinsky describes past experience, analyzes the probable future effects of various wage and employment policies, and makes projections of future trends in the wage and employment structure.

A Committee on Employment and Wages, appointed by the Fund, has prepared a set of policy recommendations which will be published as the final chapter of the report.

COMMITTEE ON EMPLOYMENT AND WAGES*

Workers Involved in Work Stoppages and Union Membership, 1897-1947

FARM POLICIES OF THE UNITED STATES, 1790-1950

RESEARCH DIRECTOR: MURRAY R. BENEDICT

Professor of Agricultural Economics, Giannini Foundation of Agricultural Economics, University of California

As a complement to a Fund study of government farm aid programs of the last two decades (see page 29), the Fund is publishing a history of United States farm policies from colonial times, on which Murray R. Benedict was working when he began the Fund project. Dr. Benedict completed the manuscript of his history in 1952. Publication was scheduled for midyear 1953, under the title *Farm Policies of the United States, 1790-1950: A Study of Their Origins and Development.*

This survey of a hundred and sixty years of public policies and government actions concerned with farming begins with the formation of the American land system in the eighteenth century. It describes the changing economic, political, and technological forces affecting agriculture and their results in policy through the whole history of the Republic.

THE FEDERAL DEBT: STRUCTURE AND IMPACT

RESEARCH DIRECTOR: CHARLES C. ABBOTT

Converse Professor of Banking and Finance, Harvard University Graduate School of Business Administration

The growing intensity of controversies over federal debt management is evidence that Americans realize more and more clearly that the 260-billion-dollar postwar national debt is not just an incomprehensible mountain-pile of figures, but a great, new, and potent economic force, with a powerful influence over our economic future.

This force is analyzed thoroughly by Charles C. Abbott in a Fund study that was completed in 1952. Dr. Abbott's report was ready at the end of the year, and was scheduled for publication early in January 1953, under the title *The Federal Debt: Structure and Impact.*

Dr. Abbott abundantly documents his conviction that the federal debt, in rising to its present massiveness, has gained an influence in our economy unparalleled in our history. He shows how the debt can affect profoundly the economic interest of every citizen, through its effect on the value of money, the level of interest, the volume of credit, and general economic stability.

The report analyzes in detail the patterns of federal debt ownership, the interest rate structure, the maturity pattern. Dr. Abbott shows in particular that instability in the pattern of ownership of federal securities has become a real economic danger, with a debt that can expand and contract our supply of money and credit on a large scale, simply by shifts in ownership.

The Fund appointed a Committee on the Federal Debt to review Dr. Abbott's findings and make policy recommendations. The Com-

mittee's report, forming the final chapter of the published study, was also issued separately in pamphlet form. The Committee saw the huge debt as having a dual potential: as a great danger, if improperly handled; as a resource of great power for stabilizing the economy, if handled with intelligence and courage. It counseled whittling down the debt when employment is full and prices stable, but warned against "heroic" debt reduction that might heavily depress the price level. The Committee's recommendations were widely, and on the whole favorably, commented on in the daily press and other periodicals across the country.

COMMITTEE ON THE FEDERAL DEBT*

Arthur R. Upgren, *Chairman*
Dean and Director of Research, Amos Tuck School of Business Administration, Dartmouth College

Henry H. Heimann
Executive Manager, National Association of Credit Men

Neil H. Jacoby
Dean, School of Business Administration, University of California at Los Angeles

E. B. MacNaughton
Chairman of the Board, First National Bank of Portland, Oregon

Earl B. Schwulst
President and Chairman of the Board, Bowery Savings Bank

Louis Stulberg
Vice President, International Ladies' Garment Workers' Union

Donald B. Woodward
Vice President for Research, Mutual Life Insurance Company of New York

* Daniel W. Bell, President, American Security and Trust Company, was prevented by other commitments from attending meetings of the Committee and participating in its conclusions. His views as expressed in correspondence were considered, however, in drafting the report. Beardsley Ruml, formerly Chairman, Federal Reserve Bank of New York, was a member of the Committee until July 15, 1952 but was unable to take part in any of its decisions.

URBAN REDEVELOPMENT

RESEARCH DIRECTOR: MILES L. COLEAN

Consulting Architect

Few American cities ever have had a planned and orderly development. Usually it is a more haphazard process, in which forces of vitality and growth struggle with forces of decay and self-destruction. The manifold problems of cities appear more and more clearly as parts of this larger problem: how can the city's inherent strength to grow and renew itself be given full room for action, free from crippling attacks of blight, self-blockage, and premature old age?

In 1950 Miles L. Colean began a brief analysis for the Fund of the roadblocks to urban renewal, and a survey of our resources for overcoming them. Mr. Colean finished his manuscript in 1952, and the Fund will publish the report during 1953, with the title *Renewing Our Cities.*

The study reviews the status of the many current schemes of slum clearance and area redevelopment in American cities. Mr. Colean, however, is interested in the slum primarily as a symptom of the general urban problem of blocked renewal. He is seeking to find how we can best marshal our economic, political and technological forces to clear the road for the growth of vigorous, useful and beautiful cities.

Mr. Colean's findings are also being used as subject matter for a motion picture, which the Fund and Encyclopaedia Britannica Films are jointly producing.

WORLD POPULATION AND PRODUCTION

RESEARCH DIRECTORS: W. S. AND E. S. WOYTINSKY

What is the economic shape of the world? An answer to this sweeping question is the goal of a large-scale survey begun five years ago by W. S. Woytinsky and his wife, E. S. Woytinsky. They bring together facts on how many people there are on the globe, where they are located and how they live; the natural and industrial resources of the countries and regions of the globe; world patterns in business, trade and commerce; world trends and outlook.

This survey has been financed by the Rockefeller Foundation and the Twentieth Century Fund and is jointly administered by the Fund and the Johns Hopkins University. The Twentieth Century Fund will publish the two volumes embodying the findings of the survey. The first volume was all in type at the end of 1952, and the Fund will

publish it in 1953 with the title *World Population and Production: Trends and Outlook.*

Mr. and Mrs. Woytinsky have covered in this first volume the populations of the world and their geographic settings; consumption needs and patterns in all the major world areas; the world's human and natural resources; and the size, distribution, organization, output, etc., of the world's farming, energy production, mining, and manufacturing. The trends of all the major economic factors are also projected into the future. The volume will total about 1,300 pages, and includes nearly 340 charts, graphs and maps especially prepared for the study. The nearly 500 tables in the volume give the statistical basis for an understanding of world economic achievements, relationships, and possibilities.

The status of the second volume of the study, *World Trade and Organization*, is described on page 41.

ACHIEVING ECONOMIC DEVELOPMENT

RESEARCH DIRECTORS:

NORMAN S. BUCHANAN
Professor of Economics, University of California

HOWARD S. ELLIS
Professor of Economics, University of California

The crucial world problem of industrialization in underdeveloped areas, approached through a single-country "case study" in the Fund's *Costa Rica: A Study in Economic Development* (see page 12), is the subject of a more general Fund study begun in 1951 under the direction of Norman S. Buchanan and Howard S. Ellis.

Drs. Buchanan and Ellis are reviewing the economic, political and social factors which promote industrialization under a wide variety of conditions, so that their study will be relevant to the problems of underdeveloped areas in all parts of the world. The first part of the study will be a description of how industrialization has actually taken place in the already developed countries, with emphasis on the common factors in economic growth. These basic requirements for economic expansion will then be measured against the particular strengths and weaknesses of each of today's major underdeveloped areas, to show in each case the points at which the attack must be pushed.

The research directors hope to complete a manuscript of their report in late spring 1953.

AGRICULTURAL POLICIES OF THE UNITED STATES

RESEARCH DIRECTOR: MURRAY R. BENEDICT

Professor of Agricultural Economics, Giannini Foundation of Agricultural Economics, University of California

ASSOCIATE RESEARCH DIRECTOR: OSCAR C. STINE

Formerly Assistant Chief, Bureau of Agricultural Economics, U. S. Department of Agriculture

The American farmer has, from the beginning, engaged in a give-and-take with the rest of the community to maintain his own welfare. Increasingly, in recent decades, he has turned to the federal government for help. The vast government farm aid programs rolled up in the thirties to meet depression emergencies so strengthened this trend that today the relationship of farmer and government is one of the most important and controversial issues in American politics.

In the fall of 1951, Drs. Benedict and Stine started a study for the Fund of the whole array of government farm programs of the preceding two decades, to give Americans a thoroughgoing analysis of their actual gains and losses from the many varieties of government aid they have given to the American farmer during this period. With the perspective of twenty years which included the depression, the war, and the postwar expansion, the time seems ripe for totting up our experience with government farm programs, as a guide to intelligent action in the future.

At the end of 1952, the directors were drafting their report, with the hope of completing it in the fall of 1953.

The Fund has also appointed a Committee on Agricultural Policy, which will review the research findings and make recommendations for action in the public interest.

COMMITTEE ON AGRICULTURAL POLICY

Jesse W. Tapp, *Chairman*
Executive Vice President, Bank of America, National Trust and Savings Association

John D. Black
Professor of Economics, Harvard University

Harry B. Caldwell
Master of the North Carolina State Grange

Leon Henderson
Chief Economist, Research Institute of America

Calvin B. Hoover
Chairman, Department of Economics, Duke University

Jay C. Hormel
Chairman of the Board, Geo. A. Hormel & Company

Donald R. Murphy
Editor, *Wallaces' Farmer and Iowa Homestead*

Edwin G. Nourse
Past Chairman, Council of Economic Advisers

Margaret G. Reid
Consumption and Family Economist, University of Chicago

Quentin Reynolds
General Manager, Eastern States Farmers' Exchange, Inc.

Theodore W. Schultz
Professor of Economics and Chairman, Department of Economics, University of Chicago

Andrew Stewart
President, University of Alberta

Louise L. Wright
Director, Midwest Office, Institute of International Education

Obed A. Wyum
Chairman, Policy and Program Committee, North Dakota Farmers Union

AMERICAN IMPORTS

RESEARCH DIRECTOR: DON D. HUMPHREY

Professor of Economics, Duke University

That tidy phrase, "the dollar gap," expresses a very untidy reality: the enormous dislocation of world trade left behind by the war, and in particular the failure of the United States to buy enough in other countries to balance what those countries, often desperately, need to buy from us. For many foreign countries, America's failure to import has caused economic hardship. For us, the imports question has traditionally been more closely related to the status of specific domestic industries as against foreign competition.

The crucial importance of American imports to the whole postwar world led the Fund and the National Planning Association to start in 1950 a joint analysis of the capacity of the United States to absorb more goods and services from abroad, including the effects of such imports on specific American industries, and on the American economy as a whole.

Directors chosen for the study were Calvin B. Hoover, Chairman of the Department of Economics, Duke University, and Dr. Humphrey. Dr. Hoover was forced to withdraw from the project at the end of 1950 because of other commitments.

Dr. Humphrey completed a first draft of the major part of his report in 1952. This was being reviewed by specialists at the end of the year, and a final revised manuscript was scheduled for completion in 1953.

The Committee for this project is the International Committee of the National Planning Association, which is co-sponsoring this study

with the Fund. The following comprise a subcommittee of this larger committee to advise on the project and draft a report.

Isador Lubin, *Chairman*
Formerly United States Representative, Economic and Employment Commission, Economic and Social Council of the United Nations; Confidential Reports, Inc.

Frank Altschul
Chairman of the Board, General American Investors Company

Solomon Barkin
Director of Research, Textile Workers Union of America

John F.Chapman
Associate Editor, *Harvard Business Review*

* Resigned April 28, 1952.

*J. B. Condliffe
Professor of Economics, University of California

Allan B. Kline
President, American Farm Bureau Federation

Morris S. Rosenthal
President, Stein, Hall & Company, Inc.

James H. Stebbins
Vice President, W. R. Grace & Company

Wayne Chatfield Taylor
Consultant, Mutual Security Agency

AMERICA'S NEEDS AND RESOURCES REVISION

RESEARCH DIRECTOR: J. FREDERIC DEWHURST

Economist of the Twentieth Century Fund

The publication, in 1947, of *America's Needs and Resources*, in which Dr. Dewhurst and a team of associates showed Americans the true scope of their economy by carefully measuring past and present trends of each of its major elements and projecting them into the future, has attracted more public attention than any other Fund study. The study's estimates of the future movement of production, consumption, productivity, population, capital formation, and other basic factors gave unmistakable evidence of the enormous potential for future growth in our unique high-productivity economy. In the year of publication *America's Needs and Resources* sold 15,000 copies, and at the end of 1952 almost 22,000 copies had been sold.

The volume of comment and the growing number of requests for information based on later figures than those available when the study was made showed the need for a revision which would take account of the postwar economic expansion and defense mobilization.

Late in 1949 Dr. Dewhurst and a research staff began work on a completely new volume to meet this need. The staff has provided a detailed statistical framework, showing past and future trends to 1960 of the basic factors: population growth, capital investment, national income, etc. On this framework, each of the major areas of the economy is measured and described. Of the twenty-eight chapters into which the new study is divided, fifteen were assigned to outside contributors, each of whom is a specialist in the subject of his

chapter. The thirteen other chapters are being written by members of the staff.

At the end of 1952 sixteen chapters were in draft form, four of them virtually ready for the printer. Dr. Dewhurst plans to send the chapters to the printer beginning early in 1953, with the whole manuscript to be in type by the end of the year.

ANTITRUST POLICIES AND ENFORCEMENT

RESEARCH DIRECTOR: SIMON N. WHITNEY

Associate Economist, The Twentieth Century Fund, and Professor of Economics, University College of Arts and Science, New York University

The American antitrust laws express one of the deepest currents of our economic faith, the belief in competition as the prime source of efficiency and fair prices in our economic life. But we know very little about how the enforcement of the antitrust laws in specific cases has actually affected the operation of our business and economic system.

In 1950, Dr. Whitney started a study for the Fund to find what the results of enforcement have been in a number of industries subjected to antitrust action. At the end of 1952, Dr. Whitney had drafted sections of the report dealing with the antitrust history of a number of industries.

During the year the Fund appointed a Committee on Antitrust Policy to review Dr. Whitney's findings and prepare a policy program based on them.

COMMITTEE ON ANTITRUST POLICY

Paul M. O'Leary, *Chairman*
Dean, College of Arts and Sciences, Cornell University

Hugh B. Cox
Lawyer, Covington and Burling

Goldthwaite H. Dorr
Lawyer, Dorr, Hand and Dawson

Edwin B. George
Director, Department of Economics, Dun and Bradstreet, Inc.

Walton H. Hamilton
Lawyer, Arnold, Fortas and Porter; Southmayd Professor Emeritus, School of Law, Yale University

Edward H. Levi
Dean, University of Chicago Law School

Edward S. Mason
Dean, Graduate School of Public Administration, Harvard University

ECONOMIC NEEDS OF OLDER PEOPLE

RESEARCH DIRECTORS:

JOHN J. CORSON
Staff Member, McKinsey & Company

JOHN W. MC CONNELL
New York State School of Industrial and Labor Relations, Cornell University

One striking development in mid-century America is that our average life expectancy is steadily increasing and the proportion of older persons in our population is steadily growing. How can these older persons obtain support and solve their health, recreational, housing and other problems? These are matters of central importance today. As a step toward solution, the Fund launched in 1950 an analysis, under the direction of John J. Corson and John W. McConnell, of the present and future economic needs of older persons in the United States, and of measures already taken to meet these needs.

The first part of the study will answer basic questions: who are the aged? how many can work? how is their health? what income do they have? The study will also describe the factors now determining the employment, or conversely, the retirement, of older people, and the patterns of saving by individuals in this country, to show how adequate such saving is now, or is likely to be, for their support in later life.

The directors will describe and analyze the development of pension plans, both private and public, with special reference to the postwar "new pension era," in which the bargaining demands of the large unions have made private industrial pension plans a national

issue. The present role and probable development of government pension plans will be thoroughly examined, with particular attention to federal old-age and survivors insurance and old-age assistance. Finally the study will weigh the present and future capacity of our economy to provide an increasing standard of living for our older people.

During the year the directors completed the first draft of their report, which was reviewed by specialists and by the Fund's Committee on the Economic Needs of Older People. At the end of the year the report was in process of final revision, with publication scheduled for late 1953. Also published with the research report will be the recommendations of the Committee for action in the public interest based on the findings of the study.

COMMITTEE ON THE ECONOMIC NEEDS OF OLDER PEOPLE

Arthur H. Dean, *Chairman*
Lawyer, Sullivan and Cromwell

Harry J. Becker
Associate Director, Commission on Financing of Hospital Care; on leave as Director, Social Security Department, International Union, United Automobile, Aircraft, Agricultural Implement Workers of America (UAW-CIO)

James A. Brownlow
President, Metal Trades Department, American Federation of Labor

Eveline M. Burns
Professor of Social Work, New York School of Social Work, Columbia University

Joseph S. Davis
Director Emeritus, Food Research Institute, Stanford University

*Marion B. Folsom
Treasurer and Director, Eastman Kodak Company

†Reinhard A. Hohaus
Vice President and Chief Actuary, Metropolitan Life Insurance Company

M. Albert Linton
Chairman of the Board, Provident Mutual Life Insurance Company of Philadelphia

‡J. Waldo Myers
Manager, Insurance and Social Security Department, Standard Oil Company (N. J.)

* Mr. Folsom resigned from the Committee December 24, 1952, following his appointment as Under Secretary of the U. S. Treasury.

† Mr. Hohaus resigned from the Committee April 7, 1953, following his appointment as chairman of a committee of special consultants to Oveta Culp Hobby, Secretary of Health, Education and Welfare.

‡ Mr. Myers resigned from the Committee on August 18, 1952.

EFFECTS OF TECHNOLOGICAL CHANGES

RESEARCH DIRECTORS:

W. DUANE EVANS
Bureau of Labor Statistics, U. S. Department of Labor

IRVING H. SIEGEL
Formerly of the Department of Political Economy, Johns Hopkins University

Science may or may not get us to the moon in this generation, but it *will* inevitably make changes in our economic and social patterns that will have vastly more effect on the life of the average human being than will the first daredevil trips into space.

The Fund started full-scale work in July 1951 on a major study to forecast these economic and social results, over the next decade, of today's sensationally rapid advances in science and technology.

Drs. Evans and Siegel have been concerned first with identifying those technological advances that promise to reach large-scale use in the near future. They have divided the inquiry into a manageable number of specific fields, each to be examined by a specialist who will contribute a paper for use in preparing the report. With the direction of development in each field of technology identified, the directors will move on to forecast the probable effects, over the near future, on basic economic and social patterns.

The report is planned to appear in two volumes: (1) a general summary of the problem and findings, including some of the broader implications that may not emerge in the "sector" studies; (2) a more technical "symposium" of the most important of the sector papers.

The directors plan to have complete manuscripts of both volumes by the end of 1953.

EMPLOYMENT AND WAGES—POPULAR VOLUME

The main findings of the Fund study *Employment and Wages in the United States*, by W. S. Woytinsky and Associates (see page 18), will appear in a pocket-size, popular volume, the text for which is being written by George Soule, manuscript editor for the Fund.

The New American Library will publish this popularization in its "Mentor" paper-back series, through which it has been markedly successful in the mass distribution of material of serious cultural interest.

Mr. Soule was well along on his 65,000-word draft of the popularization at the end of the year.

FOREIGN EXCHANGE PRACTICES AND POLICIES

RESEARCH DIRECTOR: RAYMOND F. MIKESELL

Professor of Economics, James Wilson School of Economics, University of Virginia

One of the most marked politico-economic developments of the post-war world is the restriction by national governments of the exchange of currency across international frontiers. Governmental control of international exchange is far removed from the average citizen's experience, but the powerful effects of such restrictions on foreign trade make them basically important to the world economy. Raymond F. Mikesell began, in 1951, to compile for the Fund a summary of all the major control systems now in use, and their effects on the vital flow of international payments. An appendix to the report will be a tabulation of the principal trade and exchange control systems in effect in all parts of the world.

Professor Mikesell has planned to complete a draft of his report in mid-1953.

WORLD TRADE AND ORGANIZATION

RESEARCH DIRECTORS: W. S. AND E. S. WOYTINSKY

Mr. and Mrs. Woytinsky were drafting, at the end of 1952, the second volume of their survey of the world economy. (See page 24 for description of the project as a whole and of the first volume, *World Population and Production.*) They planned to complete a first draft of the report by June 1953.

This second volume, tentatively titled *World Trade and Organization*, will be divided into seventeen chapters, covering the world's trade, transportation, and government. Among specific chapter headings are: the functions of trade in the world economy; the value, volume, direction and composition of foreign trade; the role of the different forms of transportation in the world economy; public finance; national debts; colonial empires; international cooperation as an economic force.

RESEARCH IN PLANNING STAGE IN 1952

STUDY OF THE INFLUENCE OF THE MILITARY IN AMERICAN NATIONAL POLICIES

STUDY OF THE RELATION OF ECONOMIC, SOCIAL AND POLITICAL POWER IN A MODERN DEMOCRACY

STUDY OF THE INFLUENCE OF THE MILITARY IN AMERICAN NATIONAL POLICIES

During the year the Fund sought ways to apply its investigation and dissemination resources to a new and broader area of American life: the political and social forces that interact with those of our economy. The trustees of the Fund in 1951 reached a basic decision to enlarge the Fund's sphere of activity gradually in this new direction as practical and useful areas of research can be mapped out. Meanwhile the Fund will carry on central economic studies.

A committee of the Board of Trustees, and the Fund staff, held consultations with a number of eminent scientists and historians. These meetings brought out several challenging proposals for research in the new direction. Among these was a proposal by Gordon A. Craig, Professor of History, and Harold Sprout, Professor of Geography and International Relations, both of Princeton University, that the Fund study the influence of the military on United States national policies. The Fund appointed a special committee to prepare a detailed prospectus for a study along the lines of this proposal, for consideration by the Board of Trustees. The members of this committee are:

Gordon A. Craig
Professor of History, Princeton University

Edward Mead Earle
Professor, School of Historical Studies, Institute for Advanced Study

William T. R. Fox
Professor of International Relations, Columbia University

George A. Graham
Professor of Politics, Princeton University

Edward S. Greenbaum
Lawyer, Greenbaum, Wolff and Ernst

Herbert S. Marks
Lawyer, Washington, D. C.

Edward S. Mason
Dean, Graduate School of Public Administration, Harvard University

Max F. Millikan
Professor of Economics and Director, Center for International Studies, Massachusetts Institute of Technology

Walter Millis
Military Commentator, *New York Herald Tribune*

J. Robert Oppenheimer
Director, Institute for Advanced Study

Elwood R. Quesada
Vice President, Olin Industries, Inc.

James H. Rowe, Jr.
Lawyer, Corcoran, Youngman and Rowe

Harold Sprout
Henry Grier Bryant Professor of Geography and International Relations, Department of Politics, Princeton University

The committee met in December and at the end of the year was working on a preliminary outline of the proposed study.

STUDY OF THE RELATION OF ECONOMIC, SOCIAL AND POLITICAL POWER IN A MODERN DEMOCRACY

A second proposal for studies in the new area of political and social forces was submitted by Franz L. Neumann, Professor, Department of Public Law and Government, Columbia University. It consisted of a series of projects under the general heading, "The Relation of Economic, Social and Political Power in a Modern Democracy." A first project in this area is being carried to the stage of a detailed prospectus by Professor Neumann and a special committee appointed by the Fund. The members of the committee are:

Emile Despres
Professor, Department of Economics, Williams College

John Kenneth Galbraith
Professor, Department of Economics, Harvard University

Richard Hofstadter
Professor, Department of History, Columbia University

David B. Truman
Professor, Department of Public Law and Government, Columbia University

H. H. Wilson
Associate Professor, Department of Politics, Princeton University

This committee was scheduled to begin active consultation with Professor Neumann early in 1953, with the objective of completing the prospectus for submission to a fall, 1953, meeting of the Fund's trustees.

SALES OF FUND PUBLICATIONS

1930-1952

The Fund seeks to assemble facts that specialists and the general public may need for a more intelligent and democratic approach to current economic questions. The facts must be delivered before they can be put to work. The Fund makes its basic delivery of the facts by publishing, in book form, the report of each research project. The table following, showing sales of more than 448,000 copies of Fund reports over a twenty-three-year period, is a measure of the sweep of this operation.

EDUCATIONAL ACTIVITIES

The questions investigated by the Fund usually are so broadly concerned with the public welfare that the findings are inherently valuable to a much larger public than can be reached by the basic reports themselves. Therefore the Fund believes its responsibility for "delivery" of the findings goes far beyond their publication in book form. The Fund adapts them to popular media, including newspapers, magazines, motion pictures, radio and television programs, pamphlets, etc.

Fund activities in 1952 in the use of popular media to reach a wide public with the Fund's findings are shown in the following order:

MOTION PICTURES

The Fund has sought increasingly since World War II to make use of the vividness and appeal of the motion picture to carry the results of Fund investigations to a large public. The factual, "documentary" film can now reach nearly 400,000 educational, religious, industrial, recreational, fraternal, and other groups, which have equipped themselves with 16mm. projectors, a majority of them since the war.

From 1946 through 1951, the Fund released four 16mm. films based on Fund findings:

"Distributing America's Goods," a one-reel sound film, based on the Fund study *Does Distribution Cost Too Much?*

"Building America's Houses," also a one-reel sound film, showing findings from the study *American Housing.*

"Round Trip: The U.S.A. in World Trade," a two-reel sound film, demonstrating the importance of two-way foreign trade, using material from the study *Rebuilding the World Economy.*

"Productivity: Key to Plenty," a two-reel sound film, making clear the relation of rising productivity to higher standards of living, one of the major findings of the 1947 study *America's Needs and Resources.*

All of the Fund's films are distributed, by sale and rental, through Encyclopaedia Britannica Films, Inc.

"Productivity: Key to Plenty" has been a top "best-seller" among documentary films, with outright sales of more than a thousand prints. All Fund films also have wide use on a rental basis.

MOTION PICTURE ACTIVITY IN 1952

"WORKING TOGETHER," RE-ENACTMENT OF LABOR-MANAGEMENT HISTORY

The Fund released in 1952, through Encyclopaedia Britannica Films, a new film titled "Working Together: A Case History of Labor-Management Cooperation." The true "case history" portrayed in the film is that of the American Lead Pencil Company of Hoboken, New Jersey. The story begins with the formation of the first union at the company's Hoboken plant in an atmosphere of labor-management conflict, and progresses through wage and grievance disputes, a strike, and a joint company-union productivity drive, to genuine cooperation between the union and the management. The film is given vividness and clarity by using real scenes in the company's plant, by using the actual participants (except for two roles) as actors, and by re-creating the story in a dramatic and authentic style. The film was made for the Fund by Eddie Albert Productions, with Victor Vikas directing.

The film was made to show in action, in real life, some of the principles of practical labor-management cooperation which were brought out in the Fund's report, *Partners in Production.*

"PRODUCING FOR DEFENSE," FORUM ON PRODUCTIVITY

During the year the Fund released through Encyclopaedia Britannica Films a new film, "Producing for Defense," which had been produced and distributed in 1951 as a television program-on-film. The television version was shown on more than sixty stations in all parts of the country. This popularity led the Fund and Encyclopaedia Britannica Films to prepare a version for regular nontheatrical screen use.

"Producing for Defense" is a half-hour forum and panel discussion, which brings out the essential role of increased productivity in

enabling the nation to carry its defense burden while maintaining its standard of living. Members of the panel are: Paul G. Hoffman, then Director of the Ford Foundation and former Administrator of ECA; Clinton S. Golden, labor authority and lecturer at Harvard; and J. Frederic Dewhurst, the Fund's Economist. Moderator for the discussion is Ben Grauer, radio and television announcer.

"ROUND TRIP," NEW VERSION

The Fund released during the year a new version of its film "Round Trip: The U.S.A. in World Trade," revised to ensure up-to-dateness. Encyclopaedia Britannica Films is its distributor.

The importance of two-way foreign trade is made dramatically clear in "Round Trip" by bringing together, through cinema technique, a number of producers and consumers in different countries for a free-for-all argument on the merits and demerits of buying and selling across national borders. An American businessman, a British machinist, a Mexican farmer, a French laborer, and others, each expresses with pungency what he feels to be the advantages or disadvantages of foreign trade to his own economic well-being.

The disputants are helped across tough points in the argument by two experts appearing in the film: Paul G. Hoffman, former Director of the Ford Foundation, who was then President of the Studebaker Corporation; and Winfield W. Riefler, now Assistant to the Chairman, Board of Governors, Federal Reserve System, then on the staff of the Institute for Advanced Study, Princeton, New Jersey. The argument leads finally to the agreement that everyone benefits from a full load, going and coming, in foreign trade.

FILM ON CAUSE AND CURE OF INFLATION

At the end of the year the Fund and Encyclopaedia Britannica Films were in the final stages of joint production of a new film, "Inflation," which was scheduled for release early in 1953.

"Inflation" is based on material from the Fund's Economic Stabili-

zation series and is intended to make clear the principal causes of inflation and how it may be checked. Consultants in making the film were J. Frederic Dewhurst, Economist, and Simon N. Whitney, Associate Economist, of the Fund. The film shows inflation as a personal experience for several citizens of a typical American town, including a businessman, a white-collar worker, a housewife, a schoolteacher, and the harassed and mettlesome mayor. The mayor organizes a meeting at which the citizens can express their questions about inflation, and get answers from an economist who teaches at the local university. Animation sequences help to make clear how cause and cure operate.

FILM ON NEEDS OF OLDER PEOPLE

During the year the Fund entered into an agreement with Herbert Morgan, producer of documentary films for theatrical distribution, for the production of a film using material from the current study, "Economic Needs of Older People."

The film will be part of a series produced by Mr. Morgan under the general title "The Theatre of Life," in collaboration with the Associated Press and distributed to motion picture theatres across the country. A shooting script was in preparation at the end of the year.

FILMS ON URBAN REDEVELOPMENT AND RURAL DEVELOPMENT

The Fund and Encyclopaedia Britannica Films worked during the year on joint production of two films: one on the problems of urban redevelopment, including the causes of urban decay and the barriers to the renewal of cities, with particular emphasis on the long-range policies for overcoming these barriers; and the other on the methods for, and the importance of, the development of our rural and regional natural resources.

The film on renewal of cities draws material from the study by Miles Colean on this subject (see page 23). The film on rural and regional development is based on sections of the Fund study *America's Needs and Resources.*

The script for the urban film was substantially in final form at the end of the year, and about two thirds of the footage had been shot. Completion of the film is scheduled for the autumn of 1953. A final script for the rural film was planned for early 1953, with the film itself to be completed before the end of the year.

Illustrations on this and facing page are from the Fund film, "Inflation."

TELEVISION

EXPERIMENTAL PROGRAMS AT SYRACUSE UNIVERSITY

The Fund is keeping close contact with the rapid growth of television, with its great potentials for carrying ideas to millions of people. At this preliminary, rapidly shifting stage of television development, the Fund is looking for patterns of form, of production, of distribution, that will make the dissemination of Fund findings on television practicable and effective.

During the year the Fund underwrote, jointly with Syracuse University, a series of three experimental television programs based on Fund material, which were produced by the Syracuse University Radio-Television Center on Syracuse station WSYR-TV. Each program used a different production technique: the first, based on the Fund study *Defense without Inflation*, was a rehearsed "forum" discussion; the second, using material from the Fund's *Partners in Production*, was cast as a stylized "courtroom" with "witnesses" and "cross-examining attorneys" to bring out the points in the material; the third program, using data from *America's Needs and Resources*, had the form of a current events program, with the time of the "events" established as in the 1960s, to bring to life some of the projections of the Fund study as to future trends of production, consumption, capital investment, etc.

The programs attracted an audience in the Syracuse area, as estimated by telephone surveys, of 15,000 to 18,000 people, and the numbers increased over the series, even in competition with a nationally popular entertainment program available at the same time.

At the end of the year, the Fund and the Syracuse Radio-Television Center were discussing possible further experimental programs, for 1953 production.

EXPERIMENTAL PROGRAMS AT IOWA STATE COLLEGE

Iowa State College, at Ames, Iowa, also produced a series of television programs on Fund material, on the college-owned station WOI-TV. The three half-hour programs were all devoted to material from the Fund's labor-management studies, principally *Partners in Production*. Technique of the programs was in general the re-enactment of actual labor-management "situations," including contract bargaining, grievance handling, etc. Persons who took the various roles in the re-enacted scenes were officials of labor and management from the area around Ames. Surveys were not made to indicate the size of the audiences for the programs, but unsolicited mail from viewers was strongly favorable.

Kinescope recordings of the three programs were made at WOI-TV, and Iowa State College is planning to offer to lend the kinescopes to documentary film users. Additional programs on Fund material for 1953 were under discussion between the Fund and Iowa State College at the end of the year.

Scene from experimental television program produced by the Syracuse University Radio-Television Center, using material from Fund labor-management surveys.

RADIO

The Fund and the National Broadcasting Company, in 1950 and 1951, jointly produced a series of thirteen half-hour radio programs under the series title "The People Act." The programs used tape recordings to tell, mainly through the voices of actual participants, true-life stories of American communities, each of which had attacked some local economic or social problem by voluntary group action of its own citizens.

During 1952 the series continued to reach a large audience through disc recordings, which were distributed by the U. S. Office of Education on a free loan basis to educational institutions, study groups, radio stations, and others. More than 190 agencies used the discs in 1951 and 1952, including about 115 radio stations and 40 colleges and universities.

The National Association of Educational Broadcasters, which includes about 75 radio stations in all parts of the country, sent magnetic tape recordings of the series around its "Tape Network," for scores of further radio airings.

NEWSLETTER AND CLIPSHEET

Ordinarily two or three times a year, the Fund issues a Newsletter summarizing its current activities in research, reports published, dissemination work, etc. Through the Newsletter the Fund seeks to inform leaders in industry, education, government, welfare, the press, as well as interested individuals, of its plans and progress. The Newsletter is distributed free to about 18,000 individuals and institutions.

With each Newsletter the Fund issues a Clipsheet, made up of short items of information from Fund studies, designed for "filler" use by a wide variety of publications. Usually several thousand are published each year.

In 1952 one Newsletter and one Clipsheet were issued. An issue of the Newsletter, experimentally increased in size from four pages to eight, was on press at the end of the year, for January 1953 distribution.

SUPPLEMENTARY MATERIALS

TRUSTEES DURING 1952

ADOLF A. BERLE, JR.	Professor of Law, Columbia University; formerly Assistant Secretary of State
FRANCIS BIDDLE	Formerly Attorney General of the United States
BRUCE BLIVEN	Chairman, Editorial Board, *The New Republic*
ERWIN D. CANHAM	Editor, *The Christian Science Monitor*
BENJAMIN V. COHEN	Lawyer; formerly Alternate Representative, United States Delegation to the General Assembly of the United Nations
***HENRY S. DENNISON**	Formerly President, Dennison Manufacturing Company
PAUL H. DOUGLAS	United States Senator from Illinois; formerly Professor of Industrial Relations, University of Chicago
WALLACE K. HARRISON	Director of Planning, United Nations
AUGUST HECKSCHER	Chief Editorial Writer, *New York Herald Tribune*
OSWALD W. KNAUTH	Economist; formerly President, Associated Dry Goods Corporation
DAVID E. LILIENTHAL	Business Consultant; formerly Chairman, Atomic Energy Commission
ROBERT S. LYND	Professor of Sociology, Columbia University; author of *Middletown*
JAMES G. MCDONALD	Consultant, European and Middle Eastern Affairs; First United States Ambassador to Israel
J. ROBERT OPPENHEIMER	Director, Institute for Advanced Study, Princeton, New Jersey; Chairman, General Advisory Committee, Atomic Energy Commission
EDMUND ORGILL	President, Orgill Bros. & Co.
JAMES H. ROWE, JR.	Lawyer, Corcoran, Youngman & Rowe
H. CHR. SONNE	Chairman of the Board, Amsinck, Sonne & Company; Chairman, National Planning Association
HERMAN W. STEINKRAUS	President, Bridgeport Brass Company; formerly President, Chamber of Commerce of the United States

*Died February 29, 1952

TRUSTEES DURING 1952 (continued)

CHARLES P. TAFT	Lawyer, Headley, Taft and Headley; formerly President, Federal Council of the Churches of Christ in America
W. W. WAYMACK	Formerly Editor, *The Des Moines Register and Tribune*

HONORARY TRUSTEE FOR LIFE

***MORRIS E. LEEDS**	Formerly Chairman of the Board, Leeds and Northrup Company

OFFICERS FOR 1952

ADOLF A. BERLE, JR.	Chairman of the Board
FRANCIS BIDDLE	Vice Chairman of the Board and Chairman, Executive Committee
H. CHR. SONNE	Treasurer
EVANS CLARK	Executive Director
J. FREDERIC DEWHURST	Economist

FORMER TRUSTEES

EDWARD A. FILENE	Founder and President (died September 26, 1937)
NEWTON D. BAKER 1919–1936	Lawyer; formerly Secretary of War (died December 26, 1937)
CHESTER BOWLES 1947–1950	Formerly United States Ambassador to India and Governor of Connecticut
PERCY S. BROWN 1938–1947	Formerly Executive Director, Edward A. Filene Good Will Fund, Inc.
HENRY BRUÈRE 1932–1934	Honorary Chairman of the Board, The Bowery Savings Bank

*Died February 8, 1952

FORMER TRUSTEES (continued)

JOHN H. FAHEY 1919–1950	Formerly Commissioner, Federal Home Loan Bank Administration (died November 19, 1950)
PAUL G. HOFFMAN 1947–1950	Chairman of the Board, Studebaker Corporation; formerly President, The Ford Foundation and Administrator, Economic Cooperation Administration
ROBERT H. JACKSON 1937–1941	Associate Justice, Supreme Court of the United States
ROBERT M. LA FOLLETTE, JR. 1947–1950	Formerly United States Senator from Wisconsin (died February 24, 1953)
MAX LOWENTHAL 1924–1933	Lawyer
WILLIAM I. MYERS 1941–1947	Dean, New York State College of Agriculture, Cornell University
ROSCOE POUND 1924–1938	Formerly Dean, Harvard Law School
HARRISON TWEED 1937–1946	Lawyer, Milbank, Tweed, Hope & Hadley
WILLIAM A. WHITE 1938–1941	Formerly Editor, *The Emporia Gazette* (died January 29, 1944)
OWEN D. YOUNG 1929–1934	Honorary Chairman, General Electric Company

NOTE: While the books of the Fund are maintained on a cash basis, the indicated market values of the investments owned by the Fund are given effect to in the statements shown above.

REPORT OF INDEPENDENT CERTIFIED PUBLIC ACCOUNTANTS

The Board of Trustees, Twentieth Century Fund, Inc.:

We have examined the financial statements of Twentieth Century Fund, Inc. as of December 31, 1952. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances. We had previously made a similar examination for the preceding year.

In our opinion, the accompanying financial statements present fairly the financial position of Twentieth Century Fund, Inc. at December 31, 1952 and the changes in its principal for the year then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

FUND PUBLICATIONS

MOTION PICTURES

SUPPLEMENTARY MATERIALS

A list of Fund publications—including books, pamphlets, bulletins and charts published from 1929 through 1952—follows in chronological order. Motion pictures and filmstrips are listed separately. Additional lists are shown of the Public Affairs Pamphlets and the series of Personal Growth Leaflets based on Fund reports. The Fund has also published annual reports of its operations every year beginning with the report covering the year 1930. The reports for the years 1939 and 1940, however, were combined in a single booklet which also reviewed Fund activities for the twelve-year period 1929–1940. The annual reports (except those which are out of print) may be obtained from the Fund free of charge. All publications still in print may be obtained from Fund headquarters at the prices noted.

BOOKS, PAMPHLETS, LEAFLETS

1929 **AMERICAN FOUNDATIONS AND THEIR FIELDS**
Edition of 1929. Single sheet chart. (Out of print)

1930 **FINANCING THE CONSUMER**

NO. 158. FOREIGN TRADE MEANS YOU
1946. Based on *Tomorrow's Trade.*

NO. 159. THE WORLD WE FOUGHT FOR
1947. Based on *For This We Fought.*

Monday. Dupneau New Fane Vt.

Dear Ed,

You let yourself in for this - though I suspect with malice aforethought, trusting me to be as taciturn and sensitive to your privacy as to defeat their ends. But Time's publicity hounds have followed my scent and caught up with me here in Vermont. A guy (and I admit a nice one) turned up today with a telegram he'd had from Time headquarters, hoping to discover from me what they couldn't find out from you - whether you talk about women, how you broke your nose and similar nonsense.

I gave him as little as I could, and in terms that, if he himself understood them, should certainly be unintelligible to Time's editors, let alone Time's readers. But my fear is of the license and distortion they

may indulge in. It all, I know, belongs to a side of your life to which you attach only secondary importance. And, seeing that I spoke out of a great affection and a discriminating respect I suspect and hope that it will be regarded as unnewsworthy. But I shan't know, until the damned piece appears, whether our next club luncheon can take up where the last left off without a score having to be paid ~~for~~ off by you.

Where are you? When do you cease to go on the air? I shall be back in New York on September 15. Is there prospect of a club luncheon (and let's hold at least the first à deux) soon thereafter? Our love to you all.

Charles Siepmann

Siepmann, Chas.

NO

Dear Ed,

A German broadcaster from Baden Baden is very anxious to see you and may call you up.

I saw him yesterday and undertook to soften you up for an interview!

His name is

WOLFGANG BROBEIL

Thoughts on Fatheris Day.

C. Siepmann

SP.

exploitation

Fatheris Day is a commercial racket, inviting reflection on the high "tolerance level", in our generation, for vulgar exploitation. Was man ever so vulgar or so effectively exploited – or have we stormed the heights? ~~Particular~~

privacy

Particular reflection is invited on the relation of exploitation to privacy. As exploitation ~~is on the way~~ moves in, the sense of privacy – and all that goes with it – ~~is on the way~~ moves out. There are those today for whom the very notion of privacy is meaningless and denoted of value. How 'public' can you get – + still be you?

vulgarity.

Perhaps we have a clue here to the meaning of vulgarity – another 'faded' word. You are vulgar as you tolerate (or practice) invasion (exploitation) of privacy. Fatherhood, properly considered, is a very private thing.

the embarrassment of a) fatheris day

Father's Day, as exploited, results (among fathers of any remnant sensibility) in a state of ill concealed embarrassment. Its immediate occasion ~~(the embarrassment)~~ is a variety of awful incidents, such as receipt of neckties of excruciating design, or (worse still) that of the adoring bride who washed out her husband's rack of smelly pipes in soap + water – and came near, thereby, to washing out her marriage too.

b) fatherhood

The true occasion is men's embarrassment over paternity itself. For the fact is that fathers are a scared and awkward ~~bit~~ lot. Perhaps at the end of an awful day we might profitably spend 5 minutes asking 'why'.

The incompetence of fathers

Fatherhood constitutes the largest (male) profession in the world. It is also the profession to which men bring

the ~~lowest level of~~ smallest elementary competence. (For confirmation refer to any child.) We offer a few clues to this incompetence.

"The child is father of the man."

1. Men graduate to being fathers by being sons first. This, while being (at our present stage of scientific knowledge) inescapable, is also fatal. For a son's attitude to his father (however sentimentalized or modified in later life) is either that of veiled dislike (the veil, however, is optional + not always worn), of passionate attachment, or of tolerant indifference. None of these attitudes is appropriate to the reverse role – i.e that of the father-son relationship.

Not doing what our fathers did

2. The ~~best~~ most that we can learn from being sons is not to inflict on our own children the errors that our own fathers inflicted upon us. But this gets us nowhere. For the dictionary of paternal ~~[illegible]~~ do's + don'ts is so fat that not even our own fathers mastered its vocabulary much beyond the letter D – standing for 'Don't'. And of course the most important letter of them all is the last of all – Z, standing for zero, the neutral numeral. ~~First, [illegible]~~ ~~Affectionate [illegible]~~ Affectionate neutrality – that's what a child most needs – + never gets. Which brings us to the fallacy of fond fantasy.

Paternal predestination

3. All fathers in some degree are guilty of the worst form of 'unprofessional conduct'. They wish things on their children. To have expectations of our children – to map (even in our minds) the course and character we hope for them – this spells disaster. This all but guarantees revolt – or, worse still, anxiety. It is the projection of the worst in us (vanity) instead of the best in us (true humility).

4. And finally there is to say. Fatherhood forces us to live out and learn, on the small stage of family relations, the lessons writ large (but never wholly learnt) in life itself. Of these we choose two for comment.

Experience cannot be communicated

a) Nature has so provided that (at the highest + deepest levels of significance) we learn only by our own experience. Part of man's tragedy is that he cannot, at these levels, communicate what he has learnt. There is, in this sense, no progress.

Fatherhood daily reminds us of this fact. For the one thing our own fathers might be said to know about is - fatherhood. Yet this is the one thing, also, they could not teach us or that we would not learn. No, not the one thing. It is in fact the least thing. For the poignancy of fatherhood lies in the fact that what we most would wish we might communicate - what life has taught us about living - the child will neither understand nor learn. But nature may here be wise, for who knows that we have learnt our lesson well? Properly seen, perhaps, the child's deaf ear to the "wisdom" of its parents is its own gift of freedom - to learn + suffer by itself. Man's generations are not cars on a transmission belt of knowledge.

We don't even apply what we know

b) In fatherhood we see, too, how little we apply even what we know (if we don't always practice) on the small stage of family relations. We have learnt the futility of slapping children. But on the larger stage of national + international relations slapping continues much in vogue. We have learnt likewise that by threatening a child we may get our immediate way - but at the price

of strained relations + warped attitudes: yet powerful nations, our own included, continue to use threats -- with like short + long term consequences.

Thus the most sobering fact about Fathers Day is, perhaps, its reminder that each of us, as fathers, is ~~concerned~~ faced with the same problem as that faced by statesmen + nations — how to behave and get along with others — and that neither of us as yet handles it very well.

Dear Ed,

Herewith ~~some~~ trundling thoughts on Father's Day - to swell the contents of your waste basket.

February 5, 1953

Dear Charles:

This is a loan, without interest, repayable at your convenience, and will, I hope, have last priority in connection with any commitments you may have outstanding.

As ever yours,

Mr. Charles Siepmann
240 South Main Street
New Canaan, Connecticut

called him.
Miss W. now has a job so we need not bother.

Dear Ed.

This is the reminder you asked for.

My niece, Jill Waterfield, arrives in New York from England next Monday. She is 25 years old, attractive, intelligent. She took a Second class in "Modern Greats" at Oxford, then worked in the Treasury, preparing material for the Chancellor of the Exchequer + other ministers for speeches in the House and elsewhere, etc etc.

For the last 6 months she has trained herself as a stenotypist (on my advice) as probably the realistic way of securing employment over here. She wants to go right to work, lest she lose speed + skill by a summer's lapse with us in Vermont. I'm concerned to get her secretarial employment with a human being, not a wolf or a thing. She'd be ready to go to it as of June 1, or any time thereafter. She would like to work in New York and, if possible, to avoid Washington. If you know or hear of anyone who'd be willing to take her on at standard wages, I wish you'd let me know.

Yours Charlotte

P.S. I wish we'd had our last lunch alone. But it was my fault. Do what you can to have us meet in July. Bless you.

Siepmann, Charles

Washington, D. C.

Dear Ed:

The Oxford Press people have just called me up in some distress and told me a story that makes me think the wires have somehow got crossed.

You will remember way back my asking you if you would be prepared to say a good word for the book when it came out which might be printed on the dust jacket and help sales on their way. In your usual generous way you said you would be delighted. Special proof copies were rushed through to be sent to you, to Raymond, Walter Lippmann and a couple of others and one of these went to CBS. I gather your secretary told the Oxford Press people that you were too damn busy to look at the thing. I suspect that maybe she did not make you realize what it was all about. The publishers are so eager to have some word from you that they are prepared to hold up the printing of the dust jacket for a couple of weeks if that would help and if such delay would make it possible for you to skim through the book and say such good words about it as you feel you can, I, for one, would be eager to have them make this delay. To simplify your task I can tell you that you would not have to worry about the first four chapters which are more or less straight history. Then, of course, you have read the BBC chapter. That leaves you with only Propaganda, Free Speech, Education, International Affairs and Television chapters.

I can imagine what life in Washington is like and I am loath to press you but if you could conceivably do this it would be of enormous importance and help to me.

When are you coming back? I have called several times but you seem to be in almost permanent exile. Do let us get together on your return. We, ourselves, are in process of moving out of New York, having bought a house in New Canaan. All further news when we meet.

Bless you,

Charles

114 FIFTH AVE.
NEW YORK,

FOLLOWING IS MY COMMENT REGARDING CHARLES SIEPMANN'S BOOK: "THIS IS THE MOST COMPLETE AND PROVOCATIVE TREATMENT OF THIS SUBJECT I HAVE EVER READ STOP THIS BOOK SHOULD BE READ BY EVERYONE WHO HAS ANY INTEREST IN, OR IS INFLUENCED BY, MASS COMMUNICATIONS AND THAT MEANS ALL OF US."

EDWARD R. MURROW

April 14, 1950

Dear Miss Scott:

Mr. Murrow is at present in Washington, and will not be returning to the office until some time in May. I have told him about your letter over the phone, and he has asked me to write and tell you that it's impossible for him to prepare a quotation for the jacket of Mr. Siepmann's book. He is currently so rushed with work that he has time for no extra-curricular reading or writing; he sincerely regrets that he cannot meet your request.

Sincerely yours,

Joan Flatoff

Dear Ed:

Let's lunch soon. I miss you, and refuse to allow your hectic life to squeeze friendship out entirely. Meantime, may I take you up on one of your kind offers?

Would you write to Violet Bonham Carter and whoever else it was you mentioned with a view to getting my BBC chapter before the Beveridge Committee? I suggested to the Oxford Press that they might get Cumberlidge to do this but I have just heard from them that he thinks it would be better if I wrote to Beveridge myself. I rather hesitate to do this. On the other hand I am rather interested at least to have the chapter read by them if not written into the record. I gather their minds are made up anyhow and that no change is in prospect. But for some reason I still want to press for consideration at least of dissenting opinion. Would you be prepared to anything about it?

More when we meet.

Dear Ed:

I don't want you to blame yourself or to have any pangs of conscience about this damned manuscript of mine. You should never have undertaken to review it and remember that I neither asked nor expected it of you. So that there is nothing undone. You shall have it back in good time if the inclination is still with you, but would you do me the kindness of sending it on to one or two respohsible people in CBS who could give me an unprejudiced jdgment on it and perhaps check facts for me?

I am enclosing the first draft of a new chapter which is by way of prelude to a practical discussion of some current controversial issues in radio relating to free speech. I am not happy about it as it is a hopeless job of condensation, nor I suspect, will you agree with it. But I would like your judgment on this, above all other chapters. I think the theory of the unalienable area within which the right to free speech may be claimed is at least original even if, in your judgment, it is not valid.

If you could read it perhaps we might make this the occasion for a lunch some day again for I do sorely miss you.

Cordially yours,

Charles

Dear Ed:

The Oxford Press are querying me about industry reactions to my book. The man who deals with me, a Mr. William Oman, seems to know Ackerman and would appreciate his comments. I have told him that I have sent you a copy of the draft and that as a friend I look to you for more exacting and more pitiless criticism than I could get from any stranger. I have said I'd pass your comments on to him and also mentioned that you had said that you thought you could get more competent reaction within CBS than that of Ackerman's. What all this amounts to is that I'd be very grateful if you could let a few responsible people look at the early chapters with a view to eliciting their comment on the fairness and accuracy of what I have said. I suggest that only the chapters up to and through that on the listening public need be passed on. The BBC chapter and that on propaganda lie, I think, beyond the competence of CBS to judge.

How are you and where are you? I have missed you lately on the air and last time I heard you you were in Washington. Let's lunch together soon if you are inclined.

OFFICE COMMUNICATION

..ss Platoff

From Mr. Reeve

Station Research

copy of info here sent to Supreme

September 16, 1948

The Reference Department passed Mr. Murrows requests concerning serial drama data on to me. Here is the best information I have from Research Department sources:

1. Research in the area of daytime serials has not been extensive since the large studies of 1942-43 by CBS and others. I am sending you a copy of "Radio's Daytime Serial", which digests in popular form the major results of the CBS studies.

2. Radio Research 1942-43 contains some findings which I think will still stand up.

3. A copy of the study commissioned by CBS: The Radio Daytime Serial: A Symbolic Analysis, is enclosed.

4. Some more recent articles and data are as follows:

   A. "The People Look At Radio", by Paul F. Lazarsfeld and Harry Field, Univ. of No. Carolina Press, 1946 pp 49 - 53.

   B. Fortune Magazine, March 1946: Soap Operas

   C. "Soapland", by James Thurber published in the New Yorker magazine:

   May 15, 1948 p.34
   May 29, 1948 p.30
   June 12, 1948 p.48
   July 3, 1948 p.40
   July 24, 1948 p.63

   These articles, while semi-serious in tone, contain the results of a lot of obviously intensive digging.

5. Essentially, research into the daytime serial has revealed no real psychological differences between listeners and non-listeners. Serial drama listeners seem to be normal, everyday people with a certain predelection for radio listening per se -- they listen to everything on the radio more than do non-serial drama listeners. There seems to be no evidence of any harmful or anti-social effects produced by serial drama listening.

   The problem of what makes one person listen to serials and another avoid them is not solved, but neither has it been solved in exhibited preferences for other types of radio, written or visual material where personal tastes are involved.

Dear Ed,

Janet, I remember, once consoled me over our rare get-together by saying that there would be a chance for friendship when you came to see us here in Vermont during the summer. Is it an illusory hope, or can we conceivably count on having you for a night or two? We have ample room and oh! such a longing for reunion. Come if you can. I miss you.

I've been up here since July writing another book, as a way of earning the much needed $1000 I forfeited by not teaching summer school. It's a text book for college radio courses - on radio's social implications - but planned for a much wider reading public. It's a dreary job but the quickest book I can write to earn the money I need. Being a text-book it's not provocative as was Radio's Second Chance. At least not quite so! I want to be both fair + accurate. Which makes me eager to discover someone in radio who would help by reading + commenting on chapters in a friendly and constructive way, as also by

giving me facts I need. You're obviously far too busy, though God knows there's no one I'd so much welcome at my elbow. A Lyman occurred to me, but I don't know. Have you any suggestions? I'd be grateful if you'd give it a thought.

Writing is hard up here. I so much prefer digging and terrace walling! Also writing it all in long hand takes hours.

Here's the mail man. I must rush. Our love to you all. I do very really miss you and old days. How are you? What's cooking? I'm gloriously out of touch!

Bless you

3. 31. 48

Dear Ed.

I was too lazy to rush to the telephone last night. So you must have a letter to add to your fan mail. You did nobly. You pulled no punches and the effect was electrifying. It ~~was~~ made me realize how rare it is now to hear someone "speak out loud and bold", how much it does to restore one's sense of purpose + of belonging. I happen to agree with you but I should have been grateful even if I had disagreed. It was a superb broadcast and I was proud of you. But Lord! how you must have suffered at your sponsor. To have to end + to hear that unlovely voice drool on – of all things – about Franco – American macaroni!! The bathos of the juxtaposition of those words with what you'd said about Franco + the U.S.! We didn't know whether to laugh or cry. Janey laughed, but the tears were in her eyes. When did you get the slides?

When can you come to dinner? Have you a Sunday free before you go? Sophie Marshall is simply anxious to meet you again & we want to fix an evening.

from June 14, 1947

CBS EXECUTIVE OFFICES

to: Mr. Murrow

Siepmann's proposal -- which I read with considerable interest and am returning herewith -- seems to me to be ideally suited for Foundation support in one of the university FM stations. Aside from the cost of such an undertaking, we face one very difficult problem and that involves CBS Station Relations and to a lesser extent, Sales.

No affiliate I know of would welcome Columbia in any such experiment because to the extent that we were successful we would be competing with our own network output and taking circulation away from a CBS affiliate. Similar conditions would motivate our network advertisers to complain.

There are ways to circumvent these two road blocks. The obvious approach is to seek a non-CBS market. If that were possible, I would want to hear how Siepmann plans to handle the following:

1. Programs - who provides them and how much they cost.

2. Program Promotion - what or how is this to be done and at what cost.

3. Audience Research - without some reliable gauge, how will we know the outcome of 1 and 2.

If Siepmann has definite plans we might discuss them further with him. However, I am convinced we should not be identified directly with this idea because it will cost much more if we are connected with it officially.

Mr. Edward Murrow
Columbia Broadcasting System
485 Madison Avenue
New York, New York

Dear Ed,

I have a project to suggest to you. It occurs to me that it might be of special interest to CBS for two reasons. You have always shown special interest in research and you have pioneered, as has no other network, in the field of public service. As far as I know, no concerted effort has yet been made to see how audiences for public service programs can be increased to a point at which they might prove tempting to a sponsor. With FM coming along and with it the prospects of increased competition, there is surely a need to foster and develop sizeable audiences in a wider range of differential fields of interest. The project I have in mind has reference to this problem.

Is it conceivable that we might consider a five year experiment in the deliberate promotion of interest in and attention to a selected range of programs in the educational and public service fields through the joint action of a network and a selected control community? Take Schenectady for instance. Here is a city of a manageable size, with a homogeneous community and active citizens' groups. My thought is that we should move into such a community, and enlist the cooperation primarily of the schools but also of civic groups (Chamber of Commerce, Labor Unions, etc.) and see if we could organize regular listening to a select list of programs which could be integrated with the activities and interests of the community both in and out of school. The organization need not, I think, be elaborate or the expense anything but modest. One organizer with a secretary and a modest budget for promotional activities might indeed prove sufficient.

The whole purpose would be to get the community acting on its own steam. Over five years it might be possible to prove something interesting as to the speed at which and the extent to which interest could be shifted permanently to new fields of interest. You will ~~note~~ know from our many discussions that what I am after is the beginning of collaborative effort between radio and groups in the community concerned with a more rapid advance toward civics and educational mat~~erial~~ unity.* I remain convinced that much more could be done than is at present realized in this ~~eating~~ speeding up process, given a sincere desire for cooperative effort on the part of the radio industry and of responsible social groups. A five year test should at least give us some valuable evidence. At best it might set a precedent of exceptional importance not only to educators but, who knows, to the future revenue of the radio industry itself. I don't think I am crazy in anticipating that unless we develop a wider range of differential interests among listeners, the increased competition which FM is likely to bring about may well result in reduced earnings for any given station.

This is, of course, the barest outline of the project. If you think your people would find it of any interest, I should be delighted if we could discuss it further.

Cordially yours,

Charles

C. A. Siepmann
Director

CAS/rcd

* Combined with this would be an effort to induce non listeners who "despise" radio to discover in it matter of genuine interest to them.

THE PASSING OF A VOICE

If a million listeners - two, three, four million - protested, would radio respond? When do we constitute that mythical "public" which radio claims gets what it wants? The question has relevance for those millions who, though they don't know it yet, are to hear Raymond Swing, as regular news commentator, for the last time on January 25. Heard for months past on "sustaining time", his contract has not been renewed. ABC has failed to find him a sponsor. Thus ends a broadcasting career so distinguished as to invite grateful analysis.

Raymond Swing was first heard in this country in 1935. He has been on the air ever since. His audience has ranged from 3 to 8 millions according to the convenience of the time of his broadcast and the frequency of his presence at the microphone. He came to radio a seasoned journalist. "I have held," he says, "every job there is on a newspaper outside the business office". He knew Europe intimately. What is more, he understood it. But he knew and understood more than a mere segment of the globe. With the capacity of a trained observer he combined that faculty "to see life steadily and see it whole" which is wisdom.

Beyond this he met the peculiar and exacting demands of radio. Though his voice was not ideal, he conveyed a burning sincerity which produced in the listener the illusion, appropriate if not essential to broadcasting, that he or she was being spoken to personally and in private. He disdained to curry favor. He never heistated to speak out. His appeal was always to our conscience and, though we might wince, we could not protest, for we knew that he spoke from his own troubled concern about the world. It was this, perhaps above all else that made for that intimacy which he achieved with listeners and which was reflected in the hundreds of letters he received.

But a man's performance is to be measured not only by his qualifications and skills but by his conception of his task. Raymond Swing conceived of broadcasting as a Herculean labor. He was tormented, almost, by the sense of his responsibility. "When broadcasting first began", he says, "it seemed to offer a promise of democratic enlightenment

such as surpassed the dreams of a Jefferson. But what has been accomplished, good as it is, is almost miserably inadequate to the need and falls miserably short of the opportunity. The world is plunging forward to unprecedented dangers, and it is only understanding and citizen control that can save it. We have all the paraphernalia of adult education and use only a fraction of it. It seems to me the task of broadcasting to make news analysis listenable, to devote all its skill and imagination to it. With the best, and with the public listening, the world may still be lost. But without it it is almost sure to be". Radio, as he saw it, was "born great". He set himself to serve it greatly.

Intimate and personal as was his manner, he yet conveyed, like a great actor, the tragic implication of the drama unfolding before us on the stage of the contemporary world. None surpassed and very few even approximated his capacity to "think like a wise man but communicate in the language of the people". His loss to broadcasting is irreparable and will be felt by many listeners, who never saw him, as personal.

The circumstances of Raymond Swing's departure prompt anxious reflection on the state of news analysis in radio at the present time. His own estimate of what radio can do to save us from disaster may be too high. But no-one who surveys the list of regular news analysts on the four networks today can question that the radio industry's conception of its duty is low to the point of irresponsibility. What regular interpretation of the news are we now getting? Here are the facts. On NBC the only commentator heard more than once a week between the hour of 6:00 P.M. and 11:15 P.M. is Mr. Kaltenborn; on ABC Elmer Davis and Earl Godwin; on Mutual, Fulton Lewis, Henry J. Taylor and Gabriel Heatter. CBS has a policy which, theoretically at least, precludes personal comment by its news staff, though Edward Murrow, for one, devotes a portion of his broadcast to interpretation.

Are these men adequate in numbers to ensure "understanding and citizen control"? Do they represent a fair balance of political outlook? How many of them are qualified by experience and ability to weigh the implications of world events? The conclusion of one who has listened to them all is that they are inadequate in number, lacking, as a group, in

experience and ability, and wholly unrepresentative as a cross section of responsible opinion. To say this is not to attack the men themselves but the policy which determines their presence on the air.

People are hungry for news over the radio. They rate it higher, even, than entertainment as a service. But news and news analysis alike have come increasingly to be regarded by the industry as a commodity, dependent for its place in broadcast schedules on the whim of the sponsors. Only a sponsored news analyst has assurance of the prime prerequisite of service to the listener - a regular time at a reasonable hour. No network has had the public spirit to keep a news analyst on the air at a decent hour for a sufficient time to build an audience. Raymond Swing's own experience is worth citing. "I would build up a good listening public and the business office would sell it to somebody for an entertainment program. In 1938 I was allowed to broadcast twice a week (Munich) and in 1939 three times. But the hours were changed at shortest notice, as I was only sustaining". As soon as he had a sponsor he wasn't moved and 10 o'clock became so much "his" period that two detective novels used someone listening to his program as alibis! "Unless a program can be sold", Swing says, "it is an orphan in the network family. Nobody pays much attention to it, no conscience is shown as to whether it is being carried throughout the country, its broadcast time is changed, and it is not promoted as a public service".

News analysis, in other words, like radio writing in general is, as Norman Rosten has said, "simply an adjunct of advertising. The word is fitted to the product. The product is God. The word is the interval between the announcements of God". That such considerations should determine the policies of a medium which transcends all others in its range and, who knows, its influence on intelligent opinion, is deplorable. The times are perilous. The need for news analysis is greater, not less, than it was. To say that listeners are not receptive to such programs is to say what is not proven or even tested. "Before I shall agree", says Mr. Swing, "that the public will not listen to a wise discussion of world affairs, I should like to have it offered a year's constant access to it. If

the public were to be offered first class news analysis, in the peak listening period, I remain to be convinced that it would turn it off".

Those who are concerned over this state of affairs should be warned against looking elsewhere for action. It is probably beyond the present powers of the FCC to step in. It may even be undesirable that it should. This is a matter between radio and its listeners, that vast, unorganised public which - until it organises - is likely to continue to receive short measure. Raymond Swing is lost to us. Who will be the next? Here is something for men of liberal persuasion (Raymond Swing's listeners among them) to think and do something about.

December 1

DEAR ED:

RE the reprise on "Between the Dark and the Daylight" I'm working on for UN Radio: I've tracked down all the kids I had on the show and setting up interviews all over the US. However, one of them is beyond my reach: he's NICK, the GI Mascot. As you may have guessed, he's in Korea, a corporal with the 40th Infantry— further facts unknown. I've contacted Mr. Weffing in an effort to have Geo. Herman unreel some tape on him. You remember the approach we took to the NICK section of the show. . .he was the kid who said "If it wasn't for the GI's I wouldn't of had nuttin, no home, no food, no clothes, no nuttin'." And he had a thing or two to say about war, too. It "bombed my home, killed my mudder, my fadder. . ." Also he defined happiness as "You're happy, you got your home, you got what you need, you happy," and defined "Tomorrow" as "the next day what's gonna come." A sassy little kid in a cut-down GI uniform, picked up by the GI's when they liberated the camps, left behind when they moved out ------ now a soldier of the United Nations . Quite a story, and I hope to use it in a quiet way as the hard core, perhaps even the climax, of the show. Would you, if your schedule permits the squeeze-in, and the Herman idea comes through, chat about the spot a little with George? My phone extension at PL-4-1234 (UN) is 2873, if you need further.

Meantime — best of everything. Everything.

Allan

Allan Sloane

PS: Alternative: how can I get to Korea?

Sloane, Allan

January 30, 1951

Dear Allan:

Thanks for yours of the 1st; I hope you will forgive me for the delay in replying. I have been somewhat beaten down with a cold and bad throat and am taking a week off. Maybe we can talk about possibilites when I get back.

As ever yours,

Mr. Allan Sloane
17 East 97th Street
New York, New York

(Signed in Mr. Murrow's absence)

17 E. 97th Street

January 1, 1950

Mr. Ed Murrow
Columbia Broadcasting System
485 Madison Avenue

Dear Ed:

I was serious, the other day, when I said I wanted to ask you for a job on the big show. It's a little difficult to do this, though, since if I were applying to anybody else I'd put your name down as a reference.

But this tells the story:

News: 1935-39, New York Post, Boston Transcript, Providence Journal. Street, desk, city desk.

1939-43 Army. Infantry, then Public Relations.

Radio: 1943--- Everything. Especially: 43-45, Transatlantic Call, bridging understanding between U.S. & Britain. Report to the Nation, which for 3 months I produced and wrote for Paul White, later writing spots. Have done, as you know, my own reporting-writing-directing-producing-engineering tape jobs, here and overseas.

General: Have been in every state of U.S., Canada, Mexico, Alaska, England, France, Holland, Belgium, Italy, Switzerland, Germany, Austria, Czechoslovakia, Greece. Know my way around Washington, Lake Success, Police HQ, etc.

Specific: Know a story, know radio, know how to ask questions and put the answers together to make radio. Have done many shows like this one, and honestly think I would be a value.

I would really appreciate a talk, Ed, either with you or with your blessing vis-a-vis Fred, whom I do not know. I'd like to work out, rather than a staff job, a kind of outside free-lance arrangement, whereby I'd be the extra all-round workhorse. Finally, what you don't know about me and what I can't say for myself, anybody else will, from Ed Scott thru Lee Otis and Johnny Aarons all the way down to the boys in the tape-room.

In all sincerity,

Allan Sloane

P.S. It has just occurred to me that the one way in which I might well serve is also indicated in my experience and work. And that is, as a person who can talk to G.I.'s. I used to do Man Behind the Gun, originated Sound Off, proudly wear the title Private, 47th Infantry, 9th Divisio and get along swell with soldiers. I think more and more that kind of material will be used in radio from here on o and I'd be proud to help be the G.I.'s spokesman or speak-through-er.

AES

Sloane Allan

June 8, 1948

Dear Allan:

Thanks for the note. I will make an opportunity to have a word with Taylor. 'Twas a pleasure to work with you.

As ever yours,

Mr. Allan Sloane
250 West 85th Street
New York, New York.

Sloane, Allan

June 4, 1948

Mr. Edward R. Murrow
Columbia Broadcasting System
485 Madison Avenue
New York City, 22, N.Y.

Dear Ed:

In all the spate of letters and phone calls and congratulations of one kind and another that have come in since the program, I remember best and cherish most two words, which you said. Coming from you they are an accolade, because you are a newspaperman and I like to call myself one. You called the show "good copy." That means most to me.

And so, Ed, this is my formal thanks for a job most excellently done. I was jealous of my own words, and anxious over what my kids would sound like with another grownup talking to and with them, another than I. I think now, having heard the thing once again, that you were the one person who could have brought even more to the words than I had put in them. And you did.

You are very busy and tapering toward your well-earned "hiatus." I've hesitated to bother you. . .and after all, I had only vague ideas of possible subjects for exploration. I have sort of decided, though, that I would like to get in on what they are calling, on 18, "new thinking" on the documentary unit. I think I'd do well for CBS there. And if you see fit, would you talk to Dave Taylor about it?

Again, Ed -- that very meagre word --

Thanks.

Allan

Adlai Stevenson

August 31, 1960

Dear Governor ~~Dewey~~ STEVENSON:

Pursuant to our brief conversation regarding an Election Eve television appearance by you and Governor Stevenson, I enclose a brief memorandum on the subject.

As you will note the suggested format is flexible. I am confident that if you and Governor Stevenson agree in principle to this meeting, we can work out details to everyone's satisfaction.

Having discussed this proposal with a few of my colleagues, I am more than ever convinced that such a confrontation will represent a real service to our country.

If you would send me your thoughts regarding the attached, I should be grateful.

Sincerely yours,

Governor Thomas E. Dewey
Dewey, Ballantine, Bushby,
Palmer & Wood
40 Wall Street
New York, New York

ERM:gw
encl

MEMORANDUM

August 31, 1960

To: Governor Adlai E. Stevenson and Governor Thomas E. Dewey
From: Edward R. Murrow

Subject: The Dewey-Stevenson Debate

Time: 8-9 P.M., E.S.T., November 7th, C.B.S. Television and Radio

Manner of Presentation: Live - Unrehearsed - No audience - A Chairman, could be Murrow, whose function would merely be brief introductions and time keeping.

Statement of the Issue: "Resolved that the election of a Democratic (Republican) Administration tomorrow will best serve the interests of the United States and the Free World."

Division of Time: I would suggest 15 minute opening statements by both participants to be followed by 10 minutes of rebuttal, this in turn to be followed by 5 minutes of rebuttal or alternatively 10 minutes of free-wheeling conversation.

Location: A library type studio set in New York, Chicago, or any other mutually acceptable place.

Sponsorship: Not yet determined, but if sponsorship is accepted, it will be of an unobtrusive, institutional nature subject to your approval.

Honorarium: $10,000 to each participant or to such charity or organization as he may designate.

Note: I know you both too well to believe that any turgid eloquence by me would influence your decision. However, I should like to say again that I can think of no more effective or fruitful use of an hour's television time on the eve of the election. We would purpose to provide maximum advance publicity for this program, which would have in my opinion, a larger audience, with possible exception of the first meeting of the two candidates, than any other program in the course of the campaign.

October 26, 1960

THIS IS THE ELEPHANT THAT STARTED THE TRUCK THAT PULLED THE VEHICLE THAT CARRIED THE BUS THAT GOT TO THE HOUSE WHERE ADLAI WAS

A massive key figure in putting the CBS News "Presidential Countdown" interview with Adlai E. Stevenson on the CBS Television Network Monday night (Oct. 24) was a seven-ton elephant. "A strictly non-political pachyderm," to quote producer Warren Bush.

The "Arabian Nights" tale began when a mobile video-tape unit -- a converted bus dispatched from Atlanta, Ga., to handle the Stevenson interview on the Southern Pines, N.C., farm of Mr. Stevenson's sister, Mrs. Ernest Ives -- broke down while still 375 miles away from its destination. Bush promptly hired a giant house-moving truck-trailer, loaded his bus aboard, and highballed north to Southern Pines. But the rudimentary sand road to the Ives farm proved too much for the big truck. Bush hired a tow truck to pull his trailer-truck, and the tow truck bogged down, too. Enter the elephant.

Providentially, a traveling circus pulled into the motor lodge where the "Countdown" crew was billeted. In a flash of inspiration, Bush hired the elephant to start the tow truck to pull the trailer-truck to carry the video-tape bus to the Ives farm.

The whole impossible house-that-Jack-built caravan was a worthy demonstration of a "Presidential Countdown" promise to "go where the people are, no matter where they are" to cover the election story.

Mrs. Edward R. Murrow
~~580 Park Avenue~~
New York, New York

Dear Mrs. Murrow,

Adlai E. Stevenson can be nominated and elected President of the United States this year. We are confident that a substantial, but as yet unorganized majority of Americans, acknowledge instinctively the urgent need for the quality of leadership which only he can provide in the critical 60's.

Governor Stevenson has made clear that he is not seeking the nomination; he has made equally clear, in response to newsmen's questions, that he will accept a draft. For this reason a fast growing nucleus of active pro-Stevenson New Yorkers is now in operation, and in the coming months it will put its case before the voters of this State. To assist in this difficult task an advisory panel of leading citizens, sympathetic to the candidacy of Adlai E. Stevenson, is in formation. Your association with us in this way will be most persuasive, and we cordially invite you to join it.

In the event that you have any questions regarding our membership, our present activities or our plans, we shall be happy to answer them. We look forward to your support.

Sincerely yours,
David Garth

Stevenson, Adlai

ADLAI E. STEVENSON
University of Louisville
Louisville, Kentucky
Wednesday, May 21, 1958

I thought at first, a little ambitiously, of talking about some of the great dynamics, the massive forces, of our times: the explosive growth of our population and its consequences a few years hence, America's enormous social capital needs for education, health, water supply, transportation, urban renewal, resource development, etc; I thought of talking about the nuclear arms race and man's ability to create but not to control the means of his self-extermination.

I think James Thurber summed it all up:

> "Man is flying too fast for a world that is round. Soon he will catch up with himself, in a great rear-end collision, and Man will never know that what hit Man from behind was Man."

But while pondering these subjects for tonight's lecture, I read about the rising anti-American incidents in Lebanon, Algeria, Haiti, and the violent demonstrations against Mr. Nixon which were the culmination of his ill-starred trip to South America. As usual, we blamed it on the Communists. But the comments in the South American press were different, and I was reminded again of the easy way we have of blaming all our misfortunes on Communist plots. Sometimes I think the subtlest and greatest damage the Communists do us is by affording us such a convenient excuse for everything that goes wrong.

Obviously the important thing for Americans to ponder these days, and Nixon's disastrous trip points it up, is that anti-American feeling is so great anywhere, let alone among our next door neighbors, that it could erupt with such bitterness and violence, with or without Communist help. And we won't cure such a situation by a good-will tour that invites demonstrations of ill-will, nor by brandishing our

military might. Didn't our government know the situation? And if not, why not? But if it did, why did Nixon go to South America and risk a fiasco which has cost us so dearly and given the Communists another gigantic propaganda victory.

Obviously these ugly outbursts are a warning and a symptom of troubles that we can ignore and gloss over no longer. We have lived long enough in the foolish and agreeable illusion that most of our problems and even peace and prosperity had been successfully mastered by the administration. Suddenly we have been rudely awakened by a series of unprecedented Soviet triumps -- the Sputniks and Soviet scientific achievements, their remarkable industrial growth; their foreign trade and aid challenge; their leadership toward nuclear weapons controls; and then our crisis over school integration and Little Rock; our sudden doubts about our vaunted educational system, the smoldering anti-American feeling that has been erupting lately, and finally, the severe economic recession here in the United States.

We are taking belated steps in science, defense, education to remedy some of these deficiencies, halting, uncertain steps, but steps all the same. But have we faced boldly, realistically, the grave economic crisis that confronts the Free World, especially our Atlantic world? I don't think so; and unless we do, and quickly, I think the survival of freedom is very precarious and the disorders of today only a preview of tomorrows discontent.

That's what I want to talk about -- an economic crisis that is much larger than the American recession.

Let me start ten years ago this summer when shipments were beginning to move to Europe under the most brilliantly successful program of post-war diplomacy -- the Marshall Plan, in which, by the way, your fellow townsman, Barry Bingham, played such a large and distinguished part.

A year of careful preparation by experts from all the Atlantic nations had preceded its launching. The scale of the emergency had been measured, its causes discerned, the most hopeful patterns for the future discussed and laid down. The crisis of 1947 which, left to itself, could have blasted European freedom, was arrested in time -- by vision, by forethought, and by a vast joint economic effort.

But today the Atlantic Powers have no great purposes in which we can all share. We are not engaged on any careful study of our situation. Our economies, far from working in high gear to achieve a joint strategy, are slack, confused and declining. This, under any circumstances, should be grave enough; but I fear this listlessness, this lassitude, these diplomatic platitudes covering a morass of Allied misunderstanding, are coinciding with a new economic crisis in our Atlantic world. It may not be so dramatic as that summer and fall of 1947, when, after a desperate winter, the gold and dollar reserves of Western Europe seemed to flow from an unquenchable wound. But I believe it may be more serious and more far reaching. I believe it spells more than the economic low point after a devastating war. Our new creeping crisis means the end of a whole economic order and opens the crucial question of what will take its place.

We are witnessing, I believe, the last stages of the old, world-wide, self-regulating, international trading and investment system which we in America have largely taken for granted. At the same time, as it recedes, we see, expanding, eager to take its place, the new Communist techniques of grants, gifts, loans, trade, aid, barter, technical assistance, raw materials at cost, or plain dumping, all bent to a single political purpose -- the reinforcement of Communist power.

And, to give this crisis its full dimensions, it is occurring just at a time when America's need for secure trade abroad and for steady access to foreign materials is growing in proportion to our soaring population and diminishing resources.

Moreover, the change comes at a time when the peoples of the world as a whole are demanding with more urgency and political pressure than ever before a larger share in the world's wealth. Back in 1953 I called this mood "the revolution of rising expectations." Today I would add an even more revolutionary crisis -- "the revolution of frustrated hope."

In short, we face forces of economic and political change each in itself able to shift radically the present pattern of international relations. Coming all at once, they threaten not a shift but a catastrophe.

Let us look at these forces a little more closely. We have inherited most of our ideas about the conduct of our foreign economic relations from the 19th Century -- the golden era of unfettered trade. And in spite of two world wars and the almost total disappearance of the old conditions, we still tend to react to problems raised by trade or foreign investment or balance of payment difficulties as though the old conditions still prevailed. We do this, I think, because we have only the faintest idea of what the conditions were. What we take for basic laws of economics were a happy conjuncture of particular economic and political conditions -- conditions which have now vanished.

Let me mention briefly one or two. When America started to trade with the world, most of what we now call "the uncommitted areas" were administered and policed by the Colonial powers. The New World enjoyed the protection of the Monroe Doctrine and the British Navy. China was in eclipse and Europe, including Russia, was immobilized for nearly a century by an effective balance of power. Our framework of world trade was thus one of unprecedented security and order provided in the main by others. So we assumed it was normal and would look after itself.

Let me digress to say that even today, after two wars, we still tendto hanker for a world system that will run itself and leave us to get on with our own business. Deep in our hearts I think we Americans have two profound wishes -- that the Communists will silently vanish away, and then that our allies will obligingly do the same. But no vital question can be decided rationally or effectively if we do not accept our involvement in the world as a basic fact. And this is the more compelling because one thing you don't find is a really isolationist Communist. For them the decision is made and the commitment total. Their field of operation is world wide.

Within this 19th Century framework of political stability -- within it the new economic forces of expanding industrialism were also, in large measure, self-stabilizing. The essence of any international trading system is, of course, that buyers can sell and sellers can buy and that their transactions will balance at a high and sustained level. I mention this truism simply because so many devotees of foreign trade in our great country only wish to sell and regard foreigners' efforts to do the same as an unwarranted intrusion on the rights of free Americans.

The old system worked well and easily because it tended naturally to produce a balance between sellers and buyers. The pioneer industrializers -- Britain, the Low Countries, and for a time, France -- did not fence off their markets with high tariffs. They looked overseas for growing purchases of food and raw materials. They were exporters of capital and these balancing factors meant that the biggest sellers of the day were also formidable buyers. In these circumstances, the ups and downs in foreign trade -- the debts which had to be settled in gold -- were neither large nor enduring. And we should, perhaps, notice that the automatic working of the gold standard put pressure on both debtors and creditors to bring them back into balance.

Now this is not irrelevant historical analysis. It is a shorthand attempt to explain the conditions under which unfettered, expanding, international trade occurred. Tariffs

were low or absent. Overseas investment was massive. For Britain the customary figure was 7 per cent of its national income -- the equivalent today for America of perhaps $28 billion a year in outside investment -- which is twice the Marshall Plan each year, incidentally.

Much of that capital found its way to North America and was one of the jet propulsions behind our take-off into rapid industrialization. By buying and lending freely, the European Powers thus kept trade moving and, as a result, kept to a minimum the use of gold for settling current deficits.

This congenial system -- congenial in its apparent ability to run without intervention or guidance -- was dealt a hammer blow by the first World War. The old creditors -- Britain, France, Germany -- had been ravaged. New producers had grown up while they were laying each other waste. Their margins for massive lending were cut. Their ability to sell was cut. Tariff walls were rising everywhere. And they had hardly recovered their breath when the great depression flattened them again.

By hindsight we can now see that the chief factor of the twenties was not so much this growing eclipse of Europe but the emergence of America as the world's industrial giant. Here was a new phenomenon -- a nation able to satisfy most of its internal market, yet able to sell competitively abroad both manufactures and primary products. Inexorably it had moved to a central creditor position, but it was not forced by a variety of natural compulsions either to buy or lend freely abroad. With this phenomenon we have been struggling ever since.

The second World War would have completed the ruin of Britain, the Commonwealth and Western Europe if it had not been for a series of strokes of good fortune, flashes of insight, occasional brilliant strategy and a host of successful ad hoc solutions. These have helped us to move on without disaster since 1945. But like a series of temporary cures, they have left the main malady untreated. We have not

been thinking seriously of the new system which must take the place of the old. And we Americans have been specially tempted by the policy of expedients for they postpone the day when we squarely face the fundamental fact of a future, free world economy.

That fact is that unless we Americans make such a system work, actively and consistently, nobody else can or will.

Now let us take a quick look at the expedients that have kept us going since 1945. First, in 1944 we have the general policy worked out at Bretton Woods. Some of the economic leaders of the free world recognized certain preconditions of successful international commerce and attempted to meet them. At Bretton Woods they proposed the systematic lowering of tariffs, first in an international trade organization, and then under GATT, the General Agreement on Trade and Tariffs. They proposed to supplement international lending by the International Bank for Reconstruction and Development. And they noted that the reserves available to meet fluctuations in trade -- the responsibility of the old gold standard -- had hardly been adequate before the second World War and would quite certainly be much more inadequate thereafter. Britain, for instance, had run an unfavorable trade balance consistently between the Wars and covered it only by interest on its overseas loans. But these loans had now been liquidated to pay for the War.

(In passing perhaps it is worth noting the strange reversal of fortune: In the War, German assets in America were frozen because Germany was an enemy. Britain's American assets were sold or pledged in 1939 and 1940 to buy arms and to tool up our arms industry. But now, it seems righteous to the Administration to return Germany's assets, while, in the main, our British allies must be content with the memory of how they helped us to win the war!)

To return to the matter of working reserves, the Allies set up the International

Monetary Fund at Bretton Woods to tide over embarrassments arising from temporary imbalances in trade. The sum made available to the Fund in gold and dollars -- the crucial components -- was on the order of $2 billions.

Thus, the three main elements of 19th Century stability -- low tariffs, international lending and adequate trading reserves -- were analyzed or recognized and in some measure acted upon as the War drew to a close.

But I think we can now say that this framework, however rightly conceived, would have proved totally inadequate if it had not been for other policies and expedients pursued by the free nations.

I would like to suggest three factors which have enabled the nations of the free world to avoid disaster in the last decade. The first is the degree to which the old colonial powers have revived their earlier lending. The case of Belgium with its $1 billion development program in the Congo should be noted, though a large part of the inventment is, in fact, derived from bounding revenue in the Congo itself. But France has invested, largely from Metropolitan sources, on the order of $150 millions in French West and Equatorial Africa in the last decade. If the North African figure is added, the total is nearer $300 millions.

The British effort has been even more widespread. Total post war investment in Africa alone, public and private, including funds from local sources, is past the $1.5 billion mark. At the same time, India's first Five Year Plan was massively underpinned by the releases of India's sterling balances in London in the shape of war debts. Over $3 billions have been transferred in this fashion -- either to India or to Pakistan.

Thus a very large measure of international lending -- more than we in America recognize -- has been carried on by some of our partners. These transfers are, however, intimately bound up with the other two factors I want to mention. In the first

place, they have helped to bring about an unprecedented strain upon French and British reserves. In the second place, they could not have occurred at all without American underpinning.

It is, of course, clear that there is some measure of direct conflict between the policy of widespread international lending and the policy of building up reserves to tide one's trade over the ups and downs. To lend abroad is to create further demands on the national product and, if the demands are too high, inflation sets in, the internal market sucks in producing power needed for exports, imports rise and foreign exchange drains away. This has been a feature of both the French and British economies in the last decade.

Their reserves have been, in fact, quite inadequate for the work they have been made to do. This can be seen most forcefully from the case of Britain. Today, about 40 per cent of total world trade is conducted in sterling and the wide availability of sterling is insured by Britain's massive buying and lending. The country, in short, is behaving -- as of old -- like a creditor. The trouble is that it is not. It is a debtor. At the core of the system lies a hard currency reserve of only $2 billions of convertible currencies. Thus, just below half of the trade of the free world is balanced on funds about equivalent to those of the Ford Foundation. This is a remarkable and an exceedingly useful achievement, but it is desperately precarious. With $6 billions of sterling balances on deposit in London and only $2 billions to meet them in the last resort, Britain is forever at the mercy of a run on the bank.

Moreover, this British effort would have been impossible had it not been for the post-war policies pursued by the United States. Since 1945, the full implications of American economic dominance have become apparent. The great question has been whether America's policies would permit the old system of general international trade to flourish or not. What answer can we give? Let us remind ourselves once again of

what the old conditions were: low tariffs, high lending and reserves flexibly based upon gold.

On tariffs, we have a little progress to show -- some modest concessions to the fact that we produce 40% of the world's industrial goods. But our tariffs are high relatively to our economic strength and they are still complicated by a thousand harrassments in the shape of customs specifications and the like.

On the matter of flexible reserves, certainly we have nothing faintly resembling the system prevailing in the great days of free trade. We have neither allowed the price of gold to move freely in concert with the threefold rise in other commodities. Nor have we used the vast influx of gold for massive purchasing abroad to meet the rising internal demand. We have $22 billions of the world's gold reserves of $38 billions -- but they are insulated from our economy. There are some sound reasons for this, both internal and external, but they are as contrary to the old workings of free trade as are, say, the remaining British checks on full convertibility of sterling.

(We are all, in fact, in the position of proclaiming those bits of the old system which suit our present purposes while soundly berating our partners for their own reservations.)

But if our performance on the issues of tariffs and reserves has differed very widely from the classical free trade tradition, it cannot be denied that we have made good some of the deficiencies and amply fulfilled our responsibilities in the third key area -- that of lending abroad. I do not refer now to private lending, though this has been substantial in some directions -- for oil and mineral development, for instance, or for investment in Canada.

But the great flow of American lending of all sorts has been governmental and, since 1945, it has been the basic element in the expansion and prosperity of the free world. The aid extended under UNRRA at the end of the war, the sums disbursed

under military government in Europe, especially in Germany, the creative expenditure of the Marshall Plan, the subsequent billions each year under mutual security programs, the assistance given on various occasions to the Indian subcontinent -- all these various efforts which, by 1957, had reached the sum of $64 billions, an annual average of over $5 billions -- have generously fulfilled the obligation and self-interest of a creditor country.

In spite, indeed, of our persistently favorable balance of trade -- last year it was in the neighborhood of $7 billions -- we have made it possible by aid and by loans for the free world to trade with us, and even to increase their dollar reserves by some $6 billions. It was this solid underpinning alone that has kept the sterling area in being and has enabled France and Britain to continue as international lenders.

And before we leave this question of America's performance as the post-war pivot of the free world economy, I must add one further vital element -- the high prosperity maintained at home since 1945. The Communists may have scanned the horizon for an American recession as eagerly as the prophet of old looked for the cloud no bigger than a man's hand. Through a whole decade they had to search in a virtually cloudless sky as the American economy improved on all past performance, raised its growth rate from 3 to 4 per cent, doubled the average income of its people and drew the rest of the free world upwards in its wake.

Then the tide turned, and this is now the crucial fact. The plain truth is that today, in 1958, the elements of a functioning system which I have described are beginning to disintegrate. Either their inadequacies are becoming apparent, or their strength is being dissipated, or they have come up against road blocks.

That is why I say that virtually unprepared we are heading for a new crisis -- one no less dire than the crisis of 1947 and no less certain to lead to catastrophe unless we act in time. And today there is no aftermath of war to blame, no antecedent

turmoil and destruction. The world is rebuilt -- Europe has been operating at better levels than for thirty years. Trade has expanded all round the world. If we falter now, we cannot blame war or bad winters or the failure of harvests. We have the system itself to blame and the changes we need are not temporary expedients but a fundamental reform.

And if the system fails, if Western industrial capitalist economies can't maintain an effective trading system and steady growth, the implications in the cold war are obvious. And in that contest we have already lost so much ground in the last few years that we can't stand to lose much more.

Consider for a moment the vulnerability of our present position. The starting point must be the repercussions of our dragging, deteriorating recession here in America. Last year, the world's primary producers felt the first cold breath of decline. Their income fell by $750 millions in one year -- almost the equivalent of the whole free world aid program to Asia. Now in 1958 the blight shows signs of spreading. Sterling area exports as a whole are falling and presure on the central reserves must increase if import programs are to continue.

The argument is now advanced in England that the days of sterling lending and maintenance of world trade must give way to a stern program of building up reserves and high investment in Britain's own resources. If this policy prevails it will be the end of one of the few flexible international systems of working capital for day to day trade transactions. It also ends a sustained source of capital for the developing economies. It would mean, in short, the disruption of two of the essential mechanisms that have helped to maintain world progress and prosperity in the last decade. And if the British decide that they can no longer underpin development, we must at least be prepared for the French at some point to make a similar policy reversal.

In these conditions, there are no automatic alternatives. The International

Monetary Fund will not suddenly be able to create a substitute for sterling long-term lending and short-term banking. On the contrary, $560 millions of its reserves are already on loan to Britain.

Nor are the funds at the disposal of the World Bank going to increase because of cuts in the British system. Nor will this possible retreat of the British from their exposed position automatically compel the world's solid creditors -- America and Germany -- to change their course. Germany has deliberately chosen to use its massive American aid and its great national effort to rebuild itself and its reserves. These reserves are now over twice as large as Britain's, but there is no obligation on Germany to pursue a more expansive trading or credit policy.

But the central element of uncertainty in the free world's economy today is, inevitably, centered in its most powerful member. American policies will become even more crucial if Britain has to abdicate its post-war role in international banking and investment. And what can be honestly said of our understanding of our own decisive role? Of our realization that, far from being stable, the system itself is tottering and needs only a few more chance knocks to founder completely? I suggest that the gravest element in our current crisis is the lack of realization of the scale of the crisis or of the response needed.

I believe that in general terms our present attitudes towards world economic policy disclose a frightening disregard of reality, a dangerous unawareness of the implication of what we do. Organized lobbies use every pressure to secure higher tariff protection. The voices warning us that our own vital foreign trade and the expansion of the entire non-Communist world are involved in this issue can barely make themselves heard above the righteous declamations about the virtues of free enterprise from gentlemen who, at the same time, demand tariff subsidies and checks on free competition.

In the related field of foreign lending, there is the same lack of clear perspective. At best, we shall carry on as we do today -- with a lot of foreign military support and a little foreign investment as our grudging contribution to containing the Communists, although it bears little relation to our position as the world's greatest creditor and as a nation massively engaged in international trade.

As a result, all these programs which insure the necessary outflow of dollars from our economy have a provisional, even chaotic, character -- a little here, a little there, a program started, a program reduced -- following the rhythm not of need but of Communist pressure and the Congressional fever chart.

And, equally, they bear the stamp of the ephemeral. They could be gone tomorrow, we argue, if only the Communists would pipe down. The fact is, on the contrary, with or without Communists, with or without Mr. Khrushchev, the free trading system which we desire to live by, which, for others, is a condition of survival, and which we honestly believe is the best hope for growth and prosperity cannot function unless, steadily and consistently, we take up the creditor role which our industrial predecessors in Europe are putting down.

This is not the time for hesitation. It is a time to face squarely our long-term responsibilities as creditiors and to put the whole business of capital for development, both public and private, upon a consistent basis, to accept its continuity, to coordinate and combine it with others, to link it to long-term programs of growth and to give it the trained personnel it requires for efficient, resourceful administration. If we were to act on the scale once achieved by Britain in her heyday, both our public and our private lending would need to be tripled. It is a sobering thought how far beyond our ambitions such a figure lies today.

But the notion of even doubling the present scale -- which would entail an outward flow of, say, some $15 billions a year — underlines another fundamental need -- the

need to swing our own economy back from its present stagnation to new and, I believe, higher rates of growth. So long as we grind along at levels of production ten to fifteen per cent lower than those of 1957, pressure for more protection will grow, the attacks on foreign investment will increase and, worst of all, we shall continue to export deflation and recession as a result of our own decline. Our imports this year have already fallen off by some 12 to 15 per cent. Europe fears a widening of the trade gap this fall. The old misery of the 1930s -- so gleefully portrayed by Communists -- that of nations in need, men out of work and resources wasting while the vaults bulge with gold, in being revived in Communist propaganda. And Russia is making its offers of trade and aid with deep commiseration to all the nations who have sought to depend upon the West's "failing capitalism" for their economic future.

Let us not, for Heaven's sake, forget this entirely new element. Just as the American effort has become overshadowed by recession and doubt, the Russians are advancing. They are offering Europe expanded trade on the basis of Russian raw materials. They tempt the fringe countries of Asia with long-term, low-interest loans which, in two and a half years, have nearly reached the $2 billion mark and outmatch American offers in the same area by nearly 100 per cent. Nor is this a passing phenomenon. Russian production is expanding. Each year there are more resources upon which to draw for foreign enticements, more capital to offer, more goods to exchange. Nor do rising consumer demands in Russia impede the leaders' foreign economic policy -- or at least, not yet.

This is the new and formidable factor we face. Not only is the old system tottering, but a new, brash, aggressive and powerful competitor is thrusting his way in to complete the overturn and to set up his own controlled, guided and totally political system in its place.

In this atmosphere of growing crisis, I suggest to you, with the utmost urgency,

that we cannot permit the present policy of drift and confusion to persist indefinitely. The free nations must be rallied to consider ways and means to a functioning, expanding, free world trading system, and each must accept full responsibility for the policies that are worked out.

I believe that America should now declare its readiness for such a stocktaking.

I believe we should propose a Committee of Experts comparable to the group which laid the groundwork for the Marshall Plan in 1947. It should be their responsibility to prepare an agenda for the regeneration of the free world economy upon which the nations can agree and act within a year.

The agenda springs naturally and inevitably from the needs and frailties which I have vaguely traced. You will not require from me that, at the end of an over-long lecture, I undertake the experts' work, but I might mention four or five points which seem to me supremely relevant.

First, the recovery of internal momentum. We must consider the implications of aiming at a sustained rate of growth of 5 per cent a year in place of our traditional 3 per cent. We shall certainly have to consider the urgent problem of inflation. We shall have to learn to act vigorously and boldly to check undue consumption and to keep rising living standards and demands in balance with rising capacity to produce. But I suggest that the last 18 months have proved once and for all that we cannot check inflation by halting production.

Secondly, in the field of tariffs, I would hope that our Commission of Experts would link the European experiment with a common market to the needs of a wider free trade area. There is danger that the Europeans may establish not freer conditions of trade but closer forms of protection for themselves. For this reason, I believe that not only the whole sterling area should be drawn into free trade relations with Europe's Common Market, but that a free-trade or low-tariff area

spanning the Atlantic would be an immense step toward a liberal, world-wide trading system.

Third, is economic aid to the undeveloped areas. We must rationalize and enlarge the many foreign investment programs of the industrialized nations. Six months ago I urged the administration to take the lead in the direction of consolidating and coordinating our financial and human resources for economic development in the "have-not" nations. For maximum effectiveness, such loans and aid should be stabilized and related to long-term policies of sustained growth in the backward countries. Underpinning India's economic transformation is an immediate imperative. Germany must be brought in on the contributors' side. And, surely, to give to contributors and receivers alike a steady picture of the amounts and skills needed and available is not beyond the genius of the free world.

Fourth, is reserves or working capital, and the convertibility of currencies into dollars. Our experts should advise on the best way to insure the safe, short-term financing of world commerce. My first impression is that with larger backing from the hard currency powers, the International Monetary Fund could become an effective instrument of full convertibility. Trebling the contribution of all members would be in keeping with the modern tendency to regard all currencies, hard and soft, as part of the "cushion" to world trade.

To sum up: joint measures to secure sustained growth, joint negotiations for a low tariff or free trade area, joint undertaking of a long-term aid and investment program, and joint agreement on adequate working capital for world trade and convertibility -- this agenda for the free world not only meets the main strains and crises of today, it would go far to revive the conditions under which the old, unfettered, expansive system of free international trade once worked.

We can do it. Our joint potentialities are enormous. But it won't be done unless

we, the United States, act. Today, make no mistake about it, the drift is all the other way -- towards declining production, higher trade barriers, commerce starved for working capital, falling investment, economic frustration and trouble in the under-developed areas.

As in 1947, the drift is to disaster and it is to our energy, intelligence and foresight that we must look if this drift is to be reversed.

I would appeal to our present Administration to heed these portents of disaster and not permit outworn dogmas or faulty economic shibboleths to paralyze their will and freeze their energy. In 1947, the challenge did not find us wanting. The foresight of General Marshall and Dean Acheson, the energy of President Truman, the patience of Senator Vandenberg, met the vision of men in Europe, such as Bevin and Monnet and sparked the greatest enterprise of constructive common economic effort the world has ever seen.

I know the achievement was bipartisan in the truest sense of that abused word, and I believe that any comparable effort today must be so again. I believe that my fellow Democrats will follow an Administration lead today as faithfully and eagerly as many Republicans followed the Democratic initiative ten years ago. But we connot give that lead. We are not at the levers of power.

I therefore repeat my plea to our Republican leaders. Do not let this crisis slip irretrievably by. Do not let sign after sign appear in the heavens and portent follow portent without a full, courageous and wholesale response. We have hung too long in slack waters, waiting and fearing.

And now a final word. I fear the rush of recent events -- the crisis in France, the war in Algeria, the rebellion in Lebanon, in Indonesia, the abuse, the ingratitude, the anti-American outbursts everywhere, have added dangerously to our feeling that the world is too evil and troublesome to be worth saving, even if we could.

This is, of course, precisely what the Communists want Americans to feel, for the only real obstacle, in the short run, to their plans is the consciousness all around the world that Americans are interested, aware, powerful, involved and committed.

Making a world that is reasonably decent to live in is quite as difficult as breaking open a virgin continent. The early pioneers, your ancestors and mine, thought the going would be tough, and they were quite right. It is still tough -- and it is still worthwhile, for we have to live in the world as well as the continent.

Stevenson, Adlai E.

ADLAI E. STEVENSON

Chicago

February 28, 1959

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

Governor Stevenson was out of town last weekend, but on his return home he was gratified to find your wire, and also your note of the 24th enclosing the check for his SMALL WORLD appearance. He has had to leave on another trip almost immediately, but has asked me to tell you how grateful he is for all you did to make the broadcast a success. I think he was pleased with the way it turned out.

Sincerely yours,

Carol Evans

Miss Carol Evans
Personal Secretary

Stevenson, Adlai

February 24, 1959

Dear Adlai:

Herewith our huge check for your contribution to SMALL WORLD. I have seldom seen you look better or talk better. Thanks again.

As ever yours,

ERM:skh

(signed in Mr. Murrow's absence)

Governor Adlai E. Stevenson
135 South LaSalle Street
Chicago, Illinois

Stevenson, Adlai

DOMESTIC February 20, 1959

to:

ADLAI STEVENSON
135 SOUTH LASALLE STREET
CHICAGO
ILLINOIS

IF YOU WANT TO SEE AND HEAR SOME VINTAGE STEVENSON FILMED AS HE SHOULD OUGHT TO BE LOOK AT WBBM-TV THIS COMING SUNDAY AT FIVE PAYEM. REGARDS.

ED MURROW

Chicago

February 12, 1959

Dear Ed:

I am distressed about March 1st to 4th, but I am afraid I cannot get to Naples at that time. Somehow we must contrive a leisurely visit somewhere.

Cordially yours,

Adlai

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, N. Y.

Choose Adlai, Mr. K to Head 'Cabinet'

London, Jan. 7 (Reuters)—Nikita Khrushchev and Adai Stevenson today were chosen prime minister and foreign secretary of an "Emergency World Cabinet" by the readers of "Britain's leading right-wing newspaper.

Lord Beaverbrook's 4,250,000-circulation Daily Express published the results of a special poll. The cabinet was chosen to combat an emergency "threat from outer space."

Prime Minister MacMillan was named minister of agriculture.

Stevenson was the only American to make the list. But Canadian Prime Minister Diefenbaker was named minister of education. Others named included French Premier de Gaulle as Minister of Defense; Russian Deputy Premier Mikoyan as Minister of Trade, and West German Economics Minister Ludwig Erhard as Chan-

NEW YORK POST, WEDNESDAY, JANUARY 7, 1959

Stevenson

May 16, 1957

Notes re Mr. Stevenson's Itinierary

1. Mr. Stevenson and Mr. Blair will stay at Claridge's in London.

2. The itinerary shows Mr. Stevenson leaving from Stanleyville in the Congo for Leopoldville on June 20. If transportation can be arranged, Mr. Stevenson will probably leave on June 21 instead.

3. The itinerary shows Mr. Stevenson spending one day - June 28 - in Lagos, Nigeria. If arrangements can be made, he will stay a day or two longer, which in turn would cut down on the number of days the itinerary shows him spending in Liberia. There is also a possibility that Mr. Stevenson will spend a day in Accra en route in Liberia.

4. From July 9 to July 16, Mr. Stevenson will be staying with Mr. Francis T. P. Plimpton at

Villa Balbianello
Lenno
Lago di Como
Italy

CAMPAIGN COMMITTEE

JAMES A. FINNEGAN, *Chairman* • HYMAN B. RASKIN, *Treasurer*
1128 Sixteenth St., N.W., Washington 6, D.C. / Telephone: District 7-1717 — District 7-9550

F. JOSEPH DONOHUE
DIRECTOR
VICE PRESIDENTIAL ACTIVITIES

Edward R. Murrow, Esq.
Columbia Broadcasting System
Radio City
New York, New York

Dear Mr. Murrow:

I am taking the liberty of sending you herewith some material on the KOED proposal for the Democratic Party for which I am trying to get support. I believe that if it is coupled with an effective program on political organization (which is being worked up by Neil Staebler and his group) it will go a long way to assuring that we will win the 1958 and 1960 elections. The two programs go together like gun and bullet; neither is complete without the other -- the program on political organization and the KOED program on political ammunition.

The KOED program will be submitted to the meeting of the Democratic National Committee in San Francisco on February 15th at which I expect to be present. Sometime around March 1st I will be back in New York and I would appreciate very much an opportunity to sit down and discuss with you this matter and get your ideas on it. I have had such discussions previously with Drew Pearson, Eric Severeid, Frank Edwards and other well-known journalists and commentators and I hope to talk to a lot more before I'm through.

I had the great pleasure of sitting at the same table with your wife at the dinner of January 18th for Senator Lehman.

From January 30th to February 15th I can be reached by mail at the Beverly Wilshire Hotel in Beverly Hills, California. After that I'll be in Washington and expect to come up to New York sometime in March.

Yes
Will see

Sincerely,

Stephen J. Spingarn

Stephen J. Spingarn

P.S. I was an Administrative Assistant to Mr. Truman when he was President and I happened to be present in his suite at the Mayflower recently while arrangements were being made for your week-long powwow with him in Florida. It ought to be an interesting week. S.J.S.

VOTE DEMOCRATIC

MRS. FRANKLIN D. ROOSEVELT
211 EAST 62ND STREET
NEW YORK 21, N. Y.

January 8, 1957

Dear Mr. Spingarn:

I think your idea as outlined in your letter of the 2nd is excellent and you can tell Mr. Butler that it seems to me KOED could be used in more ways even than you have mentioned.

* * * * * * * * * * *

With my good wishes,

Very sincerely yours,

Eleanor Roosevelt

KOED SUMMARY

HOW THE KOED PLAN COULD HELP THE DEMOCRATIC PARTY TO WIN THE 1958 AND 1960 ELECTIONS BY "KNOCKING ON EVERY DOOR" IN THE NATION AND PRESENTING THE DEMOCRATIC PARTY'S CASE ON EVERY ISSUE WITH MAXIMUM EFFECTIVENESS AND IMPACT.

If the KOED plan were in effective operation, it could provide literally hundreds of draft speeches and fact sheets every year by highly competent, politically savvy, people writing about political issues which are their special interest and on which they keep themselves up to date as a matter of course, and prepared in simple, understandable, lucid terms. These draft speeches and fact sheets would cover every major issue and would be available to members of Congress who cared to use them, either as actual speeches to give on the floor of Congress, or in their home state, or as factual memoranda from which the Congressmen could prepare a speech in their own style and language. The average member of Congress would not need such a service in the subject areas in which he is particularly active, since there his familiarity with the subject means that he and his staff could prepare speeches and other public statements themselves without trouble or extensive research. However, no one can cover the whole waterfront of issues, and every member of Congress has to speak out frequently on issues with which he is only generally familiar and does not follow closely.

Here the KOED plan could be invaluable. Moreover, it would permit planning ahead so that a member of Congress who was coming up for election a year or two years hence could pick the issues with the greatest impact in his state and district and deliver a series of hard-hitting speeches on them in Congress and at home on every timely occasion. This would increase the Congressman's stature with his constituency and improve his chances of re-election.

Moreover, the KOED unit could do a lot of thinking ahead and start early to prepare draft speeches and fact sheets on issues which had not yet come to a head but which looked as if they might become important.

There is a very large pool of relatively untapped talent all round the country that would be glad to do volunteer work of this sort for our Party and its representatives in Congress, as well as for our candidates during the campaigns. These people will be found mostly among the younger men and women on university faculties around the country who are active the year round in their local Democratic organizations as city or county Democratic organization officials, county Democratic committeeman, or the like. In addition, there would be the ex-Democratic officials who are practicing law or who are in business around the country.

In the past the Democratic Party has probably placed too much reliance for this kind of work on the Northeastern seaboard people. They are talented and they are conveniently close, but they represent only a small part of the talent in our Party. Moreover, one of the best features of the Democratic Party is that it is a National Party and the fusion of ideas from people all over the country would be a very valuable element of the plan.

The KOED operation would not involve any formulation of policy, but would be strictly a service operation to strengthen our people in Congress by providing them, if they desired it, with a large flow of good draft speeches and fact sheets, all written within the four corners of the Democratic Platform.

In addition, these draft speeches and fact sheets could be sent out to the Democratic state, county, and city organizations in quantity and could be used on any occasions where a speech on any issue was to be made before a business, labor, farm, or civic organization. The availability of this service would probably have the healthy effect of precipitating the making of speeches on the Democratic side of the issues which would not otherwise be delivered.

The effective operation of the KOED plan in the Democratic National Committee would strengthen the bridge between the Committee and the Democratic members of Congress in a way which would be most valuable from the standpoint of both sides, from the standpoint of the Democratic Party, and, above all, from the standpoint of the Nation.

S.J.S.

KOED MEMO

DUpont 7-0666

November 1956
(After the election)

A PROPOSAL FOR THE DEMOCRATIC PARTY (NOVEMBER 1956-NOVEMBER 1960)

Subject: A Proposal to Help the Democratic Party Present its Case to the People More Effectively -- and More Winningly -- through Democratic Members of Congress, at the grass root and pavement level, and in the 1958 and 1960 Campaigns.

- - - - - - - - - - - - - - - - - - - -

The attached memoranda set out this proposal and indicate how it could be carried out.

For purposes of convenience (and amusement), I call this proposal (at this stage) "Operation KOED" which means "Knock on Every Door" because that is what I have been doing since November 7th in an effort to enlist support for the proposal and get it rolling.*

In addition to the proposal described in the attached memoranda, and as a major part of "KOED", I propose an informal, advisory group of top-notch popular journalists and political commentators in the other media to advise us on the "Communication" problem -- how to reach the public mind most effectively and with greatest impact on political issues. This would include advice on what issues will have the greatest impact and how they can be most effectively presented.

I have already talked to several top-flight men in this category who have promised their help on an informal basis.

As another major benefit of "KOED", I note that it would provide a continuous flow of good, simple, understandable speeches on all the major issues to state, city, and county Democratic chairmen and their organizations. These speeches could be stock-piled locally and used either "as is" or with local variations for any occasion that called for a speech on a political issue, such as talks before Chambers of Commerce, Rotary Clubs, civic and religious groups, labor, farm, and small business organizations, etc. And in state, local, and national campaigns, too, of course.

I have indicated a minimum subsistence budget for salaries of $15,000. a year for "KOED". The operation could be mounted for this sum, but, if possible, it would be much better to have a $25,000. a year budget for salaries, since this would permit the employment of an alert, quick-footed researcher and an additional stenographer.

S. J. S.

*And the KOED plan is designed to "Knock on every door" in the nation and present the Democratic Party's case on every issue with maximum effectiveness and impact.

Stephen J. Spingarn

November 1956
(After the election)

MEMORANDUM ABOUT THE OPERATIONS OF "PROJECT X" IN THE 1956 POLITICAL CAMPAIGN (21 OCTOBER -- 6 NOVEMBER); AND A PROPOSAL FOR SETTING UP THIS KIND OF AN OPERATION, GREATLY IMPROVED AND EXTENDED, ON A PERMANENT BASIS IN ORDER THAT THE DEMOCRATIC PARTY MAY MORE EFFECTIVELY (AND MORE WINNINGLY) PRESENT ITS CASE TO THE PEOPLE THROUGH DEMOCRATIC MEMBERS OF CONGRESS AND IN THE 1958 AND 1960 CAMPAIGNS.

On the afternoon of Wednesday, October 17, 1956, the Stevenson-Kefauver Campaign Headquarters asked me to set up a hurry-up operation to provide a quick flow of speech drafts for Senator Estes Kefauver to use in his vice presidential campaign. The very able group of associates travelling with Senator Kefauver had done heroic and extremely effective work in helping the Senator in the preparation of scores and scores of speeches, but many weeks of work on a seven-day a week, 16 or 18 hours a day basis, had imposed a heavy strain on this group and it was felt that it was time to warm up a second platoon on the bench to try to assist them.

I actually began operating on Sunday, October 21st, when I made a series of long-distance telephone calls to top-notch politically savvy Democratic "egg-heads" all over the country. I called seven or eight universities and talked to political scientists and economists whom I knew. I also called Democratic ex-government officials around the country, now practicing law or economics or in business. Because of the time element, and to keep down expenses, I naturally tended to favor people in or near Washington, but I also made contact with people in California, Arizona, Michigan, Illinois, Ohio and elsewhere, some 35 or 40 people in all, over a period of two or three days.

To each person I said approximately the same thing:

"We need, for use by Senator Kefauver, hard-hitting speech drafts of about 2,000 words. A copy of each such draft will also go to Governor Stevenson and President Truman. Your name will be on the draft as the author.

Do not bother with a beginning or an ending -- we add those. Simply start out 'I want to talk to you tonight about---' Your paragraphs and sentences should be short and your language should be basic English. Do not freight down the speech with too many ideas. We want an organ march, not a cacophony of sounds.

We are aiming these speeches at the average American, who has had approximately ten to eleven years of schooling. We do not talk down or patronize him, but we do talk in simple, lucid terms which he can understand -- a poster, not an engraving.

All the speeches are to come in under the same general theme tent, namely:

The Eisenhower Administration is totally dominated by giant businessmen, and their bankers and their lawyers. When the Eisenhower Administration sits down at its council tables, these men occupy all the chairs.

Now we Democrats don't dislike big businessmen. On the contrary, we like them very much when they are enlightened men with a social conscience. We point with pride to our own Averell Harriman and our own Herbert Lehman. We like Republican big businessmen of this type, too, such as Paul Hoffman and Robert Lovett; and as proof of that, we note that we used these men in Cabinet jobs during President Truman's administration, but they have not been so used by the Eisenhower Administration.

However, we do not want even these good men to occupy all the chairs at the council tables of government. We want the representatives of the working man, the white collar employee, the farmer, the small businessman, and the housewife to occupy a fair share of the chairs at government's tables.

We want the egg-heads, too, the scientists and thinkers from our universities all over the country because, unlike the Republicans, we admire and appreciate egg-heads and we know that almost all human progress through the centuries has come from the thoughts and ideas of egg-heads. We know that Socrates and Plato and Copernicus and Galileo and Voltaire and Newton and Pasteur and all the other great men of thought and vision were egg-heads.

And, if a Democratic administration and Congress are elected on November 6th, that is the kind of government you will have."

I asked each man, working under that general theme, to write a speech in the area in which he was most qualified and most interested, and to send it to me by air mail, special delivery.

For example, I asked two top tax experts, both former government officials now practicing law in the Midwest, to write separate speeches on Taxes. These speeches were to show what the tax policy of the Eisenhower Administration was, and how it favored big business and the well-to-do and unfairly dealt with all the rest of the nation. I asked each writer to explain how this affected you, Mr. Small Businessman, you, Mr. Worker, you, Mr. Farmer, and you, Mrs.Housewife.

I asked other experts to write on the "Tight Money" policy of General Eisenhower and that giant businessman, Secretary of the Treasury Humphrey; and how it meant scant credit and loans for small business, but did not inconvenience big business at all in getting credit and loans.

From others I got speeches on such subjects as High Prices; on the Small Business recession since 1952; on the one-sided General Prosperity of General Motors, General Electric, General Foods and General Eisenhower; on Attorney-General Brownell's emasculation of effective enforcement of the antitrust laws, which protect small and medium sized business against monopoly power; on the Rape of the Regulatory Agencies; on how Giant Business pays for Republican services rendered through its campaign contributions (according to the Gore Subcommittee report of November 2, 1956, the officers of the 100 corporations having the largest amount of defense contracts with the government in 1956 -- January 1 to October 21 -- gave $435,310 to the Republicans, $9,500 to the Democrats, and $4,000 fo For America).

I also asked for speeches specially geared to the interests of women.

After October 29th when the war broke out in the Middle East, we were, of course, grinding out speeches on the utter bankruptcy of the Eisenhower-Dulles policy in the Middle East.

Here we stressed the fact that on October 12th in a nation-wide television appearance, General Eisenhower had told the country that there was good news from Suez -- good news in the Middle East -- that the crisis was passed. Then came October 29th and the war, which proved that the crisis was ahead and the fantastic thing was that Eisenhower and Dulles had to read about it in the newspapers -- did not even know it was brewing.

We stressed in these speech drafts, moreover, that the great Western alliance, forged in 1940 by Roosevelt and Churchill, had collapsed, that our great allies, England and France didn't even trust Eisenhower and Dulles enough to confide in them what they were planning, because they had seen the Eisenhower-Dulles policy build up Nasser so big that he seized the Suez Canal, and the same policy, of course, also brought the Russians on the run into the Middle East with arms deals to offset our handouts to Nasser, with the result that the Russians had a strong beachhead in the Middle East for the first time in 300 years.

And then there was the fantastic situation of us being lined up in the United Nations with Russia against the English and French. The total situation being one from which only the Communists could gain.

With the concurrence of all concerned, I sent a copy of each speech, not only to Senator Kefauver, but also to Governor Stevenson and President Truman. This was on the theory that the three men were talking to different audiences with different press play, and that the men travelling with them would help them to revise anything that did reach them to meet fast-changing circumstances.

It seemed clear to me from the beginning that our operation (which we called "Project X" for our own amusement and because it gave some people a chuckle, baffled some, and irritated others) could not, except in rare cases, produce final drafts of speeches. No one sitting hundreds of miles away and not in continuous contact with the candidate can do that kind of a job in a political campaign, except, perhaps, in the case of a few set speeches such as a labor speech in Detroit. But there are not many of this type in a political campaign and each candidate must make five, ten, or fifteen speeches and talks of varying importance and size almost every day.

Project X, therefore, was designed to furnish the rough ore from which the candidates and their assistants could refine speech ideas and drafts.

It would take several researchers several weeks to figure out just how much of Project X material was used by each candidate, but there was a substantial use of this material.

For example, in a two-page memorandum of October 31, Project X sent out a speech outline entitled "One Glorious Week of Peace and Prosperity with Ike," and subtitled, "How many more Weeks of Peace and Prosperity ike this can you stand?"

The week in question began with October 25th when the Bureau of Labor Statistics announced that consumer prices had reached a new historic high and ended with October 30th when the Department of Agriculture announced that farm prices had dropped another 1% thus continuing the long slump from the 100% parity ratio of President Truman's last year in office to the present 82%. In between, of course, on October 29th, came the war in the Middle East.

In addition to sending this out in outline form by air mail, special delivery, on October 31st, the idea was telephoned to both Senator Kefauver's and Governor Stevenson's groups.

Governor Stevenson used this idea and even the exact words of the Project X outline in his nationally televised speech in Chicago on Saturday night, November 3rd.

I asked 35 or 40 people around the country to write speech drafts and 31 of them actually sent me drafts. In all, Project X produced 52 items, of which 35 were speech drafts, and the rest speech outlines and fact sheets of use in preparing speeches. I wrote about a dozen items, including five full-length speech drafts, and the rest came from the able men and women who volunteered to help Project X.

During the last few days of the campaign, time was so short I telegraphed and telephoned speech ideas and factual material to the Kefauver and Stevenson parties.

The November election obviously revealed that the Democratic Party had not presented its case with sufficient effectiveness to the American people. Although it is true that the country repudiated the Republican party and elected a Democratic Congress, General Eisenhower still won an overwhelming personal triumph.

Like any good Democrat, I strongly believe that the facts on the major issues which decide elections are-- on their merits -- overwhelmingly on the side of the Democratic Party. If this is true, it is clear that we Democratic politicians did not communicate our position to the American people with sufficient clarity and impact. The Republican politicians, with the able assistance of Madison Avenue and Robert Montgomery, did a better job than we did on the national level, although we licked them in many state and local contests.

This situation must be corrected if we are to win the elections of 1958 and 1960.

I start with the premise that the Democratic party has enormous talent all over the United States which it has never tapped on a national basis; that we have relied too heavily on the talent of the Northeastern seaboard (Washington, New York, Boston, etc.) which is perfectly understandable because it is close and convenient and there is, indeed, a wealth of talent in those cities.

However, the Democratic party is a truly national party and the fusion of ideas from all over the country is most important in such a party.

At the universities, among ex-government officials, and among Democratic business and professional men, we have an enormous reservoir of ability, much of which is aching to be used. The people in Arizona, Colorado, Minnesota, Oregon, Georgia, Alabama, Indiana, and Ohio, as well as all the other states, and the territories and possessions, too, include men and women who have brains, energy, and the ability to express themselves lucidly and effectively in writing, given a little help and guidance from politically savvy people in Washington.

If we can effectively mobilize and use this talent to better present our case in Congress through our Democratic Congressmen (always operating within the four corners of the Democratic platform and not seeking to make new policy), I am convinced that we will be able to win the 1958

Congressional election and the 1960 Presidential election. In addition, we will have a more effective Congress.

My proposal, therefore, is that a permanent and continuing Project X, vastly enlarged, be set up with a home base either at the Democratic National Committee, the new National Capitol Democratic Club, the Senate Democratic Campaign Committee, or the Senate Democratic Policy Committee. Such a base, as a minimum, would need only a full-time staff director at $8 - $10,000 a year and a secretary at $4 - $5,000-- a total of say $15,000 a year for salaries, with space and incidental expenses (telephone, paper, stamps, mimeographing, etc.) provided by the "home base" organization.

Under the general guidance of an advisory group of Congressional and political personalities, mostly in Washington, this operation could, I think, do an extremely useful and effective job. Naturally, with more money and a larger staff, an even better job could be done. But the operation should prove its value first.

In about 1948, the Republicans set up an operation somewhat like the one here outlined in their Senate Policy Committee. Being Republicans, they had plenty of money and so they hired 10 or 12 competent staff men to do the job, which was to furnish Republican Senators and candidates speech drafts and fact sheets with which to answer or attack Democrats in prompt, timely, and effective manner.

I understand that the Republican Senate Policy Committee and the Republican National Committee share the cost of the operation. Of course, the Republicans have lots of money so ~~xxxx~~ they can afford the $100,000 or so a year this costs. But they do not have the young, energetic, politically savvy egg-heads in quantity and quality, ready and eager to work for free, as we have them.

So we should be able to do the same job -- only better -- for a fraction of the Republican cost.

Incidentally, several persons, whose political judgement I have confidence in, have told me that the Republican Policy Committee staff operation played a major role in the Republican victories of 1952 and 1956.

Here are some further ideas and details on how my proposal might operate:

It is obvious that in the next election the Democratic Party will be judged largely by the impressions created and maintained by our members in Congress. The Democratic Congressmen could receive great aid from the proposed speech writing service, not only for speeches on the floor, but also for speeches and news releases for their home districts. By keeping all interested Democratic Congressmen supplied with speech drafts we could assist them now in making a more favorable impression for themselves and the party on the public. Further, we could thereby develop a large stable of writers who would acquire practical experience, guidance in their development and also screening for their individual talents. When the campaign gets warmer in the summer and fall of 1958, the Democratic Congressional candidates would have a good back-log of speeches and a large pool of experienced experts at their disposal.

The more speeches are made available, the more they will be used. Their use and a letter of praise and thanks would facilitate an even greater flow of even better speeches. There would be no shortage of campaign ammunition either in the build-up stage (from now on) or in the hottest days of Fall '58 or '60.

To carry out this service all that is needed is an advisory committee one good qualified man as a director, one good secretary, office space and equipment (including a mimeograph machine), proper party affiliation and a small sum of money.

The director should be full-time with full control over his own and his secretary's time.

The work of the service should be guided by a separate advisory committee, whose members should be experienced party leaders, Congressmen or their first assistants, former high administration officials, etc. This advisory committee would also assist the director in respect to contacts in Congress for speech outlets and across the country for speech sources.

This committee should be small so that it could meet frequently and informally.

The chairman of the party organization sponsoring this service could have the final word as to the selection of issues to be emphasized and he would, of course, be an ex officio member of the advisory committee, with the privilege but not the obligation to attend the meetings of the advisory committee.

The director should be chosen by the advisory committee. He should be appointed initially for 18 months, (i.e., early 1957 to September, 1958) with succeeding terms of one year. He could be selected from the ranks of young professional political scientists who have also been active in the regular party organization, preferably as more than merely presidential-year volunteers. His term should coincide with the school year, with a successor selected (where necessary) at least a semester prior to assuming active responsibility to insure an orderly transition.

The director and the speech writers must be conscious of a two-fold restriction: they must remain comparatively unknown to the public and their function is to be the instruments and not the makers of party policy.

While speech writers will have individual specialties, essentially the function of the service would be speech writing, with research being only incidental and secondary. The director's responsibilities would include compiling quotations, facts and figures from the established party research services, the Congressional Record, committee hearings and reports, and from such obvious sources as the New York Times, etc. This material would then be given to the writers as the main points of the speeches. Since policy would be made elsewhere, the speeches would echo and paraphrase the established party policies, always seeking a more widely-understandable presentation of these policies.

The director should be free to travel to national and regional conventions of political scientists, to university campuses, etc., to establish contacts with writers from every region in the country, with a minimum of modest entertainment. Once contacts are established they should be maintained by constant use of the mails and occasional phone calls.

Another function of the director would be to arrange contacts between members of Congress and tested writers in their own areas, both by subject and geography. This would enable Democratic Congressional candidates to have the maximum of personal and professional assistance in their campaigns. Such contacts should not be allowed to disrupt the overall general service by becoming too exclusive. A good speech should serve more than one candidate, unless it receives national coverage in the press.

This service should be made available in stages to members of both Houses and eventually to the entire Democratic Party. The one group should not be duplicated but rather expanded, to prevent wasted effort and competition for the services of writers. It is important to preserve this professional-type service on a professional level. Improvement and expansion of the original is preferably to multiple imitation.

The name of this service should not be too obvious. "Special Services" might do. Since its functions would be specialized and limited, and its budget therefore small, its funds should be originated, maintained and supervised separately, except for housekeeping expenses such as office space and equipment, postage, etc. Apart from housekeeping, $15,000. a year might be sufficient.

Wednesday 31 October 1956

SPEECH OUTLINE*

"ONE GLORIOUS WEEK OF PEACE AND PROSPERITY WITH IKE"

(Subtitle: "How Many More Weeks of Eisenhower Peace and Prosperity Like This Can You Stand?")

1. Consumers and Housewives.

A. In 1952, General Eisenhower said "my Mamie gets after me about the high cost of living. I say it's time for a change - to get back to an honest dollar."

B. October 25, 1956. General Eisenhower's Bureau of Labor Statistics reported today that the Consumer Price Index (which measures the cost of living) reached its highest level in history last month.

2. Farmers.

A. At Brookings, South Dakota on October 4, 1952, Eisenhower said:

> "The Republican party is pledged to the sustaining of a 90% parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100% parity, with a guarantee in the price supports of 90%."

---

* This speech outline was sent by me to Stevenson, Kefauver, and Truman on 31 October. On Saturday A.M., I phoned this idea to Clayton Fritchey and Arthur Schlesinger in Chicago, as well as to Dick Wallace (with Senator Kefauver) in - (I forget where). In his Saturday night (Nov. 3) televised speech, Governor Stevenson used this idea, including some of the exact words.
S.J.S.

B. October 30, 1956. General Eisenhower's Department of Agriculture announced today, farm prices had declined another 1% during the past month, marking a long continued decline in these prices. The parity ratio in 1952, the last Truman year, was 100%. It is now 82%.

3. Wives, Mothers, Fathers, Children, Young Men of Fighting Age - Everbody.

A. On October 12, 1956, in a nation-wide television appearance, General Eisenhower made what he called "the best announcement that I think I could possibly make to America tonight." He said, "The progress made in the settlement of the Suez dispute this afternoon at the United Nations is most gratifying." According to Time Magazine, he said that "it looks like a very great crisis is behind us." The major campaign theme of the Republicans has been that the Democratic party is the party of war and starts them and that the Republican party is the party of peace and ends them.

B. October 29, 1956 and since. The Israeli army marched into Egypt. Today (31 October 1956) the British and French are bombing Egypt. The great alliance of the Western World established by Roosevelt and Churchill in 1940 has collapsed. The Russians and the United States lined up in the United Nations yesterday against France and England.

Beaver Falls, Pennsylvania

Speech theme for Senator Estes Kefauver - copy to Governor Stevenson: "How General Eisenhower Picks his Chief Lieutenants for Public Office." Speech would go along these lines: General Eisenhower has established many precedents since he became President, but perhaps the most historical precedent which he has established is his unique way of selecting his Chief Lieutenants, the men whom he picks to run the major programs of his Administration and our Government. As nearly as I can figure it out from the record of his selections, this is how Eisenhower goes about it. First of all, of course, he has a program and he needs a man to run it. Then he gets suggestions from many sources as to who that many should be. Next he screens this group in a rough way and culls from it all the men who like the program which has to be administered. Their names are stricken from the list. He then proceeds to carefully scrutinize the remaining names. After intensive screening he determines the man that hates the program most and him, of course, he appoints to run it.

This is not idle speculation on my part. All you have to do is run down the roster of General Eisenhower's appointees. For example, General Eisenhower had a public housing program that needed to be run, so naturally he picks to run it Mr. Cole, who hates public housing. Similarly, he picks Mr. Andrews who hates taxes to run the tax bureau. He picks Mr. Hollister, who hates foreign aid, to administer foreign aid. He picks Mr. Howrey who hates the anti-trust laws to run his anti-trust program as Chairman of the Federal Trade Commission. So on and on - you can name your own men.

Stephen J. Spingarn
1900 Que St., N.W., Wash., D.C.

From Steve Spingarn to Jiggs Donohue (via Bill Haddad) for Senator Kefauver.

A REPUBLICAN VICTORY WILL REVIVE McCARTHYISM

In a speech on October 25th at West Allis, Wisconsin, Senator Joseph McCarthy said: "Some of you may be surprised, but I also think it's important beyond words that we elect Alex Wiley to the Senate. If we control the Senate, I think you'll get some more McCarthyism because I'll be Chairman of a Senate Committee again."

ARTHUR SCHLESINGER JR AND CLAYTON FRITCHEY
CARE GOVERNOR ADLAI STEVENSON
BILTMORE HOTEL NYK

SUGGEST STEVENSON USE FOLLOWING IN NEXT FOREIGN POLICY SPEECH:

POINT 1: WITHOUT TITO THERE COULD HAVE BEEN NO POLISH TITOISM.

POINT 2: ON JUNE 23, 1956 SENATE VOTED ON BRIDGES-MCCARTHY AMENDMENT TO CUT OFF ALL AID TO YUGOSLAVIA WITHIN 90 DAYS INSTEAD OF PERMITTING PRESIDENT EISENHOWER TO DECIDE IF CONTINUED AID IS IN INTEREST OF U S REPUBLICANS VOTED 23 to 21 FOR BRIDGES-MCCARTHY AMENDMENT. DEMOCRATS VOTED 29 to 15 AGAINST IT.

STEPHEN J SPINGARN 1900 QUE ST
NORTHWEST WASHINGTON DC DUPONT 70663

Draft of Night Letter sent Monday, October 22 to:

Arthur Schlesinger and Clayton Fritchey
c/o Gov. Adlai Stevenson
Biltmore Hotel
New York City

Tonight's paper carries lengthy story that Eisenhower today said his administration "has done more for small business than any prior administration". This statement plus many other absurd claims in President's letter to Fred Herman, Chairman of Rochester "Small Businessmen For Ike" Organization.

Urgent that Stevenson (who has so far said almost nothing useful on small business) pinpoint this malarkey with strong statement and, even better, speech of which Arthur has draft.

Any statement should stress this is one of those operation-was-success-but-patient-died stories. Small Business profits down 52 percent since 1952 while big business up 61 percent and General Motors up 113 percent. These are Republican figures, not ours. Small business failures at highest rate in many years. Mergers at highest rate since Hoover. Small business share of defense contracts steadily on down-grade since 1954. Tight money policy no hinderance to big firms financing but is preventing small ones getting loans to live much less grow. Small retail stores closing down all over country. This is general prosperity of General Eisenhower, General Motors (which had biggest profit in American history last year, almost 1.2 billions after taxes), General Electric (which just announced record 9 months of its history), etc. This nonsense should be hit hard.

Draft of Night Letter to Arthur Schlesinger and Clayton Fritchey, October 22 (Continued)

Governor might indicate it's too bad that General Eisenhower's 40 years in Army left him unequipped to study or even understand problems of small businessman. And so he accepts without question the wild distortions placed in his mouth by giant businessmen around him who ring him off from the world of reality.

Steve Spingarn

STEPHEN J. SPINGARN

(See also current volume of Who's Who in America)

Birth: Town of Bedford, New York, September 1, 1908, son of J. E. and Amy Spingarn of Troutbeck, Amenia, Dutchess County, New York. Ancestors have fought in every major American war beginning with the American Revolution. J. E. Spingarn (died 1939) was Professor of Comparative Literature at Columbia University; author of numerous scholarly books and articles; soldier (infantry battalion commander, World War 1); First Post Commander, American Legion Post, Amenia, N. Y.; farmer; small-town newspaper publisher; literary adviser and a founder and Vice President of the publishing firm of Harcourt, Brace and Company; candidate for Congress in 1908 with personal endorsement of President Theodore Roosevelt; President (1930-1939), National Association for the Advancement of Colored People (NAACP); and active in public and civic affairs. See any edition of the American or International Who's Who up to the date of his death. Spingarn High School in Washington, D. C., is named after him.

Education: Phillips Exeter Academy, Exeter, New Hampshire; Yale University; University of Grenoble, Grenoble, France; University of Arizona, Tucson, Arizona. A.B., 1930 and LL.B., 1934, both from University of Arizona. Law school honors. Also attended Stanford University (California), and Rollins College (Florida).

Extra Curricular University Activities: Vice President, law school student body; managing editor, University Humor magazine; president of several campus organizations, including literary society; vice-justice of law fraternity (Phi Alpha Delta); played mediocre football, tennis, and golf in college.

For five summers (1926-1930) while in college worked as U. S. National Park Ranger at the Mesa Verde National Park, Colorado. For a brief period acted as Chief Ranger.

Work Record: (Note: Spingarn's main experience has been in 1) Legislative Drafting and Congressional Relations, 2) Small Business and Antimonopoly matters, 3) Counter Espionage and Internal Security, and 4) Politics at the National level.)

1934-1942: Attorney, U. S. Treasury Department, and Special Assistant to the Attorney General. This work involved primarily drafting bills and preparing supporting data, testifying before Congressional Committees, and consultation with and assistance to members of Congress at their request.

1942-1946: Army Captain, Major, and Lt. Col. Three years overseas. Participated in North African (Nov. 1942) and Italian (Sept. 1943) invasions. Served on Salerno and Anzio beachheads. Commanding officer, Fifth Army Counter Intelligence Corps, (CIC), July 1943-July 1945; and directed its operations in the capture of over 500 enemy espionage and sabotage agents and the arrest and internment of several thousand security threats. In his book, Calculated Risk, General Mark Clark (WWII Commander of Fifth Army) referred to Spingarn's "able direction" of Fifth Army CIC in the capture of many spies. General Alfred M. Gruenther (WWII Fifth Army Chief of Staff and until recently Supreme Allied Commander in Europe) wrote Spingarn on January 2, 1953:

> "I have always been most appreciative of the outstanding results obtained by you and the Fifth Army Counter Intelligence Corps during the Italian Campaign, 1943-1945. Under your operational direction, the CIC defeated and practically destroyed the enemy espionage and sabotage organization in the Fifth Army Zone of Combat."

Spingarn was awarded Legion of Merit, Bronze Star Medal with Valor Emblem, Invasion Arrowhead, and 5 Battle Stars. Was recommended for Silver Star Medal and additional Legion of Merit. Fifth Army CIC was awarded a Unit Citation.

1946-1949: Legislative Counsel of U. S. Treasury Department with title of Assistant General Counsel. Also served as Deputy Director of Contract Settlement, and as Legal Counsel to U. S. Secret Service (and other coordinated Treasury Enforcement Agencies). Represented Treasury at International Conference in Lima, Peru, in 1947. Served on Working Committee of President's Temporary Commission on Employee Loyalty (1946-7) which drafted Truman Loyalty Program. Legal Member of 3-man Treasury Loyalty Board.

1949-1950: Administrative Assistant to the President of the United States, after serving as Assistant to the Special Counsel to the President. Was, in effect, Legislative Counsel of the White House. Headed Task Force which prepared President Truman's Small Business Program, submitted to Congress May 5, 1950. In charge of drafting of bill which became Defense Production Act of 1950 and of presentation of this bill to Congress and handling on the Hill.

1950-September, 1953: Commissioner, Federal Trade Commission (the independent, bipartisan Federal Antimonopoly agency headed by 5 Commissioners). Handled most of FTC legislative and appropriation work. (During one period of over a year made more appearances before Congressional Committees than other 4 Commissioners combined.) Served frequently as Acting Chairman of the Commission. During FTC service, was particularly interested in antimerger, economic fact-finding, and Robinson-Patman Act work of Commission and ways and means to strengthen this work and protect small and independent business against monopoly practices.

September, 1953 to date: Has devoted himself primarily to personal affairs. At request of Members of Congress, has from time to time testified before Congressional Committees on questions of public policy. Served as Member of Small Business Advisory Committee of Democratic National Committee. Served as National Director of Special Activities for Kefauver Vice-Presidential Campaign, 1956, and as member of Senator Kefauver's Executive and Advisory Committee.

Bar Membership: Arizona State Bar (admitted 1933); and Bars of the U. S. District Court and the Court of Appeals for the District of Columbia (admitted 1947).

Organizations: American Bar Association; Federal Bar Association (former National Officer); Sons of the Revolution (American); National Counter Intelligence Corps Association (former Member, Board of Governors); American Political Science Association; National Capital Democratic Club (Sponsor and member of Program Committee).

Miscellaneous Information: Wrote a series of three articles (cleared for security by the War Department) which appeared in the Saturday Evening Post of November 27, December 4, and December 11, 1948, under the title "How we Caught Spies in World War II."

Prepared a paper recommending various changes and improvements in U. S. Military Counter Intelligence. This was adopted by the National Counter Intelligence Corps Association, an association of 5,000 Counter Intelligence Corps veterans, as its national program in 1948, and was submitted to the Joint Chiefs of Staff.

A JCS staff committee held a hearing on these recommendations at which Springarn testified. A number of these recommendations have now been adopted by the Army.

Residence: Washington residence: The Anchorage, 1900 Que Street, N. W., DUpont 7-0666.

Permanent Domicile and Voting Address: 110 East 78th Street, New York City, RHinelander 4-5663.

(Note: From 1930 to January 1947 legal and voting address was Tucson, Arizona.)

FOR RELEASE TO P.M. NEWSPAPERS
WEDNESDAY, OCTOBER 31, 1956

B-1399
10/30/56

Stephen J. Spingarn, who served as a Commissioner of the Federal Trade Commission under President Harry Truman, has been appointed a member of Senator Estes Kefauver's Executive and Advisory Committee. He will serve as Director of Special Activities for the vice-presidential candidate.

Mr. Spingarn also served as Administrative Assistant to President Truman. His other government assignments included service as Assistant General Counsel of the Treasury Department, Deputy Director of Contract Settlement, Legal Counsel of the U. S. Secret Service, and Special Assistant to the Attorney General.

In World War II, Mr. Spingarn served as a Lt. Colonel, participated in the African and Italian invasions, and saw action at the Salerno and Anzio beachheads. For two years he served as commanding officer of the Fifth Army Counter Intelligence Corps. He holds the Legion of Merit and the Bronze Star with Valor Emblem.

Mr. Spingarn was educated at Phillips Exeter Academy, Yale University, the University of Grenoble (France), Rollins College (Florida), Stanford University (California), and the University of Arizona, where he received both his bachelor and law degrees. He is a member of the Arizona and District of Columbia Bars, and makes his home in Washington, D. C.

MEMORANDUM

Subject: The Noblest Practical Occupation of Man -- Politics.

(Note: The following is excerpted from an article by my father, J. E. Spingarn, called Politics and the Poet, which appeared in the Atlantic Monthly of November, 1942 at page 73, with an introduction by Lewis Mumford. It was a reprint of one of six lectures which my father had given in 1931 at the New School of Social Research in New York.

J. E. Spingarn (1875-1939) was Professor of Comparative Literature at Columbia University; author of numerous scholarly books and articles; soldier (infantry battalion commander, World War 1); First Post Commander, American Legion Post, Amenia, N. Y.; farmer; small-town newspaper publisher; literary adviser and a founder and Vice President of the publishing firm of Harcourt, Brace and Company; candidate for Congress in 1908 with personal endorsement of President Theodore Roosevelt; President (1930-1939), National Association for the Advancement of Colored People (NAACP); and active in public and civic affairs. See any edition of the American or International Who's Who up to the date of his death. Spingarn High School in Washington, D. C., is named after him.

He was first inspired to enter politics by a speech made to a group of Columbia students in 1895 (when my father was a 20-year-old senior at Columbia University) by Theodore Roosevelt, then (as I recall) Police Commissioner of New York City. Teddy Roosevelt said that everybody said politics was a "mucker's game" and that a gentleman could only dirty his hands by entering it. It would continue to be that, he said, unless "you educated young men go into politics and work hard at it, and remember this: politics after all is how people decide how their society should be run." My father went into Republican precinct politics initially and was Republican leader of his Assembly District in New York City. Later he became a Bull Mooser and was delegate to the two Bull Moose conventions in 1912 and 1916. He was also Bull Moose Party Chairman of Dutchess County, New York and toured Teddy Roosevelt around the county when he came there and was toastmaster at the dinner for him in Poughkeepsie. When the Bull Moose Party broke up, my father became an Independent, voting Republican in 1920 and 1924 (to his later regret). In 1928 he voted for Al Smith and in 1932 for Franklin Roosevelt. In 1936 he campaigned for Franklin Roosevelt. He died in 1939. S.J.S.)

"I know that politics are out of fashion today among the intelligentsia of the world. We are told that politics no longer count, that the important thing today is economics. But the truth is that poetry and philosophy and religion and politics are the four noblest occupations of men, and that all of us who have not some profound realization of the meaning of each one of them misses something from the life of the spirit.

"Now, poetry and philosophy and religion belong to the realm of theory. And I take politics as the highest form representative of the practical spirit. That element of utility in life which is present in every act assumes its noblest form in politics. I wish to make clear that politics is a spiritual act exactly in the same sense in which poetry and religion and philosophy are spiritual acts.

* * * * * * * * * * * *

"When the politician governs men, which is the hardest job known to humanity -- the hardest and the noblest -- when the politician governs men he is to be judged first and foremost by his success in governing men, just as in the case of a bridge you want to know whether it is a good bridge according to the standards of engineering and not whether it is a moral bridge. The first test of the politician is whether he governs well, not whether he governs morally. That is a later question. Unfortunately those who sit on the sidelines and don't realize the innate character of government are always terribly troubled by the rottenness that goes on in politics. And I don't mean to imply that there are not times when that rottenness should be our main concern. But what I mean is that always the man outside of politics sees it as a matter of rottenness and evil and people tricking and scheming. He confuses the weakness of the statesman's materials with the corruption of government itself. And so the man who hasn't a philosophical view of life will take a life like Lincoln's and just rip it to pieces, as if the art of governing men were the work of a saint.

"Now the politician doesn't feel that sense that all is rotten in politics. He feels that the evil and good in the world are the very material with which he has to deal. He feels like the poet. The real poet, the great poet, doesn't say, 'My heavens, look at all this hard prosy material I have to conquer and transfigure!' The outsider who hasn't the poet's creative flow thinks that. --How can you ever make a poem out of this story? It is impossible; there is too much in it. --Or another one says: This is the machine age! How can we make poetry out of machines? --The poet doesn't bother about those questions.

"So the statesman, the politician, isn't worried as mere outsiders are worried by the clash of passions and the fact that some men are not to be trusted and the fact that others will stab you in the back. That is all part of the game of politics. That is the material with which the statesman works, human nature and its passions. In exactly the same way that the poet deals with the stubborn material of the world and makes out of it a poem, so the politician makes his poem, which is in the government of the State. And it is a noble poem."

Washington, D. C.

December 31, 1956

Mr. Stephen J. Spingarn,
Washington, D.C.

Dear Steve:-

I remember you well, particularly during the years I was a member of the Ways & Means Committee.

I have just had an opportunity of reading your letter, and your proposal.

Congratulations to the Party Chairmanship, I do not

JOHN W. McCORMACK
12TH DIST., MASSACHUSETTS

Congress of the United States
House of Representatives
Office of the Majority Leader
Washington, D. C.

feel learning a practical way of the measure by way of accommodation.

I commend you with your proposal, and authorize the very strong — for something along the lines outlined by you. For a number of years I have advocated without success a close relationship between the National Committee and Congress — with the National Committee having

JOHN W. McCORMACK
12TH DIST., MASSACHUSETTS

Congress of the United States
House of Representatives
Office of the Majority Leader
Washington, D. C.

qualified persons to do research work and give support and merit checks for members of Congress to make use of outside of Congress. Your proposal covers this — and goes further, — and in the right direction.

Not to flatter you, but to compliment you, — I think your plan is a well conceived, practical, and productive, of excellent results.

JOHN W. McCORMACK
12TH DIST., MASSACHUSETTS

Congress of the United States
House of Representatives
Office of the Majority Leader
Washington, D. C.

I am glad to see that someone else — you, — are thinking along the same basic lines I have been thinking and talking, and urging, — unsuccessfully, for some years.

By the time you receive this letter I will be in Washington. After the early, busy days of organizing, I do

JOHN W. McCORMACK
12TH DIST., MASSACHUSETTS

Congress of the United States
House of Representatives
Office of the Majority Leader
Washington, D. C.

hope you will get in touch with me so we can discuss your plan in person.

With kind regards, I am

Sincerely yours,

John W. McCormack

November 20, 1956

Dear Steve:

Thank you very much for your good letter of the 16th.

I do not understand the people and their viewpoint. It would seem that they were completely fooled on two or three matters which I'll discuss with you the next time we see each other.

Your idea for 1958 and 1960 seems as if it might be a good one, and if you and Charley and Dave Lloyd stick together, you should be able to work out something that will make us win in both years.

Sincerely yours,

Harry Truman

Rep. Udall Backs Spingarn Drive

Arizona Daily Star, Friday December 21, 1956

Letter Recommends Former UA Grad To Succeed Fitchley As Party Official

U. S. Rep. Stewart L. Udall joined yesterday in a campaign to assure the election of Stephen J. Spingarn, a University of Arizona graduate, as deputy chairman of the Democratic National Committee.

In a letter to Stephen W. Langmade, Democratic national committeeman, Udall said he reliably has been informed that Clayton Fritchey, the present deputy chairman, will resign about Jan. 1.

Spingarn, the Representative pointed out, graduated from the University of Arizona in 1930 and from the University of Arizona Law College in 1934.

"Considering his (Spingarn's) Arizona background," Udall said, "it does seem to me that it would be advantageous for our state to have a friendly voice at this high station. I don't know Spingarn personally but our mutual friends all speak highly of him."

Udall enclosed, for Langmade's information, three pages of biographical data covering long legal service in various departments of the federal government: direction, between 1943 and 1945, of the Fifth Army Counter Intelligence Corps—with the rank of lieutenant colonel — and administrative assistant to the President of the United States in 1949-50.

From 1950 through 1953 Spingarn was a member of the Federal Trade Commission.

He is the author of several articles including three that apeared in the Saturday Evening Post in 1948 on "How We Caught Spies in World War II."

Spingarn has numerous medals and special commendations for his work in the Intelligence Corps.

Dear Mr. Butler:

I have a note from Mr. Stephen J. Spingarn who is a candidate for the post of Deputy Chairman of the Democratic National Committee when Mr. Fritchey leaves on January first. I have known Mr. Spingarn for sometime and I feel sure that he will work with great loyalty and effectiveness if you decide that you can use him. He is a Democrat of long standing and an excellent worker.

I hope at least that you will be able to see Mr. Spingarn and judge for yourself.

Very cordially yours,

(signed) Eleanor Roosevelt

Mr. Paul Butler
Chairman
Democratic National Committee
1001 Connecticut Avenue
Washington, DC.

November 23, 1956

Dear Steve:

Just a line to thank you for your good note. I am glad to hear about Operation KOED. I think it is a great mistake for the Democrats to be complacent about the 1956 election, and we will need a good deal more than Lyndon Johnson if we are to have a chance in 1960. I am very glad that the Humphrey group is showing some signs of life.

I have been meaning to write and say how grateful we all were for your help in the campaign. You are quite right in supposing that the "peace and prosperity" passage in Stevenson's wind-up rally in Chicago was based on a suggestion from you. The Camden speech, as originally written, was also based on the Rubin story.* I myself did not go to Camden and do not know exactly what happened. But I have the impression that the Governor did not stick to the script and suspect that he may have talked about some of the critical foreign policy developments. I do not think that there ever was a text of the speech as finally delivered.

You will be glad to know that Brooks, the former Republican town chairman of Canton, ended up as a strong Stevenson supporter. I was always sure that Wendy in time would deliver that vote! Hope to see you before too long.

Sincerely yours,

Arthur S.

COPY

Dear Mr. Butler:

Steve Spingarn has told me of his interest in serving under you as Deputy Chairman of the Democratic National Committee.

I want to put in a word for him on the basis of merit and ability - his outstanding capability, high intelligence, indefatigable energy and devotion to the Democratic Party.

I worked for years with Steve in the Treasury Department, where I was General Counsel and Steve served as Assistant General Counsel and in other important assignments. In devising and carrying out programs, in production and in accomplishments, Steve was virtually a Department in himself, not alone in his own efforts but also in his ability as a team player to lead and inspire others.

If the Committee currently needs top staff assistance, then I believe there is a tremendous chunk of it available in Steve Spingarn.

With kindest personal regards,

Sincerely,

Thomas J. Lynch

FORM LETTER

1900 Que Street N.W.
Washington 9, D.C.
DUpont 7-0666
10 January 1957

Dear

I am a Democratic politician. Briefly, my story is as follows. I am trying to sell a program for the Democratic Party to the leaders of my Party and to other persons who are effective in Party circles. I enclose material describing my program which, for pusposes of identification, I call Operation KOED, which means "knock on every door" because it is designed to bring the story of the Democratic Party on every issue to every family in the most effective and forceful manner and also to select the issues which will be most effective so that we will go to bat on the right ones and not the wrong ones as we did in 1956 (the fact that one is logically right does not help if one is politically wrong).

Many Party leaders, including President Truman, Estes Kefauver, Tom Finletter, Hubert Humphrey, George Ball, and quite a few others have spoken well of my program. I enclose a copy of a letter from John McCormack, the House Majority Leader, which speaks for itself. He has authorized me to use it and I have shown it to President Truman and other Party leaders.

A Party program must consist of two important items: a political organization program and a political ammunition program. A political organization program is being prepared by Neil Staebler, who is Chairman of the National Committee's Committee on Political Organization, and his group. The KOED program is a political ammunition program. In short, one is the gun and the other is the bullet; neither is any good without the other. I am hopeful that the San Francisco meeting on February 15th will adopt a complete program covering both political organization and political ammunition.

Aside from the obvious importance of having a complete program for the Party, it seems to me you also need it for the all-important job of fund raising. No one can get very excited about pyaing off the installments on the funeral and that is what the Party deficit is. But if you go to interested people and organizations and say, "Look, we have a hard-hitting program for the Democratic Party which will help us to win the 1958 and 1960 elections, but we can't get this program unless we have some money. How about it?"; then you have an effective basis for raising money.

I will be in New York City from Sunday, January 13th to Sunday, January 20th, staying at the Vanderbilt Hotel. If you are interested, I should welcome an opportunity to talk with you.

Sincerely yours,

Stephen J. Spingarn

Honorable John W. McCormack
The Majority Leader
House of Representatives
Washington, D.C.

Dear John McCormack:

Your letter of December 31st and our telephone conversation of January 5th meant a great deal to me. I know how busy you are and the fact that you would sit down at 1:00 in the morning, as you told me, and write an obscure guy like myself a five-page longhand letter praising his proposed program for the Democratic Party was more than I could possibly hope for.

I have known you since 1935 when I was a youngster fresh out of Law School, working as a legislative attorney in the Treasury, and I know that you have neither the time nor the disposition to waste words and to utter meaningless flattery to a fellow who has an idea which he is trying to sell to the leaders of his Party.

I appreciate very much, too, your generosity in telling me I could use your letter to help sell my program. I showed it to President Truman last Saturday. He read it sitting on the edge of his bed at the Mayflower and he was very much impressed, because, as you know, he holds you in the highest esteem. He told me to show it to Charley Murphy right away (who is my "campaign manager") and you can bet I did. I have also showed it to Governor Williams of Michigan and other Party leaders and it has been a very valuable document on behalf of the KOED program.

I talked a few days ago to Neil Staebler, the Michigan State Democratic Chairman, and one of the ablest and most popular men in the Party organization. He is also Chairman of the Democratic National Committee's Committee on Political Organization. His Committee is charged with preparing a program on political organization for submission to the San Francisco meeting on February 15th.

I told Neil, "Look, you have a program on political organization; I have a program on political ammunition. One is the gun and the other is the bullet; neither is useful without the other. Why don't you assimilate my program into yours and present the whole thing as a total forward program for the Party at the meeting of the National Committee in San Francisco? In addition to the intrinsic merits of the program, we will have a sound basis for raising money if we have a good program. You can't raise money by talking about a deficit because people aren't much interested in paying off the installments on a funeral, but if you go to them and say we have a hard-hitting forward program for the Party that will help us win in 1958 and 1960, then you have a basis for getting contributions."

I believe that Neil was interested because he said several times, "we are thinking along the same lines."

I am going up to New York City on January 13th to stay until the 20th (at the Vanderbilt Hotel). I am doing some politicking up there because I hope to run for Congress from New York in 1958 and I have been talking to a lot of people in the State organization, including Mike Prendergast, the State Chairman. Also, I have been on the trail of Carmine De Sapio and hope to see him during that period.

C O P Y

I will be in Washington from January 21st to January 25th and I will try to get in touch with you then in the hope that the preliminary organization work of Congress is more or less over and you may be able to spare some time to see me.

On January 25th, I go to Arizona for a few days (I went to College and Law School there and I am a member of the Arizona Bar). Senator Hayden, Representative Udall, Governor McFarland, the National Committeeman and woman, and Judge Evo De Concini, the State Chairman (a Law School classmate) have all written letters or talked to Paul Butler on my behalf. Dick Harless, whom you will remember well (I believe) from his service in the House, has been helping me very effectively. He is a former Law School classmate of mine, too. He is going to arrange for me to meet all of the politicos when I go out to Arizona.

On January 30th I go to Los Angeles where I'll be at the Beverly Wilshire Hotel in Beverly Hills and later up in San Francisco for the February 15th meeting.

I am naturally hopeful that I will be able to report some success to you after that meeting, but I am keeping my fingers crossed.

The best of 1957 to you and yours.

Sincerely,

Stephen J. Spingarn

485 Madison Avenue
New York 22, New York

Dear Mr. Murrow:

With reference to your letter of December 7th, wherein you ask me to postpone our meeting until after the first of the year, I should like to suggest now that we get together as soon as possible.

As one of your staunch followers, may I compliment you on your series of year end programs which I found outstanding.

I do not know of a better man to whom I could turn for assistance and that is why I should like to see you as soon as you can possibly make it.

Hoping to hear from you by return mail.

Yours very sincerely,

WILLI W. APTOWITZER

SEE IT NOW
EDWARD R. MURROW
FRED W. FRIENDLY

23 March 1954

Dear Mr. Murrow,

Today, 23 March 54, 3 pm, a man calling himself Ralph Florio called me from the CBS lobby and asked to see me about something "confidential." He had obtained my name as a member of the staff from one of the secretaries, on an earlier call. He showed me a "certificate of Incorporation of Associated Stevenson Clubs of America, Inc.", a photostat of which is attached. Mr. Florio showed me "Stevenson Workers Kits", showed me a picture of a building at 11 East 52 St, NYC which he said he and his group would be renting for $20,000 a year; he said that he would be getting--or was getting--financial and other backing from people he identified as: "Marie Kramer of the Lincoln Hotel", "Roger Stevens, treasurer" "brother of the man who owns the Empire State Building", "Mr. Ganzer and Mr. Lippert who own the Shelton Hotel." He produced a letter with an "Encyclopaedia Brittanica" letterhead, a letter signed by a "Bill Benton", a letter which said the signer agreed with Mr. Florio on the reasons for Mr. Bowles' withdrawal from India, and which went on to wish Mr. Florio best success in his "Stevenson Clubs" venture.

Mr. Florio said the "Stevenson Clubs" project was aimed at 1956. He said Senator McCarthy would try his hardest to defeat Sen. Morse in Oregon. Florio said that if it were not for him--Florio--then Morse would not be in the Senate today.

I asked Mr. Florio what he wanted. Mr. Florio said he wanted a check from Mr. Murrow for the Stevenson Clubs--"not all the money in the world, just a check." I told Mr. Florio that I could not presume to speak for Mr. Murrow but I said that I thought Mr. Florio was wasting his time. I said I didnot know whom Mr. Murrow voted for in 1952. Mr. Florio said he knew Mr. Murrow was a good friend of Mr. Eisenhower's, and also a friend of Mr. Stevenson's. I said I assumed Mr. Murrow knew them both, but just how well, I did not know. I asked Mr. Florio for identification; he gave me a card with his name and address on it--a card that read: "Independent Congressional Voters of New York City." He offered

to show me his passport, but he said he did not have his passport with him. I asked Mr. Florio to leave the incorporation papers with me until Thursday, 25 March 54. I told him that I would pass his request along to Mr. Murrow's immediate staff, inasmuch as I had no concern with such a matter, and that my name had entered the matter merely as one of the reporters who interview numerous people to find out if their proposed stories are worth pursuing.

Mr. Florio said he was well known to Mrs. "Eleanor Traub" of Eastern Sound Studios, 550 Fifth Av, NYC. This is the studio used by "See It Now." Mr. Florio said he had approached Mrs. Traub to use her studios when he--Mr. Florio--and his associates would start turning out television films on behalf of "the Stevenson campaign" in 1956. Mrs. Eleanor Traub told me, after I phoned her, that she knew nothing of Mr. Florio's background, but that he had in fact approached her during the past summer "with some checks" and talked about using her studios. Mr. Florio told me--or implied it very strongly--that he had already made arrangements with Mrs. Traub to use herstudio. She told me no arrangements at all had bee made. She said it was just one of those things, that when someone comes around to talk abo renting her studio, she tells them--as she told Mr. Florio--to come back when he gets organized and has something definite to propose. Otherwise, she said, "I don't know him from Adam."

The lawyer on the incorporation papers is Sidney G. Madenberg, 545 Fifth Av, NYC. He said he was the lawyer who had represented the incorporators. He said he knew Mr. Florio only slightly, and had little recollection of any of the group which signed the incorporation papers. It was his recollection that Mr. Florio had worked with other political groups, a it was Laywer Madenberg's opinion that Mr. Florio was in the "publicity" field.

I am passing this note to you Mr. Murrow, with the thought that if Mr. Florio represents a legitimate group, then he is guilty of sheer impertinence. And if he and his group are not legitimate, then an investigation should be made of his purpose.

Respectfully,

Joseph Wershba

FACTS, FIGURES, AND PERSONALITIES FOR '54

The Off Year Story

THE PARTY OUT OF POWER has won seats from the party in power in every modern off-year election *except* in 1934, the first ranklin D. Roosevelt went before the voters for 34, the Democrats gained ten seats in the Senate n the Hou as the party Republic ave mid-te ts" ('18 an on four o e under P regular ele d '46. id-term gai 0 and 193 n gain in an the Democra eats than they did in 1920. In 1946, the Republi- reatest gain, 56 members over the 1944 general election.

STEVENSON

A Democratic Congress would, I think, bring closer together the United States and its allies. The present Republican Congress has been singularly unconstructive in dealing not only with our friends abroad, but even with its own President.

The election of a Democratic Congress would remove from positions of leadership those Republicans who have so often obstructed and embarrassed us abroad and replace them with leaders and committee chairmen whose outlook—as shown by their records—is responsible and enlightened.

Policies and programs in the foreign field, like revision of our laws to increase foreign trade, which the present Republican Congress has refused to approve, could go ahead.

Equal Treatment for All

In domestic affairs, the Democratic objective would be, as it has always been, to give to the average American—the farmer, the house wife, the working man, the store keeper, the professional man—equal consideration along with those who may be more privileged or powerful.

What this means is that we Democrats would do what a Republican Congress has not done—show a genuine concern about falling farm prices, unemployment and three-day and four-day work weeks.

And we could expect a Democratic Congress to check the give-aways—unfair taxes, raids

NIXON

in the last Congress. That the gains the Democrats would make in states where election contests still remain to be decided, will add strength not to the moderate wing of the Democratic party, which at times gives support to the President's program, but to the A. D. A.-controlled Left-wing. This is the group which is determined to socialize basic American institutions; which has proved that it is still notoriously soft on the internal Communist issue and which so vigorously advocates a return to the Acheson foreign policy.

I am confident that the American people will not be fooled by this desperate, dishonest campaign.

If enough people go to the polls tomorrow there is no question but that a pro-Eisenhower Republican Congress will be elected.

If only those who are satisfied with the Eisenhower Administration and who like the fact that this Administration has restored honesty, loyalty and decency to Government and has brought peace and prosperity to America, stay at home, will this desperate and fanatical left-wing clique

word.

Now let us ask how the course of a Democratic Congress would differ from the Republican path of the last two years?

A Democratic Congress would, I think, bring closer together the United States and its allies. The present Republican Congress has been singularly unconstructive in dealing not only with our friends abroad, but even with its own President.

The election of a Democratic Congress would remove from positions of leadership those Republicans who have so often obstructed and embarrassed us abroad and replace them with leaders and committee chairmen whose outlook—as shown by their records—is responsible and enlightened.

Policies and programs in the foreign field, like revision of our laws to increase foreign trade, which the present Republican Congress has refused to approve, could go ahead.

Equal Treatment for All

In domestic affairs, the Democratic objective would be, as it has always been, to give to the average American—the farmer, the house wife, the working man, the store keeper, the professional man—equal consideration along with those who may be more privileged or powerful.

What this means is that we Democrats would do what a Republican Congress has not done—show a genuine concern about falling farm prices, unemployment and three-day and four-day work weeks.

And we could expect a Democratic Congress to check the give-aways—unfair taxes, raids **on our public domain and favors for the few at the expense of the many.**

STEVENSON

That Democrats voted against the Eisenhower program 60 per cent of the time in the last Congress. That the gains the Democrats would make in states where election contests still remain to be decided, will add strength not to the moderate wing of the Democratic party, which at times gives support to the President's program, but to the A. D. A.-controlled Left-wing. This is the group which is determined to socialize basic American institutions; which has proved that it is still notoriously soft on the internal Communist issue and which so vigorously advocates a return to the Acheson foreign policy.

I am confident that the American people will not be fooled by this desperate, dishonest campaign.

If enough people go to the polls tomorrow there is no question but that a pro-Eisenhower Republican Congress will be elected.

If only those who are satisfied with the Eisenhower Administration and who like the fact that this Administration has restored honesty, loyalty and decency to Government and has brought peace and prosperity to America, stay at home, will this desperate and fanatical left-wing clique **succeed in their efforts to elect an anti-Eisenhower Congress.**

Jobs 'Assigned' By Democrats

By JACK STEELE,
Scripps-Howard Staff Writer.

WASHINGTON, Oct. 23.—The Democrats, counting political chickens before they hatch, have announced how they will divide up Senate committee chairmanships they have not yet won.

Their decision—formally proclaimed late yesterday by Senate Democratic Leader Lyndon B. Johnson (Tex.)—was a signal that the Democrats had settled in advance a behind-the-scenes battle over several key chairmanships.

The top fight was over the chairmanship of the powerful Foreign Relations Committee. The winner: Sen. Walter F. George (Ga.). His old post as Finance Committee Chairman will go—if the Democrats win Senate control—to Sen. Harry Flood Byrd (Va.).

Could Be Wrong.

Sen. Johnson's face will be red, of course, if the GOP retains control of the Senate Nov. 2. The Republicans have a good chance to do so unless the election is a Democratic sweep.

He might also be embarrassed if any of the Democratic committee chairmen he named prematurely were defeated. Seven are up for re-election.

Sen. Johnson took only a slight chance on that, however.

Under the projected Democratic line-up, 11 of the 17 Senate committee chairmanships would go to Southerners. The East would get only one chairmanship; the Middle West none. Three would go to the Southwest and two to the Northwest.

Green Loses Out.

Sen. George—a faithful follower of the Roosevelt and Truman foreign policies—beat out Sen. Theodore Francis Green (R. I.) as the Democratic choice to head the Foreign Relations Committee.

The only other major Democratic shift would hand the chairmanship of the Labor Committee to a Southern liberal, Sen. Lister Hill (Ala.).

Sen. James E. Murray (Mont.), who previously headed the Labor group, would move to chairmanship of the Interior Committee.

The Democratic line-up for other chairmanships: Agriculture: Ellender (La.); Appropriations: Hayden (Ariz.); Armed Services; Russell (Ga.); Atomic Energy: Anderson (N. Party line-up in the present 83

SENATE: Present: GOP 49
Dem 46
Ind 1

HOUSE

SENATE RACE

38 full time seats up
Maine elected GOP Smith Sept. 13
Leaves 37 races tonite
plus 2 (N.C. & Neb.) for 2 month terms

Of 38 seats, Dems had 22, GOP 16
Dems must pick up 2 for total 24 to control

Conceed to Dems: 13

That means Dems need 11 out 24 of these races:

Calif.	Ill.	Mich.	Nev.
Col.	Iowa	Minn.	N.H. 2
Del.	Kan.	Mont.	N.J.
Idaho	Mass.	Neb. 2	N. Mex.
Ken.	Ohio	Ore.	R.I.
S.D.	Wyo.		

BULLETIN—N

This reduces Democrats in present Senate to 46, leaves one vacancy. McCarran's successor probably will be a Republican. This changes the Forecast (page 4) to a probable line-up of: Democrats 48, Republicans 47, and Independents 1.

SYMBOL KEY

(R) designates Republican; (D) Democratic; (Ind.) Independent.

R+5,000 means a margin of 5,000 votes for the Republican candidate; D+5,000 means a margin of 5,000 votes for the Democratic candidate.

An asterisk (*) before a name designates the incumbent office-holder.

The candidate's name is followed by his party designation (R) or (D); his home town; his age; his occupation; his current Congressional committee assignments; and the date of the beginning of his present service in Congress.

House districts with color overlays indicate so-called "marginal" districts, where the office-holder was elected in 1952 by 55 per cent of the vote or less.

The percentage figure following the (R+) or (D+) voting margin indicates the victory percentage.

Stewart L. Udall (D) Tucson; Pima County Attorney. *Harold Patten (D) retired.

Henry Zipf (R) Tucson; attorney; former aide to Senator Goldwater
1952: Patten (D) 71,245; William C. Frey (R) 54,021: D+17,224
Eisenhower 74,793; Stevenson 58,243: R+16,550

VIEWPOINTS—ARIZONA:

Republican: All-out effort to hold gains here. Expect to re-elect Governor Pyle and Congressman Rhodes.

Democratic: This state is a good example of what having Ike at the head of the ticket can do to normally Democratic areas. With Ike not there this year, McFarland should come back as Governor and we should recapture the 1st House District.

Editor: Governor Pyle and Senator Goldwater give Arizona Republicans a double-barrelled campaign weapon. However, McFarland can't be under-sold, and without Ike on the ticket, the race here is wide open.

ARKANSAS

To be elected: Governor, 1 U.S. Senator, unopposed; 6 House members, all unopposed. Polls close: 6:30 P.M., CST

1952 Presidential: Eisenhower 177,155; Stevenson 226,300: D+49,145

GOVERNOR:

Orval Faubus (D) Huntsville, publisher

Pratt Remmel (R) Little Rock; mayor of Little Rock
Faubus defeated incumbent *Gov. Francis Cherry (D) in Primary run-off

U. S. SENATE: (no contest)

***John L. McClellan (D)** Camden; 58; attorney; Appropriations, Judiciary and Government Operations Cmtes; Nov. '42; unopposed for his 3rd six-year term
McClellan defeated former Gov. Sid McMath (D) in the Primary

***J. W. Fulbright (D)** Fayetteville; Nov. '44

HOUSE OF REPRESENTATIVES:

6 members to be elected, all unopposed

Present membership: 6 Democrats

1-6	***Ezekiel C. Gathings (D)**	West Memphis	UNOPPOSED
	***Wilbur D. Mills (D)**	Kensett	UNOPPOSED
	***James W. Trimble (D)**	Berryville	UNOPPOSED
	***Oren Harris (D)**	El Dorado	UNOPPOSED
	***Brooks Hays (D)**	Little Rock	UNOPPOSED
	***W. F. Norrell (D)**	Monticello	UNOPPOSED

U.S. SENATE ELECTIONS:

Elected: 1 (R), Maine (Election held September 13, 1954)

Three to be elected: Nebraska

Two to be elected: New Hampshire, North Carolina

One to be elected: Alabama, Arkansas, California, Colorado, Delaware, Georgia, Idaho, Illinois, Iowa, Kansas, Kentucky, Louisiana, Massachusetts, Michigan, Minnesota, Mississippi, Montana, New Jersey, New Mexico, Ohio, Oklahoma, Oregon, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Virginia, West Virginia, Wyoming.

G. O. P. IS TROUBLED BY ARIZONA TREND

Governor Pyle, Twice Winner, Hard Pressed by Veteran Ex-Senator McFarland

Special to The New York Times.

PHOENIX, Ariz., Oct. 23 — Arizona has only three noteworthy political contests this year—for the Governorship and two House seats—but their significance may be considerable.

Arizona was, along with New Mexico, a state that in 1950 presaged the national Republican sweep of two years later by disrupting a long-entrenched Democratic regime and installing a Republican Governor.

Today the trend seems to be the other way. That same Republican Governor, Howard Pyle, who outstripped General Eisenhower in rallying votes in 1952, is running for a third term and is hard pressed.

His challenger is a veteran Democratic wheel horse on the national level—Ernest McFarland, Senate majority leader during the last two years of the Truman Administration, who was edged out in 1952 by Barry Goldwater.

On the Congressional level, the Republicans have little hope of winning the Second District seat (all of the state outside of the Phoenix area), which has always been occupied by a Democrat.

First District in Doubt

And they have a fight on their hands to hold the First District seat, occupied by John J. Rhodes, which they captured in the 1952 Eisenhower landslide.

The Second District seat is being relinquished by Harold A. Patten. The Democratic aspirant is Stewart Udall, a young Tucson lawyer and a member of one of the state's first families. The Udalls are Mormons, and the Mormon vote is important in Arizona.

The Republican contender is Henry Zipf, wha has been Senator Goldwater's administrative assistant. He has been campaigning on a platform composed in equal parts of his pro-Eisenhower orientation, his familiarity with Washington, and the charge that Mr. Udall is "left wing" because he signed a 1948 petition to put Henry Wallace's Progressive party candidacy on the ballot.

In the First District Representative Rhodes is challenged by L. S. ("Dick") Adams, recent Democratic leader in the State Assembly.

Pyle Is Facile Speaker

Governor Pyle, a 48-year-old former radio commentator with considerable rhetorical facility, is somewhat a victim of the electoral disenchantment that goes with familiarity.

In 1950, as the underdog, he nosed out State Controller Ana Frohmiller for the Governorship. He marshaled impressive support in 1952. But he has conducted an Earl Warren-style "nonpartisan" administration in a traditionally partisan state, and has grappled with a divided Legislature.

His raid in July, 1953, on the Short Creek polygamous colony of renegade Mormons, and the breaking up of their families aroused widespread criticism and is believed to have cost him some support.

On Oct. 2 a survey by the Arizona Poll, a private organization which had a remarkable record of accuracy in 1952, indicated Mr. McFarland had 46.6 per cent of the support and Governor Pyle 43.4 per cent, with ten per cent undecided.

CALIFORNIA

To be elected: Governor; 1 U.S. Senator; 30 House members, 2 unopposed. Polls close: 8 P.M., PST

1952 Presidential: Eisenhower 2,897,310; Stevenson 2,197,548: R+699,762 (56.3%)

GOVERNOR:

***Goodwin J. Knight (R)** Los Angeles; succeeded Earl Warren when Warren was appointed Chief Justice of the Supreme Court in '53

Richard P. Graves (D) Lafayette; ex-officer of the League of Cities
Last general election for Gov. in '46; Warren won both nominations in '50

U. S. SENATE:

***Thomas H. Kuchel (R)** Anaheim; appointed to succeed Vice President Nixon in '53; Interior, Public Works Cmtes

Samuel W. Yorty (D) Los Angeles; House member '50-'54; Interior Cmte
1950: Last contested Senate race; Richard L. Nixon defeated Helen Gahaghan Douglas (59.2%)

***William F. Knowland (R)** Piedmont; Majority Leader; appointed Aug. '45, re-elected '46, '52
1952: Knowland (R) won both nominations, so there was no contested general election

HOUSE OF REPRESENTATIVES:

28 members to be elected; 2 have no opposition

Present membership: 19 Republicans; 11 Democrats

1 ***Hubert B. Scudder (R)** Sebastopol; 56; Public Works Cmte; '48

Max Kortum (D) Petaluma; agriculturalist
1952: Scudder (R) & (D) 137,801; C. Sullivan (I-P) 21,734: R+116,067
Eisenhower 113,106; Stevenson 62,157: R+50,949

2 ***Clair Engle (D)** Won both nominations; first elected '46 UNOPPOSED

3 ***John E. Moss, Jr.** Sacramento; real estate; Post Office Cmte; '52

James H. Phillips (R) Sacramento; attorney
1952: Moss (D) 87,335; Leslie Wood (R) 82,133: R+5,202 (51.5%)

28

***James B. Utt (R)** — Santa Ana; 55; attorney; Ways and Means Cmte; '52

Harriet Enderle (D) — Santa Ana; housewife
1952: Utt (R) 106,972; Lionel VanDeerlin (D) 62,779: R+44,193

29

***John Phillips (R)** — Banning; 67; educator; Appropriations Cmte; '42

Bruce Shangle (D) — Blythe; farmer
1952: Phillips (R) won both nominations
Eisenhower 59,336; Stevenson 32,349: R+26,987

30

***Bob Wilson (R)** — Chula Vista; 38; advertising; Armed Services Cmte; '52

Ross T. McIntyre (D) — Coronado; retired Naval Admiral, former physician to FDR
1952: Wilson (R) 121,332; DeGraff Austin (D) 82,311: R+39,021

VIEWPOINTS—CALIFORNIA:

Republican: Despite the fact that all Republicans have opposition this year after failing to win both primaries, the state should continue with a Republican Governor and a brace of Republican Senators. In the House, Republicans have an excellent chance of picking up the 3rd, 6th, 14th and 23rd.

Democratic: Better off in this state than in several years. Two years ago the Democrats lost a chance to even compete in the Senatorial by losing to Knowland in the primary. Sam Yorty is hard-driving, dynamic, and if anyone can turn over the state's recent Republican trend, he will do it. Chances to gain House seats are good in this state. Among the better possibilities are: 9th, 12th, 13th, 15th, 18th, 21st and 30th.

Editor: This year the cross-file was neutralized by a requirement for the candidates to list their party affiliations. All districts listed by the Republican and Democratic view above are question marks. There is general agreement that this state, as far as House seats are concerned, is the hardest to predict.

COLORADO

To be elected: Governor, 1 U.S. Senator, 4 House members. Polls close: 7 PM, MST

1952 Presidential: Eisenhower 379,782; Stevenson 245,504: R+114,278 (60.3%)

GOVERNOR:

Donald G. Brotzman (R) — Boulder; 32; State Senator

Edwin C. Johnson (D) — Craig; 70; ending 3rd term as U.S. Senator (elected '36); served one term as Lieutenant-Governor, two terms as Governor

*Gov. Dan Thornton (R) now finishing 2nd two-year term, not a candidate for re-election.
1952: Thornton (R) 349,920; John W. Metzger (D) 260,039: R+89,881

COLORADO'S RACES AT BOILING POINT

Off-Year Campaign Points Up Question of Power of the President's Personality

By SETH S. KING
Special to The New York Times.

DENVER, Oct. 30—Colorado' lusty off-year campaign entere its final wild round today wit the outcome apparently depend ing on whether the influence o President Eisenhower, the state' favorite son-in-law, could offse a strong Democratic trend an the vote-producing magic of Sen ator Edwin C. Johnson.

Regardless of who won, many persons here believed the election would serve as a testing ground for the President's reclamation policies and for his farm program.

Should the Democrats win the United States Senate race and upset Republican incumbents in two of the state's four Congressional districts, a change of direction in the Administration's public power, irrigation, and agricultural philosophies might be required before the 1956 Presidential elections.

Should the Republicans upset the pre-election form charts by capturing the Senate and Gubernatorial seats, and adding to their Congressional strength, it was believed the President and his Cabinet would have a strong argument for continuing their current policies.

Colorado's voting tendencies have been as variable through the years as the capricious winds that howl down out of the Rocky Mountains.

At the moment the Governor is a Republican. One Senate seat is held by a Democrat and the other by a Republican, and the four-man Congressional delegation is split evenly between the two parties.

This year, Senator Johnson, who has represented the state in Washington for 18 years, is the Democratic candidate for Governor, and his supporters were hoping he could pull the other members of his party into office behind him.

The Republican incumbent, Gov. Dan Thornton, is not seeking re-election. The G. O. P. candidate is Don Brotzman, a 32-year old former University of Colorado football star, who has served in both houses of the state's Legislature.

With Senator Johnson out of the Senate contest, the race is between former Representative John Carroll of Denver, the Democrat, and Lieut. Gov. Gordon Allott of Lamar, the Republican.

During the last few days the Senatorial race has taken a new turn. Mr. Allott and his headquarters have placed a series of advertisements in Colorado newspapers charging that Mr. Carroll, when in Congress, voted against appropriations for the House Un-American Activities Committee and against anti-Communist legislative measures.

Mr. Carroll, an Irish Catholic, has bitterly denounced this attack, labeling it a "poor form of McCarthyism." He said he voted against the Un-American Activities appropriation because he believed that a fair-play code for witnesses should have been included in the bill. He voted against the anti-Communist measure, he said, because President Truman, then in office, had contended it would be more of a hindrance than a help.

A newspaper poll concluded last night showed Senator Johnson holding a lead, but it had narrowed to a 3 to 2 margin. Mr. Carroll held an edge over Mr. Allott but it also had decreased to 5 to 4 margin.

0430

U. S. SENATE:

	John Carroll (D)	Denver; 53; attorney; House member '46, '48
	Gordon Allott (R)	Lemar; present Lieutenant-Governor. *Edwin C. Johnson (D) not a candidate for re-election; running for Gov. 1948: Johnson (D) 340,719; Will F. Nicholson (R) 165,069: D+175,650
	***Eugene D. Millikin (R)**	Denver; 63; Chairman Finance Committee and Senate Republican Conference; Nov. '42, '44, '50 1950: Millikin (R) 239,724; John Carroll (D) 210,442: R+29,282

HOUSE OF REPRESENTATIVES:

4 members to be elected

Present membership: 2 Republicans; 2 Democrats

1	***Byron G. Rogers (D)**	Denver; 54; attorney; Judiciary Committee; Nov. '50
	(Mrs.) Ellen G. Harris (R)	Denver; former co-Chairman of National Citizens for Eisenhower Committee 1952: Rogers (D) 101,864; Mason K. Knuckles (R) 97,442: D+4,422 (51.1%) Eisenhower 119,792; Stevenson 92,237: R+27,555
2	***William S. Hill (R)**	Fort Collins; 68; educator; Agriculture Committee; Nov. '40
	Lacy L. Wilkinson (D)	Greeley; ex-Mayor of Greeley 1952: Hill (R) 113,566; Ralph L. Williams (D) 66,300: R+47,266 Eisenhower 121,397; Stevenson 63,559: R+57,838
3	***J. Edgar Chenoweth (R)**	Trinidad; 57; attorney; Rules Committee; Nov. '40, defeated '48, back in '50
	Alva Adams, Jr. (D)	Pueblo; son of the late U.S. Senator Adams 1952: Chenoweth (R) 84,739; *John H. Marsalis (D) 62,025: R+22,714 Eisenhower 87,859; Stevenson 61,138: R+26,721
4	***Wayne N. Aspinall (D)**	Palisade; 58; attorney; Interior Committee; Nov. '48
	Charles E. Wilson (R)	Glenwood Springs; hotel operator 1952: Aspinall (D) 39,676; Howard M. Shults (R) 39,647: D+29 (50.0%) Eisenhower 50,734; Stevenson 28,570: R+22,164

VIEWPOINTS—COLORADO:

Republican: Hope to gain a Senate seat with Democrat Ed Johnson shifting over to Governor. See possible gain of two House seats: 1st and 4th Districts.

Democratic: This is another of Eisenhower's adopted states. Yet he couldn't carry in his Republican House candidates against Rogers and Aspinall in '52. The Republicans won't be able to do it this year either. Senate seat is safe, and we may win the House seat in the 3rd District.

Editor: With Ike not on the ticket, Republicans here will concentrate on pushing Allott over the top and taking the 1st and 4th Districts from the Democrats. Ed Johnson regarded as state's greatest all-time vote-getter.

CONNECTICUT

To be elected: Governor; 6 House members. Polls close: 7 P.M., EST

LATE DRIVE STIRS CONNECTICUT RACE

Sizable Vote Is Expected as Apathy Dissolves in Face of Bias Accusations

Special to The New York Times.

HARTFORD, Oct. 30—More than 850,000 of Connecticut's 1,200,000 registered voters are expected to cast ballots in Tuesday's gubernatorial and Congressional election in the state.

The apparent apathy in various sections of the state appears to have dissipated in the last few days, and election experts expect a fairly sizable vote in the state.

In 1950, when the last gubernatorial election was held, 889,000 voters went to the polls to choose between Gov. John Davis Lodge, Republican, and former Gov. Chester Bowles, Democrat. Mr. Lodge won by 17,000 votes.

Up to a week or so ago, it appeared as if one of the lightest votes in a Gubernatorial election in recent years would be cast. But the visit of President Eisenhower to Hartford on Oct. 20, coupled with a controversy over race and religion, has stimulated interest in the election.

For instance, in Hartford, which is the Democratic center of the state, nonpartisan campaign analysts expect an 80 to 85 per cent vote of the city's 83,000 registered voters. The Democratic town chairman, John P. Kelly, said he expects his party to achieve a margin of 28,500 votes in the city.

The Republican town chairman, Patrick J. Depasquale, said the Democrats would be "lucky" to achieve a margin of 15,000. In 1950, Mr. Bowles took Hartford by a margin of 24,000 over Mr. Lodge.

Democrats think Abraham A. Ribicoff, their nominee for Governor, will exceed the margin achieved by Mr. Bowles in 1950. They say Mr. Ribicoff is a local resident and has always run well here. In 1952, as a nominee for the United States Senate, he had a 35,000 margin in Hartford.

The Lodge-Ribicoff contest has overshadowed most of the other races, including those for the six Congressional seats from this state.

The racial and religious question came into the picture last week-end when Mr. Ribicoff, who is a Jew, made identical talks in Bridgeport and Berlin in which he said that "only in the Democratic party could a man named Abe Ribicoff be nominated for Governor."

Republicans accused Mr. Ribicoff of injecting a racial and religious issue into the campaign,

***Antoni N. Sadlak (R)** Rockville; 46; lawyer; Ways & Means Cmte; Nov. '48

Joseph P. Lyford (D) Westport
1952:Sadlak (R) 601,238; Stanley Pribyson (D) 489,645: R+111,573

VIEWPOINTS—CONNECTICUT:

Republican: Lodge will be re-elected. Hope to elect Barnes in the Hartford (First) District.

Democratic: Ribicoff, with an outstanding record as a member of Congress, has an excellent chance of winning the Governorship. Hope to recapture the 3rd District. Good chance in the 5th.

Editor: Ribicoff (House '48-'52) was the first Democrat to take the normally Republican 1st District in an off-year. This District reports early, and if it goes Republican it may tip off the National trend.

DELAWARE

To be elected: 1 U.S. Senator; 1 House member at large. Polls close: 6 P.M., EST

1952 Presidential: Eisenhower 90,059; Stevenson 83,315: R+6,744 (51.8%)

GOVERNOR:

***J. Caleb Boggs (R)** Elected to four-year term '52
1952: Boggs (R) 88,977; *Elbert N. Carvel (D) 81,772: R+7,205

U. S. SENATE:

***J. Allen Frear, Jr. (D)** Dover; 51; attorney; seeking 2nd full term; Nov. '48

Herbert B. Warburton (R) Wilmington; 38; attorney; House member since '52
1948: Frear (D) 71,888; *Clayton Douglas Buck (R) 68,246: D+3,642 (50.9%)

***John J. Williams (R)** Millsboro; 50; Nov. '46
1952: William (R) 93,020; Alexis I. duPont Bayard (D) 77,685: R+15,335 (54.5%)

HOUSE OF REPRESENTATIVES:

1 member to be elected at large

Present membership: 1 Republican

A.L.	**(Mrs.) Lillian J. Martin (R)**	Milford; 44; chief accountant, State Budget Commission
	Harris B. McDowell (D)	Middletown; State Chairman, Democratic Party This is Herbert B. Warburton's seat 1952: Warburton (R) 88,285; Joseph S. Scannell 81,730: R+6,555 (51.9%)

VIEWPOINTS—DELAWARE:

Republican: Both Senate and House candidates should win. Democrats are split between New Dealers and Conservatives on Frear, which helps Warburton considerably.

Democratic: This state can go Democratic. Frear is well liked and well known; he should win.

Editor: Could go either way, with Republicans now appearing to have the edge.

FLORIDA

To be elected: Governor; 8 House members, 6 unopposed. Polls close: 7 P.M., EST

Eisenhower 111,760; Stevenson 51,092: R+60,668

VIEWPOINTS—IDAHO:

Republican: Democrats are split over Taylor's nomination. Dworshak should win handily, and 1st District should return to Republican column.

RED ISSUE AROUSES IDAHO'S CAMPAIGN

Taylor, Accused of Accepting Communist Support in '48, Demands a Hearing

Special to The New York Times.

POCATELLO, Idaho, Oct. 23 —Idaho's Senatorial campaign, up to now conducted on a comparatively restrained basis, exploded this week with quasi-official charges that Glen H. Taylor, Democratic candidate, in 1948 knowingly accepted Communist support.

Mr. Taylor left the Democratic party that year to run with Henry A. Wallace as a Progressive. Throughout the current campaign, suggestions that the candidate was sympathetic to communism have been heard only as whispers.

But earlier this week, Senator Herman Welker, Republican of Idaho, revealed that he had conducted two one-man hearings in Washington as a member of the Senate Internal Security subcommittee, at which several witnesses testified to Communist domination of the Progressives.

Senator Welker cited testimony by Herbert Philbrick, Mary Millward and Matthew Cvetic, former undercover agents for the Federal Bureau of Investigation, and John Lautner, former Communist now a consultant for the Justice Department. All, according to Senator Welker, said that both Mr. Wallace and Mr. Taylor had known they were accepting Communist backing when they formed the Progressive party.

Since Wednesday both Mr. Taylor and Mr. Welker have been burning up the wires with denials. The junior Senator from Idaho has charged that Mr. Taylor is "politically grandstanding" and "attempting to serve his own political ends" in demanding the opportunity to testify under oath before the election Nov. 2.

Taylor Issues Challenge

"If you can show me or the committee that anyone has falsely testified about you, I will be the first to have that person prosecuted for perjury," Senator Welker added.

He announced that a Senate Internal Security sub committee task force would meet before Election Day and give Mr. Taylor the opportunity to reply. No date has been set, but the hearing is expected to be called next week.

Mr. Taylor insists that the charges were politically inspired with Senator Welker serving as "Charley McCarthy" for his actual opponent Senator Henry C. Dworshak. Late today he challenged Senator Dworshak to meet him in open debate for a comparison of their respective voting records in Congress.

Mr. Taylor, leaving for another campaign swing through the northern counties of the state, said he doubted that there would be a "task force" hearing at all.

"The so-called charges," he said, "have been whispered for years. There is no substance to them at all. Philbrick and the others allegedly say I was Communist-dominated although I have yet to see official testimony to this effect. I say I was not. It amounts to a matter of their word against mine with no other evidence possibly in the hands of the committee since no other evidence exists."

Reversal of Form

The Taylor campaign has been a reversal of his form from the earlier days, when he took the road with a ten-gallon hat, a guitar and members of his family as a political glee club.

This time, although never admitting that he did wrong in principle when he deserted the Democratic party to run with Mr. Wallace, he has expressed his regret at not always having been a full Democrat.

He has conducted a restrained campaign, making hundreds of street corner appearances throughout Idaho, on a platform pledging more aid for the farmer, the miner and the laboring man in general.

His major attack against Senator Dworshak has been on the latter's voting record in Congress.

Glen Taylor in Idaho

The North and the West sometimes twit the South with electing the candidate with the best hillbilly band, but now Southerners can twit Westerners, at least, with being receptive to the openly lowbrow approach in politics. Glen H. Taylor as Democratic candidate for Senator from Idaho developed much more strength than seemed possible when he was nominated.

He collected a crowd by playing recorded band music over loud speakers on the battered automobile he drove, then gave the audience his one speech--mostly about corruption and Wall Street influence in the Administration, a foreign policy linking us with nations oppressing native peoples, the wickedness of Secretary of Agriculture Ezra Taft Benson, and a $100 a month pension for everybody on reaching 65.

Taylor was elected to the Senate in 1944 after a campaign in which he did much strumming of the guitar and singing of cowboy songs. In 1948 he ran for Vice President with Henry A. Wallace on the Progressive ticket, a political flop (Wallace-Taylor didn't even run second in a single state) that Taylor now calls a "disastrous blunder."

He was defeated for renomination in 1950, worked in California as a carpenter for several years, got a plurality in the Idaho Democratic primary for Senator on Aug. 10. Republicans in the state stressed the role of Communists and Fellow Travelers in the Progressive Party of 1948, and how well Taylor ran in Idaho on Nov. 2 showed something about the effectiveness or ineffectiveness of the Red issue these days.

Democratic: Republican public power policies will help Democrats here. Taylor is a rebel first and a Democrat second. Mrs. Pfost has made an excellent record as a member of Congress, is a good, hard-working campaigner and should increase her victory vote over '52.

Editor: Will regular Democrats vote for Taylor? If they will, and the heat of the campaign may help them make up their minds, Taylor could make a good run. Mrs. Pfost won her seat by a small margin, but it was won in the face of an Eisenhower sweep. She should hold.

ILLINOIS

ILLINOIS CAMPAIGN IN VIOLENT STAGE

But Senator Douglas, Despite Bitter Attacks on Him, Appears to Be Gaining

By RICHARD J. H. JOHNSTON

Special to The New York Times.

CHICAGO, Oct. 23—Whatever the outcome of the Illinois campaign for the selection of a United States Senator on Nov. 2, the campaign will be long remembered here for political animus.

Senator Paul H. Douglas, the Democratic incumbent, has become the target of Republican charges that he is guilty of everything from "emotional instability" to "protecting Communists." The Senator has stuck to what he calls "the issues" and asked re-election on his record.

The Republican outburst appeared almost simultaneously with a high-level, although carefully guarded, Republican conclusion that the party's candidate, Joseph T. Meek, would be defeated.

Some Republican strategists have asserted that Mr. Meek would support to the hilt Senator Joseph R. McCarthy, Republican of Wisconsin. Mr. Meek disclaimed responsibility for what his supporters were saying.

New Turns in Campaign.

During the week these developments characterized the opposition attack upon Senator Douglas.

¶James T. Igoe, a former Representative in the House, who left the Democratic party to become a supporter of Senator McCarthy, declared: "Anyone who votes for Douglas on Nov. 2 is voting to stop Joe McCarthy's courageous investigation of Communists in our Government."

¶Campaign material circulated this week by a group calling itself the Abraham Lincoln National Republican Club declared that Senator Douglas had been a "member, sponsor or officer" in a long list of organizations cited by the United States Attorney General's office as subversive.

Michael Howlett, the Senator's campaign manager, called upon Mr. Meek to repudiate the pamphlet. This Mr. Meek declined to do. He explained that none of "my money" had been used to finance the printing and distribution of the tract and that, he, therefore, felt no responsibility.

In a speech this week Mr. Meek told a Chicago audience that lists of "subversive organizations" to which, it is alleged, Mr. Douglas once belonged were distributed by his workers "in response to thousands of citizens who simply wanted to know the background of the candidate for one of the highest offices in the land."

At the end of the week denials were pouring from the Senator's campaign headquarters in a flood. Senator Douglas, however, found time to apologize for a "misstatement" he made at a political ward meeting in Chicago on Tuesday.

The Senator had been quoted by Morton H. Hollingsworth, Republican State Chairman, as saying, "virtually all former Republican [state] treasurers ended up as suicides or in the penitentiary." Mr. Hollingsworth said Mr. Douglas' remarks were "fresh proof of his complete irresponsibility."

In his statement of apology, issued yesterday, Senator Douglas said:

"I have had a careful check made of the past record of Republican State Treasurers and I find I was wrong in describing their records."

2 HELD

0438

Douglas vs. Meek: A Vital Race

No state's voters bear a heavier responsibility than do voters of Illinois in the congressional election a week from Tuesday. They will decide whether Paul H. Douglas is to continue in the Senate for a second term of six years—or is to be replaced by Joseph T. Meek.

Few Senators have records that are so well and favorably known as that of Paul Douglas. The Illinoisan has backed President Eisenhower on such important issues as foreign aid, social security, public housing, public health and defeat of the Bricker amendent to tie the executive's hands in international affairs. He has opposed the President on the offshore oil giveaway, the blank check features of the atomic energy measure, dangerous public lands bills and other proposed legislation that he felt was against the interests of the people.

* * *

This is not to say that Senator Douglas's record is perfect. We disagree with him on flexible farm price supports, for example. He worked for rigid 90 per cent supports and then voted for 82½ per cent rather than see the level drop to 75 per cent. But there can be no question that Paul Douglas has a very high batting average on the important issues. His readiness to support the President or to differ depending on the interests of the country, as he sees them, makes this high average possible.

When a Democratic President was in office, Senator Douglas's approach to public issues was the same. His masterful presentation of the economic facts was a major influence in the defeat of the natural gas grab into the pockets of consumers. He has been against wasteful spending on pork barrel projects in both Republican and Democratic administrations. For such services Washington correspondents and professional students of government chose him the "No. 1 Senator" in three different polls.

Paul Douglas was a distinguished citizen before the voters of Illinois sent him to the Senate in 1948 with a tremendous 407,000 majority over Republican Senator C. Wayland Brooks. He served on Illinois, New York and Pennsylvania boards and commissions on unemployment compensation, housing, utilities and pensions and prepared legislation on these subjects. For 17 years he was chairman of the Board of Arbitration for the newspaper publishing industry. By vote of his university colleagues he became head of the American Economic Association.

* * *

And soon after Pearl Harbor, at the age of 50, he enlisted as a private in the Marines with whom he served in combat in the Pacific. He was cited for heroism in battle and awarded the Purple Heart for a shattered arm.

In the light of this record it is no wonder that many newspapers, not only in Illinois but also in New York, Washington, Kentucky, Colorado, Wisconsin and other states are applauding Illinois voters on their opportunity to re-elect Paul Douglas to the Senate.

It is understatement to say that Mr. Meek's record suffers in contrast. The Republican nominee has had essentially two main jobs in his career. He was public relations agent for the Illinois Chamber of Commerce and later editor of its publication. Then in 1935 he organized the Illinois Federation of Retailers and has been its president since. Thus, for the last two decades, he has been a lobbyist at the Illinois Legislature. In that time he has opposed many pieces of important public welfare legislation, including minimum wage measures which he has described as "Socialistic in purpose and effect."

* * *

Slum clearance, fair employment practices, public housing—these are Socialism to Mr. Meek. Indeed as recently as last July in an address at Decatur he listed bank deposit insurance, installment buying regulation, social security, veterans' benefits, public works projects, new tariff regulations, "even the President's Economic Council of Advisers" as either Socialistic or Communistic.

This ridiculous catalogue led the pro-Eisenhower, Republican *Chicago Daily News* to call Mr. Meek's statement the "most nonsensical public utterance to come out of the campaign."

If Joseph T. Meek were a Republican such as Senator John Sherman Cooper in Kentucky or former Representative Clifford P. Case in New Jersey, independent voters might well think twice before they chose between him and Senator Douglas. But Mr. Meek is not that kind of Republican. He is just the opposite kind. He is pro-Bricker, pro-Jenner, pro-McCarthy.

For all his belated fealty to what he calls the "Eisenhower crusade," Mr. Meek is anti-Eisenhower. In his primary campaign he said at Urbana: "The mavericks and hybrids in Washington today, passing as Republicans, are enough to turn your stomach." He could have meant only President Eisenhower or the men around him who have had to come to grips with the primitive wing of the party.

* * *

There is precious little doubt as to which Republican side Mr. Meek would line up on were he to go to Washington. He would join the wrecking crew. He has said he would vote to pass, over President Eisenhower's opposition, the Bricker amendment which was defeated in the last session by only one vote—in effect by Senator Douglas's vote.

Judging from his own words, Mr. Meek would be against the Eisenhower foreign trade program. Apparently he would oppose the U.N., which the President regards as vital. He might even join in the backstage maneuvering to drive Dwight D. Eisenhower out of politics two years from now. Certainly all Mr. Meek's sympathies are with the bitter-end cabal.

That is the choice in Illinois. All the country will be watching to see how it is made. If Lincoln's state wants to give the Eisenhower Administration strong support where it most deserves support, at the same time retaining for itself the prestige that goes with possessing a distinguished Senator, it will welcome the chance to re-elect [illegible]

	Robert W. Martin (D)	Sullivan; lawyer 1952: Springer (R) 92,851; David Beggs, Jr. (D) 54,576: R+44,275; Eisenhower 95,077; Stevenson 59,974: R+35,103
23	***Charles W. Vursell (R)**	Salem; 73; publisher; Appropriations Cmte; '42
	Albert R. Imle (D)	Hillsboro; lawyer 1952: Vursell (R) 89,428; W. C. Johnston (D) 65,-442: R+23,986; Eisenhower 96,019; Stevenson 66,494: R+39,525

24 ***Melvin Price (D)** East St. Louis; 49; newspaperman; Armed Services, Joint Atomic Energy Cmtes; '44

John T. Thomas (R) Belleville; former State Senator
1952: Price (D) 117,408; Phyllis Schlafy (R) 63,-778: D+53,630; Eisenhower 75,919; Stevenson 111,045: D+35,126

25 ***C. W. Bishop (R)** Carterville; 64; tailor; Armed Services Cmte; '40

Kenneth J. Gray (D) West Frankfort; auto dealer
1952: Bishop (R) 88,810; Edwin Hair (D) 69,245: R+19,565; Eisenhower 91,099; Stevenson 72,-787: R+18,212

VIEWPOINTS—ILLINOIS:

Republican: Illinois is a conservative state and Joe Meek, the Republican candidate, would be a more representative Illinoisan in the U.S. Senate. Republicans should pick up House seats in the 2nd, 9th and 21st, and there is one other possibility.

Democratic: Paul Douglas is one of the outstanding members of the U.S. Senate. The people of Illinois will return him to office. Among the House seats that should go Democratic are the 3rd, 4th and 11th.

Editor: As Illinois goes, so may go the nation in this off-year. Watch 2nd, 3rd, 4th, 9th and 21st Districts.

INDIANA

To be elected: 11 House members. Polls close: 6 P.M., CST

1952 Presidential: Eisenhower 1,136,259; Stevenson 801,530: R+334,729

GOVERNOR:

***George N. Craig (R)** Brazil
Gov. elected four-year term '52; cannot succeed himself
1952: Craig (R) 1,075,685; John A. Watkins (D) 841,984: R+233,701

U. S. SENATE:

***Homer E. Capehart (R)** Washington; elected 2nd six-year term '50.
1950: Capehart (R) 844,303; Alex Campbell (D) 741,025: R+103,278 (52.8%)

***William E. Jenner (R)** Bedford; elected 2nd six-year term '52.
1952: Jenner (R) 1,020,605; Henry F. Schricker (D) 911,169: R+109,436 (52.4%)

HOUSE OF REPRESENTATIVES:

11 members to be elected

Present membership: 10 Republicans; 1 Democrat

1	***Ray J. Madden (D)**	Gary; 62; attorney; Rules Cmte; '42

7	***William G. Bray (R)**	Martinsville; 51; lawyer; Armed Services Cmte; '50
	George D. Gettinger (D)	Sullivan; implement dealer 1952: Bray (R) 85,601; Thomas J. Courtney (D) 66,218: R+19,383 Eisenhower 87,835; Stevenson 66,239: R+21,596
8	***D. Bailey Merrill (R)**	Evansville; 42; lawyer; Banking Cmte '52
	Winfield Denton (D)	Evansville; lawyer; House member '48-'52 1952: Merrill (R) 98,226: *Winfield Denton (D) 87,770: R+10,456 (53%) Eisenhower 105,088; Stevenson 83,471: R+21,617
9	***Earl Wilson (R)**	Bedford; 58; educator; Appropriations Cmte; '40
	Wilfrid J. Ullrich (D)	Aurora; druggist 1952: Wilson (R) 74,052; Edward Lewis (D) 56,759: R+17,293 Eisenhower 78,015; Stevenson 54,512: R+23,503

10

***Ralph Harvey (R)** — New Castle; 53; farmer; Agriculture Cmte; Nov. '47

Inez M. Scholl (D) — Connersville; housewife
1952: Harvey (R) 103,937; Fred V. Culp (D) 67,932: R+36,005
Eisenhower 106,166; Stevenson 67,430: R+38,736

11

***Charles B. Brownson (R)** — Indianapolis; 40; businessman; Government Operations, Public Works Cmtes; '50

Charles H. Boswell (D) — Indianapolis; Probation Officer
1952: Brownson (R) 160,929; John C. Carvey (D) 109,403: R+51,526
Eisenhower 164,466; Stevenson 106,387: R+58,079

VIEWPOINTS—INDIANA:

Republican: This is a battleground state for the House, but all present 10 Republican seats should be retained. Incumbents are good campaigners and have made good records.

Democratic: Indiana Republicans have been torn in a feud between Gov. Craig, on one hand, and Senators Capehart and Jenner on the other. The Democrats should profit from this split. Best hopes: 3rd, 5th, 8th, and 11th.

Editor: It would seem if the Democrats hope to win the House, this is one state in which they must make a gain. Watch 3rd and 8th.

IOWA

To be elected: Governor; 1 U.S. Senator; 8 House members. Polls close: 8 P.M., CST

1952 Presidential: Eisenhower 808,906; Stevenson 451,513: R+357,393 (63.8%)

GOVERNOR:

Leo A. Hoegh (R) — Charlton; Attorney General

Clyde E. Herring (D) — Des Moines; Polk County Attorney
*Gov. William S. Beardsley (R) not a candidate for re-election
1952: Beardsley (R) 618,937; Herschel C. Loveless (D) 575,075: R+43,862

U. S. SENATE:

***Guy Gillette (D)** — Cherokee; 75; Foreign Relations, Rules Cmtes; '48

Thomas E. Martin (R) — Iowa City; 61; House member since '36
Gillette first elected Senate '36 in special, again in '38. Was defeated in '44 by Hickenlooper and elected to his first full six-year term in '48.
1948: Gillette (D) 578,226; George A. Wilson 415,778: D+162,448 (57.8%)

***Bourke B. Hickenlooper (R)** — Cedar Rapids; elected 2nd six-year term '50
1950: Hickenlooper (R) 470,613; Albert J. Loveland (D) 383,766: R+86,847 (54.8%)

GILLETTE FAVORED BY POLLS IN IOWA

Democrat Holds Advantage in Senate Race but G. O. P. Is Leading for Governor

By SETH S. KING

Special to The New York Times.

DES MOINES, Iowa, Oct. 23—With only a week of campaigning left, there appeared to be no major shifts developing in Iowa's political thinking. Party officials were now more concerned with getting out the vote than influencing it.

At the end of a long and at times surprisingly strenuous effort by major candidates of both parties, the State's Congressional line-up was expected to remain unchanged, although there appeared to be a good chance that the Republican vote might be lower than normal.

Senator Guy M. Gillette, remained a heavy favorite for reelection over Representative Thomas E. Martin, his Republican opponent.

Attorney General Leo A. Hoegh, the Republican gubernatorial candidate, has maintained his early season advantage over Clyde E. Herring, Democrat, and the eight Republican Congressional candidates, seven of whom are incumbents, are expected to win.

The most recent statewide public opinion polls placed Senator Gillette, one of the State's most effective campaigners, ahead of Mr. Martin, and gave Mr. Hoegh a similar lead over Mr. Herring.

Early this month the Iowa poll, sponsored by The Des Moines Register and Tribune, found Senator Gillettee was preferred by 38 per cent of those questioned, while Mr. Martin was favored by 32 per cent and 30 per cent were undecided.

In this same poll Mr. Hoegh had a preference of 38 per cent to 34 per cent for Mr. Herring, with 28 per cent undecided.

The latest October poll conducted by Wallaces' Farmer, an agricultural publication, gave Senator Gillette 51 per cent of the rural vote, while Mr. Martin got 41 per cent, with 8 per cent undecided.

HOUSE OF REPRESENTATIVES:

8 members to be elected

Present membership: 8 Republicans

1	**Fred Schwengel (R)**	Davenport; State legislator; Thomas E. Martin (R) running for Senate.
	John O'Connor (D)	Lone Tree; farmer 1952: Martin (R) 105,526; Clair Williams (D) 62,011: R+43,515 Eisenhower 113,128; Stevenson 86,280: R+26,848
2	***Henry O. Talle (R)**	Decorah; 62; educator; Banking Cmte; '38
	Ruben V. Austin (D)	Dubuque; ex-Mayor of Dubuque 1952: Talle (R) 114,553; T. W. Mullaney (D) 69,421: R+45,132 Eisenhower 126,025; Stevenson 73,635: R+52,380
3	***H. R. Gross (R)**	Waterloo; 55; commentator; Post Office Cmte; '48
	George R. Laub (D)	Cresco; lawyer 1952: Gross (R) 109,992; George Laub (D) 56,-871: R+53,121 Eisenhower 116,938; Stevenson 58,666: R+58,272
4	***Karl M. LeCompte (R)**	Corydon; 67; publisher; Chman. House Administration Cmte; '38
	Herschel C. Loveless (D)	Ottumwa; civil engineer 1952: LeCompte (R) 73,317; Earl Glassburner (D) 44,900: R+28,417 Eisenhower 76,142; Stevenson 49,609: R+26,533
5	***Paul Cunningham (R)**	Des Moines; 64; lawyer; Armed Services Cmte; '40
	James A. McLaughlin (D)	Des Moines; union official 1952: Cunningham (R) 95,057; Alvin Meyer (D) 66,303: R+28,754 Eisenhower 100,842; Stevenson 71,036: R+29,806
6	***James I. Dolliver (R)**	Fort Dodge; 60; lawyer; Interstate Cmte; '44
	Lumund F. Wilcox (D)	Jefferson; lawyer 1952: Dolliver (R) 86,842; Francis Cutler (D) 39,245: R+47,587 Eisenhower 93,687; Stevenson 49,304: R+44,383
7	***Ben F. Jensen (R)**	Exira; 62; merchant; Appropriations Cmte; '38
	Elmer G. Carlson (D)	Audubon; businessman 1952: Jensen (R) 82,462; Thomas Keleher (D) 39,999: R+42,463 Eisenhower 86,165; Stevenson 41,562: R+44,603
8	***Charles B. Hoeven (R)**	Alton; 59; lawyer; Agriculture Cmte; '42
	Roy Holland (D)	Lawton; farmer 1952: Hoeven (R) 94,561; Milo Price (D) 13: R+94,548 Eisenhower 95,975; Stevenson 43,020: R+52,955

VIEWPOINTS—IOWA:

Republican: Two years ago the vote in this state was almost 2 to 1 Republican. State House should stay Republican. All House seats are safe, and expectation is to pick up Gillette seat in the Senate.

Democratic: We look good in this state. Farm unrest will give Democrats good rural strength, coupled with the fact that Guy Gillette is the greatest vote-getter Iowa has ever known. Herring is the son of a former U.S. Senator and Governor. He is popular and a good campaigner.

Editor: Senate seat is the only contest of interest here.

KANSAS

To be elected: Governor; 1 U.S. Senator; 6 House members. Polls close: 7 P.M., CST

1952 Presidential: Eisenhower 616,302; Stevenson 273,296: R+343,106 (68.8%)

GOVERNOR:

Fred Hall (R) Dodge City; present Lieutenant Governor

George Docking (D) Lawrence; banker

Chester A. Roberts (Prohibition) Wichita

W. W. Tamplin (Socialist) Hutchinson

*Gov. Edward F. Arn (R) not a candidate for re-election

1952: Arn (R) 490,341; Charles Rooney (D) 363,468: R+126,873

U. S. SENATE:

***Andrew F. Schoeppel (R)** Wichita; 60; attorney; Agriculture, Interstate Cmtes, seeking 2nd full term; Nov. '48

George McGill (D) Wichita; former U.S. Senator; elected Special '30, re-elected Nov. '32 for one term.

David C. White (Prohibitionist) Kingsdown

1948: Schoeppel (R) 393,412; George McGill (D) 305,987: R+87,425 (54.9%)

***Frank Carlson (R)** Concordia; 61; Chman Post Office Cmte; elected both short and long terms Nov. '50

1950: Carlson (R) 335,880; Paul Aiken (D) 271,365: R+64,515 (55.2%)

HOUSE OF REPRESENTATIVES:

6 members to be elected

Present membership: 5 Republicans; 1 Democrat

1 ***Howard S. Miller (D)** Hiawatha; 75; farmer-lawyer; Education & Labor Cmte; '52

William H. Avery (R) Wakefield; member State Legislature

1952: Miller (D) 68,909; *Albert Cole (R) 64,963: D+3,946 (51.5%)

Eisenhower 103,097; Stevenson 41,567: R+61,530

2

***Errett P. Scrivner (R)** — Kansas City; 56; attorney; Appropriations Cmte; Sept. '43

Newell A. George (D) — Kansas City; attorney
1952: Scrivner (R) 91,676; Claude L. Rice (D) 68,396: R+23,280
Eisenhower 106,481; Stevenson 67,148: R+39,333

3

***Myron V. George (R)** — Altamount; 54; publisher; Banking & Currency, Public Works Cmtes; Nov. '50

William W. Monypeny (D) — Winfield; professor
1952: George (R) 57,126; Fred L. Hedges (D) 38,960: R+18,166
Eisenhower 67,943; Stevenson 37,472: R+29,471

4

***Edward H. Rees (R)** — Emporia; 68; attorney; Chman Post Office & Civil Service Cmte; Nov. '36

Robert M. Green (D) — El Dorado; member State Legislature
1952: Rees (R) 118,206; Bill Porter (D) 80,697: R+37,509
Eisenhower 148,572; Stevenson 62,581: R+85,991

5

***Clifford R. Hope (R)** — Garden City; 61; Chman Agriculture Cmte; Nov. '26

Robert L. Bock (D) — Macksville; former member State Legislature
1952: Hope (R) 90,967; Art McAnarney (D) 53,606: R+37,361
Eisenhower 102,280; Stevenson 37,331: R+64,949

6

***Wint Smith (R)** — Mankato; 61; attorney; Armed Services, Education & Labor Cmtes; Nov. '46

Elmo J. Mahoney (D) — Dorrance; farmer
1952: Smith (R) 66,723; Horace A. Santry (D) 39,955: R+26,768
Eisenhower 87,929; Stevenson 27,195: R+60,734

VIEWPOINTS—KANSAS:

Republican: Solid Republican

Democratic: Better spirit and organization among Democrats than evidenced in many years.

Editor: Democrat Howard S. Miller won in '52 on a purely local issue in the 1st District. However, that District is traditionally strong Republican.

KENTUCKY

To be elected: 1 U.S. Senator; 8 House members, 3 unopposed. Polls close: 5 P.M., CST

1952 Presidential: Eisenhower 495,029; Stevenson 495,729: D+700 (50.2%)

GOVERNOR:

***Lawrence W. Wetherby (D)** — Elected four-year term '51
1951: Wetherby (D) 346,345; Eugene Siler (R) 288,014: D+58,331

U. S. SENATE:

	*John Sherman Cooper (R)	Somerset; 53; attorney; Armed Services, Labor, Post Office Cmtes; '46-'48 to fill unexpired term of Albert "Happy" Chandler (D); defeated '48 by Virgil Chapman (D); elected '52 to fill unexpired term after Chapman died.
	Alben W. Barkley (D)	Paducah; 76; House '13-'27; Senate '26-49; Vice President '49-'52 1952: Cooper (R) 494,576; Thomas R. Underwood (D) 465,652: R+28,924 (51.5%)

AB2LX (ELN)

NIGHT LEAD ELECTION (470)

BY IRISH DONNELLY

LOUISVILLE, KY., NOV. 1 (AP)- ALBEN W. BARKLEY, "MR. DEMOCRAT" IN KENTUCKY, GAMBLES PERHAPS THE GREATEST POLITICAL RECORD OF THE STATE IN TOMORROW'S ELECTION.

THE FORMER VICE-PRESIDENT OF THE UNITED STATES, WHO HAS SERVED 47 YEAS IN PUBLIC OFFICE AND NEVER BEEN DEFEATED BY A REPUBLICAN, PUTS THIS REPUTATION AT STAKE IN A BID FOR THE U. S. SENATE SEAT NOW HELD BY REPUBLICAN JOHN SHERMAN COOPER.

THE REPUBLICANS IN THIS NORMALLY DEMOCRATIC STATE RECOGNIZE THE VOTE-GETTING MAGIC OF THE 76-YEAR-OLD BARKLEY. PRESIDENT EISENHOWER TWICE VISITED THE STATE TO HELP THEM.

WHEN BARKLEY ANNOUNCED HIS CANDIDACY FOR THE U. S. SENATE, WHERE HE SERVED 22 YEARS, MANY POLITICAL OBSERVERS CONSIDERED HIM AN ALMOST CERTAIN WINNER.

BUT THE VIGOROUS CAMPAIGNING OF THE 53-YEAR-OLD COOPER HAS CHANGED THE PICTURE. SOME OBSERVERS FEEL THAT IT WILL BE A CLOSE RACE.

NEVERTHELESS, WILLIAM FOSTER, DEMOCRATIC STATE CAMPAIGN MANAGER, TONIGHT PREDICTED BARKLEY WOULD CAPTURE THE SIX-YEAR SENATE TERM BY A MARGIN OF 85,000 TO 90,000 VOTES.

HENDERSON DYSARD, REPUBLICAN STATE CAMPAIGN MANAGER, DECLARED COOPER WOULD WIN BY 25,000.

THE RIVAL CAMPAIGN MANAGERS AGREED THAT TOMORROW'S TURNOUT OV VOTERS WOULD EXCEED 700,000 IF THE WEATHER IS NOT TOO HARSH. THE FORECAST IS FOR COLD WITH SNOW FLURRIES. KENTUCKY HAS BETWEEN 1,300,000 AND 1,500,000 REGISTERED VOTERS, ABOUT TWO THIRDS OF THEM DEMOCRATS.

BOTH BARKLEY AND COOPER ARE REGARDED AS LIBERALS, WITH SOMEWHAT SIMILAR POLITICAL PHILOSOPHIES.

THEIR STATURE IS SUCH THAT THE LOUISVILLE COURIER-JOURNAL REMARKED EDITORIALLY:

"IT'S A LUCKY STATE THAT HAS AN EMBARASSMENT OF RICHES IN ITS

CHOICE OF CANDIDATES FOR THE U. S. SENATE...ANY STATE IN THE UNION COULD BE PROUD OF EITHER MAN."

THE NEWSPAPER, HOWEVER, SUPPORTED BARKLEY. TWICE BEFORE IT SUPPORTED COOPER.

COOPER, COMPLETING HIS SECOND TWO-YEAR UNEXPIRED TERM, IS THE FIRST REPUBLICAN ELECTED TO THE U. S. SENATE FROM KENTUCKY SINCE 1924.

A33LX

BARKLEY, WHO WAS VICE-PRESIDENT FROM 1949 THROUGH 1952, CAMPAIGNED ON THE THEME THAT THE REPUBLICANS FAVORED THE PRIVILEGED FEW WHILE THE DEMOCRATS ARE THE PARTY OF THE PEOPLE.

TODAY HE TOURED HIS 18-COUNTY HOME DISTRICT, THE FIRST, IN WESTERN KENTUCKY AND RETURNED TO HIS HOME IN PADUCAH FOR A STATEWIDE BROADCAST TONIGHT.

COOPER, FROM SOMERSET IN THE TRADITIONALLY REPUBLICAN EIGHTH DISTRICT, ALSO CONCLUDED HIS CAMPAIGN WITH A RADIO APPEAL. HE TOLD THE VOTERS THAT EISENHOWER MUST HAVE A GOP CONGRESS TO CARRY OUT HIS PROGRAM WHICH, HE SAID, HAS ALREADY PLACED THIS COUNTRY ON A SOUND PEACETIME ECONOMIC BASIS.

SEVEN OF KENTUCKY'S EIGHT CONGRESSMEN ARE SEEKING RE-ELECTION. THE EIGHTH IS RETIRING. SIX REPUBLICANS AND TWO DEMOCRATS NOW REPRESENT KENTUCKY IN THE U. S. HOUSE.

THREE CONGRESSMEN, ALL DEMOCRAGS, ARE UNOPPOSED FOR RE-ELECTION. THEY ARE NOBLE J. GREGORY, 1ST DISTRICT; WILLIAM N. NATCHER, 2ND, AND FRANK L. CHELF, 4TH.

REP. JAMES S. GOLDEN, REPUBLICAN, DIDN'T SEEK RE-ELECTION IN THE 8TH.

ALSO TO BE ELECTED IS A MEMBER OF THE COURT OF APPEALS, KENTUCKY'S HIGHEST TRIBUNAL.

POLLS WILL BE OPEN FROM 6 A.M. TO 5 P.M. LOCAL TIME. (CENTRAL STANDARD IN CENTRAL AND WESTERN KENTUCKY; EASTERN STANDARD IN EASTERN KENTUCKY.)

MU6PCSNM

VIEWPOINTS—KENTUCKY:

Republican: John Sherman Cooper is the most popular Republican to ever stand for election in Kentucky. A younger, more vigorous man than his opponent, he has an excellent chance of winning.

Democratic: Alben Barkley is "Mr. Kentucky." He should win.

Editor: House seats appear steady. Cooper versus Barkley is a battle of giants. This is a Democratic state.

LOUISIANA

To be elected: 1 U.S. Senator, unopposed; 8 House members, 7 unopposed. Polls close: 7 P.M., CST

MAINE

ELECTION HELD SEPTEMBER 13, 1954

Elected: Governor, 1 U.S. Senator, 3 House members

1952 Presidential: Eisenhower 232,353; Stevenson 118,806: R+113,547

GOVERNOR:

Edmund S. Muskie (D) Elected in September, the first Democratic Governor in 20 years.
Vote: Muskie (D) 135,613; *Burton M. Cross (R) 113,-210: D+22,403

U. S. SENATE:

***Margaret Chase Smith (R)** Re-elected in September to her 2nd term.
Vote: Smith (R) 143,539; Paul A. Fullam (D) 101,697: R+41,572 (58.4%)
(In '48 Mrs. Smith's victory percentage was 71.4%)

HOUSE OF REPRESENTATIVES:

3 members elected

Present membership: 3 Republicans

1 ***Robert Hale (R)** Re-elected
Vote: Hale (R) 47,274; James P. Oliver (D) 43,577: R+3,697

2 ***Charles P. Nelson (R)** Re-elected
Vote: Nelson (R) 45,428; Thomas E. Delahanty (D) 38,973: R+6,455

3 ***Clifford G. McIntire** Re-elected
Vote: McIntire (R) 39,158; Kenneth B. Colbath (D) 25,751: R+13,407

MARYLAND

To be elected: Governor; 7 House members, 1 unopposed. Polls close: 7 P.M., EST

1952 Presidential: Eisenhower 499,424; Stevenson 395,337: R+104,087 (55.4%)

GOVERNOR:

***Theodore R. McKeldin (R)** Elected two-year term '50

Harry Clifton (Curly) Byrd (D) College Park; retired President of University of Maryland
1950: McKeldin (R) 369,807; *Preston Lane (D) 275,824: R+93,983

U. S. SENATE:

*John Marshall Butler (R)	Baltimore; 57; attorney; Judiciary, Govn't Operations Cmtes; Nov. '50 1950: Butler (R) 326,291; *Millard Tydings (D) 283,180: R+43,111 (53%)
*J. Glenn Beall (R)	Frostburg; insurance; Banking-Currency, Public Works Cmtes; Nov. '52 1952: Beall (R) 449,823; George P. Mahoney (D) 406,370: R+43,453 (52.5%)

HOUSE OF REPRESENTATIVES:

7 members to be elected, 1 unopposed

Present membership: 4 Republicans; 3 Democrats

1	*Edward T. Miller (R)	Easton; 59; attorney; Appropriations Cmte; Nov. '46
	Edward Turner (D)	Centreville; member State Senate 1952: Miller (R) 47,164; Dudley George Roe (D) 30,072: R+17,092 Eisenhower 46,199; Stevenson 34,336: R+11,863
2	*James P. Devereux (R)	Stevenson; 51; retired Marine Corps General; Armed Services Cmte; Nov. '50
	William P. Bolton (D)	Towson; House member '48-'50 1952: Devereux (R) 95,811; A. Gordon Boone (D) 60,121: R+35,690 Eisenhower 104,231; Stevenson 60,219: R+44,012
3	*Edward A. Garmatz (D)	Baltimore UNOPPOSED
4	*George H. Fallon (D)	Baltimore; 52; advertising; Public Works Cmte; Nov. '44
	Arthur W. Sherwood (R)	Baltimore; businessman 1952: Fallon (D) 54,215; Samuel Hopkins (R) 44,974: D+9,291 (54.6%) Eisenhower 60,236; Stevenson 49,437: R+60,236
5	*Frank Small, Jr. (R)	Clinton; 58; auto dealer; Public Works Cmte; Nov. '52
	Richard E. Lankford (D)	Annapolis; State Senator 1952: Small (R) 68,405; Richard E. Lankford (D) 67,366: R+1,039 (50.4%)

	Edward J. Ryan (D)	Frostburg; attorney 1952: Hyde (R) 94,603; Stella B. Werner (D) 69,050: R+25,553 Eisenhower 104,186; Stevenson 65,699: R+38,487
7	*Samuel N. Friedel (D)	Baltimore; 56; Banker; House Administration, D. C. Cmtes; '52
	Edward C. Dukehart (R)	Baltimore; real estate 1952: Friedel (D) 63,652; William F. Laukaitis (R) 60,277: D+3,375 (51.4%)

VIEWPOINTS—MARYLAND:

Republican: Democratic Party is torn apart by intra-party strife. McKeldin is a sure winner. Small, the only Republican to pick up a Democratic seat two years ago, has gathered enough strength to stay.

Democratic: At the organization level, where it really counts, the Democratic Party has healed after the Primary fight. Expect to pick up seats in 5th and 6th Districts.

Editor: For more than four years the Democratic Party in Maryland has been choosing up sides against itself. First, 5th and 6th Districts offer good contests.

MASSACHUSETTS

To be elected: Governor, 1 U.S. Senator, 14 House members, 4 unopposed. Polls close 8 P.M., EST

1952 Presidential: Eisenhower 1,551,529; Stevenson 1,230,657: R+320,-872 (54.2%)

GOVERNOR:

***Christian A. Herter (R)** Millis; editor; served 5 terms U.S. House; seeking second gubernatorial term.

Robert F. Murphy (D) Malden; Democratic leader in State House.
1952: Herter (R) 1,175,955; *Paul A. Dever (D) 1,161,499: R+14,456

U. S. SENATE:

***Leverett Saltonstall (R)** Dover; 62; attorney; Chman Armed Services Cmte; GOP floor leader; seeking second full term; elected 1944 to fill unexpired term Henry Cabot Lodge, Jr. Re-elected '48

Foster Furcolo (D) Longmeadow; 43; attorney; now State Treasurer; Served 2 terms U.S. House, '49-'52
1948: Saltonstall (R) 1,088,475; John I. Fitzgerald (D) 954,398: R+134,077 (50.5%)

***John F. Kennedy (D)** Boston; 37; Government Operations, Labor-Public Welfare Cmte; elected '52.
1952: Kennedy (D) 1,211,984; *Henry Cabot Lodge, Jr. (R) 1,141,247: D+70,737 (51.3%)

HOUSE OF REPRESENTATIVES:

10 members to be elected, 4 are unopposed

Present membership: 8 Republicans; 6 Democrats

1

***John W. Heselton (R)** Deerfield; 54; attorney; Interstate-Foreign Commerce Cmte; Nov. '44.

John J. Dwyer (D) Pittsfield; attorney; member State Legislature.
1952: Heselton (R) 101,512: William H. Burns (D) 49,379: R+52,133

2

***Edward P. Boland (D)** Springfield; 43; attorney; Post Office-Civil Service Cmte; Nov. '52.

Vernon E. Bradley (R) Springfield; City Tax Assessor.
1952: Boland (D) 88,424; Troy T. Murray (R) 81,847: D+6,577. (51.9%)

BOSTON IS TARGET IN SENATE BATTLE

City Vital in Furcolo Drive to Unseat Saltonstall, Who Has Shifted to Offensive

By JOHN H. FENTON

Special to The New York Times.

BOSTON, Oct. 23 — Senator Leverett Saltonstall, Republican, and his Democratic opponent, Foster Furcolo, have begun closing in on Boston in search of the key votes that usually decide Massachusetts elections.

Veteran political reporters assert that on Nov. 2 Mr. Furcolo must carry Boston, a Democratic stronghold, by considerably more than 100,000 votes if he expects to keep the incumbent from a third term.

Republicans traditionally have held the balance of power in the outlying communities. Six years ago, John I. Fitzgerald, an obscure opponent of Senator Saltonstall, carried Boston by 61,297. The Senator rolled up 1,088,475 throughout the Commonwealth to win his second term by a plurality of 133,977.

That year President Truman and all Democratic candidates for state office carried Massachusetts by wide margins.

Until this week, the 1954 campaign in Massachusetts had been one of the dullest in years. Senator Saltonstall had talked about his accomplishments. Mr. Furcolo had sought to find holes in them.

In the last few days the strategy has changed. Senator Saltonstall has moved to the offensive He has accused Mr. Furcolo o: "distortions," asserting that thi: is the first time in seven statewide campaigns that an opponent has used these tactics.

How much this personal touch will stir the voters from thei non-Presidential-year lethargy i: worrying both camps.

Complete registration figure: for the Commonwealth are no available at this point. [An Associated Press survey, however estimates 2,666,000 persons ar registered and otherwise qualified to vote in Massachusetts. The Boston registration is 38,23 below the 412,838 of two year ago. It is the lowest since th 364,079 in 1942.

Scattered reports from th outlying towns indicate a somewhat better showing, althoug the figures are far below recor totals. In those communities Republicans usually do well.

The Senator this year has worked harder than ever to get about the Commonwealth to let the voters see him in person.

In the last four months, Mr. Furcolo has stumped the Commonwealth.

3	*Philip J. Philbin (D)	Clinton UNOPPOSED 1952: Philbin (D) 108,743; Frank Walker (R) 52,348: D+56,395.

	James F. Gardner (D)	Quincy; union leader. 1952: Wigglesworth (R) 114,761; David Crowley (D) 74,730: R+40,031
14	*Joseph W. Martin, Jr. (R)	North Attleboro; 70; publisher; Speaker of House, 83rd, 80th Congresses; elected to Congress first, November 1924.
	Edward F. Doolan (D)	Fall River; labor leader 1952: Martin (R) 108,215; Edward F. Doolan (D) 62,554: R+45,661

VIEWPOINTS—MASSACHUSETTS:

Republican: Staking much on record of Governor Herter and on the support given the Eisenhower administration by Senator Saltonstall. Have high hopes of regaining Springfield seat lost in 1948 to the Democrats.

Democratic: Murphy and Furcolo, heading the ticket, will wage one of the most vigorous campaigns in Bay State history. This state is basically Democratic and it should return to Democratic column this fall.

Editor: Democrats have able campaigner in Furcolo. While Republicans are shooting at second district and fourth districts, Democrats are shooting at eighth and tenth districts.

MICHIGAN

To be elected: Governor; 1 U.S. Senator; 18 House members. Polls close: 8 PM, EST

1952 Presidential: Eisenhower 1,551,529; Stevenson 1,230,657: R+320,-872 (55.4%)

GOVERNOR:

***G. Mennen Williams (D)** Grosse Pointe Farms; elected two-year term '48, re-elected '50, '52

Donald S. Leonard (R) Detroit; former police official

Present membership: 13 Republicans; 5 Democrats

1 ***Thaddeus M. Machrowicz (D)** Hamtramck; 55; attorney; Public Works Cmte; Nov. '50

Rudolph G. Tenerowicz (R) Hamtramck; House member '38 and '40. Served then as a Democrat.
1952: Machrowicz (D) 118,695; Ralph G. Tenerowicz (R) 21,442: D+97,253

WILLIAMS IS SEEN MICHIGAN WINNER

Ferguson Race for the Senate Against A.F.L. Leader Is Expected to Be Close

By FOSTER HAILEY

Special to The New York Times.

LANSING, Mich., Oct. 23—A few days ago the students of Mercy College, a girls' school on the outskirts of Detroit, held a preview of the Nov. 2 election. The vote for Governor and Senator was:

Gov. G. Mennen Williams, Democrat, 110.

Donald S. Leonard, Republican, 43.

Senator Homer Ferguson, Republican, 78.

Patrick V. McNamara, Democrat, 74.

That is about the way the situation looks to political observers too. Ten days before the balloting Governor Williams appears an easy winner, and Senator Homer Ferguson and Mr. McNamara are locked in a very close race.

Professional bettors in Detroit were reported offering 15,000 votes and even money on Governor Williams to win his fourth term. They weren't quoting odds on the Ferguson-McNamara race.

Chairmen are Cautious

Neither John Feikens, Republican state chairman, nor Neil Staebler, Democratic state chairman, were giving any figures and claiming election of the tickets they are backing. They were agreed that indications now were that only about 2,000,000 of Michigan's estimated 3,500,000 registered voters would cast their ballots.

A spokesman for Mr. Staebler said the Democrats' main hope for victory for Mr. McNamara and the rest of the state ticket was that there would be more than 2,000,000 votes cast.

Mr. Feikens said that if "normal" patterns were followed this year there would be 1,200,000 upstate votes cast and 800,000 cast in Wayne County, which includes Detroit. The vote normally is 60 per cent Republican upstate and 40 per cent of the total in Wayne County. A little arithmetic brings a total of 1,040,000 Republican votes and 960,000 Democratic votes.

Democrats cite these factors, among others, as bolstering their belief that their campaign is picking up speed and votes:

¶Close working arrangements in upstate industrial areas between Congress of Industrial Organizations and American Federation of Labor officials to get out the vote and to get it cast "right." Mr. McNamara has been an A. F. L. official for over thirty years.

¶More work and better organized work by upstate Democratic groups than in many years.

¶Constantly dropping farm prices, especially for dairy products and for the calves and culls the dairy farmer is selling for beef. That there is a real revolt brewing among dairy farmers is indicated by roadway surveys being taken by newspapers.

¶Not enough improvement in the unemployment situation to bring any change in labor's vote, which will be pretty solidly Democratic this year, most observers believe.

¶Persistence of talk, and resentment, in upstate communities against the off-the-cuff remark at a press conference in Detroit by C. E. Wilson, Defense Secretary, drawing an analogy between dogs and the unemployed.

G. O. P. Cites Factors

Against these favorable Democratic factors, Republicans cite these in their favor:

¶That most of the leaders of farm groups are openly supporting the Republican ticket, and there have been no clear indications of a farm revolt against Republican policies.

¶That they have the better known and more able candidates for state and county offices and that although Governor Williams is the best known and probably the best liked candidate running on either ticket even the names of his running mates are little known.

¶The Democratic party is concentrating on the Governorship and this does not make for good relations with minor candidates.

One interesting aspect of the Michigan campaign as it nears its end is the almost complete elimination of McCarthyism and communism as issues.

The Democrats have concentrated on unemployment and farm policy with a few side flings at foreign policy "bungling." The Republicans have stressed the "back-Ike" theme.

VIEWPOINTS—MICHIGAN:

Republican:	Ferguson is in no trouble. Williams can't continue to "edge" into office. Hope to pick up 14th District.
Democratic:	Williams won in the face of Eisenhower '52 sweep. He'll win with a better margin this year. There is hope of picking up 6th, 12th, and 18th Districts.
Editor:	Closest fight will be between Williams and Leonard. House seats should remain fairly steady, although there were several turn-overs here in the off-year Republican sweep of '46.

MINNESOTA

To be elected: Governor, 1 U.S. Senator, 9 House members. Polls close: 8 PM, CST

1952 Presidential: Eisenhower 763,211; Stevenson 608,458: R+154,753 (55.3%)

2 ***Joseph P. O'Hara (R)** Glencoe; 59; attorney; Interstate, D.C. Committees; '40

Harry Sieben (D.-F.L.) Hastings; small businessman
1952: O'Hara (R) 101,641; Richard T. Malone (D.-F.L.) 48,404: R+53,237
Eisenhower 98,730; Stevenson 48,475: R+50,255

3 ***Roy W. Wier (D.-F.L.)** Minneapolis; 66; union leader; Labor Committee; '48

Edward Willow (R) Minneapolis; executive secretary YMCA
1952: Wier (D) 115,008; Edward Willow (R) 105,320: D+9,688 (52.1%)

4 ***Eugene J. McCarthy (D.-F.L.)** St. Paul; 38; educator; Banking Committee; '48

Richard C. Hansen (R) St. Paul; real estate
1952: McCarthy (D.-F.L.) 98,015; Roger G. Kennedy (R) 60,827: D+37,188
Eisenhower 76,093; Stevenson 93,783: D+17,690

5	***Walter H. Judd (R)**	Minneapolis; 56; medical doctor; Foreign Affairs Committee; '42
	Anders Thompson (D.-F.L.)	Minneapolis; member Minneapolis School Board 1952: Judd (R) 99,027; Karl Rolvaag (D.-F.L.) 68,326: R+30,701
6	***Fred Marshall (D.-F.L.)**	Grove City; 48; farmer; Appropriations Committee; '48
	Oscar J. Jerde (R)	St. Cloud; college professor 1952: Marshall (D.-F.L.) 74,041; J. Arthur Bensen (R) 66,764: D+7,277 (52.6%) Eisenhower 83,546; Stevenson 51,668: R+31,878
7	***H. Carl Andersen (R)**	Tyler; farmer; Appropriations Committee; '38
	Douglas P. Hunt (D.-F.L.)	Montevideo; probate judge 1952: Andersen (R) 87,460; James M. Youngdale (D.-F.L.) 52,144: R+35,316 Eisenhower 83,482; Stevenson 52,932: R+30,550
8	***John A. Blatnik (D.-F.L.)**	Chisholm; 43; administrator; Public Works Committee; '46
	Ernest R. Orchard (R)	Duluth; program director 1952: Blatnik (D.-F.L.) 91,465; Ernest R. Orchard (R) 54,756: D+36,709 Eisenhower 54,787; Stevenson 85,987: R+31,200
9	***Harold C. Hagen (R)**	Crookston; 53; editor; Post Office, D.C. Committees; '42
	(Mrs.) Coya Knutson (D.-F.L.)	Oklee; former state legislator 1952: Hagen (R) 70,402; Curtiss T. Olson (D.-F.L. 45,874: R+24,628 Eisenhower 64,429; Stevenson 47,784: R+16,645

VIEWPOINTS—MINNESOTA:

Republican: Humphrey has spent six years campaigning, but Bjornson is beginning to cut his lead. Anderson should win again. Hope to pick up Wier seat in Minneapolis (3rd District) and Marshall seat in 6th.

Democratic: Humphrey now looks unbeatable and the push is behind Freeman. If farm unrest shows at polls, there is a chance to pick up a Republican House seat.

Editor: Humphrey is front-running. Bjornson gaining, but as of now this state appears to favor incumbents for all posts.

MISSISSIPPI

To be elected: 1 U.S. Senator; 6 House members, all unopposed. Polls close: 6 P.M., CST

1952 Presidential: Eisenhower 112,966; Stevenson 172,566: D+59,600

GOVERNOR:

***Hugh L. White (D)** Elected four-year term in '52

U. S. SENATE:

***James Oliver Eastland (D)** Doddsville; 50; Agriculture, Judiciary Cmtes; June '41

James A. White (R) Durant
1948: Eastland had no opposition.

***John C. Stennis (D)** DeKalb; 53; Nov. '47
1952: Stennis had no opposition

HOUSE OF REPRESENTATIVES:

6 members to be elected, all unopposed

Present membership: 6 Democrats

1–6	***Thomas G. Abernethy (D)**	Okolona	UNOPPOSED

7	*Dewey Short (R)	Galena; 56; educator, minister; Chman Armed Services Cmte; '28, defeated '30, back in '34
	J. M. Lowry (D)	Springfield; businessman 1952: Short (R) 115,842; John Hosmer (D) 71,-936: R+43,906 Eisenhower 123,324; Stevenson 66,825: R+56,499
8	*A. S. J. Carnahan (D)	Ellsinore; 57; educator; Foreign Affairs Cmte; '44, defeated '46, back '48
	Dorman L. Steelman (R)	Salem; attorney 1952: Carnahan (D) 69,068; Frances E. Howard (R) 61,621: D+7,447 (52.8%) Eisenhower 67,590; Stevenson 66,037: R+1,553

9	***Clarence Cannon (D)**	Elsberry; 75; educator; ranking Democrat Appropriations Cmte; '22
	Noel Carpenter (R)	High Hill; social worker 1952: Cannon (D) 98,965; S. W. Arnold (R) 81,806: D+17,159 (54.7%) Eisenhower 95,692; Stevenson 87,161: R+8,531
10	***Paul C. Jones (D)**	Kennett; 53; publisher; Agriculture Cmte; Nov. '48
	Clyde Whaley (R)	Sedgewickville; farmer 1952: Jones (D) 71,156; Andrew Sandegren (R) 46,033: D+25,123 Eisenhower 54,591; Stevenson 65,559: D+10,968
11	***Morgan M. Moulder (D)**	Camdenton; 50; attorney; Un-American Activities Cmte; Nov. '48
	(Mrs.) L. C. Davis (R)	Boonville; housewife 1952: Moulder (D) 74,362; Max Schwabe (R) 73,104: D+1,258 (50.4%) Eisenhower 82,610; Stevenson 66,721: R+15,889

VIEWPOINTS—MISSOURI:

Republican: Hope to gain three seats here: 5th, 8th, and 11th Districts.

Democratic: Eisenhower trend couldn't upset present seats. Should pick up at least 4th and 6th, with another possible.

Editor: Watch 4th, 6th, 8th, and 11th.

MONTANA

To be elected: 1 U.S. Senator; 2 House members. Polls close: 6 P.M., MST

1952 Presidential: Eisenhower 157,394; Stevenson 106,213: R+51,181 (59.4%)

GOVERNOR:

***J. Hugo Aronson (R)** Elected to four-year term '52
1952:Aronson (R) 128,139; *John W. Bonner (D) 124,015: R+4,124 (51%)

U. S. SENATE:

***James E. Murray (D)** Butte; 78; attorney; ranking Democrat Interior-Insular, Labor, Public Welfare Cmtes; seeking 4th full term; elected Nov. '34, re-elected '36, '42, '48.

Wesley A. D'Ewart (R) Wilsall; 65; House member since June '45; Banking & Currency, Interior-Insular Cmtes.
1948: Murray (D) 125,193; Tom Davis (R) 94,458: D+30,735 (56.6%)

***Michael J. Mansfield (D)** Missoula; former House member; elected Senate '52.
1952: Mansfield (D) 133,109; *Zales Ecton (R) 127,360: D+5,749 (50.7%)

HOUSE OF REPRESENTATIVES:

2 members to be elected

Present membership: 1 Republican; 1 Democrat

1 ***Lee Metcalf (D)** — Helena; 43; attorney; Education & Labor Cmte; '52

Winfield E. Page (R) — Missoula; landscape architect
1952: Metcalf (D) 55,679; Wellington D. Rankin (R) 54,086: D+1,593 (50.7%)
Eisenhower 65,570; Stevenson 48,330: R+17,240

2 **Orvin B. Fjare (R)** — Big Timber; merchant. This is Wesley A. D'Ewart's

LeRoy H. Anderson (D) — Conrad; wheat farmer, state Senator
1952: D'Ewart (R) 90,210; Willard E. Fraser (D) 55,203: R+35,007
Eisenhower 91,824; Stevenson 57,783: R+34,041

VIEWPOINTS—MONTANA:

Republican: This is a state where Republicans should pick up a Senate seat and a House seat. D'Ewart is a younger man, well known, and he should be helped by President Eisenhower's popularity in Montana.

Democratic: Mike Mansfield licked an Eisenhower tide in Montana to unseat a Republican incumbent in '52. Murray and Metcalf will be re-elected, and Anderson will pick up the Republican 2nd District.

Editor: Montana is a wheat state. Do the voters love Eisenhower in '54 as they did in '52 after the new Benson farm bill was adopted? On that question the Senatorial race may hinge.

NEBRASKA

To be elected: Governor; 3 U.S. Senators (1 "token" term); 4 House members. Polls close: 8 PM, CST

1952 Presidential: Eisenhower 421,603; Stevenson 188,057: R+233,456 (69.2%)

GOVERNOR:

Victor E. Anderson (R) — Lincoln; former Mayor of Lincoln.

William Ritchie (D) — Omaha; lawyer
*Gov. Robert B. Crosby (R) not a candidate for re-election to the two-year term; he was defeated in the Primary for U.S. Senate.
1952: Crosby (R) 366,009; Walter R. Reacke (D) 229,700: R+136,309

U. S. SENATE:

(6-year term to fill the seat previously held by *Dwight Griswold (R) (died April 12, '54), who was elected Nov. '52 to the unexpired term of *Kenneth Wherry (R) (died Nov. '51). Seat now held by appointment by *Eva Bowring (R).)

	Carl T. Curtis (R)	Minden; House member '40-'54
	Keith Neville (D)	North Platte; served as Gov. during World War I.
		(4-year term to fill the unexpired term of *Hugh Butler (R) (died July '54). Seat now held by appointment by *Sam W. Reynolds (R).)
	Roman L. Hruska (R)	Omaha; House member '52-'54
	James F. Green (D)	Omaha; attorney
		(2-month "token" term to fill the unexpired Griswold term pending the January '55 swearing-in of the winner of the Curtis-Neville contest.)
	(Mrs.) George Abel (R)	Lincoln
	William Meier (D)	Minden; attorney

HOUSE OF REPRESENTATIVES:

4 members to be elected

Present membership: 4 Republicans

1	**Phil Weaver (R)**	Falls City; auto dealer. This is Carl T. Curtis' seat.
	Frank B. Morrison (D)	McCook; attorney 1952: *Curtis (R) 117,336; Samuel Freeman (D) 45,523: R+71,813 Eisenhower 124,102; Stevenson 49,238: R+74,864
2	**Jackson B. Chase (R)**	Omaha; judge. This is Roman L. Hruska's seat.
	James A. Hart (D)	Omaha; attorney 1952: Hruska (R) 81,185; James A. Hart (D) 63,485: R+17,700 Eisenhower 90,046; Stevenson 64,346: R+25,700
3	***Robert D. Harrison (R)**	Norfolk; 57; oil business; Agriculture Cmte; Dec. '51.
	Ernest M. Luther (D)	Hooper; cattle buyer 1952: Harrison (R) 89,879; Alan A. Dusatko (D) 35,213: R+54,666
4	***A. L. Miller (R)**	Kimball; 62; medical doctor; Chman Interior-Insular Affairs Cmte, D.C. Cmte; Nov. '42
	Carlton W. Laird (D)	Scottsbluff; business man. 1952: Miller (R) 98,032; Francis D. Lee (D) 35,628: R+62,404 Eisenhower 167,278; Stevenson 106,403: R+60,-875

VIEWPOINTS—NEBRASKA:

Republican:	If they all only were like Nebraska!
Democratic:	2nd District went Democratic in '48 Truman victory. Hope to carry it again this year.
Editor:	2nd District is a good long shot, but this is a Republican state.

NEVADA

To be elected: Governor; 1 House member at-large. Polls close: 6 P.M., PST

1952 Presidential: Eisenhower 50,502; Stevenson 31,688: R+18,814 (61.4%)

GOVERNOR:

***Charles H. Russell (R)** Ely

Vail Pittman (D) Ely; former Governor '45-'50.
1950: Russell (R) 35,609; *Pittman (D) 26,164: R+9,455

U. S. SENATE:

***Pat McCarran (D)** Reno; elected 4th six-year term '50. (58%)

***George W. Malone (R)** Reno; elected 2nd six-year term '52. (51.7%)

HOUSE OF REPRESENTATIVES:

1 member to be elected at-large

Present membership: 1 Republican

A. L.

***Clifton Young (R)** Reno; 32; lawyer; Interior Cmte; '52

Walter S. Baring (D) Reno; House member '48-'52
1952: Young (R) 40,683; *Walter S. Baring (D) 39,912: R+771 (50%)

VIEWPOINTS—NEVADA:

Republican: Governor Russell should hold and Young, a hard-working, personable campaigner, should increase his majority.

Democratic: Pittman due for a come-back and Baring, not faced with Eisenhower's vote-getting strength, should return to Congress.

Editor: Changing population has made this a 50-50 state and an unpredictable battleground.

NEW HAMPSHIRE

To be elected: Governor; 2 U.S. Senators; 2 House members. Polls close: local option

1952 Presidential: Eisenhower 166,287; Stevenson 106,663: R+59,624 (60.9%)

GOVERNOR:

Lane Dwinell (R) Lebanon; President of the State Senate

John Shaw (D) Rochester: Mayor of Rochester
*Gov. Hugh Gregg (R) not a candidate for re-election

U. S. SENATE:

(Six-year term)

***Styles Bridges (R)** — Concord; 56; businessman-attorney; President Pro Tempore of the U.S. Senate; Chairman Appropriations Committee; elected '36, '42, '48.

Gerard L. Morin (D) — Laconia; Mayor of Laconia
1948: Bridges (R) 129,600; Alfred E. Fortin (D) 91,760: R+37,840 (58.1%)

(Two-year term to replace *Robert Upton (R), who was appointed to the seat vacated by the death of *Charles Tobey (R) in July, '53. Upton defeated in the primary by Norris Cotton (R).)

Norris Cotton (R) — Lebanon; 54; House member since '46; Appropriations Committee.

Stanley J. Betley (D) — Manchester; former member State Legislature
1950: Charles W. Tobey (R) 106,142; Emmet J. Kelley (D) 72,473: R+33,669 (56%)

HOUSE OF REPRESENTATIVES:

2 members to be elected

Present membership: 2 Republicans

1

***Chester E. Merrow (R)** — Ossipee; 48; educator; Foreign Affairs Committee; '42

Thomas J. McIntyre (D) — Laconia; attorney
1952: Merrow (R) 82,689; Peter Poirier (D) 54,-746: R+27,943
Eisenhower 85,038; Stevenson 59,840: R+25,198

2

Perkins Bass (R) — Peterborough; attorney. This is Norris Cotton (Senate Candidate) seat.

George F. Brown (D) — Winchester; businessman
1952: Cotton (R) 79,861; John Guay (D) 40,373: R+39,426
Eisenhower 81,249; Stevenson 46,823: R+34,426

VIEWPOINTS—NEW HAMPSHIRE:

Republican: Safe as always. Bridges and Cotton shoo-ins. Governor and state legislature are safe.

Democratic: New Hampshire Democratic party is more active now than in recent history. Has good slate of officers and will be aided by recent Democratic triumph in Maine.

Editor: Good, solid Republican state; but the Democratic party is well organized there this year, building not so much for this election as for the future.

NEW JERSEY

To be elected: 1 U.S. Senator; 14 House members. Polls close: 8 P.M., EST

1952 Presidential: Eisenhower 1,374,613; Stevenson 1,015,902: R+358,-711 (56.8%)

GOVERNOR:

***Robert B. Meyner (D)** elected to four-year term '53
1953: Meyner (D) 962,710; Paul Troast (R) 809,068: D+153,642

U. S. SENATE:

Charles R. Howell (D) Pennington; 50; insurance; House member since '49; Labor Cmte

Clifford P. Case (R) Rahway; 50; lawyer; House member '45-'53

Sen. Robert C. Hendrickson (R) did not seek re-election
1948: Hendrickson (R) 934,720; Archibald Alexander (D) 884,414; R+50,306 (50.0%)

***J. Alexander Smith (R)** elected 2nd six-year term '52
1952: Smith (R) 1,286,782; Archibald Alexander (D) 1,011,187: R+275,595 (55.5%)

HOUSE OF REPRESENTATIVES:

14 members to be elected

Present membership: 8 Republicans; 6 Democrats

1 ***Charles A. Wolverton (R)** Camden; 74; lawyer; Chman Interstate Cmte; '26

J. Frank Crawford (D) Collingwood; attorney
1952: Wolverton (R) 118,367; Alfred Pierce (D) 96,162: R+22,205
Eisenhower 109,464; Stevenson 113,342: D+3,878

2 ***T. Millet Hand (R)** Cape May; 52; lawyer; Appropriations Cmte; '44

Clayton A. Burdick (D) Hammonton; real estate
1952: Hand (R) 79,955; Charles E. Rupp (D) 46,174: R+33,781
Eisenhower 77,296; Stevenson 54,866: R+22,430

3 ***James C. Auchincloss (R)** Rumson; 69; broker; District of Columbia and Public Works Cmtes; '42

Charles F. Sullivan (D) New Brunswick; City Sealer
1952: Auchincloss (R) 124,292; John Zimmerman (D) 67,642: R+56,650

4 **William G. Freeman (R)** Camden; former FBI agent. This is Charles R. Howell's seat

Frank Thompson, Jr. (D) Trenton; lawyer
1952: Howell (D) 84,733; John Inglesby (R) 70,076: D+14,657 (55%)
Eisenhower 80,625; Stevenson 83,233: D+2,608

JERSEY VOTE SEEN CLOSEST IN YEARS

Impartial Survey Gives Howell Edge, With G.O.P. Likely to Sweep Legislature

By GEORGE CABLE WRIGHT
Special to The New York Times.

TRENTON, Oct. 30—As the New Jersey political campaign nears its end, there is increasing evidence that the outcome of many of the contests is virtually unpredictable.

A survey of trends throughout the state leads impartial observers to believe that the balloting on Tuesday may be closer than at any time in recent years.

At stake this year is a United States Senate seat, fourteen House seats, one state Senate post and four berths in the State Assembly. Voters throughout New Jersey will also be asked to accept or reject a proposal for a $25,000,000 bond issue to finance the erection of what would be the state's first medical-dental college.

Most impartial observers give Representative Charles R. Howell, Democratic candidate for United States Senator, a definite edge over his Republican opponent, Clifford P. Case. Robert C. Hendrickson, the Republican incumbent, is not seeking re-election. Should Mr. Howell emerge victorious, he would be the first Democrat elected to the Senate from this state since 1936, and the third in forty years.

House Races Analyzed

Republicans now hold eight of the state's seats in the House of Representatives and the Democrats hold six. The Republicans are considered certain to retain their seats in the First, Second and Fifth Districts, and their opponents are equally sure of recapturing the Fourth, Tenth, Thirteenth and Fourteenth Districts.

In doubt are seats in the Third, Sixth, Seventh, Eighth, Ninth, Eleventh, and Twelfth Districts. All but the Sixth and Eleventh are presently represented by Republicans. The G. O. P. probably has its best chance of picking up a seat in the Sixth, where Representative Harrison A. Williams Jr. is struggling to retain a post won last year by a margin of 2,000 votes.

The Democrats, meanwhile, find their greatest opportunity for picking up seats in the Third, Eighth and Twelfth Districts. These are represented at the present time, respectively, by James C. Auchincloss of Rumson, Gordon Canfield of Paterson and Robert W. Kean of Livingston.

Present indications are that the Democrats will retain all of their House seats and perhaps pick up the Eighth and Twelfth District seats. On the other hand Republican candidates are expected by non-partisan observers to triumph in all of the contests for seats in the State Legislature.

Despite reports of widespread voter apathy, registration this year totaled 2,645,973, a drop of but 12,693 from the 1953 figure. Increases over last year were noted in ten counties and in most instances admittedly reflect a rise in Democratic activity.

Hudson Registration Off

By far the greatest decline occurred in Democratic Hudson County, where registration fell off by more than 13,000. However, observers point out that not all this represents lost votes, inasmuch as several thousand Hudsonites took up residence in Bergen County during the last two years.

Republicans concede but four counties to Representative Howell—Hudson, Camden, Mercer and Middlesex—and privately expect Mr. Case to win by a plurality of at least 75,000. Democratic leaders, on the other hand, privately admit that Mr. Case may carry as many as ten counties. At the same time they insist that Mr. Howell's plurality will exceed 100,000.

Impartial observers, although giving the Democratic candidate the edge in Hudson, Camden, Middlesex, Mercer, Burlington, Warren, Salem and Hunterdon, look for an extremely close contest with a Howell plurality not exceeding 30,000.

They emphasize that the Senate race will undoubtedly be decided in Hudson, Essex and Bergen Counties. Both parties privately agree that Hudson will produce a Democratic plurality ranging from 60,000 to 75,000. To offset this, sizable Republican pluralities must be obtained in the other two counties.

Indications are, however, that the voting in Essex will be extremely close and that the Republican majority in Bergen will be insufficient.

The list of candidates (asterisks denoting incumbents) and the text of the medical-dental referendum proposition follow:

U. S. SENATE

Clifford P. Case (Republican).
Charles R. Howell (Democrat).
Henry Krajewski (American Third party).
George Breitman (Socialist Workers).
Albert Ronis (Socialist Labor).

HOUSE OF REPRESENTATIVES

Republicans	Democrat
First District

VIEWPOINTS—NEW JERSEY:

Republican: New Jersey is a Republican state. Case is an outstanding candidate with a good record in the House. He should win, and three House seats in the 4th, 6th and 11th should go Republican, with at least one other a possibility.

Democratic: The Republican party, torn by scandals, is attempting to hold the Hendrickson Senate seat by running a "non-organization" man. However, even that won't help them. Howell should win, and with power enough to hold the present Democratic House seats.

Editor: Watch 4th, 6th, and 12th. Howell has even chance against Case.

NEW MEXICO

To be elected: Governor; 1 U.S. Senator; 2 House members at-large. Polls close: 7 P.M., MST

1952 Presidential: Eisenhower 132,170; Stevenson 105,661: R+26,509 (55.4%)

GOVERNOR:

Alvin Stockton (R) Raton: Speaker, State House

John F. Simms, Jr. (D) Albuquerque; lawyer; former State legislator
*Gov. Edwin L. Mechem (R) now running for U. S. Senate
1952: Mechem (R) 129,116; E. Grantham 111,-034: R+18,082

U. S. SENATE:

***Clinton P. Anderson (D)** Albuquerque; 59; Agriculture & Interior Cmtes; '48

Edwin L. Mechem (R) Santa Fe; present Governor
1948: Anderson (D) 108,269; Patrick Hurley (R) 80,226: D+28,043 (57.4%)

***Dennis Chavez (D)** Albuquerque; elected 4th six-year term '52
1952: Chavez (D) 122,543; Hurley (R) 117,168: D+5,375 (51.1%)

HOUSE OF REPRESENTATIVES:

2 members to be elected at-large

Present membership: 2 Democrats

A. L.

***John J. Dempsey (D)** Santa Fe; 75; Public Works Cmte; '34-'40, Gov. N. Mex. '43-'47, back '50

Warren R. Cobean (R) Roswell; ex-Mayor of Roswell.
1952: Dempsey (D) 121,477; Homer J. Berkshire (R) 112,297: D+9,180 (53%)

A. L.

***Antonio M. Fernandez (D)** Santa Fe; 52; Appropriations Cmte; '42

Thomas H. Childers (R) Santa Fee; businessman
1952: Fernandez (D) 119,925; Berkshire (highest Republican) 112,297: D+7,628 (52%)

VIEWPOINTS—NEW MEXICO:

Republican: A study of the figures for the last few years shows New Mexico becoming a Republican state. Mechem, a popular Governor, should unseat Anderson. Excellent chance to win both House seats.

Democratic: Clint Anderson is one of the most popular men to serve New Mexico. Teamed with veteran campaigners Dempsey and Fernandez, the state should go Democratic.

Editor: May be overshadowed by larger states, but this should be hottest political state in '54. Pay your money, take your choice.

NEW YORK

To be elected: Governor; 43 House members. Polls close: 7 P.M., EST

1952 Presidential: Eisenhower 3,952,815; Stevenson (D) 2,687,890, (Liberal) 416,711=3,104,601: R+848,214 (55.5%)

GOVERNOR:

*Governor Thomas E. Dewey (R) retiring at end of present term after serving 3 four-year terms.

Irving M. Ives (R) Norwich; 58; banker-insurance; U.S. Senator, elected Nov. '46. Member New York State Assembly 1930, Minority Leader '35, Speaker '36, Majority Leader '37-'46.

W. Averell Harriman (D) New York City; 63; financier; ambassador, Russia Oct. '43-Feb. '46, Great Britain April '46-Oct. '46; Secretary Commerce Oct. '46-Apr. '48; Roving Ambassador ECA, April '48-'53.
1950: Dewey (R) 2,811,683; Walter A. Lynch (D) 2,246,839: R+564,844

needs 1/2 mil. in N.Y.C.

U. S. SENATE

***Irving Ives (R)** Elected second six-year term 1952. Expires Jan. '59
1952: Ives (R) 3,853,934; John Cashmore (D) 2,521,736: R+1,332,198 (55.2%)

***Herbert H. Lehman (D)** New York City; 76; former governor; elected present six-year term Nov. '50
1950: Lehman (D) 2,632,313; Joseph Hanley (R) 2,367,353: D+264,960 (48.1%)

HOUSE OF REPRESENTATIVES:

VIEWPOINTS—NEW YORK:

Republican: Ives is a sure winner. May gain two seats: 6th and 7th, both on Long Island.

Democratic: The peak of Republican strength in the state is now past. Democrats should make substantial gains this November. Best chance to capture the governorship since Lehman won in 1938 (last Democratic victory). Should regain some House seats lost in the Eisenhower wave of '52: 5th, 12th and 25th.

Editor: 1952 vote established New York as solidly Republican. Watch these House districts: 5th, 6th, 7th, 12th, 24th, 25th, and 41st.

NORTH CAROLINA

To be elected: 2 U.S. Senators; 10 House members. Polls close: 6:30 P.M., EST

1952 Presidential: Eisenhower 558,107; Stevenson 652,803: D+94,696 (53.9%)

GOVERNOR:

***William B. Umstead (D)** elected four-year term '52
1952: Umstead (D) 796,306; Herbert Sewell, Jr. (R) 383,329: D+412,977

U. S. SENATE:

W. Kerr Scott (D) Haw River; former Gov. '48-'52

Paul C. West (R) Raleigh, former Judge.
This contest is for a full six-year term.

CAROLINA DISTRICT LEANS TO THE G.O.P.

Party's Only Holder of House Seat Since 1930 Is Popular in the Charlotte Area

By JOHN N. POPHAM

Special to The New York Times.

CHARLOTTE, N. C., Oct. 23—This state's Tenth Congressional District, a six-county area with the city of Charlotte as its commercial center, has received more attention from national figures of both major political parties than any other district in the South.

Captured by the Republicans in 1952, the district has been visited during the year by President Eisenhower and Adlai E. Stevenson, Democratic Presidential nominee two years ago. Both men spoke in Charlotte before crowds numbered in the thousands.

Stephen A. Mitchell, Democratic National Chairman, and Leonard W. Hall, his Republican counterpart, have made political speeches in the district.

With the general election a little more than a week away, it appears to most observers that the Republicans have a slight edge in the race.

Second of Family in House

The incumbent is Charles Raper Jonas, 49 years old, a lawyer in Lincolnton. His father, Charles A. Jonas, made similar Republican political history in North Carolina in 1928 by his election to the House of Representatives when Herbert Hoover carried this state.

Mr. Jonas, the first Republican Representative from North Carolina since his father's defeat in 1930, is one of the most popular public figures in this part of the state. In 1952 he swept every county in the district to defeat the Democratic incumbent, Hamilton C. Jones, by 21,000 votes.

His opponent this year is City Court Judge J. C. Sedberry of Charlotte.

The Democrats are vigorously pressing such issues as unemployment and reduced working hours among the district's textile mill workers and lower farm prices.

Mecklenburg County (Charlotte) usually accounts for about 62 per cent of the district's total vote. It gave Mr. Jonas a 10,000-vote majority in 1952.

Democrats Claim Negro Vote

Democratic leaders, who have concentrated on precinct organization in Charlotte, say that in 1952 Representative Jonas received 8,000 of 9,000 ballots cast by Negroes in the city. They assert that Judge Sedberry will receive some 7,500 Negro votes in this election.

Republican workers counter that Representative Jonas' popularity has its strongest bipartisan following in Charlotte, that the Negro vote will be split and that the party's organization work at precinct level in Charlotte is the equal of Democratic efforts.

Meanwhile, North Carolina Republicans have uncovered a surprisingly strong candidate in the neighboring Ninth District, a nine-county area with several traditionally Republican counties. The district was represented for forty years by the state's "Mr. Democrat," the late Robert L. Doughton.

The Ninth District seat is now held by Hugh Quincy Alexander, a Kannapolis lawyer. His Republican opponent is William E. Stephens Jr., 32 years old, of Lenoir, the son-in-law of J. E. Broyhill, wealthy furniture manufacturer and Republican national committeeman from North Carolina.

	*Sam J. Ervin, Jr. (D)	Morgantown; House member Jan. '46-Jan. '47; appointed to succeed Clyde Hoey, June '54 UNOPPOSED This contest is for the un-expired term of two years

Eisenhower 58,121; Stevenson 54,663: R+3,458

VIEWPOINTS—NORTH CAROLINA:

Republican: This is another major test of the two-party system in the South. We are hopeful that Jonas, with an excellent record in Congress, will hold this seat.

Democratic: Jonas is personally popular, but there is a capable candidate opposing him, and that seat should be recaptured by the Democrats.

Editor: A review of the Presidential vote shows the Republican strength in the Western part of North Carolina. The 10th District is the one to watch.

NORTH DAKOTA

To be elected: Governor; 2 House members, At Large. Polls close: 7 P.M., CST

1952 Presidential: Eisenhower 191,712; Stevenson 76,694: R+15,018 (71%)

GOVERNOR:

lay,Oct.25,1954) (By Bertram Benedict)

For Senator from Ohio

Two members of Congress, neighbors, are running against each other for junior Senator from Ohio. The Democrat is the incumbent, soft-spoken Sen. Thomas A. Burke, 55, graduate of Holy Cross, lawyer, mayor of Cleveland for eight years. The Republican, voluble Rep. George H. Bender, 58, businessman, represents a District made up of Cleveland suburbs.

Burke was appointed by Democratic Gov. Frank J. Lausche on Oct. 12, 1953 to fill the seat of the late Sen. Taft until an election was held. Bender is serving his seventh term in the House, non-consecutive because in 1948 he was defeated for re-election as Representative-at-large.

Bender is probably the better known to Buckeye State voters inasmuch as most of his service in the House was as Representative-at-large, elected from the state as a whole. On the other hand, Burke has the advantage of the support of popular Gov. Lausche, favored by the betting odds for his own re-election on Nov. 2.

Bender, an ardent advocate of Taft for the G.O.P. presidential nomination in 1952, has nevertheless voted almost without deviation in the last two years for the Eisenhower program, including flexible farm price supports. In the pre-Eisenhower era he was considered one of the more conservative Republicans in Congress.

Burke seems middle-of-the-road rather than "liberal." In his one year in the Senate, he voted <u>for</u> greater tax cuts than the Administration wanted, public housing, a three-year extension of the Trade Agreements act, the Bricker Amendment, and <u>against</u> more funds for T.V.A. and commercial power production by the Atomic Energy Commission. He voted for flexible farm price supports and for dairy price supports at 80 instead of 75 per cent of parity.

REPUBLICAN LOSS INDICATED IN OHIO

Polls and Economic Factors Show Democratic Victory —Farm Votes Is Vital

By FOSTER HAILEY

Special to The New York Times.

COLUMBUS, Ohio, Oct. 30—Ohio political leaders and observers were inclining today to the opinion that the Democrats on Tuesday would win the Senate seat held for fourteen years by the late Robert A. Taft.

The candidates are Senator Thomas A. Burke, four times Cleveland Mayor who is serving by appointment and is the Democratic nominee for the remaining unexpired two years of Mr. Taft's term, and George H. Bender, seven-term Republican Representative in Congress.

The one-hour visit of President Eisenhower to the Cleveland airport yesterday is not believed to have helped Mr. Bender matrially. For one thing, the President did not mention Mr. Bender by name in his brief talk there and only indicated he wanted Mr. Bender returned to Washington when the candidate called over a reporter and asked him to ask Mr. Eisenhower the direct question.

"I want him (indicating Mr. Bender by wave of the hand) in Washington quick," was the President's response to the inquiry.

Airport Crowd Small

The small crowd at the airport —estimated by Mr. Bender at 5,000, by the police at 2,500 and by reporters at less than 1,000—did not show that any great enthusiasm had been aroused among Republican workers by the President's visit.

It is the consensus that there is a lot of apathy but that it seems to be mostly among Republicans. The story everywhere is that the Democratic organizations never have worked harder. Labor organizations also have been diligent and state labor leaders are confident labor will vote solidly Democratic.

Republican apathy was particularly evident in Dayton last night where not more than 500 persons turned out to see three elephants, listen to a dance band, some singers, and Charles E. Wilson, the Defense Secretary, make his fourth speech of the campaign.

Wednesday night, Democrats filled the same hall—the University of Dayton Field House—with 5,000 persons to eat a $1.50 box supper and hear Senator Estes Kefauver speak in behalf of Thomas B. Talbot, the Democratic candidate for Congress from that district, the Third.

Admission last night was free. Several members of the small audience left before Mr. Wilson had finished his speech.

One question that still made many chary of predicting a real Democratic sweep was just how big a turnout there would be Tuesday. Ted W. Brown, the Secretary of State, estimated not more than 2,750,000 would vote. That is 1,000,000 under 1952.

Mr. Burke's main strength lies in the eight urban industrial counties where 35 per cent of the vote is cast. A small turnout Tuesday apparently would hurt his chances.

Farm Reaction Important

Another question is, how deep is rural resentmeent against the Eisenhower Administration's farm policies? Everyone admits there is much "talk" among the farmers and that any considerable defection would be fatal to Mr. Benders' chances. In 1948 it was the rural Ohio vote that gave Harry S. Truman Ohio's electors.

All economic facts and most political polls indicate a sweeping Democratic victory.

This state has 150,000 to 200,000 unemployed. The latest report of the Federal Reserve Bank of Cleveland on retail sales show every reporting station in Ohio except Portsmouth below 1953 totals through September.

Farm income is down, with dairy farmers in revolt against the cutback in crop supports from 90 to 75 per cent of parity.

One newspaper survey is reported to have shown an indicated 23 per cent swing in the rural vote. The same survey indicated a 9 per cent swing to the Democrats in urban areas and a surprising 18 per cent switch in small towns.

A newspaper reporter who has just completed a tour of the state believes that the farm survey at least comes close to the fact. Contrary to other years, he found many farmers who were willing to say they were going to vote Democratic.

Lausche Still Popular

He said he found no diminuition anywhere in the popularity of Gov. Frank J. Lausche, the Democratic Governor, who is seeking his fifth term. In 1952 the Governor carried the state by 426,000 votes while President Eisenhower was winning it by 500,000.

Governor Lausche's opponent is James A. Rhodes, 44-year-old State Auditor and former Columbus Mayor.

Despite all these indications of a Democratic trend in Ohio, no one is sure of anything except Governor Lausche's re-election.

The Democrats today still were claiming three sure victories in contests for House seats now held by the Republicans. These are the Second, Third and Fourteenth Districts, with a possible victory in sight in the Sixteenth.

They also think they have a chance to pick up the Ninth District seat in Toledo that now is held by Frazier Reams, the only Independent in the House. They concede the loss of a seat in the Fifteenth District, a normally Republican area that Robert T. Secrest relinquished to accept appointment to the Federal Trade Commission.

	Bernice S. Pyke (D)	Lakewood; former Collector of Customs 1952: *George Bender (R) 85,752; Michael O'Brien (D) 47,090: R+38,662

VIEWPOINTS—OHIO:

Republican: As past voting statistics indicate, this is a Republican state. Bulk of the House seats are already held by GOP, but both 6th and 18th should be added to the present 16 Republican seats.

Democratic: Bound to make gains in the House delegation. Among the possibilities are 2nd, 11th, 14th and 16th.

Editor: Both parties admit Senate race is toss-up, each claiming advantage. Ohio is an off-year "swing" state, with "outs" usually picking up some House seats.

OKLAHOMA

To be elected: Governor; 1 U.S. Senator; 6 House members. Polls close: 7 P.M. CST

1952 Presidential: Eisenhower 518,045; Stevenson 430,939: R+87,106 (54.6%)

Eisenhower 85,140; Stevenson 73,496: R+11,644

VIEWPOINTS—OKLAHOMA:

Republican: Eisenhower ran well here in '52. If this enthusiasm can be transferred to the House candidates, now that Ike isn't on the ticket, it should be possible to even the odds in the 2nd and 6th Districts.

Democratic: First District is traditionally Republican, but with Ike off the ticket there is an opportunity to pick it up.

Editor: Should run according to form.

OREGON

To be elected: Governor, 1 U.S. Senator, 4 House members. Polls close: 8 P.M., PST

1952 Presidential: Eisenhower 420,815; Stevenson 270,579: R+150,236 (60.5%)

GOVERNOR:

***Paul Patterson (R)** — Salem

Joseph K. Carson, Jr. (D) — Portland; former Portland Mayor
Patterson succeeded Douglas McKay in Jan. '53, when McKay resigned to become Secretary of Interior under Eisenhower.

U. S. SENATE:

***Guy Cordon (R)** — Roseburg; 64; '48, seeking 2nd full term.

Richard L. Neuberger (D) — Portland; member State Senate, writer
Cordon appointed to succeed Charles L. McNary in Mar. '44, elected Nov. '44.
1948: Cordon (R) 299,295; Willis Mahoney (D) 199,275: R+100,020 (60%)

***Wayne L. Morse (Ind.)** — Elected 2nd six-year term as Republican in '50
1950: Morse (R) 376,510; H. Latourette (D) 116,780: R+259,730 (74.8%)

Cordon v. Neuberger v. Morse v. Eisenhower

President Eisenhower hopes you'll re-elect Sen. Guy Cordon. Interior Secretary Douglas McKay has been telling his fellow Oregonians, who elected McKay their governor in 1948. This Eisenhower preference for Cordon must be due largely or chiefly to their joint Republicanism, for the senior Senator from the Beaver State has voted against the present Administration on many key issues.

Cordon was against raising unemployment benefits--trials for G.I.'s in foreign courts--a five per cent tax credit for dividends (most other G.O.P. Senators also voted against this one)--extending the reciprocal trade act for three years--admitting 200,000 more refugees. And was for the Bricker Amendment. On the other hand, he was with Eisenhower in supporting flexible (vs. rigid) farm price supports.

Sen. Cordon's Democratic opponent is Richard L. Neuberger, a "liberal," for whom the junior Senator from Oregon, Wayne L. Morse (Ind.), has been campaigning vigorously. Indeed, one Republican slogan in the campaign is, "Oregon can't afford two Morses in the Senate."

Certainly Morse and Cordon have been on opposite sides of many or most issues, even if Morse had been re-elected in 1950 on the Republican ticket. He voted differently from Cordon on five of the seven issues cited above, the same way as Cordon only on opposing the trial of G.I.'s in foreign courts and a 5 per cent tax credit for dividends.

LATE OREGON ODDS SHIFT TO THE G. O. P.

Cordon Is Given a Slight Margin Over Neuberger—Neither Side Confident

By LAWRENCE E. DAVIES

Special to The New York Times.

PORTLAND, Ore., Oct. 30—The State of Oregon is nearing its most critical election in years with this question foremost:

Will Oregonians, conditioned by custom to sending Republicans to Congress, follow their time-tested pattern, or has the "supreme effort" mustered by the Democrats been enough to give this state its first Democratic Senator in forty years?

Neither the forces of Senator Guy Cordon, 64-year-old Republican conservative, nor those of Richard L. Neuberger, 41-year-old New Deal Democrat, were overconfident today.

Some polls gave Senator Cordon the edge, others favored Mr. Neuberger. Betting odds slightly favored the Republicans, having changed this week-end from even money.

There is no doubt—Democrats agree to this—that Senator Cordon has taken the offensive during the last two or three weeks.

At the outset he called for a gentlemanly, high level campaign. Now he has delighted his backers by taking off the gloves, seriously and in caustically humorous fashion.

He has been forced into this, Cordon managers declared, by constant "baseless" charges and "distortion" of his record. Each side charges the other with campaigning on lies and smears. Personalities, war records and charges of excessive expenditures have had a tendency of late to overshadow discussion of the issues.

In support of their charges that Mr. Neuberger distorts his rival's record and indulges in half truths, the Cordon campaigners have circulated pamphlets and used full-page newspaper advertisements quoting from the Democratic nominee's writings.

The voters' attention is being called to the fact that in 1947 after a campaign for a seat in the Legislature he wrote for Harper's magazine:

"As long as the business of rounding up votes dominated my thoughts, I discovered an unconscious inhibition on what I wrote. Truth * * * became not the sole test. My eraser modified original conclusions so they would be more generally acceptable. And I was seeking only minor office. What might the inhibitors have been if I had glimpsed ahead the prospect of * * * a United States Senatorship?"

The Cordon forces, in the opinion of even some of Mr. Neuberger's close friends, hit a jackpot this week with a widely used advertisement quoting much of a column in The Oregon Statesman by its publisher, Charles A. Sprague, a former Governor of Oregon, who is personally friendly to the Democratic nominee.

The column berated "big guns" and "little guns" among the Democrats—and named Mr. Neuberger personally—for "laying down such a barrage on 'give-away' that an utterly fantastic portrait of Republicans of known integrity is being fashioned."

It denounced them as dressing up Senator Cordon and Douglas McKay, Secretary of the Interior, in "pirate" suits and classifying these officials as "yeggs out to plunder the public domain," whereas, Mr. Sprague continued, they knew these Republicans were men of "high character, conscientious in the performance of their public duty, not subject to ulterior influence."

Should Mr. Neuberger emerge the victor, the opinion is rather general that the Democrats also would break the solidly Republican national House delegation of four members by sending Mrs Edith Green a former teacher, to Washington. Her Republican opponent is Tom Lawson McCall, a radio commentator, regarded as an internationalist, whereas Senator Cordon is being attacked as failing to support the Eisenhower foreign policy. The Green-McCall contest is in the Third District, Multnomah County.

Gov. Paul Patterson, Republican, generally is picked to beat Joseph Carson, Democrat, a former Mayor of Portland.

HOUSE OF REPRESENTATIVES:

4 members to be elected

Present membership: 4 Republicans

1	*Walter Norblad (R)	Stayton; 46; lawyer; Armed Services Cmte; Jan. '46
	Donnell Mitchell (D)	Willamina; salesman 1952: Norblad (R) 124,720; Robert Jones (D) 58,796: R+65,924 Eisenhower 122,227; Stevenson 68,111: R+54,116
2	*Sam Coon (R)	Baker; 51; farmer; Appropriations Cmte; Nov. '52
	Albert C. Ullman (D)	Baker; real estate 1952: Coon (R) 57,155; John G. Jones (D) 40,-550: R+16,605 Eisenhower 63,455; Stevenson 38,291: R+25,164
3	Tom Lawson McCall (R)	Portland; radio commentator; primary winner May '54 over *Homer D. Angell (R)
	(Mrs.) Edith Green (D)	Portland; housewife 1952: Angell (R) 125,504; Alfred H. Corbett (D) 107,099: R+18,405 (54%) Eisenhower 132,602; Stevenson 107,118: R+25,484
4	*Harris Ellsworth (R)	Roseburg; 55; publisher; Rules Cmte; '42
	Charles O. Porter (D)	Eugene; lawyer 1952: Ellsworth (R) 100,970; Walter Swanson (D) 51,298: R+49,672 Eisenhower 102,311; Stevenson 57,005: R+45,306

VIEWPOINTS—OREGON:

Republican: Oregon is and has been a good Republican state; there is no reason why it won't continue that way in '54.

Democratic: With Wayne Morse aiding his campaign, Neuberger has an excellent chance to win the Senate. In the House, Mrs. Green should win over McCall, as she will get the labor and liberal vote which Angell was able to hold. There is a chance Ullman may win over Coon in the 2nd.

Editor: Hinges on whether Morse can lead enough of his supporters into the Democratic column to swing the Senatorial. Watch 3rd District.

PENNSYLVANIA

To be elected: Governor; 30 House members. Polls close: 8 P.M., EST

1952 Presidential: Eisenhower 2,415,789; Stevenson 2,146,269: R+269,-520 (52.7%)

GOVERNOR:

Lloyd H. Wood (R) Collegeville; present Lt.-Gov.

George M. Leader (D) Dover; member State Senate, farmer.

*Gov. John S. Fine (R) not a candidate for re-election.
1950: John S. Fine (R) 1,810,146; Richardson Dilworth (D) 1,722,809: R+87,337

U. S. SENATE:

***Edward Martin (R)** Washington; 75; elected 2nd six-year term '52
1952: Martin (R) 2,331,034; Guy Bard (D) 2,168,546: R+162,488 (51.6%)

***James H. Duff (R)** Carnegie; 71; elected 1st six-year term '50
1950: Duff (R) 1,820,400; *Francis Myers (D) 1,194,076: R+626,334 (51.3%)

DEMOCRATS GAIN IN PENNSYLVANIA

Analysts Cite Labor Support, Idleness, Farm Discontent in Fight for 30 Seats

By WILLIAM G. WEART

Special to The New York Times.

PHILADELPHIA, Oct. 23—The outcome of the contests for Pennsylvania's thirty seats loomed today as a major factor in the nation-wide battle for control of the House of Representatives in the Eighty-fourth Congress.

If history repeats itself, as expected, this off-year election will produce many changes in the Commonwealth delegation, now composed of nineteen Republicans and eleven Democrats. The contests are being fought hard in every district.

G. Mason Owlett, Republican National Committeeman and leader of the faction once headed by former Senator Joseph R. Grundy, looks for the Republicans to add four members to the delegation.

David L. Lawrence, Mayor of Pittsburgh and Democratic National Committeeman, believes his party will pick up five or six Representatives.

Impartial political analysts feel that the odds strongly favor the Democrats, who have the support of organized labor. They also base their deductions on Democratic strength because of unemployment in the coal fields and industrial areas, some discontent among farmers, and the fact that five Republican incumbents "just made it on Ike's coattails in 1952."

Conversely, they contend that the five Democratic incumbents who won by narrow margins two years ago should do better because President Eisenhower's name is not on the ballot.

Another imponderable stems from apathy among the voters. Both sides are making eleventh-hour drives to stir interest, the Republicans with the aid of the Citizens for Eisenhower and the Democrats with the backing of organized labor groups.

The Republican campaign is now stepping up and will reach its peak, Mr. Owlett declared, with a "decisive victory" for Mr. Wood over his Democratic opponent, State Senator George M. Leader.

In Philadelphia the Democrats contend they will re-elect five incumbents and pick up the Republican seat that Hugh D. Scott Jr., onetime Republican National Chairman, has held for twelve years.

Mr. Scott, who carried the Sixth District by 6,244 votes in 1952, is opposed by Alex Hemphill, 32-year-old attorney and son of John Hemphill, unsuccessful Democratic nominee for Governor in 1930. Both are waging aggressive campaigns.

While admitting that Mr. Scott has a real battle on his hands, the Republicans say he will win and that they will take a couple of Philadelphia seats from the Democrats.

6	*Hugh Scott (R)	Phil.; 54; lawyer; Rules Cmte; '40, in Service '41-43, back '46

VIEWPOINTS—PENNSYLVANIA:

Republican: A Democratic intra-party fight in Philadelphia should tip the scales in several House seats in favor of the Republicans. 1st through 5th Districts are vulnerable. 14th, 15th, and 21st are possibles.

Democratic: The 6th, 10th, 11th, 19th and 22nd are possibles.

Editor: It is likely that the Philadelphia friction will be smoothed over and the Democrats will retain their Philadelphia seats. Districts not listed by Republican or Democratic opinions appear quite safe.

RHODE ISLAND

To be elected: Governor, 1 U.S. Senator, 2 House members.

1952 Presidential: Eisenhower 210,935; Stevenson 203,293: R+7,642 (50.9%)

GOVERNOR:

***Dennis J. Roberts (D)**	Elected two-year term in '52.
Dean Lewis (R)	former Mayor of Newport 1952: Roberts (D) 215,587; Raoul Archambault, Jr. (R) 194,012: D+21,575

U. S. SENATE:

***Theodore Francis Green (D)** — Providence; 87 (oldest in Congress); lawyer & banker; ranking Democratic member Foreign Relations Cmte; Nov. '36

Walter Sundlan (R) — Providence; attorney
1948: Green (D) 190,287; Thomas P. Hazard (R) 130,672: D+59,615 (59.3%)

***John O. Pastore (D)** — Providence; 46; attorney; Joint Atomic, Interstate Cmtes; Nov. '50
1952: Pastore (D) 225,128; Bayard Ewing (R) 185,850; D+39,278 (54.8%)

HOUSE OF REPRESENTATIVES:

2 members to be elected

Present membership: 2 Democrats

1

***Aime J. Forand (D)** — Cumberland; 59; newspaperman; Ways & Means Cmte; Nov. '36

Arthur Carrellas (R) — Newport; attorney
1952: Forand (D) 105,404; Berthelot A. Leclaire (R) 86,523: D+18,881 (54.9%)
Eisenhower 97,832; Stevenson 98,183: D+351

2

***John E. Fogarty (D)** — Harmony; 41; union official; Appropriations Cmte; Nov. '40

James O. Watts (R) — Narragansett; former Assistant Attorney General
1952: Fogarty (D) 115,057; James O. Watts (R) 100,305: D+14,752 (53.4%)
Eisenhower 113,103; Stevenson 105,110: R+7,993

VIEWPOINTS—RHODE ISLAND:

Republican: '52 Eisenhower victory may well have changed the political complexion of this state. There is a good chance of breaking the Democratic grip this year.

Democratic: Green, Forand and Fogarty are good campaigners; we have little to worry about here.

Editor: Republicans are eyeing this Senate seat as a dark horse win. If soundings continue to be encouraging, an all-out drive will be made during the closing weeks of the campaign.

SOUTH CAROLINA

To be elected: Governor; 1 U. S. Senator; 6 House members, all unopposed. Polls close: 6 P.M., EST

1952 Presidential: Eisenhower 168,082; Stevenson 173,004: D+4,922 (50.7%)

GOVERNOR:

George Bell Timmerman (D) — Lexington; present Lieutenant-Governor
UNOPPOSED

*Governor James F. Byrnes (D). Not a candidate for re-election, under state law.

SENATE RACE HOT IN SOUTH CAROLINA

Unusual Contest Is Enlivened by 'Tissue-of-Lies' Charge Hurled by Brown

Special to The New York Times.

COLUMBIA, S. C., Oct. 30—South Carolina's unusual general election contest for the United States Senate warmed up considerably during the closing week.

Developments included:

¶A "tissue-of-lies" charge that largely evaporated, to the embarrassment of Edgar A. Brown, Democratic nominee for the seat held by the late Senator Burnet R. Maybank.

¶Gov. James F. Byrnes' announcement of open support for J. Strom Thurmond, write-in candidate who is riding the crest of a wave of popular protest over the state committee's by-passing of a primary whn a full Senate term was at stake.

¶Entrance into the active campaign of Senator Olin D. Johnston—on the side of Mr. Brown. Senator Johnston and Mr. Thurmond slugged it out in a bitter primary race in 1950 and Senator Johnston won by a fairly narrow margin.

The "who's-lying?" episode started Tuesday when Mr. Thurmond hit back at the charge that he was not a loyal Democrat by reading this quotation from a speech prepared for radio delivery by Mr. Brown in 1952:

"We voted for Thurmond and Wright four years ago because they were the candidates of the Democratic party of South Carolina and because they were the best Democrats in the race. * * *"

Mr. Brown, taking advantage of a Thurmond error in describing the source of his information, called the entire Thurmond statement "a tissue of lies" and said he never had supported Mr. Thurmond in any race. He added that Mr. Thurmond had "more gall and less ability" than any other public official he had ever known.

Mr. Thurmond came back next day with photocopies of the text of Mr. Brown's prepared speech containing the exact words he had quoted earlier—but in another newspaper a week earlier than he had first reported. Mr. Thurmond added that if Mr. Brown had not voted for him in 1948, then Mr. Brown was disloyal to the state Democratic party, which supported his States' Rights candidacy.

Mr. Brown replied yesterday that the latter part of the disputed quotation about Mr. Thurmond and Mr. Wright being the best Democrats in the race—was deleted before the speech was delivered. And in the first part, Mr. Brown said, he was speaking as chairman of the state party in saying "we supported Thurmond" and was not giving his personal stand.

Brown Complains of Byrnes

The net effect was to dissipate somewhat Mr. Brown's charge that Mr. Thurmond was a party maverick and a thinly masked Republican puppet.

Governor Byrnes' open support for Mr. Thurmond drew a plaintive statement from Mr. Brown that his "good friend," who wa best man at his wedding, ha been influenced by Republican to the point of turning his bacl on him.

Senator Johnston televised speech on behalf of Mr. Brow over a number of South Carolin stations. He said a primary wa not possible under the circun stances.

The outcome is highly unce tain. Mr. Thurmond, whose car paign started off with speed, lo some ground at mid-point b regained the initiative and t spotlight this week. The l question is whether any can date, no matter how effective issues and personal followi can win a state-wide race a write-in candidate.

BYRNES SUPPORTS THURMOND IN RACE

Opposes Party's Candidate for Senate—Cites Lack of Primary Election

Special to The New York Times.

COLUMBIA, S. C., Oct. 23—Gov. James F. Byrnes today openly threw his support behind J. Strom Thurmond, write-in candidate, in South Carolina's unusual United States Senate contest.

It was the second time the Governor had bolted the regular Democratic ticket. In 1952, both Mr. Byrnes and Mr. Thurmond supported General Eisenhower through the medium of an independent slate of Democratic electors.

The Governor said a vote for Mr. Thurmond's opponent, State Senator Edgar A. Brown, would constitute approval of the method of Mr. Brown's nomination—by state party committee instead of a primary election.

Election of Mr. Brown "may encourage other committees to deny the people the right to elect other officials," Governor Byrnes added.

Praising Mr. Thurmond as a man of courage, with a clean record in public and private life, the Governor said:

"I follow his leadership in this fight with full realization of the difficulties."

The Governor had reference to the obvious handicaps of a write-in candidate.

The general election contest grew out of the sudden death of the Democratic Senator Burnet R. Maybank, on Sept. 1, two days before the normal deadline for certification of the party's nominee. Senator Maybank had been renominated without opposition.

The state Democratic Executive Committee met a few hours after Senator Maybank's funeral. It rejected a motion for a special primary by a 31-to-18 vote and then voted unanimously to nominate Mr. Brown. Mr. Thurmond announced a few days later as a write-in candidate. Marcus Stone of Florence is a second, but minor write-in candidate.

Governor Byrnes has contended all along that a primary could have been arranged, if the committee had wanted one. After the committee had acted, he called on Mr. Brown to resign and let the committee arrange a primary. Mr. Brown refused.

The Governor's open support is expected to bolster Mr. Thurmond's chances considerably. He already has the support of several county Democratic committees and the great majority of the newspapers.

U. S. SENATE:

Edgar Brown (D) — Barnwell, 66, State Senator and Democratic National Committeeman. Brown was nominated by the State Democratic Executive Committee after the death on September 1, 1954 of *Burnett R. Maybank (D)

Strom Thurmond (D) — Aiken, 51, former governor, States Rights' candidate for President 1948. Not on ballot. Write-in candidate.

***Charles Daniel (D)** — Appointed to unexpired term ('til Jan. 5, '55) of Maybank

***Olin D. Johnston (D)** — Spartanburg; Nov. '44, '50.

HOUSE OF REPRESENTATIVES:

SOUTH DAKOTA

To be elected: — Governor; 1 U.S. Senator; 2 House members. Polls close: 5 P.M., MST

1952 Presidential: — Eisenhower 203,847; Stevenson 90,426: R+113,431 (69.3%)

GOVERNOR:

Joe J. Foss (R) — Sioux Falls; State legislator, Marine hero of World War Two

Edward C. Martin (D) — Chamberlain; rancher
*Sigurd Anderson (R), present Governor, not a candidate for re-election.
1952: Anderson (R) 203,102; Sherman Iverson (D) 86,403: R+116,689

U. S. SENATE:

***Karl E. Mundt (R)** — Madison; 54; educator; elected 1st six-year term '48

Kenneth Holum (D) — Groton; former State legislator
1948: Mundt (R) 144,084; John Engle (D) 98,749: R+45,355 (59.3%)

***Francis Case (R)** — Custer; elected 1st six-year term '50 (63.9%)

HOUSE OF REPRESENTATIVES:

2 members to be elected

Present membership: 2 Republicans

1 ***Harold O. Lovre (R)** — Watertown; 50; lawyer; Agriculture Cmte; '48

Francis G. Dunn (D) — Sioux Falls; attorney
1952: Lovre (R) 151,449; Goldie Wells (D) 69,-777: R+81,672

2 ***E. Y. Berry (R)** — McLaughlin; 52; lawyer-publisher; Labor, Interior Cmtes; '50

Ray Satterlee (D) — Martin; farmer
1952: Berry (R) 45,688; George Bangs (D) 20,-561: R+25,127

VIEWPOINTS—SOUTH DAKOTA:

Republican: State is sure Republican. Hope for a higher victory margin with such vote-getters as Mundt and Foss heading the ticket.

Democratic: Farm discontent should help chances here.

Editor: Vote statistics listed above seem to tell the story. No contest.

TENNESSEE

To be elected: Governor, unopposed; 1 U.S. Senator; 9 House members, 5 unopposed. Polls close: 7 P.M., CST

1952 Presidential: Eisenhower 446,147; Stevenson 443,710: R+2,437 (50%)

GOVERNOR:

***Frank G. Clement (D)** — Unopposed for his second two-year term.

U. S. SENATE:

***Estes Kefauver (D)** — Chattanooga; 51; attorney; Armed Services, Judiciary Cmtes; Nov. '48

Thomas P. Wall, Jr. (R) — Nashville; attorney
1948: Kefauver (D) 326,142; B. Carroll Reece (R) 166,947: D+159,195 (65.3%)

***Albert Gore (D)** — Carthage; Nov. '52
1952: Gore (D) 545,432; Hobart F. Atkins (R) 153,479: D+391,953 (74.2%)

HOUSE OF REPRESENTATIVES:

4 members to be elected; 5 have no opposition.

Present membership: 2 Republicans; 7 Democrats

1	***B. Carroll Reece (R)**	Johnson City; attorney, banker; Rules Cmte; Nov. '20, defeated '30, back '32, not a candidate '46 and '48, back '50

UTAH

To be elected: 2 House members. Polls close: 8 P.M., MST (Northwestern part of state on PST)

1952 Presidential: Eisenhower 194,190; Stevenson 135,364: R+58,826

GOVERNOR:

***J. Bracken Lee (R)**

Elected four-year term '52
1952: Lee (R) 180,516; Earl J. Glade (D) 147,-188: R+33,328

U. S. SENATE:

***Arthur V. Watkins (R)**

Orem; Nov. '46; '52
1952: Watkins (R) 177,435; Walter K. Granger (D) 149,598: R+27,837 (54.3%)

***Wallace F. Bennett (R)**

Salt Lake City; Nov. '50
1950: Bennett (R) 142,427; *Elbert Thomas (D) 121,198: R+21,229 (53.9%)

HOUSE OF REPRESENTATIVES:

2 members to be elected

Present membership: 2 Republicans

1

***Douglas R. Stringfellow (R)**

Ogden; 32; radio; Banking Cmte; Nov. '52

Walter K. Granger (D)

Cedar City; House member '41-'52; defeated Senate candidate '52
1952: Stringfellow (R) 76,825; Ernest R. McKay (D) 49,898: R+26,647
Eisenhower 76,825; Stevenson 51,086: R+25,739

2

***William A. Dawson (R)**

Salt Lake City; 51; attorney; '46, out '48, back '52.

Reva Beck Bosone (D)

Salt Lake City; attorney; '48, '50, defeated '52
1952: Dawson (R) 105,296; *Bosone (D) 95,084: R+10,212 (52.5%)
Eisenhower 117,365; Stevenson 84,278: R+33,087

VIEWPOINTS—UTAH:

Republican: Feel we can hold these seats with State government in Republican control.

Democratic: Here is where we can pick up two House seats: Granger is a sure bet, while Bosone now is running ahead.

Editor: If Republicans can bring out their '52 vote they can hold, but the off-year vote here never is good.

VERMONT

'HERO'S' EXPOSURE HURTS UTAH G.O.P.

Replacement for Stringfellow, Dr. Dixon Is Reluctant, Inexperienced, Late

Special to The New York Times.

SALT LAKE CITY, Utah, Oct. 23—Republican leaders here admit privately today that the spectacular departure from the political scene of Representative Douglas R. Stringfellow has left them small hope of holding the First Congressional District.

Mr. Stringfellow withdrew from his race for re-election after making an emotional television confession that for ten years he had invented and proclaimed a heroic war record.

His replacement on the Republican ticket is Dr. Henry Aldous Dixon, whose opponent is ex-Representative Walker K. Granger.

Dr. Dixon, 62 years old and almost wholly without political experience, was drafted by the Republican State Central Committee Monday night.

Not only is Dr. Dixon a most reluctant candidate, but his position as president of Utah State Agricultural College at Logan and ex-president of Weber Junior College at Ogden puts him in an uncomfortable position.

The circumstances surrounding his draft made Dr. Dixon appear the hand-picked candidate not only of the popular Senator Arthur V. Watkins, who was chairman of the McCarthy censure committee, but of Gov. J. Bracken Lee.

Governor Lee, momentarily at least, is highly unpopular in Weber and Carbon Counties, two of the most populous areas in the First Congressional District.

College Shifts at Issue

Governor Lee who has pressed for the closing of Carbon Junio College and transfer of Webe College to the Church of Jesu Christ of Latter-Day Saints. Th closing and transfer of the col leges remains a hot issue in th campaign—with both Weber an Carbon County voters certain t resoundingly defeat the colleg status change propositions ap pearing on the Nov. 2 ballot.

Mr. Granger, a veteran twelve years in the House pri to the 1952, Eisenhower swee already is linking Dr. Dixon wi Governor Lee and the colle issue. The G. O. P. obviously h sought to lessen this possibili by selecting a distinguished ed cator and opponent of the "c lege giveaway" as their can date.

Meantime, what with the ne to tear down Stringfellow ca paign posters, prepare campai literature, revise television a radio announcements and t like, Dr. Dixon's candidacy barely "getting off the ground.

Mr. Granger, a sheepman, ha been conceded a majority of th votes in the State's ranching re gions even prior to the Stringfellow exposé. Democrats now expect he will do at least as well as the new Republican candidate in the cities of Ogden and Price—main population centers of Weber and Carbon counties.

A Sunday "nonpolitical" visit by Vice President Richard M. Nixon to Salt Lake City, in which he will attend a tabernacle concert by the famed Mormon Choir, should help the G. O. P. hold a hard core of "church votes," a major factor in any Utah election.

But a victory for Dr. Dixon Nov. 2, after a campaign of little more than a week, would rank as a sizable political miracle.

HOUSE OF REPRESENTATIVES:

10 members to be elected

Present membership: 3 Republicans; 7 Democrats

1	*Edward J. Robeson, Jr. (D)	Newport News — UNOPPOSED
2	*Porter Hardy, Jr. (D)	Churchland; 51; businessman; Armed Services Cmte; Nov. '46

Near D.C.

VIEWPOINTS—VIRGINIA:

Republican: Eisenhower brought Virginia into the ranks of a two-party state in '52. Broyhill, Wampler and Poff have made good, impressive records in Congress, and should be able to hold the gains of '52. Admittedly they will have a harder fight than two years ago.

Democratic: The romance between some Virginia Democrats and Ike ended many months ago. Democrats will regain all three Republican House seats.

Editor: Strength of the three Republican incumbents seems to be in this order: Poff, Broyhill, Wampler. Will the old-line conservative Democrats return to the fold?

WASHINGTON

To be elected: 7 House members; one At Large. Polls close 8 PM, PST

1952 Presidential: Eisenhower 599,107; Stevenson 492,845: R+106,262 (54.3%)

	Al Canwell (R)	Spokane; former State Senator 1952: Magnuson (D) 515,213; Al Canwell (R) 504,783: D+10,430 (50.5%)

VIEWPOINTS—WASHINGTON:

Republican: Concentrating on the only major state-wide office, the Congressional At-Large seat. We expect to win it while holding the other four GOP Districts.

Democratic: Should gain two seats here. Until the Ike sweep of '52, both the 1st and 2nd Districts were Democratic. In '52, however, Hugh Mitchell gave up the 1st to run for Governor, and Henry Jackson left the 2nd to run for the Senate. This year we believe both these Districts will go Democratic.

Editor: When Democrats talk of controlling the next House they usually point to expected gains in Washington State. However, a Republican State administration will make them fight for any such gains down to the second the polls close.

WEST VIRGINIA

To be elected: 1 U.S. Senator, 6 House members. Polls close: 7:30 PM, EST

1952 Presidential: Eisenhower 419,970; Stevenson 453,578: D+33,608

GOVERNOR:

***William C. Marland (D)** Elected four-year term '52. Gov. cannot succeed himself.
1952: Marland (D) 454,898; Rush D. Holt (R) 427,629: D+27,269

U. S. SENATE:

	*Matthew M. Neely (D)	Fairmont; 79; ranking Democratic member D. C. Cmte; elected House '13; elected Senate '22; defeated '28; elected Senate '30; re-elected '36; resigned to become Gov. '41; elected House '44; elected Senate '48.
	Tom Sweeney (R)	Wheeling; attorney. 1948: Neely (D) 435,354; *W. Chapman Revercomb (R) 328,534: D+106,820 (57%)
	*Harley Martin Kilgore (D)	Beckley; 61; attorney; Appropriations, Judiciary Cmtes; '40, '46, '52. 1952: Kilgore (D) 470,019; Revercomb (R) 406,554: D+63,465 (53.6%)

HOUSE OF REPRESENTATIVES:

6 members to be elected

Present membership: 1 Republican; 5 Democrats

1	*Robert H. Mollohan (D)	Fairmont; 45; administrator; Govn't Operations Cmte; Nov. '52
	Arch A. Moore, Jr. (R)	Moundsville; attorney 1952: Mollohan (D) 72,218; Francis J. Love (R) 64,216: D+8,002 (52.9%) Eisenhower 65,605; Stevenson 70,615: D+5,010
2	*Harley O. Staggers (D)	Keyser; 47; educator; Interstate Cmte; Nov. '48
	Albert M. Morgan (R)	Morgantown; prosecuting attorney 1952: Staggers (D) 67,172; Kermit R. Mason (R) 63,320: D+3,852 (51.5%) Eisenhower 67,362; Stevenson 62,255: R+5,107
3	*Cleveland M. Bailey (D)	Clarksburg; newspaperman; Education-Labor Cmte; Nov. '48
	Joseph B. Lightburn (R)	Jane Lew; merchant. 1952: Bailey (D) 71,926; Frank Love (R) 62,839: D+9,087 (53.4%) Eisenhower 65,244; Stevenson 69,220: D+3,976
4	*Will E. Neal (R)	Huntington; 79; medical doctor; Public Works Cmte; Nov. '52
	M. G. Burnside (D)	Huntington; educator; House member '48-'52 1952: Neal (R) 82,104; *Burnside (D) 71,819: R+10,285 (53.3%) Eisenhower 85,422; Stevenson 68,092: R+17,330
5	*Elizabeth (Mrs. John) Kee (D)	Bluefield; Veterans Cmte; elected July '51 to succeed her late husband.
	Fred O. Blue (R)	Bluefield; attorney 1952: Kee (D) 83,653; Cyrus H. Gadd (R) 47,519: D+36,134 Eisenhower 52,223; Stevenson 78,641: D+26,418
6	*Robert C. Byrd (D)	Sophia; 36; House Administration Cmte; Nov. '52
	Pat B. Withrow, Jr. (R)	Charleston; businessman 1952: Byrd (D) 104,387; Latelle M. LaFollette (R) 83,429: D+20,958 Eisenhower 84,114; Stevenson 104,755: D+20,641

VIEWPOINTS—WEST VIRGINIA:

Republican: Hope to gain at least three House seats here: 1st, 2nd and 3rd District. Neely has been beaten before and this might be the year to do it again. The age issue will play a strong part in the campaign.

Democratic: Burnside should regain his seat from Neal, a colorless campaigner. Democrats can hold all other seats. Neely is in no trouble.

Editor: Republicans have used West Virginia as a "test" campaign area. It is near enough to Washington to import speakers, yet far enough away to remain untouched by Potomac "fever." This testing may drain off some normally Democratic votes. The first four House districts could swing either way.

WISCONSIN

To be elected: Governor; 10 House members. Polls close: 8 PM, CST

1952 Presidential: Eisenhower 979,744; Stevenson 622,175: R+357,569 (61%)

GOVERNOR:

***Walter J. Kohler (R)** Sheboygan; 50; manufacturer; elected first 2-year term 1950

William Proxmire (D) Blooming Grove; 38; executive.
1952: Kohler (R) 1,009,171; William Proxmire (D) 601,844: R+407,327.

U. S. SENATE:

***Alexander Wiley (R)** Chippewa Falls; 70; attorney; Chman Foreign Relations Cmte; first elected '38; 3rd term
1950: Wiley (R) 595,283; Thomas E. Fairchild (D) 515,539: R+79,744 (53.3%)

***Joseph R. McCarthy (R)** Appleton; 45; attorney; Chman Government Operations Cmte, first elected '46; 2nd term
1952: McCarthy (R) 870,444; Thomas E. Fairchild (D) 731,402: R+139,042 (54.2%)

HOUSE OF REPRESENTATIVES:

10 members to be elected.

Present membership; 8 Republicans; 2 Democrats.

1 ***Lawrence H. Smith (R)** Mt. Pleasant; 62; attorney; Foreign Affairs Cmte; August '41.

Edward A. Krenzke (D) Racine; District Attorney.
1952: Smith (R) 99,742; Arnie W. Agnew (D) 68,269: R+31,473
Eisenhower 102,237; Stevenson 68,935: R+33,302

2	***Glenn R. Davis (R)**	Waukesha; 40; attorney; Appropriations Cmte; August '41
	Gaylord A. Nelson (D)	Madison 1952: Davis (R) 116,542; Horace W. Wilkie (D) 68,665: R+47,877 Eisenhower 113,277; Stevenson 72,843: R+40,434
3	***Gardner R. Withrow (R)**	La Crosse; 62; union official; Post Office-Civil Service Cmte; Nov. '30
	Joseph A. Seep (D)	Westford; farmer 1952: Withrow (R) 96,908: Edna Brown (D) 32,165: R+64,743 Eisenhower 92,156; Stevenson 41,327: R+50,829
4	***Clement J. Zablocki (D)**	Milwaukee; 42; educator; Foreign Affairs Cmte; Nov. '48
	John C. Schafer (R)	Milwaukee; elected 1922, served five terms, defeated '32, '34, re-elected '38, defeated '40, 42 and '52. 1952: Zablocki (D) 131,098; John C. Schafer (R) 72,869: D+58,229
5	***Charles J. Kersten (R)**	Milwaukee; 52; attorney; Education Labor Cmte, elected '46, defeated '48, re-elected '50, '52.
	Henry S. Reuss (D)	Milwaukee; 42; attorney; unsuccessful candidate for '52 Democratic Senate nomination 1952: Kersten (R) 112,048; Andrew Biemiller (D) 105,013: R+7,035 (51.6%)
6	***William K. Van Pelt (R)**	Fond du Lac; 49; businessman; Banking-Currency Cmte; Nov. '50.
	Russell S. Johnson (D)	Eldorado; union official 1952: Van Pelt (R) 103,464; Ralph A. Norem (D) 40,910: R+62,554 Eisenhower 100,981; Stevenson 46,527: R+54,454
7	***Melvin R. Laird (R)**	Marshfield; 33; businessman; Appropriations Cmte; Nov. '52.
	Kenneth E. Anderson (D)	Stevens Point; attorney 1952: Laird (R) 95,049; Ernest Kluck (D) 36,387: R+58,662
8	***John W. Byrnes (R)**	Green Bay; 41; attorney; Ways and Means Cmte; Nov. '44
	Jerome J. Reinke (D)	Kewaunee; registrar of deeds 1952: Byrnes (R) 114,183; Robert C. Schultz (D) 40,980: R+73,203
9	***Lester R. Johnson (D)**	Black River Falls; '53; attorney; Veterans' Affairs Cmte; Oct. 13 '53
	William E. Owen (R)	Menomonie; State Senator 1952: *Merlin Hull (R) 81,258; Kent L. Pillsbury (D) 43,437: R+37,821 (Hull died in office '53)
10	***Alvin E. O'Konski (R)**	Mercer; 50; publisher; Armed Services Cmte; Nov. '42
	Basil G. Kennedy (D)	Mellen; attorney 1952: O'Konski (R) 73,527; Roland Kennenberg (D) 35,597: R+37,930

VIEWPOINTS—WISCONSIN:

Republican: This is a solid Republican state. The 9th district which was lost in a special election last year will be regained and there is reason to believe the other Democratic seat in Milwaukee (4th district) will go Republican.

Democratic: Running for governor two years ago Proxmire polled the greatest number of Democratic votes in history. He has been campaigning ever since and will give Kohler a run for his money. Zablocki is safe, but admit that Johnson will have to fight to survive. Sure he will. Kersten seat should be taken by Reuss, an excellent campaigner. Watch First District.

Editor: Republicans are as sure of taking Johnson's 9th district as the Democrats are of taking Kersten's 5th district. The first district is only other possible tight contest.

WYOMING

To be elected: Governor; 1 U.S. Senator; 1 House member At Large. Polls close: 7 P.M., MST

1952 Presidential: Eisenhower 81,047; Stevenson 47,934: R+33,113 (62.7%)

GOVERNOR:

Milward L. Simpson (R) Casper; attorney

William Jack (D) Casper; Vice-President Rocky Mt. Oil and Gas Association, former State House Speaker

*C. J. Rogers, acting Gov. since Republican Gov. Frank Barrett was elected to the U.S. Senate in '52, was defeated in Republican primary by Simpson.

1950: Barrett (R) 54,492; John J. McIntyre (D) 41,987: R+12,505

U. S. SENATE:

William H. Harrison (R) Sheridan; 58; attorney; House member since Nov. '50

Joseph C. O'Mahoney (D) Cheyenne; 70; attorney; appointed to Senate Jan. '34, elected to full terms '34, '40, '46; defeated '52.

This seat now is held by appointment by E. D. Crippa (R) of Rock Springs. It was vacated by the death of Senator Lester C. Hunt (D) on June 19, '54.

1948: Hunt (D) 57,953; *Edward V. Robertson (R) 43,527: D+14,426 (57.1%)

***Frank A. Barrett (R)** Lusk; 62; attorney; former House member and Governor; Nov. '52

1952: Barrett (R) 67,176; *O'Mahoney (D) 62,921: R+4,255 (51.6%)

HOUSE OF REPRESENTATIVES:

1 member to be elected at large

Present membership: 1 Republican

A.L.

E. Keith Thomson (R) — Cheyenne; State Representative. This is William H. Harrison's seat.

Sam Tully (D) — Rawlins; Mayor of Rawlins
1952: Harrison (R) 76,161; Robert R. Rose, Jr. (D) 50,559: R+25,602

VIEWPOINTS—WYOMING:

Republican: Harrison has been before the voters of the State twice and won handily each time. He is the grandson and great-great-grandson of Presidents Benjamin Harrison and William Henry Harrison. He should win over O'Mahoney and both Simpson and Thomson will be elected.

Democratic: Unrest among the farmers bolsters O'Mahoney's chances. He was swept out in '52 by the Eisenhower tide, which now has receded very noticeably in Wyoming.

Editor: Democrats have better chance of winning Senate than House. But as of now, Republicans have the edge for both.

O'MAHONEY HOLDS LEAD IN WYOMING

G.O.P., However, Is Pressing Furious Windup Campaign in the Senate Contest

By WILLIAM S. WHITE

Special to The New York Times.

CHEYENNE, Wyo., Oct. 23—The Democrats have a good chance of picking up a seat in Wyoming in the national struggle for control of the next Senate, but heavy battling yet remains.

Every objective indicator suggests that former Senator Joseph C. O'Mahoney is ahead of the Republican candidate, Representative William Henry Harrison.

At stake is the seat held by E. D. Crippa, Republican, who was appointed to serve in place of the late Senator Lester C. Hunt, Democrat, who shot himself in July. Thus, a victory for Mr. O'Mahoney would mean a net gain for the Democrats in the Senate of the Eighty-fourth Congress.

While Mr. Harrison is generally believed to be running behind today—leading Republicans privately acknowledge as much—the Republicans are putting on a furious final campaign that has the Democrats somewhat worried.

At the heart of the campaign is an effort to link Mr. O'Mahoney, one of the state's most prominent Roman Catholic laymen, to "leftwingism."

Law Practice an Issue

This effort is not so much by Mr. Harrison or the regular state Republican organization as by avowedly unofficial sources for whom the chief spokesman is Martin Littleton, a Cody attorney, who also is attacking Senator James E. Murray, Democrat of Montana, in radio and broadcasts beamed into that state.

Ralph Linn, the Republican state chairman, says he neither endorses nor disavows Mr. Littleton, who is calling Mr. O'Mahoney "foreign agent 783," citing that since he returned to private law practice he has represented the United States Cuban Sugar Council.

Mr. Littleton's "foreign agent" charge, however, is so worded—for example, in full-page newspaper advertisements—as to stress that Mr. O'Mahoney has been one of the attorneys for Owen Lattimore. Mr. Lattimore, an early target of Senator Joseph R. McCarthy, Republican of Wisconsin, has been reindicted for perjury in denying any association with Communist intrigue. The courts threw out the heart of the original indictments.

Mr. O'Mahoney has not only refused to apologize for legally defending Mr. Lattimore, but in speeches has gone further to make two traditional points:

1. That Mr. Lattimore is entitled to the presumption of innocence until and unless a jury finds otherwise.
2. That Anglo-Saxon justice and the United States Constitution require that the accused writer on Far Eastern affairs have counsel of his own choosing and his day in court.

This explanation, however, has not gone too well with some in Wyoming and Mr. O'Mahoney's principal advisers have now urged him to avoid asserting his right as a private attorney to represent Mr. Lattimore.

While Mr. Harrison is seeking some self identification with President Eisenhower, he is on the whole running on the contention that Mr. O'Mahoney is too liberal and has, since his defeat for re-election in 1952, spent too much time in Washington and not enough in Wyoming.

As to other races here, few Democrats really believe that Mr. Harrison's Republican seat in the House of Representatives can be taken by their party. The expectation is that in that at-large contest Keith Thompson, the Republican nominee, will prevail over Sam Tully, Democrat, barring something approaching a landslide victory for Mr. O'Mahoney.

NOTES FOR NOVEMBER

ON ELECTION NIGHT, keep an eye on returns from the following areas, which usually are among the first to report. If a majority of these races appear to be going to the same party, a trend favoring that party would be indicated which might hold up nationwide:

Connecticut: Gubernatorial, and 1st (Hartford) House seat

Pennsylvania: Sixth House seat, in Philadelphia (Hugh Scott) (R)

Virginia: Tenth House seat (Joel Broyhill) (R), which borders Washington, D. C.

Maryland: Fifth House seat (Frank Small) (R).

● ● ●

LITTLE PATRONAGE hangs on the change of House and Senate control. Not more than 450 jobs would be available in the Senate and about 300 jobs in the House.

● ● ●

THE 83RD CONGRESS was brightened by the largest number of feminine members in history. Including Mrs. Betty Farrington (R), non-voting Delegate from Hawaii who was elected to succeed her late husband, Delegate Joseph Farrington (R), there are fourteen. Nine are Republicans; 5 are Democrats.

Women in the Senate:

Eva Bowring (R), Nebraska; Margaret Chase Smith (R), Maine.

Women in the House:

Frances P. Bolton (R), Ohio; Vera Buchanan (D), Pennsylvania; Marguerite Stitt Church (R), Illinois; Cecil M. Hardin (R), Indiana; Elizabeth Kee (D), West Virginia; Edna F. Kelly (D), New York; Gracie Pfost (D), Idaho; Edith Nourse Rogers (R), Massachusetts; Katharine St. George (R), New York; Leonor Sullivan (D), Missouri; Ruth Thompson (R), Michigan; Betty Farrington (R), Hawaii.

● ● ●

IN 1952, Republican Presidential candidate Dwight D. Eisenhower carried 76 more Congressional Districts than his own Republican party.

● ● ●

DEMOCRATS HAVE THE JUMP in the House elections. The 13 Southern states have a total of 120 seats in the House. The Republicans will win only about five of these, giving the Democrats a head start of 115 seats. Thus, the Democrats have only to pick up 102 seats, or about one-third of the 215 seats outside the South, to have the 218 necessary to win control of the House. The Republicans must win at least 213 seats outside the South, or more than two out of every three in the North, to control the House.

THE "HIDDEN VOTE" may hold the key to the election outcome. People came out and voted two years ago who had never taken part in an election before. For example, the incumbent Democrat in Arizona's first Congressional District, John R. Murdock, polled more than 56,000 votes in 1952. This was the greatest vote total he ever registered in nine elections, dating from 1936, yet he was defeated by almost 10,000 votes. Will this hidden vote go to the polls again this year? If it does and if it still favors Eisenhower it could well cancel out the traditional slump of the "ins" during an off year.

• • •

ALL STATES ELECT governors this year except: Delaware, Illinois, Indiana, Kentucky, Louisiana, Mississippi, Missouri, Montana, North Carolina, Utah, Virginia, Washington and West Virginia.

• • •

ALL STATES HOLD ELECTIONS for state legislatures this year except Kentucky, Louisiana, Mississippi, and Virginia.

• • •

IF THE DEMOCRATS win control of the House and Senate the probable committee chairmen would line up like this:

SENATE:

Agriculture: Allen J. Ellender (La.)
Appropriations: Carl Hayden (Ark.)
Armed Services: Richard B. Russell (Ga.)
Banking, Currency: J. W. Fulbright (Ark.)
Finance: Walter F. George (Ga.)
Foreign Relations: Theodore Green (R.I.)
Government Operations: John L. McClellan (Ark.)
Interior, Insular: Clinton P. Anderson (N.M.)
Interstate: Warren G. Magnuson (Wash.)
Judiciary: Pat McCarran (Nev.)
Labor, Public Welfare: James E. Murray (Mont.)
Post Office, Civil Service: Olin D. Johnston (S.C.)
Public Works: Dennis Chavez (N.M.)
Rules: Guy M. Gillette (Iowa)

HOUSE:

Agriculture: Harold D. Cooley (N.C.)
Appropriations: Clarence Cannon (Mo.)
Armed Services: Carl Vinson (Ga.)
Banking, Currency: Brent Spence (Ky.)
Education, Labor: Graham A. Barden (N.C.)
Foreign Affairs: James P. Richards (S.C.)
Government Operations: William L. Dawson (Ill.)
House Administration: Omar Burleson (Tex.)
Interior, Insular: Clair Engle (Cal.)
Interstate: J. Percy Priest (Tenn.)
Judiciary: Emanuel Celler (N.Y.)
Merchant Marine: Herbert C. Bonner (N.C.)
Post Office, Civil Service: Tom Murray (Tenn.)
Public Works: Charles Buckley (N.Y.)
Rules: Howard W. Smith (Va.)
Un-American Activities: Francis Walter (Pa.)
Veterans: Olin E. Teague (Tex.)
Ways and Means: Jere Cooper (Tenn.)

BATTLEGROUND STATES FOR CONTROL OF THE 84th CO

Numerals in states (1) designate the number of "marginal" House seats in that state. (S) denotes states where there are key Senate races.

Politicians Seeking Keys To Presidential Campaign In Outcome of Vote Nov. 2

Returns from New York, California, Illinois, Ohio, Michigan and New Jersey Will Get Close Scrutiny — Each of These States Has a Presidential or Vice-Presidential Possibility Involved in Election.

By RAYMOND P. BRANDT
Chief Washington Correspondent of the Post-Dispatch.

WASHINGTON, Oct. 23.

LEADERS of both parties, and objective students of politics, are looking beyond election day, Nov. 2, to discern the personalities and issues that are likely to be in the forefront of the 1956 presidential campaign.

This is not as speculative and unrealistic as might appear on the surface. Practicing politicians are, of course, primarily concerned in winning the battles they are currently waging and publicly deny that they are thinking two years ahead. But each battle is only part of an unending war for which tentative plans must be made.

Impartial observers—if there are any in politics—study the constantly changing pattern of politics and government because nothing really new has much chance of immediate success in a democracy. Issues and personalities need time for experimentation, development and public acceptance. Trends and changes can often be spotted and charted before they become obvious.

* * *

BY SIMPLE ARITHMETIC and ample precedent, the election returns which will get the closest study for prospects in 1956 will be those from New York, California, Illinois, Ohio, Michigan and New Jersey.

Each of these states has a presidential or vice presidential possibility on the ticket or in office. They have a total of 165 presidential electoral votes, or a little more than 30 per cent of the nation's 531. They represent more than 60 per cent of the required 266 electoral votes.

Although Republican Gov. Thomas E. Dewey of New York, after two unsuccessful tries, has taken himself out of the 1956 presidential contest, the state, which casts 45 electoral votes, has two Democrats who will be powerful in the party national convention if they win in state contests. They are Averell Harriman, New and Fair Dealer, who is running against Republican Senator Irving M. Ives for the governorship; and Representative Franklin D. Roosevelt Jr., who is seeking the Attorney Generalship against Republican Representative Jacob J. Javits.

Harriman is ahead of Ives in the New York Daily News poll and betting odds have switched from 8 to 5 in favor of Ives to 6 to 5 in favor of Harriman. In the 1952 Democratic National Convention, Harriman took his candidacy for the presidential nomination seriously, although most politicians thought he had been given nearly all the New York delegates as a "favorite son" device to keep the delegation in deliverable shape. He received 123½ votes on the first ballot but after he lost a couple on the second roll call he withdrew. Although pressured by the "young Turks" to throw his support to Senator Estes Kefauver of Tennessee, he turned his delegates over to his old personal friend, Adlai Stevenson.

If he wins the governorship for a four-year term, he and Carmine De Sapio, the Tammany Hall leader who arranged his nomination for this office, will be the co-bosses of the New York delegation to the National Convention in 1956. If he loses this first attempt at elective office, De Sapio will try to take over the delegation.

The other New Yorker with something to say in 1956 is young Roosevelt, who teamed up with Democratic Senator Lehman of New York, Gov. G. Mennen Williams of Michigan and Senator Paul Douglas of Illinois for Kefauver for President in 1952.

Roosevelt was a maverick at the recent Democratic State Convention. He tried for the governorship nomination with the support of upstate leaders but De Sapio and the other New York City bosses were too much for him. He said that he would not take second place on the ticket, presumably because the lieutenant governorship is tied up with the governorship on the ballot as a single shot proposition. To the surprise of many local politicians, however, he accepted the nomination for the Attorney Generalship. This office has a separate place on the hand ballots and voting machines, and the voters for Roosevelt—a magic name in New York—can be compared with those for Harriman.

If Harriman is defeated and Roosevelt wins, the young man—he is 40 years old—will be in a favorable position to argue that the city bosses made a great mistake and that he, not Harriman, should have been given the governorship nomination.

In recent history nearly every New York governor has been regarded as a possible presidential candidate and several have reached the White House. But in 1956 Harriman will be 64 years old, while Roosevelt Jr. will be only 42. For many persons these figures might make Harriman too old and Roosevelt too young for the presidency. There is the vice presidential nomination, however, and a precedent was established when Theodore Roosevelt took the second place on the Republican ticket in 1900. Because of its 45 electoral votes and its nearly 100 votes in a Democratic National Convention, New York is definitely a state to watch.

* * *

FOR REPUBLICANS, the place to watch is California, although none of the presidential possibilities is up for election this year. This state, with its 32 electoral votes, is important because Vice President Richard Nixon and Republican Senator William Knowland, the Senate Majority Leader, are jockeying for position in the event President Eisenhower will not accept renomination.

The stakes this year are the governorship, the senatorship and 30 House seats. The outcome of these elections could greatly influence the trends, local and national, to Nixon or Knowland.

In his present official position, Nixon is heir-apparent to the President, and many believe that Mr. Eisenhower, should he decline renomination, would back the Vice President for the top leadership. Substance is given to this guess by the designation of Nixon as the Administration's spokesman in place of Mr. Eisenhower for senatorial and congressional campaigns where extraordinary help is needed. He has criss-crossed the continent and made valuable local political friendships that would serve him well in 1956 if the President should insist on retirement.

The California political situation this year is more mixed up than usual with Nixon, Knowland and Goodwin Knight, the gubernatorial candidate, trying to take over the Republican organization left by former Gov. Earl Warren when he came to Washington to be Chief Justice of the United States. The senatorial contest is between Republican Senator Thomas H. Kuchel and Democratic Representative Samuel W. Yorty.

In Illinois, as in California, the immediate campaign has an indirect but influential bearing on the national elections two years away, particularly for former Gov. Stevenson, at present the leading prospect for the Democratic presidential nomination. If his friend, Democratic Senator Paul H. Douglas, wins re-election over Republican lobbyist Joseph T. Meek, Stevenson's stock will go up nationally because a Democratic victory would be interpreted as a great trend away from 1952, when Republican Eisenhower carried the state by almost 450,000 majority over its own Governor.

If Meek should win, credit for the victory would go to Republican Gov. William Stratton and his political machine, said to be one of the most efficient in the country. A Republican victory would draw attention to the ambitious 40-year-old Governor and the state's 27 electoral votes.

* * *

THREE OTHER GOVERNORS are believed to have high ambitions: Democrats Frank Lausche of Ohio, who is seeking a fifth term this year; Williams of Michigan, up for a fourth term, and Robert B. Meyner of New Jersey, who was elected to his first term last year.

Lausche, 59 years old, is running on the same ticket as his appointee to the Senate, Thomas A. Burke, who succeeded the late Republican Senator Taft. The Governor has always been a lone-wolf runner and refused to associate himself with Presidents Roosevelt and Truman in their campaigns. Political pollsters assert he will be a walk-in for an unprecedented fifth term, and if he carries Burke in with him in this election, politicians are certain to think of him as a presidential prospect in 1956, primarily because he has repeatedly demonstrated he can win normally Republican Ohio and its 25 electoral votes.

Williams is in a similar situation in Michigan, which has 20 electoral votes. His running mate is Patrick V. McNamara, an AFL official who is trying to unseat Republican Senator Homer Ferguson. Williams is touted as an easy winner for re-election but the McNamara-Ferguson contest is said to be close. Even without a combined Williams-McNamara victory, Williams, a leader of the "Young Turks" in the 1952 Democratic National Convention, is a person to be considered for first or second place in 1956.

Gov. Meyner is not up for re-election this year but he and his newly rehabilitated Democratic machine is backing Representative Charles R. Howell for Senator against Republican Representative Clifford P. Case.

New Jersey has only 16 electoral votes but a former Democratic governor, Woodrow Wilson, was elected President in 1912. No incumbent is likely to forget that, especially one like Meyner who will be 48 years old in 1956. There is already talk in Trenton about his chances for the first place and when a vice presidential nomination is mentioned, his supporters quote an anonymous politician that "only a creep would seek to be Veep." A substantial majority for Howell over Case would direct attention to New Jersey and its present Governor, his record and his political machine.

In the weeks and months after the election the politicians and political students will scrutinize the local and state returns to see if they can find the winning and losing issues on a national scale. Spotty unemployment and decline in farm income are the talking points in many campaigns this year; public-versus-private-power is important in the Pacific West; centralization of Government, Government economy and taxes are issues in other places; President Eisenhower's popularity is stressed in some regions. Only a clairvoyant could say whether these issues will still be important in 1956. The job in both parties will be to take these and other issues and match them with the personalities that will emerge after a week from next Tuesday to see if they can put together a winning combination for 1956.

1 in Every 3 Won't Take The Time to Vote

By CHARLES LUCEY,
Scripps-Howard Staff Writer.

WASHINGTON, Nov. 2.—Estimates of the number of Americans voting today ranged from 40,000,000 to 46,000,000 — but whatever the total it will be proportionately far below recent votes in other democracies.

The U.S. Census Bureau estimates there are about 100,000,000 Americans 21 or over, but this includes many millions who are not naturalized or who are disqualified for other reasons. Therefore, the total actually eligible to vote probably is not far from 75,000,000.

Thus at least one in every three who could vote probably will not take the trouble to go to the polls today.

In 1952 the total vote set an all-time record—61,547,343. But the U.S. was electing the President then and was stirred by a lively campaign.

In every midterm election in the last 20 years the vote for House candidates has been reduced from the vote for House candidates in the preceding Presidential election.

In the 1950 election the 40,300,000 vote for the House was almost 6,000,000 below the House vote in 1948 and nearly 8,500,000 under the 1948 Presidential vote.

Both parties claim that a big vote means victory for them. After 1952, the GOP said President Eisenhower's election proved any time the voters really got to the polls it meant Republicans were elected. But Democrats have argued the same way in the past.

This year political leaders in most states have reported apathy, but people could be soaking up the big debate by newspaper and radio and still come out today and vote in considerable number.

In 1952, Harry Truman cited the record of voting in the U.S. as against voting in other countries. He observed that "Americans are mighty proud of their democratic system of government, but when it comes to voting many other countries put us to shame."

DAILY SERVICE
1205 NINETEENTH ST.
WASHINGTON 6, D. C.
EDITORIAL RESEARCH REPORTS

(Thursday, Sept. 16, 1954) (By Bertram Benedict)

THE RACES FOR GOVERNOR

Thirty-three states elect governors on Nov. 2. In 14 others the incumbents hold over, and in one, Maine, a Democrat was elected on Sept. 13 for the first time in 20 years.

Fourteen present governors are not candidates to succeed themselves, in some instances because of constitutional provisions. Among the 14 retiring are Thomas E. Dewey of New York, James F. Byrnes of South Carolina, Herman Talmadge of Georgia, John S. Fine of Pennsylvania.

Three present governors were defeated for renomination---Francis Cherry (D.) in Arkansas, Charles E. Johns (D.) in Florida, C.J. Rogers (R.) in Wyoming. In New Mexico Gov. Edwin L. Mechem (R.) is running for the Senate. Conversely, Sen. Edwin C. Johnson (D.) is running for governor in Colorado, and Sen. Irving M. Ives (R.) in New York.

In the 33 gubernatorial elections this November, 10 incumbent Republicans and five incumbent Democrats will try to succeed themselves; in 18, neither major party contestant is the incumbent. At stake are 22 governorships held by Republicans and 11 held by Democrats.

* * * * * * * * * * *

Two incumbent Democratic governors running for re-election will, if successful, be more widely discussed as possibilities for the 1956 Democratic presidential nomination. One is Frank J. Lausche of Ohio, the other, G. Mennen ("Soapy") Williams of Michigan.

Lausche, a Catholic, former judge and former mayor of Cleveland, is serving his fourth term (two years) as head of the Buckeye State. He was re-elected in 1952, over Charles P. Taft, by more than 400,000 votes while the state was giving Eisenhower a majority of over 500,000 for President. Williams, popular with the C.I.O., barely scraped through in 1952 for his third two-year term by a margin of about 8500 votes while Michigan was going for Eisenhower by over 320,000.

State governors are usually preferred over members of Congress by the major parties for their presidential nominees. Governors are apt to have been more successful than members of Congress in keeping away from political positions that antagonize some groups of voters somewhere. In the last 40 years six occupants of governor's mansions have been nominated for president (Wilson, Smith, F.D. Roosevelt, Landon, Dewey, Stevenson) to only one member of Congress (Harding).

* * * * * * * * * * *

Some Democrats are pointing to the recent election of a Democrat as governor of Maine as an augury of a Democratic landslide in the Congressional elections on the coming Nov. 2. But other Democrats remember that (1) the Republican governor, candidate for re-election, was unusually unpopular; (2) the Democratic candidate was an unusually strong one; (3) more and more voters these days split their tickets for state and national offices.

For instance, in 1952 six states elected Democratic governors while voting for Eisenhower (Florida, Michigan, Missouri, Ohio, Rhode Island, Tennessee; no contest in Texas). In 1953 the big governorship election upset came in New Jersey, where the Democrats dispossessed the G.O.P. by over 150,000 votes.

The Republican candidate had asked for clemency for a convicted labor extortionist, and graft had been uncovered in certain localities under G.O.P. control. In commenting on this result, and on the 1953 loss of a G.O.P. House seat in New Jersey and another in Wisconsin, President Eisenhower said he had lost skirmishes before but never a major campaign.

nday, Nov. 1, 1954)

(By Bertram Benedict)

Presidents and Midterm Elections

If Republican candidates for Congress do better on the whole on Nov. 2 than had been originally expected, much of the credit will "rub off" on President Eisenhower because of his last-minute appeals for a Congress of his party. His earlier non-partisan approach to the midterm elections would have deprived him of any such glory from a G.O.P. victory, yet also would have spared him the discredit if the Democrats scored resounding gains.

Undisguised Presidential intervention in midterm elections of the past proved either harmful or ineffective. It started with Woodrow Wilson on Oct. 25, 1918, when with victory over Germany in World War I in sight, he asked "my fellow-countrymen" to "return a Democratic majority to both the Senate and the House" if they "have approved of my leadership."

Wilson said that though the Republicans had been "unquestionably pro-war," they had been "anti-Administration," so that the election of G.O.P. majorities to Congress would hamper him in his peace negotiations. This was widely interpreted as impugning the patriotism of the Republicans, who were given a plurality of 36 seats in the House and one in the Senate.

In 1938 F.D. Roosevelt intervened directly, not in the elections, but in certain of the preceding Democratic primaries, only to be slapped down in all except one case. In 1942, with the country at war, he made pre-election "inspection trips" of war plants, and the Democrats retained their Senate and House majorities, though with reduced margins.

In 1950 President Truman went even further than Wilson had gone in 1918, and took to the stump. Result: the Democratic majority in the Senate fell from 12 to two, in the House from 90 to 34; outstanding Fair Dealers were defeated; the G.O.P.-Southern coalition in Congress was strengthened in its opposition to the Truman domestic program.

SEE THE WEEKLY REPORT OF SEPT. 23, 1954: MID-TERM ELECTIONS, P. 708.

INFLUENCE OF PRESIDENTS ON CONGRESSIONAL ELECTIONS

The President was asked by many candidates to make local appearances in their behalf. But with the exception of his trip through 16 states earlier this year, Mr. Truman confined himself to the radio and television broadcast he made last Saturday night.

On the record - and it's often wrong - Mr. Truman is more successful in influencing voters when he makes his appeal in person.

Two years ago, he covered 22-thousand miles, made more than 300 speeches and led the Democrats to an unexpected victory.

But in 1946, the President stayed at home. He came out publically for Rep. Slaughter of Missouri, Mead and Lehman in New York... and all three lost.

FDR campaigned with considerable success, though in 1938 he tried to "purge" a dozen unfriendly democrats in the primaries (against Jim Farley's advice) and got only one: Rep. O'Connor of N.Y.

You may also remember 1918. Wilson made a written appeal, addressed to "my fellow citizens." He asked for the election of a Democratic Congress, implied that the Republicans couldn't be trusted to support the war effort. The appeal fell on deaf ears. And the Democrats were repudiated at the polls.

Millions of Americans are quite familiar with Alben Barkley's simple, homespun face. They have a vague feeling that he ~~is more than~~ just another politican, but less than a statesman, but they don't know exactly why. The story of Alben Barkley is not widely known, partly because it's a rather commonplace story, yet commonplace in a wonderfully American way. Barkley, it so happens, really was born in a log cabin, which still stands, still just as inaccessible up the rutted roads of the persimmon and sassafrass country in the Jackson Purchase, the most Westerly part of the State of Kentucky. He's big and awkward; he's slow to wrath but crowned, at times, with a most engaging smile. He's unhandsome, certainly; so were his brothers unhandsome and the four boys, beginning with Alben the eldest, used to be called by their playmates, Big Monk, Baboon, Ape, and Little Monk. He wasn't much to look at, but people liked him, and he was listenable, even as a youth; he imitated his youthful hero, William Jennings Bryan, and the farmers who sat on the grass to hear the local debates nearly always gave the palm to Big Monk. Big Monk, his old father once said, "Was the smartest son of a so and so to come from that part of the country."

Democrats just always win in that part of Kentucky. Barkley was reared in the Andrew Jackson tradition that carried on through the Populist and Greenbacker period, the Bryan Era, and reached its peak with Wilson and Roosevelt; all these men heroes to Barkley, Wilson perhaps the greatest influence on his life because he had just come to Congress when Wilson was in his prime, and it was Wilson's liberalism in domestic matters, his inter-nationalism in world matters, which formed the political mind of Alben Barkley.

Barkley ran his first campaign -- for county attorney -- on foot, then on a grey mule, then on a horse. He will be running what will probably be his last,

(MORE)

this fall, on a special train; and if he loses this fall, it will be the first general election he's lost in all his career; but his is a special case, and it will not mean that his career ends with failure for he has the vice-presidency nomination now as a kind of accolade, a final tribute to an old man of seventy who has earned this reward. Barkley runs as Vice President for the Democrats, not as the man pushing on the wave of the future, but as the old Democratic soldier who best defends and justifies the past. That is the meaning of his nomination, and his immediate role is that of the party unifier, the one man best able to hold the warring factions of the party together -- if any man, indeed can now do that. Geographically the Kentuckian is perfect for that role, and intellectually he is a liberal, yet a Southern-minded liveral, offensive to neither side, and liked by both; and as the man who held the longest tenure in our history as majority leader of the Senate, acting as go-between in the party is the thing he knows best of all.

As a boy he was a law clerk in the office of Judge Bishop of Paducah, made famous in the works of Irvin Cobb as Judge Priest. When he won election to the House of Representatives at the age of thirty-five, he called attantion to his youth, as the main reason folks should vote for him. When he runs for the Vice Presidency now, his opponents will surely call attantion to his age, as the main reason folks should vote <u>against</u> him.

But age, of course, is a relative matter and Barkley seems to defy it. He has campaigned around Kentucky making a half dozen long speeches in a single day. In nineteen thirty eight, he was then sixty, Happy Chandler ran against him. Happy was a famous athlete and twenty years younger. And Happy boasted at the political rallies, how he would have Old Alben, as he called him, down in bed within six weeks. J. B. Shannon, one of Barkley's biographers, relates that the campaign actually ended with Happy in bed, exhausted, and Barkley going strong.

Many people here in Washington use the word "loyal" when they speak of Barkley, almost, now, out of habit. He comes from an era, remember when Americans wore their

(MORE)

party label almost with the same fierce pride that they wore their nationality. Barkley has never let his party down; he stuck doggedly behind Al Smith, despite what that meant in those dry and protestant Kentucky counties. He supported almost everything Roosevelt asked for, partly out of loyalty, partly because he sincerely believed in almost everything Roosevelt believed. Except once; once in forty-four when the President vetoed a tax bill against Barkley's advice. Then Dear Alben, as the President called him, rebelled in heat and passion, almost in tears. Strangely, instead of weakening his position as majority leader, it strangthened it; no longer was he regarded merely as the party wheel horse.

But certainly his sense of loyalty governs Barkley more strongly than his ambition drives him on. He has wanted the Vice Presidential nomination before this, but despite his keynote speeches at Roosevelt conventions, despite his nomination speech for Roosevelt in forty-four, the honor of second place on the ticket was always passed over his steady shoulders to somebody else. And so he came to last week's fantastic Democratic Convention in Philadelphia. Last week Barkley's enduring loyalty was really put to the test, and you will have to make up your own mind, whether he is a weak man for doing what he did, or a very big man. There was no particular move to nominate Barkley for Vice President. When his devoted friend, the quiet little arranger, Les Biffle, passed out the word that Barkley was top contender for the spot, Biffle was really <u>starting</u> a movement, in his canny way, not revealing one. The hours passed; Douglas was still the man Truman wanted. No word came to Barkley from the White House at all. Up till Barkley made his fiery keynote speech, which convulsed the dead convention with sudden life, the White House still searched for a running mate from anywhere but Capitol Hill. The tremendous demonstration for the surprised and delighted Barkley - this too, partly organized by quiet little Leslie Biffle -- made it clear the President had no choice. For once, a Presidential candidate had not picked his own running mate, the convention had done it for him.

(MORE)

Truman's stock was very low at that period of the convention and the word began flaring around the hall, "Why not Barkley for the Presidential nomination?" Historians will speculate on this for a long time; and I may be wrong, but my own feeling was that if Barkley had given the sign, a drive would have started which might have given him the nomination and shut Truman out. A tough and really ambitious man in Barkley's position at that moment, would have given the sign. Maybe because he's old and mellow now, maybe just because of that ingrained loyalty streak, Barkley discouraged the move, which puts Mr. Truman in his debt forever.

Barkley was heard to say, a little wistfully, "It would be a great thing to see the delegates pick their own candidate for President." A straying sentiment, which he will not repeat. He will go on, in secondary position as before, doing his best for his leader, still loyal as before. And, as before, making a terrific campaign.

HARRIMAN, W(ILLIAM) AVERELL
Nov. 15, 1891- United States Secretary of Commerce

Address: b. c/o Department of Commerce, Washington, D.C.; c/o Brown Brothers, Harriman and Co., 59 Wall St., New York; h. Harriman, N.Y.

To W. Averell Harriman's career of banker, railroad director, diplomat, and non-elective Government official, President Truman added in September 1946 the post of Secretary of Commerce, vacated shortly before by Henry A. Wallace '40. Under the Roosevelt Administration, Harriman had served as Lend-Lease coordinator between the United States and Britain, and as Ambassador to Russia; under President Truman, he had been Ambassador to Great Britain for a short period. Harriman, who had been born and bred a Republican, became a Democrat during Al Smith's '44 campaign for the Presidency. He was also a close friend of President Roosvelt and was associated with the New Deal after its inception in 1932.

The son of financier Edward Henry Harriman (who "feared neither God nor Morgan") and his philanthropic wife, Mary (Williamson) Harriman, William Averell Harriman was born on November 15, 1891. At seventeen, just when he was entering Yale from Groton, his father died, leaving him and his brother E. Roland Harriman various railroad holdings and a fortune reputed to be between seventy and one hundred million dollars. During summer vacations from college, the young millionaire worked as a clerk and a section hand in the Union Pacific Railroad yards at Omaha, Nebraska. Upon graduation from college in 1913, he once again went to work for the railroad, and by the following year had risen to be vice-president in charge of purchases and supplies for Union Pacific.

Shortly before the United States entered World War I, Harriman bought a small shipyard at Chester, Pennsylvania, where he built the first partially prefabricated ships in the country. Out of this grew the Merchant Shipping Corporation, which, with Harriman as chairman of the board from 1917 to 1925, became one of the largest merchant fleets under the American flag. In 1920 the twenty-nine-year-old railroad and shipping magnate established W. A. Harriman and Company, a private bank. For the next decade Harriman was chairman of the board of this concern, but when it was merged with the Brown Brothers firm in 1931 to form Brown Brothers, Harriman and Company, he accepted a partnership in the new corporation. (He had already disposed of his shipping interests in 1927 in order to devote more time to finance.)

Harriman became chairman of the board of the Union Pacific Railway in 1932. During the depression of the thirties, while other railroads were retrenching, he poured millions into streamlined aluminum trains, low-priced diner meals, and trained-nurse stewardesses. As a result, at the lowest point of the depression, in 1934, Union Pacific's receipts from passenger traffic rose 66 per cent. Two years later board chairman Harriman called in public relations man Steve Hannagan '44 to look into the possibilities of establishing a winter resort on some thirty-three hundred acres of Idaho valley land owned by the railroad. The result was the famous playground Sun Valley.

Through a chance meeting on the croquet field at the Long Island estate of Herbert Bayard Swope '44, which initiated Harriman's friendship with Harry Hopkins '41, the railroad magnate was brought to the attention of President Roosevelt '42. "Harriman," said *Time*, "reacted to the New Deal like a weathercock in a gale." Roosevelt, while not yet completely convinced of Harriman's talent for organization, appointed him Administrator of Division II of the NRA in January 1934. In dealing with business problems, Harriman showed himself to be a middle-of-the-road arbitrator, with a capacity for ironing out the trouble spots between the Administration and industry. In March 1934 he was appointed special assistant administrator for the NRA, and two months later, when General Hugh Johnson resigned, he became administrative officer, a post which he held until the following year. At Secretary of Commerce Roper's invitation, Harriman joined the Business Advisory Council of the Department of Commerce in 1933, and was eventually chosen chairman of the council for the years 1937 to 1940. In this capacity, as *PM* put it, he spent a good deal of time trying "to get Government and business to swap concessions." Harriman's diplomacy was double-edged: in business conventions, he would block anti-Administration moves, and at the White House, he would complain about tax and labor legislation.

Harriman brought his experience as a transportation and procurement man into the service of the national defense while the United States was still neutral in World War II. When he was chosen chief of the raw materials branch of the Office of Production Management in 1941, he introduced a speed-up system of armaments production. With proof of Harriman's executive ability, President Roosevelt appointed him "defense expediter" in London shortly before the passage of the Lend-Lease Act in March 1941. As liaison officer between the American and British Governments, Harriman was entrusted with keeping the President informed of British needs and the British apprised of American production.

Although Roosevelt gave Harriman the rank of Minister, he told newspapermen that the job "did not conform to any job reporters had ever heard of." Harriman was supposed to devote his attention to three problems: transportation, financing, and purchasing. Gradually the orbit of his activities widened and he was soon shuttling to the Near East (May 1941) to make surveys for the installation of American supply bases and to Russia (August 1941) on a joint Anglo-American mission with Lord Beaverbrook for the purpose of discussing Lend-Lease aid to the Soviet Union. The joint mission agreed on the immediate necessity of sending material aid to Moscow, and Harriman promised that hundreds of planes and tanks would be sent to Russia. "The flow," he said, "will be constantly increased and eventually will be limited only by problems of transport." Returning in October to report to President Roosevelt, he told reporters that "Hitler will never destroy Russia." In the following three years, he frequently reiterated this statement, calling for "quick and increasing" aid to Russia.

During 1942 Harriman often accompanied Prime Minister Churchill '43 on missions. One of these was another trip to Moscow in August 1942, when Churchill and Premier Stalin discussed the question of the second front. Meanwhile, "work-minded" Harriman continued his activities as Lend-Lease expediter, and to them added the duties of representative in London of the Combined Shipping Adjustment Board (February 1942) and of member of the London Combined Production and Resources Board (July 1942). At Casablanca in January 1943, he joined President Roosevelt and Harry Hopkins. (Harriman was present at the conferences in Quebec, Casablanca, Moscow, Teheran, San Francisco, and Potsdam.)

President Roosevelt on October 1, 1943, named Harriman Ambassador to Russia. By then the American financier, who had already met Stalin twice, renewed the acquaintance toward the end of that month when he and Secretary of State Cordell Hull '40 conferred with Stalin and Molotov. Throughout the three years of his ambassadorship, Harriman consulted with Stalin an average of once a month—a courtesy supposedly not accorded any other diplomat. The new Ambassador completely reorganized the American Embassy in Moscow, both as an office and residence, and installed Kathleen, his daughter by his first wife, as hostess.

Harriman worked closely with Russian Foreign Minister Molotov '40 and the English Ambassador, Sir Archibald Clark Kerr '42. At his first press conference in the new post, Harriman said: "One matter I think deserves the greatest possible consideration at this time is the assistance the United States can give to the Soviet Union in the rehabilitation of devastated areas and the repairing of other dislocations caused by the war." Toward the end of his embassy, however, it became increasingly evident that the United States and Russia were not agreeing about postwar policy. The American Ambassador often acted in concord with the Russians, as when he told the Polish Committee of National Liberation that the United States would not oppose Russian wishes in regard to the Polish question. In February 1945 he was appointed to the committee conferring in Moscow with the various Polish factions. He attended the conference at Potsdam in July and soon after Christmas of 1945 transmitted the terms of the peace treaty to the Rumanians, which facilitated the broadening of the Bucharest Cabinet as a condition of recognition.

After Harriman had tried several times to resign, according to the *Christian Science Monitor,* President Truman acceded to his wish in February 1946 by accepting his resignation. Harriman returned home via Chungking (where he conferred with Chiang Kai-shek '40 and General George C. Marshall '40), Korea, and Tokyo. The ex-Ambassador reported to the President, the Secretary of State, and the House Rules Committee before holding a press conference. To the reporters he said, "Russia does not want war with the United States and is trying to cut off avenues of invasion by surrounding herself with friendly small nations." Through the press, Harriman warned the country that the "chief hope of the world is collective security through the United Nations organization." He added: "It is a fact that the Russian ideology is completely different from ours, but if we both adopt the attitude of live and let live, as to internal affairs, and if we both respect the right of all people to choose their own way of life, this barrier needn't be insurmountable. Most of the people of the world know that this is the attitude of the United States and are counting on us to stand firm against any nation that won't abide by this principle." Harriman also voiced his disapproval of Russia's failure to carry out certain agreements. (It was assumed at this time that he was referring to Russia's failure to withdraw her troops from Iran by March 2, 1946.) About a month after Harriman's return to the United States he and his daughter received a gift of two thoroughbred horses from Stalin.

The last week of March 1946, when John Winant '41, Ambassador to England, was sent to the United Nations Economic and Social Council, President Truman appointed the fifty-four-year-old Harriman to be Winant's successor at the court of Saint James, thus making him the only man in United States history to have held the rank of Ambassador both to Moscow and London. In this way, commented *Time,* the former polo player's "diplomatic rating was raised to a ten-goal top." Harriman knew London from long familiarity ("I have been there on and off ever since I was a boy"), and was described by the British press as a "very close friend of Britain."

Scarcely seven months later, at the end of September 1946, the Ambassador was called home to enter President Truman's Cabinet as Secretary of Commerce. The previous incumbent, Henry Wallace, had been forced to resign after broadcasting a proposal for a changed foreign policy toward Russia, in which he spoke against "getting tough" with the Soviet power. Harriman's appointment was variously regarded as "a consolidation of Truman's decision to intensify a diplomatic challenge of Russia" (*PM*), and as an Administration attempt "to cultivate more cordial relations with American business" (New York *World-Telegram*); Arthur Krock wrote in the New York *Times* that "his [Harriman's] record, the present value of his past political sponsorship, and his educated realism as to Soviet Russia have produced the general expectation that the Secretary will effectively meet his new responsibilities." The new Secretary is expected to revitalize the forty-five-member Business Advisory Board of which he was once chairman. He will have the task of reorganizing the Commerce Department to be what it was originally intended to be, said Krock further—"a liaison between American business and the Government of the United States," without a policy "designed to proclaim the faults of capitalism."

Immediately after his appointment, Secretary Harriman announced that he was in complete accord with Secretary of State Byrnes's foreign policy. (It is believed that Harriman's reports at the San Francisco conference helped to formulate the then Secretary of State Stettinius' policy of firmness towards Russia which Byrnes inherited.) In reference to Russia, he declared, "A country which attempts to gain security through unilateral action, through aggressive independent action, is only opening the gates of disaster." Referring to his work in various missions, the Secretary of Commerce said, "I had an opportunity to learn first-hand the grave economic problems that face the people of Europe and Asia. . . .In playing our part in world reconstruction, development of a stable and expanding economy at home is of primary importance."

Harriman considers himself a public servant, hired by the American people to promote the commercial interests of the whole nation, without favoritism to either "big" or "little" businesses. He intends to continue ex-Secretary Wallace's plans for the reorganization of the Commerce Department. (Congress had substantially curtailed the annual appropriation of the Department under Mr. Wallace's administration, and he had therefore not been able to complete his plans.) A reorganization of the Bureau of Foreign and Domestic Commerce is projected. It will be organized into five divisions: domestic trade, international trade, small business, field operations, and business economics, with new secretaries appointed to the first three branches.

On October 11, 1946, Harriman held his first conference with members of the Department of Commerce. He assured the war veterans in the department that "experience overseas is just as important in developing men as sticking to the job at home is. Therefore, the experience of service men will be recognized in department promotions." To the women employees, Harriman declared: "There will be absolutely fair treatment in the department as to race and religion and as between men and women." In his capacity as Secretary of Commerce, Harriman will also serve on the Presidential Research Board, which will determine "the allocation of research resources between the universities, research foundations, industry, and the Federal Government."

As his father did, Harriman has devoted a good deal of his time to his railroad interests. From 1931 to 1942 he was chairman of the executive committee of the Illinois Central Railroad Company; he is, in 1946, a director. He is also chairman of the board of the Los Angeles and Salt Lake Railroad Company, the Oregon Short Line Railroad Company, and the Oregon and Washington Railroad and Navigation Company. Harriman is the father of two daughters, Mary and Kathleen, by his first wife, the former Kitty Lanier Lawrance. After their divorce, in 1931 he was married to Mrs. Marie Norton Whitney. The Harrimans are collectors of modern art, and have acquired paintings by Van Gogh, Renoir, Cézanne, Picasso, and Derain. The Secretary of Commerce used to be an outstanding polo player, with an eight-goal rating. He is described by *Time* as a "glossy," young-looking man, with "an ingratiating if aristocratic charm."

PROSPERITY AND ELECTIONS

April 13/50 Truman said: "Country is in good shape. Some say it wou be so even if Moron in White House but I'm taking credit for it."

Only 4 times in history has administration been turned out in good times: twice on contested votes, once because of Bull Moose third party movement...and only real exception in 1852 when Pierce defeat Fillmore.

Prosperity & prices were direct factors in only 4 times party in po lost control of the House since 1896 in a mid-term election.

1910 & 1918 - recession followed a boom on eve of election

1930 - depths of depression

1946 - times were good but prices were high -- ("Had Enough" was GO slogan and it won for them).

DAILY SERVICE • EDITORIAL RESEARCH REPORTS • 1205 NINETEENTH ST. WASHINGTON 6, D. C.

(Friday, Sept. 24, 1954) (By Bertram Benedict)

G.O.P. BUCKS PRECEDENTS

The Republicans will keep control of both branches of Congress in the November elections, according to Vice President Richard M. Nixon at Indianapolis on Sept. 23. Two days before, at Denver, Republican national chairman Lenoard W. Hall had gone farther: "We'll pick up 15 to 22 House seats."

SEE WEEKLY REPORT OF SEPT. 23, 1954: MID-TERM ELECTION.

Yet on Sept. 15, in Washington, the Vice President had agreed that the Republicans "might be behind at this time," and Hall, that they were "running scared." After all, the party in power has lost House seats in 12 of the preceding 13 midterm elections in this century. And in four of the 13 House control changed hands:

1910 (Taft)--High prices, unemployment, tariff policy unpopular with farmers, revolt of G.O.P. "progressives."

1918 (Wilson)--Let-down after war victory was in sight, backfire from "he kept us out of war" Democratic slogan in 1916, boomerang of President's appeal to elect Democrats on patriotic grounds.

1930 (Hoover)--Depression. G.O.P. retained thin control in the national elections, lost it in subsequent special elections.

1946--Reaction delayed from 1944, end of war but not of war controls and scarcities, replacement of Roosevelt by Truman.

The single 20th century exception to the general trend came in 1934, when the Democrats increased their House majority from 191 (!) in 1932 to no less than 209. The depression under the Republicans had been of unprecedented severity, most voters wanted the New Deal to have the chance to carry its recovery steps further, the Republicans were sadly disorganized.

* * * * * * * * * * * *

Five reasons are usually given why the party in power almost always loses some House seats, net, in the midtern Congressional elections--(1) The party in power had promised more than it could perform in order to get elected two years before. (2) Apart from such promises, some voters always expect a new Administration to accomplish more than it can. (3) Any move taken by an Administration is bound to step on some toes somewhere. (4) After two years some voters tend to forget, or at least to forgive, what they hadn't liked about the party they had voted against two years before. (5) No winning presidential candidate furnishes coattails on which Congressional cnadidates can ride to victory, even if he does take part in the campaigns.

In the midterm elections for the Senate, as distinguished from those for the House, the above factors can be blurred by the geographical and political distribution of the one-third-plus of the Senate seats contested. This year, for instance, 50 per cent more Democratic than Republican Senate seats must be re-filled. Two years ago it was the other way around--half again more Republican than Democratic seats were at stake.

Louis H. Bean, who has perhaps the highest of the political forecaster reputations, predicts that the Democrats will gain from 25 to 30 seats in the new House, but refuses to predict on the Senate. It may be pointed out that the Bean prediction appears in a publication of the Americans for Democratic Action, which Republicans call a mere adjunct of the Democratic party.

With the presidency not involved, local issues are apt to decide more Congressional elections in midterm than in Presidential election years. Professor James M. Burns of Williams College told the annual meeting of American Political Science Association at Chicago on Sept. 11 last that the 1954 Congressional elections will provide no test of national trends because most of them in doubtful states or Districts will "turn largely on local issues."

THE KEY ISSUES: AS THE TWO PARTIES SEE THEM

Excerpts From Speeches That Define G.O.P. and Democratic Positions

The quotations that follow on the major issues in the Congressional campaign were taken from speeches and statements by principals of both parties. On the Republican side, those quoted are President Eisenhower, Vice President Richard M. Nixon; Secretary of Agriculture Ezra Taft Benson; Secretary of Labor James P. Mitchell and Chairman Leonard W. Hall of the Republican National Committee. On the Democratic side, spokesmen quoted are former President Truman; Adlai E. Stevenson, Democratic Presidential candidate in 1952; Sam Rayburn, Minority Leader of the House of Representatives; Senator Albert Gore of Tennessee and Chairman Stephen A. Mitchell of the Democratic National Committee.

THE BIG ISSUE

THE REPUBLICAN POSITION

EISENHOWER: In the election two years ago, our citizens showed their determination to have a government dedicated * * * to the accomplishment—over a four-year period—of a new program of progressive and vigorous action * * *. This program is midway in its progress toward enactment.

* * * All of us who believe in the aims of this program should join together to elect Republican Senators and Congressmen who will work effectively with the leaders of the Executive Branch * * *. When the Congress is controlled by one party and the Executive Branch by the other * * * the conduct of government tends * * * to deteriorate into an endless round of contests for political advantage, * * * of stagnation and inaction. * * *

For the next two years the Executive Branch will be Republican. Confusion can be avoided and steady progress assured only by electing a Republican majority to the Congress .

When the Administration deals with the human and his problems * * * it tries to be human, considerate and sympathetic, and that means true liberalism. But when it comes to the economy of this country and your pocketbook and * * * taxes, it tries to be conservative. So it is conservative in economy, liberal in human affairs.

NIXON: We are on the eve of an election that poses the alternative of continuing President Eisenhower's program of integrity, firmness and moderation or * * * restoring a program of discredited Trumanism * * *. In 1952 * * * Trumanism meant hopeless inability to deal with the four-headed monster that was Korea, communism, corruption and controls.

THE DEMOCRATIC POSITION

TRUMAN: It seems to me that President Eisenhower should be secretly wishing for a Democratic Congress * * *. If he wants to continue [his] policy, he needs the help of the Democrats * * *. He needs a Democratic Congress if he is to go down in history as a successful President.

What concerns me greatly is the fundamental attitude and outlook of * * * this Republican Administration. It is now clear that they do not represent the best interests of our people, and in twenty months they have changed dangerously our liberal form of government to one of reaction at home and confusion abroad.

STEVENSON: * * * It is as important in 1954 as in any other year that party not be placed above country; * * * it is more important that candidates * * * be right than that they be Republican.

Where the Eisenhower program has been responsible and constructive it has * * * received unstinting Democratic support * * * that * * * has * * * in many cases provided the President his margin of victory. This would strongly suggest that a Democratic majority in the Congress could be trusted to support the President on basic questions of security and welfare.

* * * The real question that the people must decide this fall is whether the Congress will function more effectively under a divided, quarrelsome, squabbling Republican regime than it will under the Democratic party.

DOMESTIC ECONOMY

THE REPUBLICAN POSITION

EISENHOWER: At last our nation's economic strength is of an enduring kind. It is not a prosperity based on the froth of inflation. We flatly reject the idea that, for America to stay prosperous, we must constantly run a high economic fever. We flatly reject the idea that, for America to stay prosperous, the Government must always spend more than it has. No longer do we have a prosperity pegged to the battlefield sacrifices of our husbands, sons and brothers.

Without war our economy is working at near record levels. Over 62,000,000 people have jobs. The number is steadily increasing. The hours of work are getting longer. Consumers are spending at a higher rate than ever before. * * * Wage rates are at their all-time peak. * * * Our people have more personal income after taxes than ever before. Our national production surpasses even the war peak of 1944. It is far above the levels of 1945 through 1952.

* * * The latest report on unemployment [shows that] in this month it has been reduced by 400,000 jobs. In that period unemployment has fallen from 3,100,000 to 2,700,000. * * * We can foresee that in less than a decade the national output will increase from today's $356,000,000,000 to $500,000,000,000. * * * And these can be real dollars—dollars of stable buying power, not simply more dollars of cheaper value.

Without the economic collapse so widely forecast by professional pessimists, our nation has moved from war to peace.

SECRETARY MITCHELL: For twenty years, until President Eisenhower was elected, * * * unemployment in this country averaged 9 per cent of all the working people—twice what it is today. * * * We think the unemployment we have today of 2,700,000 is still too much and we are doing all we can to reduce it.

THE DEMOCRATIC POSITION

STEVENSON: Stabilization is not good enough; moving sidewise is not good enough; a second-best year, like a second-best poker hand, is not good enough. * * * America must grow. There are 7,000 more Americans today than * * * yesterday. The * * * economy must provide 1,600 new jobs every day * * *.

Our national income is about $20 to $25 billion less than it should be. The economy should have grown about 3 per cent this year. Instead it has shrunk about 3 per cent. * * * One out of every twenty people in the labor force is unemployed * * * . The cost of living is at an all-time peak. * * * The average weekly earnings of workers in industry have declined. * * * Per capita disposable income is down; after paying our taxes we have less income this year than last. * * * Corporation profits are down, too * * *

TRUMAN: Over 3,000,000 people are out of work. Many more are on a part-time basis, which causes a loss in take-home pay. The Administration keeps telling us that it is not unmindful of human misery. But I see no bold steps being taken by this * * * Government to deal with unemployment.

TAXES

THE REPUBLICAN POSITION

EISENHOWER: A comprehensive tax program * * * since Jan. 1 of this year will have provided for tax cuts totaling $7,400,000,000—the largest dollar tax cut in any year in the history of the nation. * * * Economic growth will be fostered by * * * more flexible depreciation and better tax treatment of research and development costs, thus encouraging all business to modernize and expand. And, partial reduction of the double taxation of income from dividends will stimulate the investment of savings by our private citizens * * *.

NIXON: [The Democrats] gave America fourteen out of its fifteen tax boosts since 1913. They decreased the tax exemptions of the little man * * * from $1,500 to $500. They skyrocketed his income taxes 700 per cent since 1933. They slapped a 300 per cent increase on his automobile taxes, 200 per cent on his gasoline and radio taxes, 25 per cent on his cigarette taxes. * * * If the little man or the medium-sized man * * * wants a decent tax break, only the Eisenhower Administration and a Republican Eighty-fourth Congress are prepared to give it.

THE DEMOCRATIC POSITION

RAYBURN: There was a Federal tax revision * * * but * * * 80 per cent of the nation's taxpayers got only 9 cents of the reduction while 73 cents of the tax-cut dollar went to the corporations and 18 cents to families whose incomes are above $5,000 a year.

To show the unfairness of this tax bill, the man with a wife and two children who makes his living with his brain and his brawn and earns $4,000 a year, will pay $240 a year income tax. The man who has an income of $4,000 a year from dividends pays only $184.

* * * The Republicans continue to claim credit for the 11 per cent tax reduction on individual income, which the Democrats provided for in the Eighty-first Congress. The individual income taxpayers will save $3 billions through positive action taken by the Democrats, yet the Republicans claim they did it.

CHAIRMAN MITCHELL: Tax relief does not fully serve its purpose of stimulating the economy if it is concentrated in the upper income brackets. Prosperity never trickled down from the top under an Andy Mellon tax bill—and it won't under a George Humphrey tax bill. The trickle-down theory has never worked.

FOREIGN POLICY

THE REPUBLICAN POSITION

EISENHOWER: Over the world we have brought strength where there was weakness * * * realism, * * * candor and force to foreign policy which at last insists on distinguishing words from deeds. Two years ago, war was raging in Korea and Indochina. All Asia lay exposed to the * * * Reds. Iran * * * was in deadly danger. Suez and Trieste posed constant threats to peace in the West. Europe [was] unable to build a position of reliable strength. Even in the Western Hemisphere Communist imperialism had ominously appeared.

In London * * * an agreement * * * was signed that can powerfully strengthen the defenses of the West. * * * Yugoslavia and Italy [have] settled their differences over Trieste. Iran today has new strength, new hope * * * disaster has been averted. At Suez, ancient * * * quarrels have been resolved. Peace has been preserved. Pakistan has become a valued new ally. In Guatemala, the first Communist beachhead in the Western Hemisphere has been destroyed.

Throughout the world a series of alliances among our friends has enhanced the strength of the free world, upon which our security so largely depends. * * * At the Berlin and Geneva conferences our nation sought serious negotiation on German unity, on a treaty for Austria, and on a political settlement for Korea. * * * We shall press on in search of agreement. * * *

* * * It is important to all of us that the seemingly endless and frustrating war in Korea [has been] ended * * *. Today we have peace.

For the first time in twenty years there is no active battlefield anywhere in the world. And at last we are harnessing the atom to the work of peace. This Administration has maintained a continuing bipartisan discussion of the foreign problems of this nation—a record of bipartisan consultation unmatched in any previous administration.

THE DEMOCRATIC POSITION

STEVENSON: Let us state our successes with modest realism and not boastful reassurance. For we confront a trembling alliance in Europe, less than confidence in Asia, the growing attraction of monstrous China, Russia's military and economic might, a restless Africa and a South America we have too long taken for granted.

The harsh fact is that in twenty months of bluff and bluster, confusion and contradiction, we have lost influence and friends faster of late than at any time since * * * Republican repudiation of international cooperation after the First World War.

* * * About the bipartisanship in our foreign problems * * * the facts are that not only have no Democrats been appointed to policy-making positions in the State Department and our foreign activities, but they [the Administration] don't even want Republicans who worked for the Democrats, regardless of competence. * * * What they have brought to our foreign policy is a long procession of ringing slogans that lie forlorn but not forgotten * * * "liberation," "unleashing Chiang Kai-shek," "seizing the initiative," "massive retaliation," "the new look."

TRUMAN: Our own security and the peace of the world is jeopardized by a diplomacy that is ever shifting. A chorus of conflicting voices * * * has so confused our friends and allies as to endanger the friendly cooperation we need. * * * This babel of voices can lead only to uncertainty * * * . The worst thing the Republicans have done is to weaken the position of the free nation in their fight against Communist imperialism.

FARM POLICY

THE REPUBLICAN POSITION

EISENHOWER: At last we have a program which attacks our farm problem on both crucial fronts—markets and production. We have a farm program geared not to war, but to peace—a program that will encourage consumption, expand markets, and realistically adjust farm production to markets. It will begin the movement toward that full parity in the market place which * * * I set as a goal. * * * For the consumer it will mean adequate, steady supplies of agricultural products at reasonable prices.

BENSON: I am for aid to agriculture. I am for price supports. I am for a fair share of the national income for agriculture. But I am also unalterably opposed to programs that substitute government aid for reasonable self-help * * * crop controls are unpopular, uneconomic, unfair * * *.

NIXON: * * * A major objective of the Administration is to develop a program aimed at 100 per cent of parity in the market place.

THE DEMOCRATIC POSITION

TRUMAN: [The Eighty-third Congress] drove down the farmer's income; in fact they tried to bankrupt him as they did in 1921. The prices the farmer now gets for his product have declined on the average 20 per cent in the last two years. But the cost of living, for him, as for others, has gone up to an all-time high.

STEVENSON: There [is no] historical basis for concluding that lower farm prices will reduce production and thus solve the surplus problem. On the contrary, * * * lower prices induce farmers to raise more to make up * * * loss of dollar income * * *. There cannot be in today's hungry world a surplus of corn or wheat. There can only be a shortage of ideas [on] how to use God's gifts * * *.

I object to the downright dishonesty of representing that * * * flexible price supports will reduce our taxes. * * * About 1 per cent of the national budget is applied to all agricultural programs * * * including price supports. * * * The House Agriculture Committee has estimated that farm subsidies over the past twenty years have cost a little over a billion dollars, compared with over forty-five billion dollars on business subsidies.

INTERNAL SECURITY

THE REPUBLICAN POSITION

NIXON: The previous Administration's lack of understanding of the Communist danger and its failures to deal with it firmly * * * [have] led to our major difficulties today. The previous Administration unfortunately adopted policies which were soft, vacillating and inconsistent in dealing with the Communist threat.

* * * The Eisenhower Administration, with the solid backing of the Republican Eighty-third Congress, has finally put the Reds on the run in America. * * * Laws have been passed [providing] more effective legal weapons to use against the Communist conspiracy. * * * The Communists and their sympathizers have been driven from Federal employment * * *. During the Truman years * * * the Communist Fifth Column made a shambles of our domestic security.

The Communist party is right when it says the 1954 elections are crucial in determining the path America will take. It has determined to conduct its program within the Democratic party * * * to infiltrate the Democratic party and to make its policies the policies of the Democratic party.

THE DEMOCRATIC POSITION

STEVENSON: As to the * * * Republican campaign theme, model C3K1—crime, corruption controls and Korea—well, I doubt that the market for yesterday's slogans is any better than the market for yesterday's newspapers * * *. President Eisenhower has begun to talk about Communists in Government and red herrings, after assuring us months ago that his Administration's record was the only issue.

It looks as though the Great Crusade, under the leadership of the Vice President, is going to end up * * * on the elevated note of subversion, perversion and denunciation of President Truman. I suppose that's what they call McCarthyism in a white collar. [They have] maligned and impugned the very loyalty of a former President of the United States—a man * * * who has done more to fight communism on all the fronts than all the Republican politicians put together—and I mean Harry S. Truman.

PUBLIC POWER

THE REPUBLICAN POSITION

EISENHOWER: The issue is not * * * public power versus unregulated private power. The issue * * * is Federal monopoly of power, as against public or private regulated power, freely chosen in each instance by the citizens of each area, with the Federal Government drawn in as a cooperating partner where this seems necessary or desirable.

We shall neither withdraw from the power field nor federalize all electric power generators in the U. S. Instead we shall continue to advance in a spirit of helpfulness to localities, and in a spirit of cooperation with local citizens. * * * Private industry [has been] enabled to participate more fully in the development of economic nuclear power [under the Atomic Energy Act of 1954] while the Government continues to assist * * * with basic research and the building of experimental reactors. * * * I want our people to know that these provisions [of the law] are designed eventually to relieve the taxpayer of the enormous cost of the enterprise, while fully protecting the public interest in atomic energy.

HALL: The Eisenhower Administration and the Eighty-third Congress [have] established a new and healthy system of 'partnership' development of our water and power projects.

THE DEMOCRATIC POSITION

TRUMAN: Within twenty months this Administration has confronted the country with a historic and dangerous program to give away the resources and rights carefully developed by Republicans as well as Democrats over thirty years * * *. These precious rights are in grave danger of being given away to special monopolistic interests.

STEVENSON: Now there has come this 'local partnership' proposition * * * whereby the Government and the private utilities will build the project and the private utilities get the profitable part—the electricity—and the Government, you and I, get the flood control, storage and reclamation part.

* * * It is hard for us to see why all of us, as taxpayers, should support the non-paying part of these developments while private utilities take a guaranteed return out of the profitable part.

GORE: Atomic energy has been developed with taxpayers' money. Twelve billion dollars of your money has been spent to develop this vast new resource. * * * But * * * the Republicans voted to turn this power over to the big utility firms so that these gigantic, privately owned companies could add their profit to the taxpayer's electric bill.

TRUMAN: Let's look at the mysterious Dixon-Yates contract award by the Administration. * * * It is just a plain give-away of public money and national resource. * * * Bad as the contract is, it would be tragic if it were used to destroy the T. V. A., one of our greatest public assets.

(Tuesday, Oct. 19, 1954) (By Richard M. Spong)

MIDTERM SWEEPS AND WHY

On the basis of past performance, the odds are against a sweeping victory for either party in the midterm elections of Nov. 2. The party in power usually tends to lose some seats in Congress at midterm elections; the Republicans will obviously be happy to maintain the paper-thin majorities they now hold in both branches.

Similarly, the odds also are against a Democratic sweep. In only five of the 13 midterm elections since 1900 has either party scored a landslide.

Louis H. Bean, widely known as a political statistician, suggests that the record of voting in midterm elections for the House is a dependable gauge of "political tides." Bean points out that normally only a third-plus of the 96 senators are elected every two years, whereas all the members of the lower house are elected every two years.

A check on the record since the turn of the century shows that only twice did a landslide midterm victory change control of the House. The Democrats gained control in the midterm elections of 1910, gaining 56 seats in the House while the Republicans were losing 57. The Republican landslide in 1946, in which the G.O.P. gained 56 seats and the Democrats lost 55, also reversed House control.

* * * * * * * * * * *

In the landslide of 1930, the Democrats won 51 new seats and the Republicans lost 47. The Republicans retained technical control of the House in the elections, only to lose it by deaths in the following months.

In 1922, the G.O.P. lost 75 seats to the Democrats but kept House control by an 18-seat margin. In the landslide of 1938, the Republicans gained 80 House seats while the Democrats were losing 71, but the Democrats controlled the lower branch by a comfortable 93-seat margin. In a semi-sweep in 1942 the Republicans gained 47 seats --the Democrats lost 45 --but the Democrats still held a 13-seat edge.

* * * * * * * * * * *

SEE REPORT OF SEPT. 14, 1948: PRICES AND POLITICS (VOL. II, 1948, p. 631).

High prices lost the 1910 midterm elections for the Republicans. Voters blamed the stiff Payne-Aldrich tariff rates for the high cost of living. Also in 1910, the country had had two years of a Republican President --Taft-- who certainly lacked the political glamour of his Republican predecessor, "Teddy" Roosevelt. And the Taft proposal of tariff reciprocity with Canada was unpopular with many farmers.

Low farm prices and business depression accounted in large part for the swing to the Democrats in 1922. And again in 1930 the Democratic victory in the House, with a light vote, was attributable to a sharp depression in agriculture and industry.

The vote was light in 1938, too. President Roosevelt's attempt to pack the Supreme Court undoubtedly had an adverse effect on Democratic fortunes. So did increasing unemployment, labor-management squabbles, another sharp recession in industry and agriculture. The vote was unusually small again in 1942, when the Republicans scored a semi-coup.

Resentment of price controls and a meat shortage hurt the Democrats in 1946. So did rising living costs and confusion over foreign policy. The vote was unusually small, and war weariness and reconversion problems aided the Republican candidates.

EDITORIAL RESEARCH REPORTS

(Monday, Oct. 18, 1954) (By Richard M. Spong)

IN THE NAME OF UNITY

In the two weeks before the midterm elections, President Eisenhower is expected to repeat his pleas not to elect a Democrat Congress that would block his legislative program in 1955 and 1956. But the prospect of a "cold war" between the White House and Capitol Hill often appears more dire two weeks before the elections than it does two weeks after them.

The Republican-controlled 80th Congress clashed repeatedly with President Truman in 1947 and 1948. Truman in the '48 campaign was to castigate it as a "do-nothing" Congress, the second worst in history. But no continuous deadlock between the Executive and Legislative branches of government actually materialized.

Bipartisan support for the Truman-Marshall foreign policy was maintained throughout 1947 and 1948 sessions. To the credit of the 80th Congress must be listed the Greek-Turkish Aid Act, the Army-Navy Unification Act, the General Foreign Relief Act (all 1947), and the European Recovery Program, Military Aid for China, Draft Revival and Rearmament, the Voice of America Act, Trade Agreements Extension, the Displaced Persons Act (all 1948). Much of the praise for this record in foreign policy was paid to the persuasive leadership of the late Sen. Vandenberg, then chairman of the Senate Foreign Relations Committee.

SEE REPORT OF AUG. 7, 1948: RECORD OF 80TH CONGRESS (VOL. 1, 1948, P. 359).

The real battle came on domestic issues. The 80th Congress enacted over presidential vetoes two important measures pledged by Republicans in the 1946 campaigns--the Taft Hartley Act (1947) and a $4.8 billion tax reduction (1948). Truman vetoed nine major bills. Six of these vetoes were overridden with the assistance of substantial numbers of Democrats; three vetoes were sustained.

Truman's 10-point civil rights program was largely unsuccessful in the 80th Congress. But in general it found wider acceptance among Republicans than among Democrats. And, again in general, the President's anti-inflation program was defeated by Republicans only with the support of conservative Democrats.

* * * * * * * * * * *

In the latter half of the Hoover administration, Democrats controlled the House and a combination of insurgent Republicans and Democrats controlled the Senate. A compromise relief measure was enacted after a large-scale public works-relief measure had been vetoed. Tariff rates were unchanged, although Congress did attempt to transfer the flexibility power from the White House to the Capitol. Hoover's veto of that measure, like his vetoes of other major bills, was not overridden.

The President was defeated outright on tax and economy measures, but the totals finally carried by these measures approximated the amounts the administration requested. Hoover's appointments gave rise to few contests.

* * * * * * * * * * *

In the last two years of the Wilson administration, Republicans controlled both branches. Vetoes of bills ending Daylight Saving Time and the Volstead bill for enforcement of Prohibition were overridden.

A bill increasing tariff protection of farm products was vetoed. Wilson was defeated on the League of Nations, but popular sentiment in favor of the League forced the Republican candidate in 1920, Warren G. Harding, to propose an "association of nations."

DAILY SERVICE
1205 NINETEENTH ST. WASHINGTON 6, D. C.
EDITORIAL RESEARCH REPORTS

(Monday, Oct. 25, 1954) (By Richard Spong)

IF THE DEMOCRATS WIN

Democratic strategists are reported already mapping out a program to be followed if their party wins control of the next Congress in the Nov. 2 elections. This report places high on the Democratic agenda the extension and liberalizing of the Reciprocal Trade Act, as recommended by the Randall Commission.

SEE WEEKLY REPORT OF AUG. 21, 1954: RECORD OF THE 83RD CONGRESS

Action on President Eisenhower's comprehensive freer trade program was postponed at the 1954 session of Congress. Democrats had strongly supported the three-year liberalized extension requested by the President on Mar. 30. But on the advice of Republican leaders on Capitol Hill, the President on May 20 accepted a straight one-year extension. The compromise, it was explained, would give Congress more time to study the proposed liberalizations.

Just as the Republican-controlled Congress of 1947-48, in general, supported the Truman administration foreign policy with legislation and appropriations, so a Democratic-controlled Congress in 1955-56 could be expected to support the Eisenhower foreign program. On domestic issues less cooperation could be expected between Congress and White House, judging from Democratic votes in the 1953-54 Congress.

* * * * * * * * * * * *

Organized labor is going all-out to support Democratic candidates this year, expecting to be repaid for that support in the next two years. But Labor supported the Democratic ticket in 1948; the four following years could hardly be called a period of "collecting big" for Labor. Certainly the Democrats could be expected to attempt to revise the Taft-Hartley Act. Attempts at repeal and revision after the 1948 Democratic victory were blocked by a coalition of conservative Democrats and Republicans.

Depending on economic conditions, a Democratic Congress would be more likely than a Republican Congress to vote low-bracket tax concessions, and to rip out dividend tax credits. In the House in 1954 more than 98⅓ per cent of Republicans voted against a cut in the proposed dividend tax relief. Almost 88 per cent of Democrats voted for the cut. But the administration might get from the Democrats the indefinite extension of the 52 per cent corporation income tax rate the administration had asked for in 1954--only to settle for a one-year extension.

* * * * * * * * * * * *

A Democratic Congress might consider it had a mandate to restore rigid high farm price supports. In 1954, almost 78 per cent of Senate Democrats voted against flexible supports. Only 17 per cent of Senate Republicans opposed the administration-requested principle.

Democrats would attempt, on their past record, to increase appropriations for national defense. And they would try to reverse the administration private industry-public funds "partnership" power policy. Democrats would be expected to vote more funds for multi-purpose dams and for flood control and emergency farm relief.

In the area of social welfare legislation, a Democratic Congress would tend to follow the administration's lead, particularly in supporting the President's health reinsurance program, defeated this year. As for public housing: Congress this year scaled down the President's request from authorization for 140,000 starts over four years to 35,000 starts for one year. Democrats in general favored an even larger program.

Special Session of Senate

The Senate session opening on Monday, Nov. 8 is unique in that the Senate is summoning itself back without the House, under the adjournment resolution of Aug. 20. Although there have been 46 previous special sessions of the Senate alone, the last in 1933, all were summoned by a President.

The forthcoming session is unique also in being convened to consider censure of a Senator. Most special Senate sessions of the past were called to act on major nominations immediately after a new President had been inaugurated. (Before the 20th amendment was adopted in 1933, a new Congress was not due to meet in regular session until 13 months after a President took the oath of office.)

A few special sessions of the Senate were called also to act on a treaty or to consider some aspect of foreign relations not requiring legislation. The House has never been called into special session by itself.

And this special Senate session is unusual, although not unique, in running on (probably) for some weeks. Of the 46 preceding special Senate sessions, 34 lasted for 15 days or less, including Sundays. The last previous of the 12 which lasted for more than 15 days was away back in 1893.

Whether the present session keeps strictly to passing judgment on Sen. McCarthy is probably up to the Senate leaders. In the special Senate session of March 1917, a point of order was raised and sustained against even the introduction of a bill alien to the purpose for which the session had been called. But nothing can prevent any Senator from discussing anything--for instance, election results.

CERTIFICATE OF INCORPORATION

-of-

ASSOCIATED STEVENSON CLUBS OF AMERICA, INC.

Pursuant to the Membership Corporations Law.

We, the undersigned, for the purpose of forming a membership corporation pursuant to the Membership Corporation Law of the State of New York, do hereby certify:

I. The name of the proposed corporation shall be ASSOCIATED STEVENSON CLUBS OF AMERICA, INC.

II. The purposes for which it is to be formed are:

a. To promote and foster by political and informative means, the nomination and election of ADLAI STEVENSON to the office of President of the United States.

b. To solicit, collect and otherwise raise money for the furtherance and accomplishment of the aforementioned purposes; to expend, contribute, disburse and otherwise handle and dispose of the same for such purposes, either directly or by contributions to other agencies or organizations; and to do any and all other things necessary or proper in connection with or incidental to any of the foregoing, subject to such limitations as are provided by law.

III. The territory in which its operations are principally to be conducted is New York State.

IV. The city, village, town or courty in which its office and headquarters are to be located is the City and County of New York, with sub-headquarters elsewhere in the United States, as may be deemed necessary and desirable.

V. The number of its directors shall be not less than five (5) nor more than eleven (11).

VI. The names and residences of the directors until the first annual meeting are:

Dear Mr. Mercer,

On one of the pre election days I wrote you a pretty mad letter after you spoke about "daisy diaries" when we were fighting for Stevenson and all he means. On most of the other days you were hiding behind quotations of Will Rogers. Knowing you through all these years from "This is Lawton" days – it was not possible that you lost your courage now.

Tonight, one week after that fateful election, you pay tribute to the last 20 years. You never resented those lies and attacks on those 20 years and its Creators Why! Why!

If you thought a "change" necessary you could have explained that too in many ways. I listened to nearly everybody and every site but nobody was so massive.

I never sent that other letter but this I have to get off my chest.

Sincerely Yours
Lo Haelscher

November 24, 1958

The Rushing Chairman
Kappa Sigma Fraternity
University of Oregon
Eugene, Oregon

Dear Brother:

I write from this considerable distance to suggest that your chapter might want to have a look at Norman Stoddard, who is a freshman at Oregon and presently resides at McClure Hall. I have known him for many years and have known his father for more years than either one of us cares to remember. He is intelligent, amiable and, I should imagine, a fair student, although I don't know about that. But I do know him well enough to suggest that he might be worth looking over.

Fraternally yours,

KRM:skh

November 24, 1958

Dear Tom:

I knew all along that Norm was a boy of unusual judgement and discernment. If the Kappa Sigs won't pledge him, Ole Olson and I will both withdraw from the fraternity.

Yours in haste, as usual,

KRM:skh

Edward R. Murrow,
% CBS,
485 Madison Avenue,
New York, N. Y.

Dear Ed:

A very special request. This will take you back a long ways! Norman is interested above all other fraternities, of all things, in Kappa Sigma. He is in his fall term at The University of Oregon. The Phi Delts are at a low ebb there, living in altogether too old a house, etc. I have cleared the path by telling him that it won't bother me a bit if he doesn't pledge them.

I would like to ask you to direct a letter of recommendation of Norman to the "Rushing Chairman, Kappa Sigma Fraternity, University of Oregon, Eugene, Oregon." Though it could be ever so brief, I am sure a letter from you would be of help to him.

You might mention that you have been with him on a fishing outing or two--and that it would please you if they looked him up. Norm is living at McClure Hall on the campus. All Freshmen must live in the dorms their Freshman years.

I would surely consider this a special favor, and in reciprocation will work toward the goal of making Casey a Phi Delt come 1962.

~~Sincerely,~~

Tom

November 7, 1958

Dear Tom:

How long can we wait, without inconvenience, before deciding the exact date for the Brooks River trip? Unless something really comes unstuck, we can do it in August, but I would like to wait as long as possible before making a definite commitment. At the same time I realize the people up there won't want to wait indefinitely.

As ever yours,

ERM:skh

Dear Ed:

I have written an initial letter to my fishing and hunting operative in Ankorage, Alaska relative to our possible trip to that area for the coming summer of 1959.

I received a letter back today advising me that everything is in order and that he awaits confirmation as to dates before confirming the reservation. If everything works out we will take the Brooks River trip and I know you and Casey will enjoy it. I guarantee you fish. I told Murray (my operator) that it would be sometime in August. When and if your plans firm up so that we can set a date, please let me know. We should plan at least a week in Alaska with at least three or four days at Brooks River, just three hours flight out of Ankorage.

Everything is fine with the Stoddards. Norm is at college and getting along fine. Whenever you are through with the pictures have Casey send them along. We attended the Washington State vs. Oregon football game last Saturday and painfully watched the Cougars spoil a very nice Oregon homecoming.

I am giving a great deal of thought to the subject of our discussion at the Century Club and feeling like you that by 1960 I will be prepared to test my wings. Am pleased that you are planning along the same line.

With warm regards to you and yours, I am

Sincerely yours,

Tom

Edward R. Murrow
485 Madison Avenue
New York 22, N. Y.

Dear Ed:

I have today written my Alaska operative to obtain the latest date, without inconvenience, that we can make a reservation for our Brooks River trip. I will hear in a few days and will advise you.

I am delighted that you are giving this trip serious consideration, as I feel that since we have jointly undertaken on such a wholesome scale the woodsmanship education of Casey, we should not let it drop this year. The quasi-international flavor of this Alaskan trip would be most worthwile just at his entrance into high school, plus the fact that it will give his Dad and his Dad's friend a real excuse to "get away from things".

Ole has been on some sort of trip and wrote me that he had made brief connections with you in New York. I explained to Ole that it was not easy to get on your schedule and that it would be particularly difficult for a man who held the hands he did against you in our last summer poker sessions.

As ever yours,

Tom m.m.

Dear Ed:—

Thanks for taking the time to have lunch on the 26th last at the dear "Dreary" Century Club. As usual it was the highlight of my trip.

Ed - I have thought over the subject that kept referring itself to us - that of a public life to finish out the lives of a couple of lucky Western boys. I'm going to do it - & I hope you do, too.

I will keep you posted.

As ever,

Tom.

Tom Stoddard

June 20, 1958

Dear Tom:

I regret to say that I am not sure when we arrive in Portland, but believe me, we will be there by noon July 5th. Perhaps earlier. I will telephone you from Spokane or Seattle.

I am afraid Janet must fly back on the 5th or the 6th. This is due to the fact that her father, who is 82, recently broke his hip and she must make the necessary arrangements to house him and a nurse at the farm.

Casey is busy practicing his spinning gear and we are both eager to get going.

As ever yours,

Mr. Tom Stoddard

June 18, 1958

Mr. Edward R. Murrow
485 Madison Avenue
New York 22, N. Y.

Dear Ed:

Pleased to get your letter of June 12th, and to hear that nothing short of a major war is going to prevent the Rogue River trip. Catherine is anxiously awaiting word from Janet as to her plans and I do hope they can arrange to spend the time together in Portland.

As to your ETA in Portland. We should plan to leave Portland Saturday, July 5th, around noon and drive to Grants Pass which is approximately 275 miles of good roads. We have a reservation at a motel for Saturday night, July 5th, and will shove off from Grants Pass by boat for Gold Beach by noon, Sunday, July 6th. We will be on the water July 6th, 7th, 8th and 9th and arrive at Agnes on the morning of July 10th. We will eat lunch at Agnes and take the afternoon U. S. Mail Boat into Gold Beach where we can meet Janet and Catherine late that afternoon.

I am presuming that Janet and Catherine will drive down to Gold Beach and meet us the afternoon of the 10th of July. An alternative that might be pleasant to them would be that they plan to arrive at Gold Beach in time to take the U. S. Mail Boat up to Agnes to meet us and then we could all return together. As you may know this is a beautiful trip and I am sure both Catherine and Janet would enjoy it. The mail boat leaves Gold Beach for Agnes at 8:30 A. M. Thursday, July 10th, and gets back from Agnes about 5 P. M. the same day.

Now as to your arrival in Portland. If you would like to get here at the latest possible date, you should be here on the morning of Saturday, July 5th. If you would like to get here a day early in order that I can partially finance my portion of the trip by playing you a game of golf at the Portland Golf Club, I would suggest that you arrive either the night of July 3rd or the morning of July 4th. This would be particularly pleasing to me as well as remunerative, so---the earlier you get here the more golf we can play and there will be plenty for Casey to do as well.

All you need in the way of clothing is slacks and sport shirts or shorts. Rubber soled tennis shoes are recommended in the boat and Bob Pruitt says that all we will need for warmth is a light sweater and some sort of light rain jacket. As to fishing tackle, he said that he could either set you up with what he has or you could buy some inexpensive tackle at Grants Pass. Pruitt said that we shouldn't take too much luggage as we would not need it. He said to bring all we wanted and he would sort it out at the Boat Landing at Grants Pass and what was not needed could come around to Gold Beach in the car.

I am anxiously awaiting your arrival as well as word from Janet as to what her plans are. Please let me know when to expect you and try to come a day early for a day of golf if you can.

Sincerely,

Tom

New York, N. Y.

Dear Ed:

Everything appears to be in readiness for your Rogue River cuting starting July 6th. Reservations are all made and confirmed and I am advised that we have the two best boatsmen on the river. This is too early for the steelhead runs but trout fishing will be at its peak.

I have not heard from you since we firmed up all these dates over the telephone but I am assuming that no news is good news and that you have had no alterations in your schedule that would prevent your ETA.

Catherine has written Janet that she would be delighted to have her stop over at our home while we are on the trip. Perhaps she and Catherine could drive down and meet us at Gold Beach, and we could go our various ways from there. My son, Norman, is working at a logging camp above Hood River, so Janet, Catherine and Ann would have the house to themselves. I do hope she can work this out as Catherine is most anxious to make her visit as gaddy or as quiet as Janet would like. Catherine's invitation to Janet was sent late only for the reason that I had neglected to tell her that Janet would be with you as far as Washington. Please let me have a word from you about the above matters.

Very truly yours,

Tom

Edward R. & Casey Murrow
580 Park Avenue
New York, N. Y.

Dear Edward & Casey:

I have just been advised by our Rogue River Guide, Bob Pruitt, that our ETA at Gold Beach will be early afternoon, July 10th instead of July 11th as I previously advised you. I thought that it was important that you know this in order that you make your plans from there.

We will be too early for the steelhead runs that make this the greatest steelhead fishing in the world, but we will be at the height of the trout season and that will be something. Pruitt tells me that the trout fishing is wonderful all the way and that there are some big luggers underneath some of those rocks midway on the trip about one hundred miles from the nearest road.

Let me hear from you when your plans are set.

Very truly yours,

Tom

Dear Ed:

I wrote you on February 5th, relative to plans we had discussed about a fishing trip with you and Casey in Eastern Oregon at Earnest Stoddard's 10,000 acre retreat on Eagle Creek near Baker. In that letter I told you that this place is unavailable and I also offered a suggestion that we take the famous Rouge River trip from Grants Pass to Gold Beach.

I have not heard from you on this suggestion and will need to hear rather shortly in order to tie up the necessary boats and guides that I want to use for the trip. This is the greatest outing in the world, Ed, and I hope you can work your plans out to make it. Please let me know as soon as possible, and I hope the answer is "yes"!

I went into some detail in my letter of February 5th, so please re-read that one before you make a decision. Please arrange time for a day or two for golf and other things we might want to do.

Sincerely yours,

Tom

February 5, 1958

Mr. Edward R. Murrow
485 Madison Avenue
% Columbia Broadcasting System
New York, N. Y.

Dear Ed:

While in New York last October, I told you of plans I had to get you and Casey out to Oregon for a fishing trip and outing at my cousin Earnest Stoddard's 10,000 acre retreat on Eagle Creek near Baker in Eastern Oregon. This sounded good to you, and you accepted on behalf of you and Casey for the second or third week in July.

Earnest died very suddenly last December, which throws these plans out for the reason that Earnest won't be there to set the deal up properly for us, make the necessary arrangements, etc. I regret this very much because this would simply have been ideal, and both the fishing and outing accommodations (and privacy) would have been superb.

I still want you to come and I still want to arrange a fishing trip and outing that you two will never forget. My thoughts have been turning to a boat trip down the famous Rogue River from Grants Pass to Gold Beach. Have you ever made this trip? This is unquestionably the greatest trip of its kind in the west. The boats are handled by expert river-men and there are two people to a boat. You and Casey could take one boat and Norman and me another. The trip takes five days, and stops are made at specific places where mountain cottages have been built and are run by people who provide sleeping accommodations and real food. July will be a little early for steelhead fishing, but we will be at the height of trout fishing season.

This trip, Ed, is five days through completely virgin territory and through the greatest stand of timber left in Oregon. There are lots of white water rapids and only three short portages. I have never taken the trip but have always wanted to. Your joining me will give me the excuse I need. I assure you that this is a trip neither you or Casey will ever forget. I am sure you know some of the details of this river through your association with Earl Foster in the lumber association in Gold Beach.

Incidentally many women take this trip with their husbands. If Janet would like to join the trip with you, I am sure that I could interest Catherine in coming along and we would need only to hire another boat.

This letter is too long but please read it carefully as I want to convince you that this is the thing we should do. It is necessary for me to reserve these Rogue River boats early and now is not too late. If this all sounds good, please let me know if you can by return mail and what dates will be satisfactory to you.

Sincerely,

Tom

Dear Ed:

The surprise dinner by my friends on the event of my 50th Birthday last Wednesday at the Multnomah Club in Portland is an occasion that will live in my memory forever. A very beautiful letter from you was read at the dinner, and I merely want to tell you that my gratitude is unbounded for this salute from so valued and dear a friend. The affair was really beautiful and some thirty five of my friends throughout the northwest were in attendance. Some very nice things were said which affected me very much and which made any kind of sensible response quite impossible. A beautiful camera and set of photographic equipment was given to me and nothing could have pleased me more. I understand that you shared in this gift and I express my thanks to you for it.

Among the choicest blessings of my life, Ed, has been the deep and warm friendship which has existed between you and me over a long period of years. It is my hope that the coming years will afford us numerous opportunities to even enrich, if that is possible, this relationship.

Sincerely yours,

Tom

Dear Ed:

I am in receipt of volume one, two and three of "See It Now", and spent the entire evening last night listening to them.

I had heard volume one and two before but they mean so much more now that I have them in my library as a personal gift from you. Volume three is really stupendous. Thank you very much, old friend.

Catherine and I drove up to Pullman last Saturday and saw a terrific game between Oregon and Washington State in which Oregon emerged the victor by a scant 1 point, 14 to 13, resulting from the ball hitting the crossbar after WSC's last touchdown. I was never so glad to have a game end in my life. We toured the downtown area and the campus and you can imagine that plenty of my thoughts went back to the days when you were giving the local Police Department and School faculty hell with your multifold activities!

Sincerely yours,

Tom

September 14, 1957

Dear Ed:

Just returned from a trip south to find your considerate and appreciated wire telling me that my World Series Tickets were secure and offering to aid me in getting reservations both in New York and Milwaukee.

You can't know how much I appreciate your arranging for the tickets. As for reservations, am pleased to be able to relieve you of this responsibility. I was successful in obtaining adequate reservations at the Commodore in New York and The Wisconsin in Milwaukee. Neither would be my choice under normal circumstances, but both are entirely satisfactory. Thanks for the offer of help.

I do hope we will be able to see you while in New York, and you may be sure that it will all be up to you--since we are available any time and anywhere. I would be disappointed if we didn't get together--but would understand if your schedule didn't allow it. We will arrive Saturday, September 28th around noon at the Commodore. I have some business the first two days of the following week--then the Series games on the 2nd and 3rd of October. Anytime that we can get together during those days--I'll be ready. I'll give you a call when we get in and arrange to get the tickets. Your Miss Criseau has been wonderful. Hope you are paying her in like proportion.

Harold "Ole" Olson is with me. He is one of my best friends, a real honest-to-God man among men, and a Kappa Sig to boot. He is looking forward to meeting you.

See you the latter part of the month, old friend.

Sincerely,

Tom

Miss Rebecca Holder
Secretary to Mr. Edward R. Murrow
CBS
480 Madison Avenue
New York, N. Y.

Dear Miss Holder:

I received the following wire from you from Hollywood, California. "Have managed to get two tickets to $64,000 dollar question for Mr. & Mrs. Paul Hunt for October 19. Please ask them to contact me when they arrive Plaza 1-2345, Ext 7494 and I will get the tickets to them."

Since the $64,000 dollar question program is on Tuesday night I am wondering if the wire wasn't misquoted in transmitting and should have read October 9?" Would you please let me know about this? If the October 9th date is correct Mr. Hunt will contact you at CBS for the tickets on that date, which is the date he is arriving in New York. He will be stopping at the Waldorf Astoria.

Please convey my regards and thanks to Mr. Murrow.

Very truly yours,

N. Thos. Stoddard

August 23, 1957

Dear Tom:

I have just returned to my shop and was delighted to learn that the matter of tickets for the World Series had been settled. I assume that part, at least, of the game will be played here in New York and will give me a chance to see you.

Sorry we missed you during the brief visit to my mother's at the end of July. Things got a little messed up for a variety of reasons. Not the least of which, was while we were salmon fishing at Neah Bay, Earl Foster who was Athletic's Manager when I was in school dropped dead of a heart attack, and I had to make a lot of arrangements including flying down to Mc Minnville for the funeral.

Do drop me a wire when you know exactly when you will be arriving and we will plan a rendezvouz.

As ever yours,

Mr. N. Thomas Stoddard

Mr. Edward R. Murrow
518 Madison Avenue
% Columbia Broadcasting System
New York, N. Y.

Dear Ed:

This letter is to ask a very special favor from a very special friend. Harold Olson and I are planning to take in the World Series this year. We don't care who plays or where. Since I was a little boy, (like you, No. 50 is coming up) I have had a long unsatisfied ambition to see a World Series. Since Olson has had the same thwarted ambition, we have decided to join forces and take one in this year.

My favor is this. I would like to ask you to have your secretary arrange to get me two tickets to the full series, whereever the games are played. I am sure that with your connections this won't be too difficult. Even with my connections I know it would be difficult from here. If we can have a choice we would like to be on the first base line as close in as possible and the ticket price is no item. As soon as the ticket prices are established, please have your secretary let me know and I will forward you a check.

This is quite a favor to ask of a very busy man and the only reason that I have fortitude enough to ask it is because I would do the same for you if I were in a position to do so.

My recovery from the Coronary of 1956 has been wonderful thus far. I am back to pretty much of a normal life again. I play golf, do some hunting and fishing, and work to the same capacity I always did. I know my limitations however,

and stay well within them. I could recommend this last item to someone else I know very well! The Stoddard's are all fine. We have a new home in the country and I keep my idle hours quite busy "straw-bossing" the maintenance of my one-half acre of ground. My son Norman is 18 and has all of the promise of being as good a "blade" as his father. My daughter Ann is 15 and becomming fetching, as you and I understand the term. Catherine is just fine and tolerates us quite well. The entire family, of course, watch all of your programs and I listen to your daily newscast which is released in Portland conveniently at the time I am driving from my office at 5 P.M. If it is possible, you are getting even better as the years roll on. I almost feel as though I have has a visit with you at the conclusion of one of your programs.

Are there any plans for your being out this way this year? If so let me know, I have the perfect place to take you trout fishing in Oregon's beautiful Blue Mountains. This is an invitation. With very best wishes to you and yours, I am

Sincerely yours,

Tom

Mrs. Crissau,
Secretary to Mr. Murrow,
% Columbia Braodcasting Company
485 Madison Avenue,
New York, N.Y

Dear Mrs. Crissau:

Thank you for your thoughtful telephone call with regard to my request from Mr. Murrow for help in obtaining tickets for the World Series this coming October. I take from your call that you are obtaining for me two tickets to each of the games, wherever they are played, and that you will let me know when and where to pick them up. At that time I will settle with you for their cost.

My present plans call for me being in New York from September 29th until October 4th--and I believe the Series will begin within a day or two following the latter date. So--I will be in a position to pick them up in New York rather than have you go to the trouble of sending them to me somewhere. I will expect to hear from you or Mr. Murrow on this.

I do hope this is not causing you or Ed too much trouble. I appreciate that noone knows at this date whether the series will go four games or the limit of seven games--and that you can only be sure of the first four. I wouldn't think of making this request were it not for the fact that it becomes quite a maneuver to get World Series tickets that are any good from way out here. Tell the old boy that I'll return the favor someday, and I'm sure I will think of a way to get even with you, too.

Sincerely,

N. Thos. Stoddard

September 27, 1956

Dear Tom:

The tickets for the Hunts have been arranged and will be waiting for them, and I will certainly make it my business to meet them.

I made a quick trip to Bellingham after the Republican Convention and had hoped to come down to Portland, but had to go to Suez for two weeks, so that was that.

Sorry you are not coming East, I will make you a signal if I get West again. This is written in great haste, but I did want to tell you that everything has been arranged for the Hunts.

As ever yours,

Mr. N. Thomas Stoddard
226 S. W. Broadway
Portland 5, Oregon

rh

N. THOS. STODDARD
226 S. W. BROADWAY
PORTLAND 5, OREGON

Sept. 15, 1956

Mr. Edward R. Murrow
CBS
580 Madison Avenue
New York, N. Y.

Dear Ed:

I was disappointed that you didn't route yourself northward from the Republican Convention at San Francisco, but presumed the large bill you compiled for CBS on that event necessitated an early return to New York to defend the expenditure. On the point of the convention let me say that your coverage was terrific and the feature of the whole program was your daily recapitulations with Eric Severeid.

I am not making my annual trip east and therefore, we aren't going to get together this year. This is a disappointment, of course, to me. The purpose of this letter is to advise you that one of my best, closest friends, Paul D. Hunt, general manager of the Pacific Mutual Life Insurance Co., mortgage loan division here in Portland, has asked me for a favor which I would very much like to arrange. Paul and his wife are going to be in New York City at the Waldorf Astoria from Oct. 9 through the 13th. Like any sizzerbill from the sticks, among other things he would like to see in New York City is a leading television show. Since he knows we are friends and since from me he has gained the general impression that the only good television shows are those of CBS, he has asked

N. THOS. STODDARD
226 S. W. BROADWAY
PORTLAND 5, OREGON

me if I can arrange for he and his wife to attend one of the CBS shows within those dates. It would be a very personal favor to me if you would have one of your staff arrange this. I have asked Paul to give you a call when he arrives in New York. However, should he miss connections I wonder if it would not be well for you to have your secretary contact him at the Waldorf with whatever answer you are able to give. I leave this to you but would appreciate hearing from you as to whom he should contact, or how he is to be contacted.

have done RH

Paul Hunt is one of God's chosen people. He graduated with me from Oregon and is our age. He is one of those friends who is always by your side though miles may separate you. His friendship, as a result, always reminds me of those words of Robert Browning, "Ah, but a man's reach should exceed his grasp - - - or what's a heaven for?" Other less important factors from Paul's past life is that he is a member of Kappa Sigma Fraternity, likes a drink, always appreciated the turn of a feminine ankle - - - and married a very lovely lady much too good for him. It would be wonderful if you could meet the Hunts, but I know your busy schedule denys you many of these pleasures.

I am getting along fine and I am back to a full day's work once again. My recovery from the coronary attack in April has been a splendid one and my life is becoming very normal once again. I am starting to play golf next week and only last week had the pleasure of a two hour boat fishing trip on the Rogue River in Southern Oregon.

N. THOS. STODDARD
226 S. W. BROADWAY
PORTLAND 5, OREGON

Let there be no doubt in your mind that I am as good a man as ever - - - which leaves you with the job of making the appraisal!

Sincerely yours,

Tom

Dear Ed:

Received the Winston Churchill album and the copy of "See it Now, and hasten my thanks to you for both of these wonderful gifts. The album just received completes my collection of your recordings, so get busy on another one. This last one I believe is the best. Have played it a dozen times or more, and get something new each time. What a man!

I am getting along fine, and it appears my recovery will be good. Will be playing 18 holes of golf in a couple of months, so if you come west later this summer, bring your clubs. You may be sure I won't use the heart as an excuse--for it is my considered opinion after viewing your game the last time we played that I could beat you without one (a heart)!

Am getting lazier than hell. Let me hear of your plans to come west as soon as they are completed.

As ever,

Tom

The following is from Tom Stoddard:

5/17/56

Dear Ed:

Hate to have you labor thru my penmanship -- but am still in the hospital (1 month yesterday) and don't yet have the privilege of my stenographer -- so please bear up. Thanks for your thoughtful letter, which helped a good deal the general state of my mind. Will look forward to the book and recording you mentioned -- and thanks for them in advance.

The old "Iron man" is down but by long odds not out! Your jaunty phrase that "you refuse to take this think seriously" exactly records my own feelings -- and lately I have been getting confirmation of this attitude from "the scientists" I had a heart attack at 9:30 am on April 20th at my office, which landed me here. Was getting along perfectly and feeling like a million when I apparently had another and much more severe one at 10:00 pm on April 28th. I really thought they had me this time for sure!. But it was fortunate I was in the hospital and with oxygen, hypos, etc. they brought me around okay. Tho not without a little sweating on my part.

I have been completely immobilized until day before yesterday. I guess that is the only treatment now -- to just rest your heart till it heals -- so that's what they have done. I have recently received the wonderful news that the healing process has been successful and that, with a few applied here and there, I can expect to lead a perfectly normal and productive life. After a few months I can hunt & fish & play golf and work as I normally have always done. So, my friend,when you get out this way -- bring those left-handed golf bats -- and I'll <u>continue</u> the lesson I gave you on your last visit!

Roger Keane, a WSC Sigma Nu around your era, is my doctor. He says you two know each other. He and I had been planning an 11 day horseback ride into the Salmon River country of the Idaho Panhandle this August, of course I am now "grounded" for this year - but he wants you to make the trip with him. You will get trout fishing that just doesen't exist anymore -- and of course you know how beautiful that country is. He told me he would write you an invite - and I just want to urge you to do it if you can take the time. I know you have a government "to support," but to hell with it for eleven days. Other men going from Portland with Roger will be Ed Dwyer, about 52 and President of Dwyer Lbr Co here, and Ray Deiter, about 62 and one of the best fly fisherman (almost as good as me) in that country. There will be about 20 in the saffari - and you'll be bedded down, cooked for, etc. Hope you can make it. Again thanks for your letter and thought. Don't worry -- I'll be okay in a couple of months. I hear you every nite at 5:00 pm (your radio news report) and it never fails to bring back some 27 & 28 year old memories of a couple of young punks with big ideas!

The best always,

Tom

N. THOS. STODDARD
731 S. W. STARK STREET
PORTLAND 5, OREGON

6/2/55

Dear Ed: —

Sorry to hear that you can't get out to the Advertising Convention here — but even if you could I can see a dozen reasons why you'd decline! You mention that the Murrows might possibly be in this area in early July — and wonder about a fishing trip. You may be sure I will kick up a trip of some kind should you come — so keep me advised of any plans.

After almost twenty years with Commonwealth — I have tendered my resignation effective July 1st this year. As you may see from the enclosed financial statement — I am executive vice-President — and a member of our board. We are the largest mortgage

banking concern in the Northwest — and do an extensive business in the five western States and Alaska. We have, in addition to our mortgage loan division, a business and industrial property department, a property management department, and a state-wide Title Insurance department. With pardonable pride I may say that I have worked up from the bottom of this Company to the 2nd position salary-wise + otherwise over the past twenty years — and have had a major part to do with our tremendous growth and expansion.

My decision to resign is based on business-company situation having to do with further advancement in the reasonably near future. The President reached retirement age this year — and since he has concluded not to retire in the forseeable future — I don't want to wait that long for a final advancement. I am a fairly strong stockholder — + will continue on the Board.

I have no immediate plans, tho

N. THOS. STODDARD
731 S. W. STARK STREET
PORTLAND 5, OREGON

may eventually, if nothing else turns up to my liking, launch a real estate and mortgage company of my own. I am wondering if you have any ideas for me. The thought occurs to me that perhaps you might, among your contacts or within your own organization, have a thought as to a location that I would like and that could profitably employ my talents, if any. Understand, I am not soliciting anything more than your appraisal of the opportunities surrounding you. Though I am far from being rich — we are rather comfortably fixed for a considerable length of time — but certainly not forever. I have, like you, no desire (if I could) to retire at 47!

Ed, I am + have been, one of the higher paid executives in Portland

business among the younger men. I have virtually run this Company for the past Ten years - & prior to the war was Sales Manager for six years. As you know - I have headed most every thing in Portland on the side - having always taken a pretty strong position in the civic life of the city & state. I do a lot of public speaking during a year - and have almost a fetish for organization and promotion. Give it some thought - & let me know if you have an idea. Would like to hear of any possibilities as early as possible - else I will probably go ahead on plans as stated above. I will be here (Res phone Beacon 9812) until June 13th - then am driving my family to Wisconsin and can be reached at Frank Hauzlik, The Pelledge Home, Chippewa Falls, Wisc from the dates of June 17th - 20th. Then I'll be back here after June 23rd. My business phone here is Atwater 8141.

Before closing want to tell you

5

N. THOS. STODDARD
731 S. W. STARK STREET
PORTLAND 5, OREGON

that both of your TV programs go great out here.

"Person to Person" is really striking a responsive chord in the public mind — and of course the other program is the most intelligent one on the air today. This tobacco subject is the talk of the town as a result of it.

But to you and yours — and if the principal subject of this letter sounds ridiculous to you — just ignore it. Hope to see you in July — + in the meantime best of luck.

Sincerely,

Tom.

Am writing this at home. Please pardon the scribbling.

Stoddard, Tom

May 5, 1955

Dear Mr. Collier:

Very many thanks for your letter and your cordial invitation to speak at the 52nd Annual Convention of the Advertising Association of the West to be held in Portland, Oregon, June 26-29.

I regret very much that I cannot accept. Quite apart from the fact that my schedule makes it impossible for me to leave New York during June, I have finally had to make a choice between doing five quarter hours and two half hours of television each week and making speeches.

I am sorry to have to miss so pleasant an occasion as your Convention.

Sincerely,

Mr. Charles W. Collier
Advertising Association of the West
425 Bush Street
San Francisco 8, California

fe

May 5, 1955

Dear Tom:

I am sorry, but it is absolutely impossible for me to get away from New York and come to the West Coast in June.

I have regretfully had to write Mr. Collier to this effect. I find that I have finally had to make a choice between doing five quarter hours and two half hours of television each week and making speeches.

There is a bare chance that Janet, Casey and I will be on the Coast the first week in July. If this materializes, do you think there would be a possibility of arranging a fishing expedition?

With best regards,

Sincerely yours,

March 30, 1955

Mr. Edward R. Murrow, Vice President
Columbia Broadcasting System
New York, N. Y.

Dear Ed:

I have been asked by H. Quenton Cox, a prominent radio and TV advertising representative here in Portland, to encourage you to accept an invitation which is being made to you by the Advertising Association of the West to - attached appear before the Association's annual convention in Portland on Wednesday, June 29, at 2:15 P.M. at the Multnomah Hotel. If you have not already received their invitation, it is on its way. They are most anxious to have you accept the assignment before their convention of approximately 500 people.

Since the last week in June is just when the fishing gets good in this country, I am particularly anxious that you work out a reason for making a trip out here. It is entirely probable that I could arrange a three or four day fishing trip starting immediately after your appearance at the convention, and I believe I could assure you a very wonderful outing. Please give this some serious thought and let me know if it works into your schedule.

Last night I viewed your program on the watch industry on "See It Now", and I send you my compliments on this fine program. It was not only interesting, but amazingly educational to the rank and file of people on the complex tariff situation that confronts the country. It is very commendable that programs of this type are forthcoming from CBS. Your "Person to Person" program is going over big out here, and everyone I talk to finds it most interesting. I think it is one of the best programs today.

Everything is going fine here. Should it be possible for you to bring Casey with you on this western

Mr. Edward R. Murrow

ADVERTISING ASSOCIATION OF THE WEST

CHAS. W. COLLIER
Executive Vice-President

425 Bush Street • San Francisco 8, California • Garfield 1-6868

April 12, 1955

Mr. Edward Murrow
Columbia Broadcasting System
New York City

Dear Mr. Murrow:

I am sure that by this time word has reached you from our various friends that we want you to speak at the 52nd Annual Convention of the Advertising Association of the West to be held in Portland, Oregon, June 26-29, 1955. We feel that this occasion offers the kind of scene which Ed Murrow would thoroughly enjoy.

The theme of our convention is "New Frontiers for Business and Advertising". This 52nd annual convention is being held during the year celebrating the 150th anniversary of the arrival of Lewis and Clark in the Northwest. So, not being content with inviting ordinary speakers, our convention committee has gone out for the best in the land. The program committee wants you to give the climax talk the afternoon of the 29th. The subject, as we visualize it, might be "New Frontiers in Selling Ideas and Ideals". We want to give you sufficient latitude so you may talk about the problems of communication either on a national or an international basis.

Both as an individual and as an officer of CBS you have demonstrated your abilities in this field and, in this instance, you will be talking to an audience that is intensely interested, as indicated by the enclosed resolution unanimously adopted by this Association at its Mid-Winter Conference in January of this year.

As you know, the week previous to our convention, there will be held in San Francisco the 10th anniversary meeting of the United Nations. We are hoping that your plans might be made already so that you will be in this part of the country at that time and can easily go from San Francisco to Portland to speak at our convention.

We have discussed the possibility of your coming with such friends of yours as Arthur Hull Hayes, KCBS, San Francisco; Tom Swafford, and managers of CBS stations throughout the western area, and they all hope you can be with us.

We know that demands on your time are such that you cannot accept many invitations. We do assure you, however, that with our 5600

members we will have an audience of between four and five hundred people prominent in business and advertising in the West, and that very broad publicity will be given to your appearance. We will provide you with pleasant room accomodations and registration book covering all dinners and other events of the convention.

Our committee would greatly appreciate hearing that you will accept this invitation. You are the man they want.

Cordially,

Chas W. Collier

RESOLUTION ADOPTED AT
MID-WINTER CONFERENCE
ADVERTISING ASSOCIATION OF THE WEST
Hollywood, California
January 30, 1955

This Association is soberly mindful of the immensity of the stakes in the continuing cold war competition with the ungodly and militant forces of world communism which threatens the very survival of the free world.

We are painfully aware of the viciously distorted version of our country being spread throughout the world by the ruthless and tellingly effective propaganda of the communists.

We are conscious of the transcendent need for combating this force by portraying to the world more extensively, aggressively and effectively the true story of America and of our nation's peaceful and constructive desires.

This Association therefore faces our responsibilities as good citizens and as the organized voice of advertising in the west by declaring our policy as follows:

1. We endorse the necessity for and the objectives of the U. S. Information Agency and related programs and deplore the relative inadequacy of appropriations for this vital activity.

2. We pledge the active interest of this Association and urge all organized advertising to lend its knowledge, counsel, techniques and proven skills toward helping sell America as effectively as advertising has proved its ability to sell goods and services.

3. We call on our government to expand this activity and to utilize more fully the abilities and usefulness of the advertising profession and industry toward this objective and also to rely on those possessing proven skills in these techniques and crafts.

4. We recommend appointment of a committee of this Association to establish such liaison as appears practicable with the appropriate agencies and organizations, both public and private. The committee further will explore the problem and make recommendations to this Association regarding the value, desirability and means of doing our part in helping tell America's story abroad honestly and effectively for the welfare of our country and cause.

- - -

Following passage of this resolution, AAW President Clair G. Henderson, Denver, named Robert R. Gros of San Francisco to serve as Chairman of the Committee to implement the recommendations.

FACTS ABOUT THE

ADVERTISING ASSOCIATION OF THE WEST

AND WHAT IT MEANS TO YOU!

Reading time **5** minutes

THIS IS THE FOUR-WAY PROGRAM OF THE

ADVERTISING ASSOCIATION OF THE WEST

FOR ADVANCEMENT OF BUSINESS AND ADVERTISING IN THE WEST

1 Promoting Better Understanding of Advertising

AAW sponsored the first Advertising Recognition week, now a national event. Each year materials for use in all media go to the individual clubs and media along with suggestions on how to make the most of this presentation to the public.

AAW prepares, publishes and distributes pamphlets and other material to help business do a better job of advertising.

AAW circulates films and other material to help increase public understanding of advertising and our economic system.

2 Improving Advertising and Advertising Practices

AAW has long been active in serving as clearing house for observance of ethical standards of advertising. AAW, through its national, regional and local affiliations has presented organized front to thwart unfair legislative restrictions on advertising. This effort alone warrants full support of all advertisers.

AAW works constantly with schools and universities to promote better understanding of advertising among teachers and students and also to raise standards and practices for all entering the advertising field.

AAW conducts eight advertising craft competitions in cooperation with media annually, to constantly improve quality of advertising produced in the West.

AAW works directly with Better Business Bureaus, 4-A, Assn. of National Advertisers, U. S. Chamber of Commerce, Direct Mail Advertising Assn., National Industrial Advertising Association, Adv. Fed. of America, Magazine Adv. Bureau, Am. News. Publ. Assn., Outdoor Advertising Association, Western Transit Advertising Assn., Brand Names Foundation, Nat. Assn. Radio & TV Broadcasters, Freedoms Foundation, Alpha Delta Sigma, Gamma Alphi Chi, SCAAA and others.

3 Supporting Public Service Campaigns

AAW, through its affiliation with the Advertising Council, coordinates western support of all important campaigns including Traffic Safety, Better Schools, Forest Fire Prevention, Ground Observer Corps, and many others.

AAW represents the western states at the annual Advertising Council White House Conference.

THE MAJOR ACTIVITIES LISTED ABOVE ARE SUPPORTED BY CONTRIBUTING SPONSORS OF AAW. THE CLUB ACTIVITIES LISTED BELOW ARE SUPPORTED BY DUES FROM THE ADVERTISING CLUBS. THESE CLUBS, HOWEVER, SUPPLY THE MANPOWER TO CARRY OUT THE ASSOCIATION PROJECTS.

4 Coordinating Activities of Western Advertising Clubs

AAW is the "central office" of more than 40 individual advertising clubs (list on back). It supplies information on speakers, programs and projects. It conducts club contests and arranges awards to stimulate advertising through the local clubs. Frequent bulletins on tips, trends and projects are sent to all clubs and contributing sponsors.

AAW has 35 working officers and directors selected from the 11 western states, Hawaii and British Columbia, who keep in touch with local problems relating to advertising and business. These people serve without pay.

All AAW activities are coordinated through a central office in San Francisco under policy supervision of President and Board of Directors. All accounts are audited annually by a CPA and all expenditures are budgeted by a central finance committee.

AAW holds an annual convention. National authorities on all phases of advertising appear on the program. This annual meeting also promises a valuable interchange of information for all advertising people in the West.

do a better advertising job.

maintained contact with 100 colleges
universities in the West. Provided ma-
for use in advertising classes.

dinated activities of 40 advertising
with combined membership of over

tained a practicing educator on its
l of directors to better direct educa-
l activities in advertising.

AAW is the voice of advertising in the West. Its work is vital. If there were no such organization, one would have to be formed. Fortunately there is such an organization. It is the only one in the entire West working full time in the interests of all phases of advertising.

Too many times the activities of this worthwhile association are taken for granted. This fact folder points out what AAW is, what it does and why it is a vital force in furthering the interests of advertising.

Facts presented here have been boiled down for brevity. Additional information is available on any function of the Association.

We believe that after you have read this folder you will agree with all the other sponsors of the Association that it is a worthwhile activity deserving your support.

CONTRIBUTING MEMBERS OF A.A.W.

include over 300 representative firms among advertisers, agencies, media and suppliers.

•

AAW has advertising clubs or affiliates in the cities listed below. Total list of 45 includes regular clubs, women's clubs, Junior clubs and advertising and journalism honoraries.

Boise, Idaho	Sacramento, California
Boulder, Colorado	Salt Lake City, Utah
Denver, Colorado	San Diego, California
Eugene, Oregon	San Francisco, California
Fresno, California	San Jose, California
Hollywood, California	Santa Barbara, California
Honolulu, T. H.	Seattle, Washington
Long Beach, California	Spokane, Washington
Los Angeles, California	Stockton, California
Oakland, California	Tacoma, Washington
Ogden, Utah	Tucson, Arizona
Pasadena, California	Tempe, Arizona
Phoenix, Arizona	Vancouver, B. C.
Portland, Oregon	Whittier, California

New Frontiers for Advertising in the West

Portland Adopts Challenging Theme For 52nd AAW Convention, June 26-29

Delegates to the Mid-Winter Conference in Hollywood were delighted with the imaginative presentation made by Portland Ad Convention leaders outlining plans for the AAW Convention June 26th to 29th. Presenting the plans were Oregon Club President Roald Lund, General Convention Chairman Ted Tracy, and committee member Jack Fitting. Backing up their claims was AAW Treasurer Carroll O'Rourke, also of Portland.

Portland leaders at Hollywood: Mrs. Jack Fitting, Ru Lund, Jack Fitting, Carroll O'Rourke, and Mrs. O'Rourke.

The year 1955 marks one hundred and fifty years since Lewis and Clark opened new frontiers in the West. The sesquicentennial of that event is being celebrated in Portland, so the convention theme will appropriately be "New Frontiers for Advertising in the West." Multnomah Hotel will be headquarters. Countless hours are being spent by members of the Oregon Advertising Club and the Women's Advertising Club of Portland planning entertainment and the program for all the important details for a successful convention.

Reata Howard Trombly

Program chairman is Bryce Spruill, vice-president of Botsford, Constantine & Gardner. Working with him is a strong committee of Portland men. Representing AAW on the committee are President Clair Henderson, Past President Robert R. Gros, and Charles Collier. The theme of the convention will be carried out during the entire three days, with famous speakers now on the list to receive invitations to discuss such challenging subjects as "New Frontiers for Western Business," "New Frontiers for Advertising," "New Creative Frontiers in Advertising." Authoritative talks will be given on new concepts and art treatment in television commercials; advertising copy, advertising arts, and research.

Similarly fresh will be the approach to advertising club program discussions, as well as those pertaining to programs of the Advertising Association of the West.

And in addition to these serious minded frontiers, will be new frontiers in diversion. Oregon's wonderland is being explored again so that the very finest in entertainment tours will be offered. Visiting wives will be graciously received and entertained. Chairmanning this feature will be Reata Howard Trombly and Grace Phipps, former vice-presidents-at-large and presidents of Portland Advertising Women. Giving counsel and advice on the program building are present officers of the Association, Carroll O'Rourke, treasurer; Harry McLain, district vice-president; Neva Elliott, associate vice-president; Arthur House, past president, still on the AAW Board and representing our liaison committee with AFA; and other past presidents Vernon Churchill, Walter May and Marshall Dana.

A strong committee representing top advertising in Portland will carry out the plans. A Junior Committee, with cooperation of the Seattle Junior Advertising Club will make full provision for the Juniors.

Hollywood Mid-Winter Conference Largest Yet

On January 28-31 Hollywood was the scene of the largest and in many respects the finest Mid-Winter Conference this Association ever had. Those who came strictly for business, really had it, for all day Saturday, January 29, was business, with many important reports.

High in importance among the many actions taken was unanimous approval of a special resolution presented by Past President Robert R. Gros urging our government and the advertising industry to join hands in meeting effectively communist propaganda discrediting America and the American way of life.

Committee and Board meetings and a final general assembly were on Sunday. The Hollywood Advertising Club, headed by Robert Coleson, hosted the affair. Frank Crane was general chairman. Plans started with a Friday afternoon at Santa Anita, and included a cocktail party compliments of the Hollywood advertising fraternity, a dinner dance, a luau, visits to NBC, CBS and Mutual studios. Those who stayed over for Monday were treated to a preview of MGM's "Hit the Deck."

President Clair G. Henderson, of Denver, assisted by Senior Vice-President John Kemp, Hollywood, and Audrey Calder, vice-president-at-large, Oakland, presided. Such subjects as the operations of advertising clubs, Advertising Recognition Week plans, and important projects of the Association, such as improvement of advertising content, advertising education, legislation, small business, and a prospective survey of consumer attitude toward advertising, gave all a fine picture of advertising at work in the West. The meeting was well attended by AAW officers and club representatives.

VOICE OF A. A. W.
CHAS. W. COLLIER, *Executive Vice President*
MARIE CARLTON, *Office Manager*
Published quarterly by the Advertising Association of the West, 425 Bush Street, San Francisco, Calif. Subscription price, 50 cents per annum. Single copies, 10 cents. Entered as second-class matter August 20, 1942, at the Post Office, San Francisco, Calif., under Act of March 3, 1879.

Actions by Board and Members At Mid-Winter Conference

Passage of a Resolution to combat communist propaganda.

AAW and its Fifty-two Years, a saga of the West, has been completed by Chairman E. J. Murphy, a past president of the Association. A publication committee to consider ways and means of making this story available to all is headed by Herbert Kirschner as chairman, and includes K. L. Hamman, Elliot Epsteen, Howard Willoughby and Leland Phillips.

Club Competitions. All AAW Club Contests will be continued as usual, except that the Arthur E. House Sweepstakes Award will be decided not only on the place awards in each of the five classifications but also on the overall excellence of the entries.

Improvement of Advertising Content. A plan for a contest to be publicized within AAW and directed by the Improvement of Advertising Content Committee will be announced. The general membership will be urged to submit its ideas of the best and most practical code of practices to reflect the ideals of those practicing advertising.

Membership Card. The Association approved a general membership card to be made available to Advertising Clubs, either to serve as their own club membership cards, or to be used as an additional card which each member of an Advertising Club may possess. Audrey Calder and Jim Morgan are in charge of development. Frank Crane is to present ideas for a plaque for Contributing Members.

Small Cities Groups. Smaller cities not wishing to maintain an Advertising Club may form chapters of the Advertising Association of the West, if they have ten or more members. Such groups will be furnished with materials by AAW and be kept informed of advertising developments.

Direct Mail Competition. A new direct mail competition sponsored by the Direct Mail Advertising Association, has been approved, with Robert Hemmings in charge.

Point of Purchase Contest has been approved. Details to be developed.

Farm Paper Contest has been approved and will be conducted this year.

AAW Financing, under direction of Treasurer Carroll O'Rourke. Advertising Club presidents will be asked to appoint chairmen in their communities.

Ayres' Three Minute Speaking Competition, subject selected "My Part in Advertising of the Future." Open to all advertising club members thirty years old, or under, with district elimination contests.

Spokane Junior Advertising Club has been admitted to the Association.

President's Competition for Juniors will be on the same basis as last year, with points for both over-all work and club project.

Resolution expressing appreciation to Benet Hanau and Arthur Strader for work in preparing "Mind Your Advertising Manners" was adopted.

Highlights of Conference Reports

Charles W. Collier expressed appreciation to all officers and committee and club members who have done so much to weld AAW into a strong unit for the advancement of business and advertising in the West. He reported approximately 5,600 members of advertising clubs, 300 contributing members, and affiliate memberships with the American Association of Advertising Agencies, Direct Mail Advertising Association, Gamma Alpha Chi, and Alpha Delta Sigma. After telling of the services of clubs and committees, he urged organized advertising and AAW to speak out boldly for better practices, better ethics, better advertising education; otherwise we may be judged by the bad apple in the barrel.

Buzz Capener, chairman Junior Executive Committee, reported on Junior activities throughout the area, urging help from the seniors in advertising education. He said they need the experience of seniors and support of all groups. If seniors could help pay the fees and dues of junior members, they will derive more benefits directly and indirectly. "Give more responsibility to the Juniors; they are working for the industry and for the clubs."

Professor Arthur Kroeger, of Stanford, expressed the appreciation of educators for the interest of AAW. Said that letter had been sent to sixty-eight colleges in the Western states asking if they were interested in more help from practical advertising men in the field, such as speakers for classes, help in organizing classes, and assistance to young men and women who wish to go into advertising. He urged that when a speaker appears before a college group they not spend too much time selling and defending advertising, but should discuss the fields of advertising in which they function. He suggested that advertising make a very careful study before recommending courses for colleges, and should also consider the problems of the colleges. Prof. Kroeger commended the clubs throughout the area for worthwhile work with the schools at different levels.

Neva Elliott, Portland, chairman of the Legislative Committee, called attention to bills being introduced in Washington, California, Oregon and Utah. "Somewhere along the line the advertising profession," said she, "has forgotten how to make love to the public. The public becomes disenchanted with advertising and it is then when legislation is proposed. Why can't this group do more about avoiding legislation by improving itself?"

Robert R. Bauer, Los Angeles, chairman Advertising Improvement, stated that the committee formed two years ago recommended certain standards for consideration and adoption by the Association. These standards were presented but never adopted. He announced that the new committee consisting of representatives of practically every advertising association, had received reports on the large amount of work being done by these groups individually.

Mr. Gros emphasized the great need for increased funds to counteract the impact made on world opinion by Soviet propaganda. We in advertising, he said, should not become so involved with selling goods or services that we fail also to take an interest in and responsibility for the continuation of the American way of life. His Committee recommended that AAW go on record first, as endorsing the objective of the U. S. Information Agency program and, second, that we both offer and urge greater use of advertising experts and the tools and techniques of advertising to implement that program of telling the American story abroad.

Market Study, Warwick Carpenter, chairman, outlined what has been done to date in investigating possibilities of an authoritative consumer attitude study. He said that he is corresponding with the American Association of Advertising Agencies and the Association of National Advertisers and other groups, and he believes that such a survey will eventually be made. Such a survey, he thought, should be qualitative rather than quantitative, and based on depth interviews, designed for maximum use with the congressmen and state legislators.

Ad Recognition Week Hits New High

In its sixth year, with the U. S. Chamber of Commerce and the Advertising Federation of America cooperating with the Advertising Association of the West, millions of people across America were made aware of how advertising benefits everyone. Each organization had its own program, and yet all coordinated their efforts. The week opened with a national telecast over four networks, with John Nance, president of Studebaker-Packard, as the speaker.

In the Advertising Association of the West area, forty advertising clubs had large committees working on programs. Some communities had as many as forty speakers appear before other organizations. Seniors and Juniors alike took on assignments. Over 500 newspaper mats of ads prepared by task force Young & Rubicam, Los Angeles, were used. Many also used extensive editorial and news space. Five hundred radio stations used recordings and script. Ten thousand car cards were shown, and more than 40 painted bulletins were used throughout the area at strategic spots. Many will remain for long periods. Twenty business magazines used full page advertisements; fourteen farm papers carried ads and editorials; thousands of direct mail leaflets were distributed. Governors of eleven Western States and British Columbia proclaimed the week, as did many mayors and business organizations. John Kemp was general chairman; Eric Lifner was account executive for Young & Rubicam; Burroughs, Inc., Los Angeles, mailed much of the material. All materials, labor and creative thought were contributed.

(1) Governor Knight proclaims Advertising Recognition Week. (Left to right) John Kemp, Eric Lifner, Martha Jeffres, TV actor Ronald Reagan. (2) AAW Past Presidents still serving: K. L. Hamman (1929), chairman, Finance Committee; E. J. Murphy (1936), chair (3) AAW officials see NBC color Television c Henderson, Frank Crane, Bob Coleson. (4)

Club and Craft Contests Announced

Ed Niederkorn, of Portland, will chairman the Club Contests for the Portland Convention. All judging will be done in Portland in advance of the convention. Dick Ryan, of San Jose, is vice-chairman.

The contests include Membership Gain, Attendance, Programs, Advancement of Business & Advertising Activities, Public Interest Committee, Publicity Book. These will be in five divisions based upon size of club. Entries must be received in Portland by June 11.

Other special contests will be held, including the Arthur E. House sweepstakes trophy; the President's trophy for Juniors; Herbert H. Kirschner trophy for the best promotion of Advertising Recognition Week; the Advertising Council trophy for best Public Service program; *Printers' Ink* trophy for best advertising education activity; the Double A award for Advertising Achievement, open to university and college men and women; and of course the Ayres' 3-Minute Speaking competition. The Ramsey Oppenheim award, to be given to the club president who has done the most for understanding of advertising in his community, will again be offered.

Craft Competitions. Entries in the 1955 annual AAW advertising craft competitions covering all media, winning exhibits of which will be displayed at the Portland convention, are now being solicited from AAW members, advertisers, agencies and others in the West. Material entered must have been prepared and used in the West between May 1, 1954 and April 30, 1955. Last year over 1,600 entries were received.

Newspaper Advertising, for general and retail advertising, sponsored by Pacific Coast Division, Bureau of Advertising, ANPA.

Magazine Advertising, sponsored by Magazine Advertising Bureau.

Outdoor Advertising, the Max Schmidt Memorial Award, sponsored by Schmidt Lithograph Co.

Transit Advertising, sponsored by Western Transit Advertising Association.

Radio Advertising, sponsored by Southern California Broadcasters Association, with the winner retaining for one year the Vancouver Advertising & Sales Association trophy.

Television Advertising, sponsored by the Hollywood Advertising Club.

New competitions will be Farm Paper Advertising, Direct Mail Advertising, and Point of Purchase Advertising.

Entry fees will apply in each of these competitions, and special announcements and entry blanks will be available.

Sweepstakes trophy for the entry considered best in all competitions is offered again by Western Advertising magazine.

AAW Resolution to Fight Red Propaganda

(Presented by Robert R. Gros and passed at Mid-Winter Conference)

This Association is soberly mindful of the immensity of the stakes in the continuing cold war competition with the ungodly and militant forces of world communism which threatens the very survival of the free world.

We are painfully aware of the viciously distorted version of our country being spread throughout the world by the ruthless and tellingly effective propaganda of the communists.

We are conscious of the transcendent need for combating this force by portraying to the world more extensively, aggressively and effectively the true story of America and of our nation's peaceful and constructive desires.

This Association therefore faces our responsibilities as good citizens and as the organized voice of advertising in the west by declaring our policy as follows:

1. We endorse the necessity for and the objectives of the U. S. Information Agency and related programs and deplore the relative inadequacy of appropriations for this vital activity.
2. We pledge the active interest of this Association and urge all organized advertising to lend its knowledge, counsel, techniques and proven skills toward helping sell America as effectively as advertising has proved its ability to sell goods and services.
3. We call on our government to expand this activity and to utilize more fully the abilities and usefulness of the advertising profession and industry toward this objective and also to rely on those possessing proven skills in these techniques and crafts.
4. We recommend appointment of a committee of this Association to establish such liaison as appears practicable with the appropriate agencies and organizations, both public and private. The committee further will explore the problem and make recommendations to this Association regarding the value, desirability and means of doing our part in helping tell America's story abroad honestly and effectively for the welfare of our country and cause.

Following passage of this resolution, AAW President Clair G. Henderson, Denver, named Robert R. Gros of San Francisco to serve as chairman of the Committee to implement the recommendations.

AAW Participates in Education Meeting

Activated by a meeting held in San Francisco last October and participated in by representatives of AAW, National Industrial Association, AAAA, Alpha Delta Sigma, and others, a meeting was held in New York City February 14 in which representatives of these and other organizations discussed steps that might be taken by all advertising organizations to coordinate their work with educational institutions teaching advertising courses.

Thor Smith, vice-president of *The American Weekly* and former secretary-treasurer of AAW, represented AAW. Suggestion was made to exchange educational material of each association at least every three months, and it was recommended that each organization extend invitations to all other interested organizations for attendance at meetings held on the subject of education. It was suggested also that each organization urge inter-organization coordination at the local level, between the chapters of various advertising and marketing associations.

Clair Henderson will represent AAW at the annual White House meeting with The Advertising Council officers, staff and members in Washington, D.C., March 22. President Eisenhower and top members of his cabinet and staff will discuss America's domestic and international situation and suggest how advertising may play a greater part.

"Mind Your Advertising Manners"—A Success

Following the initial printing of ten thousand copies of "Mind Your Advertising Manners" by the publishers, Reynard Press, Inc., nearly four thousand copies have been sold to date—many of these in the East and in foreign countries.

This book has been pronounced by the U. S. Chamber of Commerce and by others as among the finest on advertising they have seen. Among others this recent expression by a western banking official, E. M. Johnson of the Bank of America, Los Angeles headquarters, indicates the fine reception for this little book: "Congratulations to everyone concerned—you, AAW, Miss Benet Hanau and any others who had anything to do with 'Mind Your Advertising Manners.' I read this peachy dandy little book first for just the enjoyment and then for the additional enlightenment I could get. It is now a distinguished little member of our advertising book family."

The books are available in individual copies or in quantity lots, as follows: 1 copy, 75 cents; 3 copies, $2.00; 10 copies, $5.00; 100 copies, $35; 100 copies with your imprint on back, $50; 500 copies with your imprint on back, $170; 1,000 copies with your imprint on back, $300.

), chairman, History Committee. vision camera: John West, Clair . (4) Audrey Calder, veep-at-large; Earl Glade, Jr., secretary; Elliot Epsteen, AAW general counsel. (5) John Wills; Florence Gardner, executive director S. F. Ad Club; Robert R. Gros, Harrison Davis, Jim Frost. (6) Buzz Capener, Junior chairman, and Mrs. Capener. (7) Los Angeles Women's Club celebrating 40 years: Jacqueline Britton Johns, president, greets two past presidents, Agnes White Tizzard (1929-30) and Mary Sweeney (1941-42).

WITH THE ADVERTISING CLUBS

The Advertising Clubs of the West are going to town this year. It seems that each club is doing more and better jobs for themselves, their community and for advertising. Each seems to be a beehive of activity. Notes below indicate only a few of the ways in which they are serving. It was an inspiration to see nearly every club president and a number of officers attend the Mid-Winter Conference.

BOISE AD CLUB, under President John Greenlee, who attended the conference, really did a terrific job on Advertising Recognition Week. In cooperation with the Idaho Press Association, their efforts reached out through the State of Idaho. Attending also from Boise was AAW Secretary, Earl Glade, Jr.

ADVERTISING CLUB OF DENVER, under the presidency of Lee Fondren, is enjoying one of its best years. For Advertising Recognition Week, Governor Johnson of Colorado spoke to a combined meeting of the Club, Chamber of Commerce and others, on the subject "Advertising and Colorado." Lee and V.P. Bill Prescott were at Hollywood.

FRESNO ADVERTISING AND SALES CLUB is having an excellent year, meeting regularly, covering projects such as Advertising Recognition Week, and various meetings on craft subjects. M. E. Forslind was one of many club presidents at the Mid-Winter Conference.

HOLLYWOOD ADVERTISING CLUB, just over the hump of one of the biggest Mid-Winter Conferences and having recently completed their great "Y" Day, now settles down to its routine of heavy business. The "Hollywood Grape-Vine" issue which was used as the Conference program, was the largest issue the club ever had.

LONG BEACH ADVERTISING CLUB, President Fred Sykes, has produced a fine new club roster with pictures of all the club members, by-laws of the club, and much other useful information. Advertising paid the cost of this book. Long Beach had fine representation at Hollywood.

LOS ANGELES ADVERTISING WOMEN, Mrs. Jacqueline Britton Johns, president, is busy now with plans for the Frances Holmes Award, which will be held on May 1. This club is one of the most active in our Association. The LAAW handled registration at the Hollywood Conference.

ADVERTISING CLUB OF LOS ANGELES, president Glenn Carter, in addition to being actively engaged in his work of heading the large and busy Los Angeles Club, has been twice cited by Washington for his work on public service activities. The Club itself is enjoying successful programs and did great work on Advertising Recognition Week. Norman Watts, managing director of the club, has made himself a host of friends and is giving valuable service to advertising. Many officers and members were present at Hollywood.

LANE ADVERTISING & SALES CLUB of Eugene, Oregon, recently changed from an advertising to an advertising and sales club, in order to become a greater factor in the community. President Herb Michael attended the Mid-Winter Conference with his charming wife.

ADVERTISING CLUB OF OAKLAND, headed by Frank Hogan, is enjoying an excellent year with fine programs. Their meeting notices, discussed at the Mid-Winter Conference, are considered the most outstanding and original gotten out by any club.

OGDEN ADVERTISING CLUB has had a good year under President Joe Sullivan, but since he is now moving to Denver, a new president will be appointed. Chick Collier will meet with the club on March 2. This club has made itself famous in its community by conducting retailing clinics.

OREGON ADVERTISING CLUB, Portland. Roald Lund, president, is giving that leadership to the club which he promised and which will see fruition in what he and many others believe will be one of our greatest conventions.

ADVERTISING CLUB OF PASADENA has just lost its excellent president, Jim Emerson, who is now engaged in business in Brea. He is succeeded in office by Stewart Hayward. Many members of this club attended the Mid-Winter Conference.

PHOENIX ADVERTISING CLUB has been a perpetual winner of sweepstakes trophies. Jackson Hoagland, aggressive president, promises that Phoenix will be in there again and that if anyone beats them, they will know they have been in a competition. District V. P. George Christie, Jack Hoagland, Sally Hoagland, and four of the club directors attended the conference.

WOMEN'S ADVERTISING CLUB OF PORTLAND. President Ilene Rose and her husband journeyed to Hollywood for the Mid-Winter Conference, thoroughly enjoyed it and report great benefit from it. The club is busy on plans for the convention as well as their own projects, emphasizing always that Portland is the Rose City.

SACRAMENTO ADVERTISING & SALES CLUB. Bill Queale, president, and Dave Williamson attended the conference and were enthused and delighted with the whole affair. The club will host President Clair Henderson when he visits there on April 4 and 5.

SALT LAKE ADVERTISING CLUB is losing its president, Fred Barlow, who has just announced that he is moving to Denver to take over the Transit Advertising Lines there. He is being succeeded by newspaperman John Carver. Fred Barlow and John Carver attended the conference.

ADVERTISING CLUB OF SAN DIEGO. President Harry Green has established himself as one of the finest ad lib presiding officers of any club. He keeps everyone on their toes. He missed the Mid-Winter Conference, but Paula Sullivan, Muriel Tolle and a host of Juniors were present.

SAN FRANCISCO ADVERTISING CLUB finds President Tony Mattes giving it another great year. Week after week their programs are tops. They are planned many months ahead. Any speakers who have something to offer must contact the club early. Florence Gardner, executive director; Bob Gros, past president; Harry Borden, treasurer, and other club leaders were at Hollywood.

SAN JOSE ADVERTISING CLUB. Its new president, Henry Haggland, retailer, is putting real pep and fire into the club. Henry, Benet Hanau, Dist. V. P. Dick Ryan were at Hollywood.

ADVERTISING & MERCHANDISING CLUB OF SANTA BARBARA, with its excellent radio program of "Hats Off," is making a name for itself in the community and its work is being watched. The plan is to take some person in the community who has done something outstanding and to recognize that citizen both at the meeting and in a radio program conducted by Claire Walker. The club was well represented at the Conference.

ADVERTISING & SALES CLUB OF SEATTLE. While Trevor Evans, president, and chairman of Schools Committee for AAW, was unable to be present at the Conference, the club was well represented by Frank McCrillis, former president. The club is now engaged in its annual Advertising Competition, as well as planning for its Art Day.

AD & SALES ASSOCIATION OF SPOKANE. President Hal Bacon at Hollywood reported for District Veep Thor Myhre, also on the Spokane club in Ad Recognition Week last year, when they captured the Kirschner award. Clair Henderson will visit the club May 4. Art Madsen, education chairman, advises that President Eisenhower agreed to speak at the Whitworth commencement when the first advertising class graduates.

STOCKTON ADVERTISING CLUB. Probably no club was so well represented in proportion to its membership as Stockton at Hollywood. Delegation included Robert O'Brien, president, winner of the Ayres Award two years ago; Mrs. Billye Luedtke, treasurer, Marian Jacobs, Bill Golden and Mrs. Bob O'Brien. A night meeting is being planned in April for President Henderson's visit.

TACOMA ADV. & BUSINESS WOMEN. President Margaret Kulgren reports club doing very well with many projects. Members are looking forward to the Portland convention. They were sorry not to have been represented at the Mid-Winter Conference.

TUCSON ADVERTISING CLUB. President Mac Matheson, who chairmanned the Mid-Winter Conference last year, led a delegation to Hollywood, and talked on the Club Service program on how to get maximum attendance at meetings. Mrs. Matheson was one of the finalists in "Queen for a Day" program. Bessye Pittman, Associate V.P. from Tucson, and Ella Breazeale, Senior Advisor for Juniors, Dist. 7, also were in attendance.

ADV. & SALES BUREAU OF VANCOUVER. Frank Baker, who incidentally is considered one of the outstanding presiding officers of any advertising club, came to the Conference with Mrs. Baker from a vacation in Hawaii, and thoroughly enjoyed it from start to finish, as did others from Vancouver, including Harold Merilees and Allan Klenman.

ADVERTISING CLUB OF WHITTIER. We missed Joe Walsh and other members at Hollywood. Wish they could have been with us.

JUNIOR DIVISION

JUNIOR ADV. CLUB OF LOS ANGELES. President Jack Abrams and many other Juniors hosted the fine Junior Conference, considered by many to have been the best Junior Mid-Winter Conference in history.

SAN DIEGO JUNIORS stole the show with a host of Juniors up for the meeting, led by President Danny Hale, who was elected vice-chairman of the Junior Executive Committee. The Juniors have named Muriel Tolle as their choice for the San Diego Woman of the Year.

SAN FRANCISCO DEPARTMENTAL has selected its project for the President's Trophy, an advertising campaign for a hypothetical Seafood Advisory Board. The club was represented at Hollywood by Past Chairman Bill Simons and Dorothy Whelan.

SEATTLE ADV. CLUB JUNIORS were well represented at the Conference by their general chairman, Buzz Capener, formerly of Salt Lake City, who also reported for the Salt Lake Juniors.

SALT LAKE JUNIOR DEPARTMENTAL again took over promotion of Ad Recognition Week for this year and is doing a fine job.

VANCOUVER JUNIORS were unable to have representation at the Conference, but report is that they are meeting regularly and doing well.

UNIVERSITY OF ARIZONA ADV. CLUB was represented at the Conference by Senior Advisor Ella Breazeale.

The new INTERCOLLEGIATE SALES & ADV. CLUB OF SPOKANE is headed by Robert Phillips. The club is made up of students at Gonzaga and Whitworth colleges.

HONOLULU FORMS ADVERTISING CLUB

Final organization of the Honolulu Advertising Club, started in meeting with Florence Gardner in 1954, has now taken form. Donald Woodrum, of Woodrum, Carney & Staff, Ltd., is president; Mark Pinkston, Honolulu *Star-Bulletin,* vice-president; Allan Clarke, Honolulu Gas Company, treasurer; and the following directors: F. Gordon Chadwick, Hawaiian Telephone Co.; Ralph Davison, KGBM-TV; Vance Fawcett, Vance Fawcett Associates; George Mansfield, KGU; William O. Paine, KGU; C. R. Pope, Jr., Holst & Cummings & Myers, Ltd.; Harry Chu, KAHU; Charles Nolan, Hawaiian Electric Co.; Bryan Renwick, Honolulu Chamber of Commerce; Robert Rice, Honolulu Rapid Transit, and Shigeo Soga, Hawaii *Times.*

President Clair Henderson met with officers of the club on his recent visit to Honolulu and we are advised that they will soon affiliate with AAW.

L.A.A.W. CELEBRATES BIRTHDAY

The Los Angeles Advertising Women recently celebrated forty years of service to the advertising field with a Past President's luncheon held at the Chapman Park Hotel in Los Angeles. More than sixty members and guests attended, with fifteen past presidents of L.A.A.W. as honor guests. Toasts were given by special guests Glenn Carter, president of the Los Angeles Advertising Club; Bob Coleson, president of Hollywood Advertising Club, and John Kemp, senior vice-president of Advertising Association of the West.

(1) Past Presidents of Advertising Club of Denver: (first row) Harold Martin, Morris Townsend, Lee Fondren (present president), Clifford Werner, Cecil Connor; (middle row) Harold Benson, Steve Russell, Numa James, Gene McKim, Ed Porter, James Holme; (back row) Clair Henderson, Joe Tracy, Galen Broyles, Ray Frey, Bruce McLeran, Grover Kinney. (2) Stockton group: Bob O'Brien, Mrs. O'Brien, Bill Golden, Marian Jacobs, Billye Luedtke, Bill Winter. (3) Members of Junior Division, San Diego Ad Club, touring Union Tribune Publishing Co.

PUBLIC SERVICE BLDG. PORTLAND, 4 ORE.

April 13, 1955

Mr. Edward R. Murrow
Columbia Broadcasting Studios
New York City, New York

Dear Mr. Murrow:

A few days ago, an invitation to speak at the 1955 Convention of the Advertising Association of the West was extended to you by Mr. Charles W. Collier. As you know, the convention is to be held here in Portland, June 26-29. I have the privilege of serving as General Chairman of this convention, and my purpose in writing to you at this time, Mr. Murrow, is to second Mr. Collier's invitation and to express the hope of all of us here in Portland that our invitation will receive your favorable consideration.

Our convention is entitled "New Frontiers in Advertising". Through a carefully planned program and universally high caliber of speakers, we intend to present just exactly that --the new frontiers in many of the vital phases of this business. As you know, the title of your address will be "Advertising's Most Important New Frontiers". I am sure you will agree that this topic presents a genuine challenge and a real opportunity to deliver an important and meaningful message to an audience of 500 or more advertising executives from all parts of the West. In a real sense, the audience you will be reaching will be all Western business and advertising leaders.

Perhaps you, too, will find much worthwhile interest in the messages of the other speakers on our program. And, while we plan this to be primarily a "working" convention, Western hospitality is not to be pushed into the background, by any means. The Pacific Northwest has much to offer visitors at any time of the year -- we feel certain that our guests will find it particularly enjoyable at this time, and know you will enjoy the special entertainment features that are being planned. Our efforts are dedicated to presenting a convention for advertising people that is outstanding in every respect -- one that is both well worth attending and very enjoyable as well.

We hope you will give our proposal every consideration, that you will agree with us that this is indeed a most worthwhile speaking engagement and that you will honor us by appearing as a featured speaker on our program.

Many, many thanks.

Sincerely yours,

McCANN-ERICKSON, INC.

August 28, 1960

Dear Ed:

Please forgive my delay in thanking you for your very generous and spontaneous offer to help the new edition of Union Now by discussing it on TV when it comes out.

That will help more than I can say or you imagine. I hope it will be ready by early October, and certainly will let you know. Meanwhile, my heartfelt thanks.

My delay in sending them is due to the work of meeting the book's deadline, dead-tired, plus our big story which has been pending in Congress since 1949 - and in the public since 1939 - and which got done Wednesday when the House approved the proposed Atlantic Convention 288 to 103. I enclose our release which brings out what an unprecedented approach to international problems this launches.

Now, all depends on getting big men to serve as delegates - such men as Truman, Stevenson, Gruenther, McCloy . . If they will serve, it will set the tone for the other countries, and great things may be done. (We would have no United States today if Washington had not agreed, despite the apathy and his own feeling that the people were "not ripe" for it, to attend the Philadelphia Federal Convention in 1787.) I see no Washington around just now, and the next best will be very hard to get - especially since the New York and Washington press has ignored every step in the present, and treated even this last decisive one as of no importance. If you can help bring this story to the public, you will be adding another great service to your record.

With warmest regards,

Hastily,

Clarence

Washington 9, D.C.

Dear Clarence:

It is with real regret that I must tell you I simply cannot find the hours in the day to write the foreword you suggest. This is indeed a sad business but I am sure you can find someone whose words will carry more weight.

I will try to do better than write a bad foreword which, under the circumstances, it would have to be. I will try to sell the new edition when it appears. I am now doing a twenty-five minute radio show at 12:05 E.S.T. on Sundays, and this gives me time to talk occasionally about something other than the news of the week or day. Please have your publisher send me an advance copy as soon as available and I will try to do a little selling.

As ever yours,

August 7, 1960

Dear Ed:

I wonder if you could find time to do me the great favor of writing a brief introduction - 400 to 600 words - to a new edition of Union Now? We are getting it out by arrangement with Bantam Books because:

1. Congressional decision to call the proposed convention to explore Atlantic unification now awaits only House approval, which is expected to come soon after it reconvenes, since it cleared the Foreign Affairs Committee unanimously, and the Rules Committee nine to three, is approved by both Kennedy and Nixon. House approval means the Convention would be meeting through 1961.

2. The Nixon-Rockefeller agreement proposed "North Atlantic Confederation;" the Democratic platform called for a "broader partnership."

3. Transformation of NATO into a federal union is the No. 1 debate proposition which 10,000 high schools - 50,000 to 80,000 students - are debating this Fall.

4. The 1949 paperback Postwar edition of Union Now is out of print, only a couple of hundred of the cloth edition remain, students are clamoring for the book.

We are having Bantam print 20,000 copies, of which 10,000 have been bought by one of our supporters, F. Gilbert Lamb, who is present a copy to each of the debate squads. Incidentally, he is a frozen food packer in northeastern Oregon, near your old country.

Instead of revising the text I am following the policy I adopted in the Postwar edition - presenting the original abridged text, and adding about 25,000 words in new chapters at the end to focus the book on the presentsituation. The attached Foreword explains why.

I also attach the two introductions to the Postwar edition, one written in 1948 by Senator Kefauver, the other in 1939 by Oscar Jaszi. I plan to retain the latter but replace the former with one done in 1960.

What is needed, I think, is an introduction aimed primarily at encouraging those who read the book before to take a fresh look at it, and introducing it to the rest. I fear most people will assume that a book published in 1939 must be too dated now to read. Yet it seems to me its age is an advantage. No other proposal in the field, I believe, can be put to so searching a test as one can put Atlantic Union by reading this 1939 text in 1960, in the light of all that has happened since. This could be a new and interesting reading experience for many. Certainly now when problems are growing so

complex and confusing, we need such tests to gain perspective, help distinguish sound reasoning from false, and lessen the fearful cost of learning by trial and error.

How many proposals for securing peace and making the world safe for democracy you and I have seen reach the front pages, fade away or fall in disastrous failure . . . Through the 21 years since I left the Times you have been reporting all this daily, as I did the 10 years before in Geneva. In those 21 years a student at Harvard in 1939 has become now a candidate for President of the United States, many other college students of that year have reached other positions of leadership, or been buried far away. The children born in 1939 with Union Now are now bearing arms, voting, and those who were reading nursery tales when the last edition of it appeared in 1949 are now in high school - about to debate Atlantic federation.

Those in their 20s, 30s, 40s in 1939 on whom Union Now made some impact then are now parents or grandparents; their most vital problem is even more dangerous now than then - and meanwhile a whole new generation of readers has arisen . . one that has never known a world without guided missiles, jet planes, atomic bombs . . but does not yet know this proposal for governing in freedom and peace the international community our inventions have been building.

If you agree that they should read it now, and that their parents and grandparents should re-read it, no one could do more than yo, Ed, to get them to do this.

Knowing the problems of reporters, I don't ask you to endorse the book's proposal and philosophy - immensely as I would value that. All I seek in this introduction is help in getting the book a new or renewed hearing.

If you think it deserves this, please let me know if you can find time to write such an introduction before August 18. The book should go to press then to be in the hands of all the debaters by Oct. 1 - already a bit late in their season. I regret this allows so little time - I don't like to do such a rush job myself as I have to do on the new chapters. If, with a few more days time, you could crowd this in, let me know and I'll see what can be done.

I enclose a reprint of chapter 1 of Union Now, giving the essence of its proposal, and chapter 13, giving its philosophy. They may suffice to show how it reads today. If you don't have the book and want to examine it all, please ask Harpers to send you the cloth edition of the Postwar edition and charge it to me.

I also enclose our July-August Freedom & Union which will give more details about our situation, as regards Congress, high school debate, and the bokk - especially on the marked pages.

If enough interest is aroused in the new edition of the book, Bantam may put it in the newsstands, drug stores etc. A consummation devoutly to be wished! You can be sure I shall deeply appreciate your help, and understand perfectly if you can't give this last-hour aid. With warmest regards,

Sincerely,

Clarence

Foreword
to the Postwar Edition

Union Now first went into type ten years ago, in September, 1938, in a private edition of 300 copies. I printed it at my own expense for free distribution to influential leaders when I could find no publisher who would bring it out. The book was thereafter published by Harper & Brothers in New York on March 2, 1939, and a few days later by Jonathan Cape, Ltd., in London. In June of that year the Librairie de Médicis in Paris published a French translation, *Union ou Chaos*; in August, Natur och Kultur published a Swedish translation, *Union Nu*, in Stockholm. Nearly 300,000 copies of *Union Now* have been sold. Many readers in many countries soon banded together to achieve its aims. The headquarters of the organization it led to, Federal Union, Inc., are at 300 ~~Ninth Street~~ N. W., Washington 9, D. C.

After Hitler over-ran or cut off the democracies on the European Continent, *Union Now With Britain* was published in early 1941 as a provisional proposal to meet the existing emergency. Its title led many to jump to the mistaken conclusion that the basic Union Now proposal was limited to the English-speaking peoples. After the United States entered the war and the liberation of the continental democracies began, I returned to the original proposal, and the wartime edition of *Union Now* appeared in the fall of 1943. All the American editions of *Union Now*, unabridged, abridged and wartime, are now out of print.

To meet the demand for *Union Now* which has risen with the spectre of a third World War, this postwar edition became necessary. It raised the question: Should the original text be revised, or should it be left unchanged, and new chapters added at the end to bring it down to date, deal with the tremendous events since 1939 and with the great opportunity and danger the free now face? I have adopted the latter course. The years that have crowded by since this book first appeared provide a test of its wisdom and foresight which anyone can apply—but

only if the author refrains from changing the text in his own favor as hindsight may suggest, and puts his present comments and views in new chapters at the end.

With the exception of those additions, and the Introductions, for which I am indebted to Congressman Estes Kefauver and Dr. Oscar Jaszi, the text of this edition is printed from the plates of the "Shorter Version" of *Union Now* which the Book of the Month Club distributed in 1941. That version is a condensation about a third shorter than the original unabridged edition, and omits entirely two Annexes, those showing how national sovereignty wrecked the gold standard and the Locarno treaty.

I wish I had space to express my deep gratitude to all the tens of thousands who by their encouragement and support have converted this book's philosophy and proposal into a living, growing Federal Union movement. I must acknowledge my debt, however, to these few typical representatives of the many whom I cannot name but do not forget:

John Howard Ford, president of the Union Iron Works and chairman of the Board of Federal Union, Inc.; its secretary, Rev. A. Powell Davies; its treasurer, Brice Toole, a principal attorney of the U. S. Department of Justice; its New York City representative, P. F. Brundage, senior partner of Price, Waterhouse & Co.; its Pacific coast director, Edgar Bissantz, architect; its southern director, Edmund Orgill, president of the Southern Hardware Association; its representative in Britain, Herbert Agar, author of *A Time for Greatness* and founder of Freedom House; the other men and women who have served or serve on the Board or as branch officers; Don Dennis, its executive director and his predecessors; Justice Owen J. Roberts, formerly of the U. S. Supreme Court, and Russell W. Davenport, former managing editor of *Fortune*, who are contributing editors of Federal Union's magazine, *Freedom & Union*; Helen Hamer, its managing editor, and Howard Chapman, its art director. In all this I speak also for my wife, who has been from the beginning of this enterprise a helpmate indeed.

Two Introductions to the Postwar Edition

I. By a Recent Reader

I wish that every person interested in world peace would take the time to read this masterful work.

The first time I saw a copy of *Union Now*, I dismissed it as probably another wild dream of peace. Later I heard more about Clarence Streit and his background, his experience and his devotion to a noble cause, and so I recently decided to take another look at *Union Now*. I have now read this book twice. I find it contains the one idea and plan around which we can build a peaceful world for the generations to come.

All of us hoped that the United Nations would be the answer to the perplexing problem of peace. We know now that something more than the United Nations is required. That organization is performing a vital service, but it has the inherent weaknesses of all leagues, which are well pointed out in *Union Now*.

Free people—those who enjoy individual and constitutional liberties—do not make aggressive war. The greatest strength in the world is now divided among the governments that guarantee the most liberties and rights to the individual citizen. If only all these free people could stand together for the prevention of war as they do for the winning of a war! *Union Now* shows why they should do this, and how they could. Its detailed suggestions of how a Union of the Democracies could be constituted form a blue-print to guide the deliberations of world statesmen. Naturally such a federation faces many complicated problems. In *Union Now*—if you will only read it through—you will find that Mr. Streit tackles every major problem—currency, debts, trade, immigration, and so on—and gives a reasoned answer.

I reflected frequently in reading this book that World War II might have been prevented if the United States after the first World War had fostered and secured the acceptance by

other democracies of a plan similar to that of *Union Now*. We now have another chance. We should waste no time in making the most of it. A Convention to consider a Federal Constitution for a Union of Democracies would not conflict with the United Nations; such a Union would strengthen its efforts.

The truths and principles set forth in *Union Now* are fundamental—they will never grow old or dated. Time and experience add to this book's undeniable logic. I hope that enough people all over the world will become familiar with it, and will demand that their constituted governmental authorities put into effect this one workable plan for preventing further devastating conflicts.

Clarence Streit is a great American. He has faced many obstacles in securing consideration for *Union Now*, but with vision and determination he has persisted. Events have now proved the soundness of the idea. To be put into effect it awaits only the force of public opinion. That force, I hope, may soon be forthcoming.

ESTES KEFAUVER
U. S. SENATOR FROM TENNESSEE

Nov. 5, 1948

II. BY AN EARLY READER

Union Now is remarkable because it was born out of the kind of circumstances which produced the few great books of the world's political literature. Our matter-of-fact era commits a great mistake in believing that the really significant accomplishments of political literature are simply the result of long and dispassionate research, which the investigator carries on from sheer curiosity or—what is worse—from the exigencies of professorial competition. This is manifestly not enough. Those few works that constitute landmarks in our political history were creations of men who on the one hand were keenly suffering under the burdens of unsolved problems which threatened to crush their own lives and who on the other hand grasped those problems with the greatest sincerity and the most universal human outlook possible in their time.

And when these two conditions of creative activity are pres-

ent, works appear like the *Republic*, the *De Monarchia*, the *Defensor Pacis*, the *Prince*, the *Vindiciae*, the *Six Books of the Republic*, the *Two Treatises of Civil Government*, the *Spirit of the Laws*, the *Social Contract*, the *Wealth of Nations*, the *Essay on Liberty*, *Das Kapital*—to mention only the most portentous for the future. Accomplished scholarship, sophisticated terminology are not necessary attributes of these works. Many of them appeared to contemporary scholars as dilettante attacks against their professional monopoly.

I do not hesitate to class Mr. Streit's *Union Now* among these great works of human emancipation. One might say that it combines the acute, realistic analysis of a Hamilton with the exuberant vision of a Walt Whitman. As a matter of fact, his book is the new *Federalist*, a carefully and minutely elaborated plan for a federal union of democracies, which may serve as a stepping stone to broader and more universal union. In writing this book, he has practically written his own personal history, from the moment when the World War snatched him from his own home, through his experiences as war correspondent, and through his sad disillusionment with the League of Nations. [See Annex, "My Own Road to Union," p. 231; some prefer to begin the book by reading this first.] From that time he realized keenly that the present anarchy of the world, with all its disasters, was and *is* primarily not a problem of the states but a problem of the individual; that the League of Nations was doomed to failure because it was not a union of free men but a league of jealous and egotistic governments; that our present misfortunes were due not to narrow-minded and wicked statesmen but to a system which must necessarily and inevitably sacrifice the individual to the Moloch of state and national sovereignty.

And here appears the great eighteenth century animus of the book, by which it becames a successor to the spirit of the American and French Revolutions. It shows magnificently how a system in which the individual abandons his moral sovereignty will make of him a tool or slave of the state [Chaps. VI, IX]. It shows no less forcefully that a truly individualistic conception of society leads unavoidably to the highest amount of human cooperation, both inside and outside of the state, until it reaches the ultimate possibilities of the world-community [Chaps. VI, IX, XIII].

These are not *all* new ideas. On the contrary, there is noth-

ing in the author's argument which would not be understandable to the Stoics, the philosophers of Christian universality, the founders of international law, and the fighters for English, French and American democracy. But his new and creative vision is the sober and at the same time inspired elaboration of the remedy. He demonstrates that the task for the union of the democracies is *not* essentially different from the task which the United States has accomplished, and that this union would not only be a protection against war but the most spectacular step ever taken to solve our social problems while maintaining individual liberty and human dignity.

The great significance of the book seems to me to lie in the future, rather than in the immediate possibility for realizing this plan [in 1939], but it will show to all intelligent men of good will that any other peace proposal is only a palliative and not a remedy, and that there is no other alternative for the future than War or Union.

I venture to say that from no textbook or series of textbooks will you understand the essence of the political process and the dynamics of international relations so clearly as from the study of *Union Now*. At the same time, it makes you conscious participants in a supreme moral task. It will convince you that the future does not lie in the hands of the dictators or of the bankrupt democratic statesmen of Europe but rather in the determination of courageous individuals conscious of their own power. Or, as Mr. Streit puts it: "For man's freedom and vast future, man must depend on man. It is ours together or no one's, and it shall be ours."

OSCAR JASZI
PROFESSOR OF POLITICAL SCIENCE
OBERLIN COLLEGE

P. S. I gave the preceding introduction first as a review of *Union Now* on April 13, 1939, at Oberlin College Chapel. The eventful years since then have confirmed, not changed my opinion of it then.—O. J., PROFESSOR EMERITUS OF POLITICAL SCIENCE, OBERLIN COLLEGE, *August 16, 1948*.

UNION NOW—*Now*

The Essence of this Timely Plan for Safeguarding Life, Liberty and Jobs the American Way

The boy born in March, 1939, when UNION NOW appeared with its plan to prevent World War, is now old enough to fight in a third one. But today he can read "UNION NOW — now" . . . and so can you.

How the World Ranks "UNION NOW"

***N. Y. Herald-Tribune*—"With realism, faith, audacity and prudence . . . the postwar edition of *Union Now* comes with with earmarks of a classic. A book with life of its own, one of the very few in any generation that rise above the influences which gave them birth to shape and to direct the future."**

What they say about the book:

STATESMEN

The late Justice Owen J. Roberts: "Streit has added five admirable chapters [to the postwar edition] that show the unparalleled opportunity we now have. The whole book deserves to be read and reviewed afresh. It is a clarion call to act."

Jean Monnet, ("Mr. Europe"): "Ten years have passed since I first read *Union Now*. Ten years of suffering that could have been prevented. Today the same problem faces us anew. The danger is as great, if not greater. One thing gives reason to hope: 'Union' is now a rallying cry for millions."

Lord Altricham: "Very gallant and challenging, possessing a peculiar American quality of punch."

Senator Kefauver, in his introduction to the postwar edition: "I wish every person would read this masterful work. First I dismissed it as a dream. I took another look (in 1948). I have now read it twice. It contains the one plan around which we can build a peaceful world. *Union Now* will never grow old or dated."

The late Lord Lothian: "Streit has pointed unerringly to the fundamental cause of the return of militarism and war. In his courageous advocacy of the only true remedy he stands in the direct succession from Washington and the Fathers of the American Constitution, the writers of the *Federalist* and Abraham Lincoln. The time for men to consider it is now. The greatest thing in this great book is the title, *Union Now.*"

BOOK REVIEWERS

Minneapolis Tribune—"Streit's case was a formidable one when he first made it in 1939. It is even more formidable in this postwar edition which ought to be read by every citizen concerned for the survival of free institutions."

Akron (Ohio) Beacon-Journal—"Streit pours himself into controversial questions with a strength born from study, sincerity and human knowledge . . . his straight arrow points the way out . . . onto a sure-footed platform of freedom, union and happiness that can be built as broad and high as men wish."

Tulsa (Okla.) World—"Read it! Buy this provocative book, rent it, borrow it, or just plain take it, but get it and read it."

Memphis Commercial Appeal—"It was a Book-of-the-Month then (1941), and time, the ultimate test of a classic, has only enhanced its prospects of becoming the Book-of-the-Century."

Chicago Sun-Times—"I hesitate not at all in saying you will profit from *Union Now*. It's a big idea for $1. (Non-profit paper edition.) No one profits from its sale except the reader."

Boston Post—"Is a dream less practical than a nightmare?"

Houston Post—"No fuzzy thinking anywhere in this book . . . no vague idealism. . . . Any tenth grade child could understand its proposal and the true intellectual will find it provocative of more and better thought."

"Some day . . . something like what Mr. Streit suggests will have to come to pass, either now or after we and our children's children have waded anew through flowing rivers of blood." — The late James Truslow Adams in The New York Times, 1939.

Dr. Wallace Partch

UNION NOW —*now*

"History is catching up with UNION NOW," *Fortune* has said. See for yourself how Clarence Streit's book answers today's challenge in Chapter 1, given here, abridged, 18 years after Harper & Bros. first published it on March 2, 1939. It sums up the proposal for preventing war and depression by forming an Atlantic Federal Union which the book develops in detail.

NOW WHEN MAN'S FUTURE seems so vast, catastrophe threatens to cut us from it. The dangers with which depression, dictatorship, false recovery and war are hemming us in have become so grave and imminent that we no longer need concern ourselves with proving how grave and near they are. We need concern ourselves instead with the problem of escaping them and the cruel dilemma we face: Whether to risk peace or freedom? That is the problem with which this book is concerned. I believe there is a way through these dangers, and out of the dilemma, a way to do what we all want, to secure both peace and freedom securely, and be done with this nightmare. It promises not only escape, but life such as I, too, never hoped could be lived in my time.

It is not an easy way—who expects one?—and to many it will seem at first too hard to be practical. But this is because its difficulties and dangers are greatest at the start; other ways that seem easier and safer to begin with, grow increasingly hard and dangerous, and lead nowhere.

Since 1933 when I stumbled on this way I have been exploring it all I could and trying, in the writing of this book, to clear away the things hiding it. By all the tests of common sense and experience I find it to be our safest, surest way. It proves in fact to be nothing new but a forgotten way which our fathers opened up and tried out successfully long ago when they were hemmed in as we are now.

The way through is Union now of the democracies that the North Atlantic and a thousand other things already unite — Union of these few peoples in a great federal republic built on and for the thing they share most, their common democratic principle of government for the sake of individual freedom.

This Union would be designed (a) to provide effective common government in our democratic world in those fields where such common government will clearly serve man's freedom better than separate governments, (b) to maintain independent national governments in all other fields where such government will best serve man's freedom, and (c) to create by its constitution a nucleus world government capable of growing into universal world government peacefully and as rapidly as such growth will best serve man's freedom.

By (a) I mean the Union of the North Atlantic democracies in these five fields:

- a union government and citizenship
- a union defense force
- a union customs-free economy
- a union money
- a union postal and communications system.

By (b) I mean the Union government shall guarantee against all enemies, foreign and domestic, not only those rights of man that are common to all democracies, but every existing national or local right that is not clearly incompatible with effective union government in the five named fields. The Union would guarantee the right of each democracy in it to govern independently all its home affairs and practise democracy at home in its own tongue, according to its own customs and in its own way, whether by republic or kingdom, presidential, cabinet or other form of government, capitalist, socialist or other economic system.

By (c) I mean the founder democracies shall so constitute The Union as to encourage the nations outside it and the colonies inside it to seek to unite with it instead of against it. Admission to The Union and to all its tremendous advantages for the individual man and woman would from the outset be open equally to every democracy, now or to come, that guarantees its citizens The Union's minimum Bill of Rights.

The Great Republic would be organized with a view to its spreading peacefully round the earth as nations grow ripe for it. Its Constitution would aim clearly at achieving eventually by this peaceful, ripening, natural method the goal millions have dreamed of individually, but never sought to get by deliberately planning and patiently working together to achieve it.

This goal will seem so remote now as to discourage all but the strong from setting out for it, or even acknowledging that they stand for it. It is not now so remote, it does not now need men so strong as it did when Lincoln preserved the American Union "for the great republic, for the principle it lives by and keeps alive, for man's vast future." It will no longer be visionary once the Atlantic democracies unite. Their Union is not so remote, and their Union is all that concerns us here.

The American Way Through

One hundred and fifty years ago a few American democracies opened this Union way through. The dangers of depression, dictatorship and war, and the persuasiveness of clear thinking and courageous leadership, led them then to abandon the heresy into which they had fallen. That heresy converted the sovereignty of the state from a means to individual freedom into the supreme end itself, and produced the wretched

"League of Friendship" of the Articles of Confederation. Abandoning all this the democrats of America turned back to their Declaration of Independence—of the independence of Man from the State and of the dependence of free men on each other for their freedom, the Declaration:

"That all men are created equal, that they are endowed by their creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness, that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed, that whenever a new form of government becomes destructive of these ends it is the right of the people to alter or to abolish it, and to institute new government, laying its foundations on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

Finding they had wrongly applied this philosophy to establish Thirteen "free and independent States" and organize them as the League of Friendship so that "each State retains its sovereignty, freedom and independence," they applied it next as "We the people of the United States" to "secure the blessings of liberty to ourselves and our posterity." To do this they invented and set up a new kind of interstate government. It has worked ever since as the other, league, type has never worked.

It has proved to be an "astonishing and unexampled success," as Lord Acton said, not only in America but wherever democracies have tried it regardless of conditions — among the Germans, French and Italians of Switzerland, the English and French of Canada, the Dutch and English of the Union of South Africa. It is the kind of interstate government that Lincoln, to distinguish it from the opposing type of government of, by and for states, called "government of the people, by the people, for the people." It is the way that I call Union.

To follow this way through now our Atlantic democracies—and first of all the American Union—have only to abandon in their turn the same heresy into which they have fallen, the heresy of absolute national sovereignty and its vain alternatives, neutrality, balance of power, alliance or League of Nations. **We the people of the Atlantic have only to cease sacrificing needlessly our individual freedom to the freedom of our nations,** be true to our democratic philosophy and establish that "more perfect Union" toward which all our existing unions explicitly or implicitly aim.

Can we hope to find a safer, surer, more successful way than this? What democrat among us does not hope that this Union will be made some day? What practical man believes it will ever be made by mere dreaming, or that the longer we delay starting to make it the sooner we shall have it? All it will take to make this Union—whether in a thousand years or now, whether long after castastrophe or just in time to prevent it—is agreement by a majority to do it. Union is one of those things which to do we need but agree to do, and which we can not possibly ever do except by agreeing to do it. **Why, then, can we not do it now in time for us to benefit by it and save millions of lives? Are we so much feebler than our fathers and our children that we can not do what our fathers did and what we expect our children to do?** Why can not we agree on Union now?

Are not liberty and Union, now and forever, one and inseparable as in Webster's day? We can not be for liberty and against Union. We can not be both for and against liberty and Union now. We must choose.

Definitions

Democracy I would define more closely than the dictionary that defines it as "government by the people," (though I would not attempt needless precision and would indicate an ideal rather than an average). I would add with Lincoln, and I would stress that democracy is also government for the people and of the people—the people being composed of individuals all given equal weight, in principle.

Democracy to me is the way to individual freedom formed by men organizing themselves on the principle of the equality of man. That is, they organize government of themselves, in the sense that their laws operate on them individually as equals. They organize government by themselves, each having an equal vote in making law. They organize government for themselves, to secure equally the freedom, in the broadest sense of the term, of each of them.

By democracy I mean government of the totality by the majority for the sake equally of each minority of one, particularly as regards securing him such rights as freedom of speech, press and association. (If merely these three rights are really secured to all individuals they have the key, I believe, to all the other rights in all the other fields, political, juridical, economic, etc., that form part of individual freedom.)

Union to me is a democracy composed of democracies—an interstate government organized on the same basic principle, by the same basic method, and for the same basic purpose as the democracies in it, and with the powers of government divided between the union and the states the better to advance this common purpose, individual freedom.

Union and *league* I use as opposite terms. I divide all organization of interstate relations into two types, according to whether man or the state is the unit, and the equality of man or the equality of the state is "the principle it lives by and keeps alive." I restrict the term *union* to the former, and the term *league* to the latter. To make clearer this distinction and what I mean by unit, these three points may help:

First, a *league* is a government of governments: It governs each people in its territory as a unit through that unit's government. Its laws can be broken only by a people acting through its government, and enforced only by the league coercing that people as a unit, regardless of whether individuals in it opposed or favored the violation. A

These Led to Union Then

Now it is proposed to form a Government for men and not for Societies of men or States—*George Mason in the U.S. Constitutional Convention.*

I am convinced that this is the safest course for your liberty, your dignity and your happiness. . . . I frankly acknowledge to you my convictions, and I will freely lay before you the reasons on which they are founded. . . . My arguments will be open to all, and may be judged of by all. They shall at least be offered in a spirit which will not disgrace the cause of truth—*Alexander Hamilton, opening* The Federalist.

(*These quotations head Chapter 1 in* Union Now—*Editors.*)

union is a government of the people: It governs each individual in its territory directly as a unit. Its laws apply equally to each individual instead of to each government or people, can be broken only by individuals, and can be enforced only by coercing individuals.

Second, a *league* is a government by governments: Its laws are made by the peoples in it acting each through its government as a unit of equal voting power regardless of the number of individuals in it. A *union* is a government by the people: Its laws are made by the individuals in it acting, each through his representatives, as a unit of equal voting power in choosing and changing them, each state's voting power in the union government being ordinarily in close proportion to its population. A union may allow in one house of its legislature (as in the American Senate) equal weight to the people of each state regardless of population. But it provides that such representatives shall not, as in a league, represent the state as a unit and be under the instructions of, and subject to, recall by its government, but shall represent instead the people of the state and be answerable to them.

Third, a *league* is a government for governments or states: It is made to secure the freedom of each of the states in it, taken as units equally. A *union* is a government for the people: It is made for the purpose of securing the freedom of each of the individuals in it taken as units equally. To secure the sovereignty of the state a league sacrifices the rights of men to justice (as in the first point) and to equal voting power (as in the second point), whereas a union sacrifices the sovereignty of the state to secure the rights of men: A *league* is made for the state, a *union* is made for man.

This may suffice to explain the sense in which the terms *democracy*, *union* and *league* are meant in this book.*

Fifteen Founder Democracies

In the North Atlantic or founder democracies I would include at least these Fifteen (or Ten): The American Union, the British Commonwealth (specifically the United Kingdom, the Federal Dominion of Canada, the Commonwealth of Australia, New Zealand, the Union of South Africa, Ireland), the French Republic, Belgium, the Netherlands, the Swiss Confederation, Denmark, Norway, Sweden and Finland.

These few include the world's greatest, oldest, most homogeneous and closely linked democracies, the peoples most experienced and successful in solving the

problem at hand—the peaceful, reasonable establishment of effective interstate democratic world government. Language divides them into only five big groups and, for all practical political purposes, into only two, English and French. Their combined citizenry of nearly 300,000,000 is well balanced, half in Europe and half overseas. *None of these democracies has been at war with any of the others since more than 100 years.*

These few democracies suffice to provide the nucleus of world government with the financial, monetary, economic and political power necessary both to assure peace to its members peacefully from the outset by sheer overwhelming preponderance and invulnerability, and practically to end the monetary insecurity and economic warfare now ravaging the whole world. These few divide among them such wealth and power that the so-called world political, economic and monetary anarchy is at bottom nothing but their own anarchy—since they can end it by uniting to establish law and order among themselves.

Together these fifteen own almost half the earth, rule all its oceans, govern nearly half mankind. They do two-thirds of the world's trade, and most of this would be called their domestic trade once they united, for it is among themselves. They have more than 50 per cent control of nearly every essential material. They have more than 60 per cent of such war essentials as oil, copper, lead, steel, iron, coal, tin, cotton, wool, wood pulp, shipping tonnage. They have almost complete control of such keys as nickel, rubber and automobile production. They possess practically all the world's gold and banked wealth. Their existing armed strength is such that, once they united it, they could reduce their armaments and yet gain a two-power standard of security.

The Union's existing and potential power from the outset would be so gigantic, its bulk so vast, its vital centers so scattered, that all the autocracies even put together could not dream of defeating it. Once established the Union's superiority in power would be constantly increasing simply through the admission to it of outside nations. A number would no doubt be admitted immediately. By this process the absolutist powers would constantly become weaker and more isolated.

Power and Responsibility

Tremendous world power brings with it tremendous responsibility for the world. It is no use blaming today's chaos or tomorrow's catastrophe on Mussolini, Hitler, Stalin, the Japanese militarists. It is still less use to blame the Japanese, German, Italian and Russian peoples. It has never been in their combined power to establish law and order and peace in the world. They are not the source of the danger our whole species now faces, they are only its first victims. They are today where we dread to be tomorrow.

When the really powerful members of a community refuse to organize effective government in it, when each insists on remaining a law unto himself to the degree the democracies, and especially the United States, have done since the war, then anarchy is bound to result, and the first to feel the effects of the chaos are bound to be the weaker members of the community. When the pinch comes the last to be hired are the first to be laid off, and the firms working on the narrowest margin are the first to be driven to the wall or to desperate expedients. That makes the pinch worse for the more powerful and faces them with new dangers, with threats of violence. It is human for them to blame those they have unwittingly driven to desperation, but that does not change the source of the evil.

*All that has been said here about leagues applies with still greater force to alliances, such as NATO, for these, too, take the state as unit.—C.K.S.

So it has been in the world. The younger democracies have been the first to go. The first of the great powers driven to desperate and violent measures have been those with the smallest margin. There is no doubt that their methods have since made matters worse and that there is no hope in following their lead. Their autocratic governments are adding to the world's ills but they are not the real cause of them. They are instead an effect of the anarchy among the powerful democracies.

The dictators are right when they blame the democracies for the world's condition, but they are wrong when they blame it on democracy. The anarchy comes from the refusal of the democracies to renounce enough of their national sovereignty to let effective world law and order be set up. But their refusal to do this, their maintenance of the state for its own sake, their readiness to sacrifice the lives and liberties of the citizens rather than the independence of the state—this we know is not democracy. It is the core of absolutism. Democracy has been waning and autocracy waxing, the rights of men lessening and the rights of the state growing everywhere because the leading democracies have themselves led in practicing, *beyond* their frontiers, autocracy instead of democracy.

The rising power of autocracy increases the need for Union just as the spread of a contagious disease increases the need for quarantine and for organizing the healthy. But it is essential to remember that though the victims carry the disease they did not cause it, and that quarantine of the victims and organization of the healthy are aimed not against the victims but against the epidemic, the purpose being to end it both by restricting its spread and by curing its victims.

It is wrong, all wrong, to conceive of Union as aimed against the nations under autocracy. There is a world of difference between the motives behind Union and those behind either the present policy in each democracy of arming for itself or the proposals for alliance among the democracies. For such armament and such alliance are meant to maintain the one thing Union does attack in the one place Union does attack it—the autocratic principle of absolute national sovereignty in the democracies. Unlike armament and alliance policies, Union leads to no crusade against autocracy abroad, to no attempt to end war by war or make the world safe for democracy by conquering foreign dictatorship. Union is no religion for tearing out the mote from a brother's eye—and the eye, too—while guarding nothing so jealously, savagely, as the beam in one's own eye.

—American Swedish News Exchange

"Merely uniting the democracies in one free trade area would increase trade and prosperity and raise the standard of living."

Union calls on each democracy to remove itself the absolutism governing its relations with the other democracies, and to leave it to the people of each dictatorship to decide for themselves whether they will maintain or overthrow the absolutism governing them not only externally but internally. Union provides equally for the protection of the democracies against attack by foreign autocracy while it remains, and for the admission of each autocratic country into The Union once it becomes a democracy in the only possible way—by the will and effort of its own people.

To become thus equal sovereigns of the world, they would first have to prove, by overthrowing their autocrats and establishing democracies at home, that they believe in and hold supreme the equality and freedom of individual Man, regardless of the accident of birth.

The attraction membership in The Union would have for outsiders would be so powerful, and the possibility of conquering The Union would be so hopeless that, once The Union was formed, the problem the absolutist powers now present could be safely left to solve itself. As their citizens turned these governments into democracies and entered The Union, the arms burden on everyone would dwindle until it soon disappeared.

Thus, by the simple act of uniting on the basis of their own principle, the democracies could immediately attain practical security, and could proceed steadily to absolute security and disarmament.

They could also increase enormously their trade and prosperity, reduce unemployment, raise their standard of living while lowering its cost. The imagination even of the economic expert can not grasp all the saving and profit democrats would realize by merely uniting their democracies in one free trade area.

They need only establish one common money to solve most if not all of today's more insoluble monetary problems, and save their citizens the tremendous loss inherent not only in depreciation, uncertainty, danger of currency upset from foreign causes, but also in the ordinary day-to-day monetary exchange among the democracies.

Merely by the elimination of excessive government, needless bureaucracy, and unnecessary duplication which Union would automatically effect, the democracies could easily balance budgets while reducing taxation and debt. To an appalling degree taxes and government in the democracies today are devoted only to the maintenance of their separate sovereignties as regards citizenship, defense, trade, money and communications. To a still more appalling degree they are quite unnecessary and thwart instead of serve the purpose for which we established those governments and voted those taxes, namely, the maintenance of our own freedom and sovereignty as individual men and women.

By uniting, the democracies can serve this purpose also by greatly facilitating the distribution of goods, travel and the dissemination of knowledge and entertainment. With one move, the simple act of Union, the democrats can make half the earth equally the workshop and the playground of each of them.

Creation of The Union involves difficulties, of course, but **the difficulties**

are transitional, not permanent ones. All other proposals in this field, even if realizable, could solve only temporarily this or that problem in war, peace, armaments, monetary stabilization. These proposals would be as hard to achieve as Union, yet all together they could not do what the one act of Union would — permanently eliminate all these problems. *These are problems for which the present dogma of nationalism is to blame. We can not keep it and solve them.* We can not eliminate them until we first eliminate it.

Which Way Advances Freedom More?

This does not mean eliminating all national rights. It means eliminating them *only* where elimination *clearly* serves the individuals concerned, and *maintaining them in all other respects*— not simply where maintenance clearly serves the general individual interest but also in all doubtful cases. **The object of Union being to advance the freedom and individuality of the individual, it can include no thought of standardizing or regimenting him, nor admit the kind of centralizing that increases governmental power over him. These are evils of nationalism, and Union would end them. Union comes to put individuality back on the throne that nationality has usurped.**

Everywhere nationalism, in its zeal to make our nation, instead of ourselves, self-sufficing and independent, is centralizing government, giving it more and more power over the citizen's business and life, putting more and more of that power in one man's hands, freeing the government from its dependence on the citizen while making him more and more dependent on it—on the pretext of keeping him independent of other governments. Everywhere the national state has tended to become a super-state in its power to dispose of the citizen, his money, job, and life. Everywhere nationalism has been impoverishing the citizen with taxes, unemployment, depression; and it is poverty—the desert, not the jungle—that stunts variety, that standardizes. Everywhere nationalism is casting the citizen increasingly in war's uniform robot mold.

Union would let us live more individual lives. Its test for deciding whether in a given field government should remain national or become union is this: Which would *clearly* give the individual more freedom? Clearly the individual freedom of Americans or Frenchmen would gain nothing from making Union depend on the British converting the United Kingdom into a republic. Nor would the British be freer for making Union depend on the Americans and French changing to a monarchy. **There are many fields where it is clear that home rule remains necessary for individual freedom, where the maintenance of the existing variety among the democracies helps instead of harms the object of Union.**

It is clear too that a Union so secure from foreign aggression as this one would not need that homogeneity in population that the much weaker American Union feels obliged to seek. **Our Union could afford to encourage the existing diversity among its members as a powerful safeguard against the domestic dangers to individual freedom. Just as the citizen could count on The Union to protect his nation from either invasion or dictatorship rising from within, he could count on his nation's autonomy to protect him from a majority in The Union becoming locally oppressive. The existence of so many national autonomies in The Union would guarantee each of them freedom to experiment politically, economically, socially, and would save this Union from the danger of hysteria and stampede to which more homogeneous unions are exposed.**

Clearly, individual freedom requires us to maintain national autonomy in most things, but no less clearly it requires us to abolish that autonomy in a few things. There is no need to argue that you and I have nothing to lose and much to gain by becoming equal citizens in The Union while retaining our national citizenship. Clearly you and I would be freer had we this Great Republic's guarantee of our rights as men, its security against the armaments burden, military servitude, war. It is self-evident that you and I would live an easier and a richer life if through half the world we could do business with one money and postage, if through half the world we were free to buy in the cheapest market what we need to buy, and free to sell in the dearest market what we have to sell.

In five fields—citizenship, defense-trade, money, and communications—we are sacrificing now the individual freedom we could safely, easily have. On what democratic ground can we defend this great sacrifice? We make it simply to keep our democracies independent of each other. We can not say that we must maintain the state's autonomy in these few fields in order to maintain it in the many fields where it serves our freedom, for we know how to keep it in the latter without keeping it in the former. We have proved that in the American Union, the Swiss Union, and elsewhere.

What then can we say to justify our needless sacrifice of man to the state in these five fields, a sacrifice made only to maintain the nation for the nation's sake? *How can we who believe the state is made for man escape the charge that in these five fields we are following the autocratic principle that man is made for the state?* How can we plead not guilty of treason to democracy? Are we not betraying our principles, our interests, our freedom, ourselves and our children? We are betraying, too, our fathers. They overthrew the divine right of kings and founded our democracies not for the divine right of nations but for the rights of Man.

Clearly absolute national sovereignty has now brought us to the stage where this form of government has become destructive of the ends for which we form government, where democrats to remain democrats must use their right "to abolish it, and to institute new government."

The Alternatives to Union

Fantastic? Visionary? What are the alternatives? There are only these: Either the democracies must try to stand separately, or they must try to stand together on some other basis than Union; that is, they must organize themselves as a league or an alliance.

Suppose we try to organize as a league. That means seeking salvation from what Alexander Hamilton called "the political monster of an *imperium in imperio*." We adopt a method which has failed in the League of Nations,

which before that led the original thirteen American democracies to a similar failure, and failed the Swiss democracies, the Dutch democracies, and the democracies of ancient Greece. We adopt a method which has been tried time and again in history and has never worked, whether limited to few members or extended to many; a method which, we shall see, when we analyze it later, is thoroughly undemocratic, untrustworthy, unsound, unable either to make or to enforce its law in time.

Suppose we try to organize instead an alliance of the democracies. But an alliance is simply a looser, more primitive form of league, one that operates secretly through diplomatic tunnels rather than openly through regular assemblies. It is based on the same unit as a league —the state—and on the same principle —that the maintenance of the freedom of the state is the be-all and the end-all of political and economic policy. It is at most an association (instead of a government) of governments, by governments, for governments. It has all the faults of a league with most of them intensified and with some added.

The lack of machinery for reaching and executing international agreement in the economic, financial and monetary fields in time to be effective did much to cause the depression that led us through Manchuria and Hitler and Ethiopia to where we are today. What could be more fantastic than the hope that any conceivable alliance could provide this machinery, or that without this machinery we can long avoid depression and war?

The Worst Alternative

Only one thing could be more visionary and fantastic, and that is the third possible alternative to Union, the one that would seek salvation in rejecting every type of interstate organization and in pursuing a policy of pure nationalism,—the policy of isolationism, neutrality, of each trusting to his own armaments, military and economic.

The experience of the United States shows that even the most powerful nations can not get what they want by isolationism.

Hard times led to war dangers which the United States in 1935 sought to lessen by the neutrality variation of isolationism.

The United States has never armed in peace time as it has since it adopted this policy. And the end is not near. In proposing, Jan. 4, 1938, that Congress spend $990,000,000 on armaments, President Roosevelt referred "specifically to the possibility that, due to world conditions over which this nation has no control, I may find it necessary to request additional appropriations for national defense."

Clearly he did not expect this huge expenditure to remove the cause for it and put under control those "world conditions over which this nation has no control." Has the United States come nearer to controlling world conditions? It is now spending four times as much on its arms as it did in 1933, and its control over world conditions has meanwhile lessened.

Here is a policy enjoying the overwhelming support of the American people, most of all in its basic isolationist principle. It results in the national debt passing $38,000,000,000 while the national and world situations darken, and so it is proposed to add more billions to the debt—and the proposal is accompanied with a warning that the failure may continue. Is not such a policy fantastic? Is it not sane to propose instead that the democracies gain control of their common world by organizing effective government in it, by each bringing its part of the conditions now outside the control of the others under the common control of them all through Union?

Balance or Unbalance of Power?

There is no more sterile, illusory, fantastic, exploded and explosive peace policy than the balance of power. Look at it. Take it apart. What does it mean in common words? It means seeking to get stability by seeking to equalize the weight on both sides of the balance. One can conceive of reaching stability this way—but for how long and at the cost of what violent ups and downs before? And when the scales do hang in perfect balance it takes but a breath, only the wind that goes with a word spoken or shrieked in the Hitlerian manner, to end at once the stability, the peace that was achieved. Stability can never be more in danger, more at the mercy of the slightest mistake, accident or act of ill will than at the very moment when the ideal of the balance of power is finally achieved.

We do not and can not get peace by balance of power; we can and do get it by *unbalance* of power. We get it by putting so much weight surely on the side of law that the strongest lawbreaker can not possibly offset it and is bound to be overwhelmed. *We get lasting stability by having one side of the balance safely on the ground and the other side high in the air.*

Even the moment's stability which the balance of power may theoretically attain is a delusion since each side knows it can not last. Therefore neither can believe in it and the nearer they come to it the harder both must struggle to prevent it by adding more weight on their side so as to enjoy the lasting peace that unbalance of power secures—and the race is to the strongest.

The Test of Common Sense

The race is to the strongest, and the democracies to win need only scrap this balance of power and neutrality nonsense and directly seek peace in the unbalance of power that Union alone can quickly and securely give them.

The problem facing the democracies is simply one of uniting their existing power; but the problem before the autocracies is to get that much power, and more, to unite. The speed at which the autocracies have increased their power in recent years has blinded many to this basic difference, and to the fact that despite all their gains their power put together remains weak compared to the combined power of the 15 democracies.

Because Union is a fresh solution of the world problem it appears to be something new. The deeper one goes into it, however, the better one may see that there is in it nothing new, strange, untried, nothing utopian, mystic. The fact is that we democrats have already strayed away from the road of reason and realism into the desert of make-believe and mysticism. We strayed away seeking the mirage utopia of a world where each nation is itself a self-sufficing world, where each gains security and peace by fearing and preparing war, where law and order no longer require government but magically result from keeping each nation a law unto itself, *where the individual's freedom is saved by abandoning at the national frontier the principle that the state is made for man and adopting there the dogma that man is made for the nation.* It is proposed here that we have done with

these dangerous delusions, that we return to the road of reason and seek salvation by tested methods, by doing again what we know from experience we can do. I ask nothing better than that we stick to the common interests of us individual men and women and to the simpler teachings of common sense.

Common sense tells us that it is in our individual interest to make the world safe for our individual selves, and that we can not do this while we lack means of governing our world.

It tells us that the wealthier, the more advanced machinery, the more civilized a people is and the more liberties its citizens enjoy, the greater the stake they have in preventing depression, dictatorship, war. The more one has, the more one has to lose.

Common sense tells us that some of the causes of depression, dictatorship, war, lie inside the nation and that others lie outside it. It tells us that our existing political machinery has let us govern strongly the conditions of life within the nation but not outside it; and that all each people has done to overcome the dangers inside it has been blighted by its failure to reach the dangers outside it, or remains at the mercy of these ungoverned forces.

Common sense advises us to turn our attention now to finding means of governing the forces still beyond our control. It warns us that no matter how strong or perfect we each make our national government, it can never end those outside dangers, and that we individuals can not know how long we can wait to end those dangers before they end us.

Common sense reminds us Americans that we are part of the world and not a world apart, that the more we keep our lead in the development of machines the more important to us we make the rest of the world, that *we can not, without catastrophe, continue, through good times and bad, improving these machines while refusing to develop political machinery to govern the world we are thus creating.*

It tells us that the principles of this Union of the Free are the principles that America was born to champion, that Americans can not deny them and still remain Americans. For the loyalty of the American is not to soil or race. The oath he takes when he enters the service of the American Union, is altogether to the principles of Union, "to support and defend the Constitution." That Constitution is already universal in its scope. It allows for the admission to its Union of any state on earth. It never even mentions territory or language. It mentions race and color only to provide that freedom shall never on that account be denied to any man.

The American Example

Common sense may seem to say that the American example does not apply, that it was much easier for the Thirteen States to unite than it would be for the Fifteen Democracies today, that the possibility of their forming a Union is now too remote to justify practical men trying to solve the immediate problem this way. It may seem to say that one needs only consider current American public opinion to realize that, unlike 1787, Union now is a dream that can

not possibly be realized for many years. This seems convincing, but is it so?

American opinion has always been remarkable for seeing from afar danger to democracy and quickly adopting the common sense solution, however remote and radical and difficult and dangerous it seemed to be. What other people ever revolted at less oppression? Independence was so remote from American thought at the start of 1776 that it was not even proposed seriously until Jan. 10, when Paine came out for it. Yet his *Common Sense* then so swept the country that within six months the Declaration of Independence was adopted.

To understand how difficult and remote the Union of the Thirteen States really was when 1787 began, and how encouragingly the example they set applies to our democracies today, common sense suggests that we turn back and see the situation then as contemporaries saw it.

"If there is a country in the world where concord, according to common calculation, would be least expected, it is America," wrote Paine himself. "Made up as it is of people from different nations, accustomed to different languages, and more different in their modes of worship, it would appear that the union of such a people was impracticable."

Conditions among the American democracies of the League of Friendship were such that John Fiske wrote, "By 1786, under the universal depression and want of confidence, all trade had well-nigh stopped, and political quackery, with its cheap and dirty remedies, had full control of the field." Trade disputes threatened war among New York, Connecticut and New Jersey. Territorial disputes led to bloodshed and threat of war among New York, New Hampshire and Vermont, and between Connecticut and Pennsylvania.

War with Spain threatened to break the League of Friendship in two camps. The League could not coerce its members. Threats of withdrawal from it were common. Its Congress rarely had money in the treasury, could no longer borrow.

The total membership of Congress under the League of Friendship was ninety-one, but the average attendance in the six years preceding Union was only about twenty-five. Often Congress could not sit because no quorum came. Things reached the point where little Delaware, though it had the same voting power in Congress as the largest state and though it was not thirty miles from Philadelphia, where Congress met, decided it was no longer worth the expense to send a delegate.

The states issued worthless currency, misery was rife, and courts were broken up by armed mobs. When these troubles culminated early in 1787 with the attempt of Shay's rebels to capture the League arsenal in Massachusetts, so strong was state sovereignty and so feeble the League that Massachusetts would not allow League troops to enter its territory even to guard the League's own arsenal.

Everything seemed to justify the words of the contemporary liberal philosopher, Josiah Tucker, Dean of Gloucester:

"As to the future grandeur of America, and its being a rising empire under one head, whether republican or monarchical, it is one of the idlest and most visionary notions that ever was conceived even by writers of romance. The mutual antipathies and clashing interests of the Americans,

their differences of governments, habitudes, and manners, indicate that they will have no centre of union and no common interest. They never can be united into one compact empire under any species of government whatever; a disunited people till *the* end of time, suspicious and distrustful of each other, they will be divided and sub-divided into little commonwealths or principalities, according to natural boundaries, by great bays of the sea, and by vast rivers, lakes, and ridges of mountains."

The idea of turning from league to union was so remote in 1787 that it was not even seriously proposed until the end of May when the Federal Convention opened. And the opening of the Convention had to wait ten days in order to have even the bare majority of the Thirteen States needed for a quorum. The Convention itself had been called by Congress merely to reform the League—"for the sole and express purpose of revising the Articles of Confederation." It was not deflected away from patching and into building anew until the eve of its session—and then thanks only to George Washington's personal intervention. Even then the Union as we know it now was more than remote: It was unknown, it still had to be invented.

Yet, once the Convention decided to build anew, it completed this revolutionary political invention within 100 working days. Within two years—two years of close votes and vehement debate in which Hamilton, Madison and others, now called "men of vision," were derided as "visionary young men" even by Richard Henry Lee, the revolutionist who had moved the Declaration of Independence in 1776—within two years the anarchy - ridden, freedom - loving American democracies agreed to try out this invention on themselves. Twenty months after they read its text the American people established the Constitution that still governs them — but now governs four times as many democracies and forty times as many free men and women.

Is it really visionary to believe that the American people can still be trusted quickly to understand and act upon the common sense of Union?

Can it be hard-headed reason that holds it easier for the American democracies to invent and agree to try out Union in the infancy of self-government than it is for our more mature democracies to adopt it now?

It does seem practical to ask first how all the difficulties in changing from national sovereignty to Union are to be met. Yet the makers of the first Union were not delayed by such considerations. They abolished each State's rights to levy tariffs, issue money, make treaties, and keep an army, and they gave these rights to the Union without waiting for a plan to meet the difficulties of changing from protection to free trade, etc. They did not even bother trying to work out plans to meet all these difficulties of transition. And they were right in treating all this as secondary and leaving it to the Union itself so solve, for the lack of such plans neither prevented the swift adoption of the Union nor caused any serious difficulty thereafter.

Yet they lived in a time when New York was protecting its fuel interests by a tariff on Connecticut wood, and its farmers by duties on New Jersey butter, when Massachusetts closed while Connecticut opened its ports to British shipping, when Boston was boycotting Rhode Island grain and Philadelphia was refusing to accept New Jersey money, when the money of most of the States was depreciated and that of Rhode Island and Georgia was so worthless that their governments sought to coerce the citizens into accepting it. In those days New York was massing

troops on its Vermont frontier while the army of Pennsylvania was committing atrocities in the Wyoming valley against settlers from Connecticut.

Can it still be said that the difficulties of transition to Union were simpler then than now? That it was then more practical to risk establishing Union without a transition plan than to risk delaying Union until such a plan was worked out? That it is now more practical to delay Union at the risk of complete catastrophe than to adopt it at the risk of transition dangers and difficulties? Common sense answers, No.

Some factors, of course, made Union easier for the American democracies than for us; others made it harder. It can be urged that they were all contiguous states that had been colonies of the same country. Their peoples, though much more divided than we now assume, did have a common language, a predominantly British background and nationality, the same pioneering traditions and problems. It can be urged on the other hand that they lacked some tremendous advantages our fifteen democracies now enjoy. One of them is political experience, another is speed of communications.

They lived in the infancy of modern democracy, when it was a bold experiment to let men vote even with a property qualification. They had to invent federal union. We have behind us now 150 years of experience with democracy and federal union they lacked.

Although it does seem to me, on balance, that Union is easier now than then, I would grant that it is hard to strike this balance. But we can not have it both ways. **Those who say that I am wrong, that conditions were so much more favorable to Union of the American democracies then than they are for Union in our day, are also saying implicitly that conditions then were also much more favorable than now to all the alternative solutions — league, alliance, or isolationism. If a common language, a common mother country, a common continent and all the other things the American democracies had in common, made Union easier for them than us, they also made it easier for them to make a league succeed. If even they could not make a league work, then how in the name of common sense can we expect to do better with a league than they did? Even if Union is harder now than then, we know we can succeed with it.**

Common sense leads to this conclusion: If we the people of the American Union, the British Commonwealth, the French Republic, the Lowlands, Scandinavia and the Swiss Confederation can not unite, the world can not. *If we will not do this little for man's freedom and vast future, we can not hope that Europe will; catastrophe must come, and there is no one to blame but ourselves.* But the burden is ours because the power is ours, too. If we *will* Union we can achieve The Union, and the time we take to do it depends only on ourselves.

UNION NOW

POSTWAR EDITION
With 5 New Chapters
By Clarence Streit

Union Now proposed in 1939 that the U. S. prevent World War II by uniting the Atlantic Democracies in a Federal Union. Instead, the free sacrificed millions of lives, billions in money . . . for another league —only to face another dictator, another war . . . and be offered now—another alliance. All we have won is another chance to save liberty and peace by Union Now.

At this turning point comes the new Postwar *Union Now*—the Concise Version of the original text plus five new chapters:

WON: A NEW CHANCE—THE LAST?
TEN YEARS PROGRESS
WERE I REWRITING UNION NOW
THE IMMEDIATE OBJECTIVE
TODAY'S IMMENSE OPPORTUNITY

ALL FOR $1 paperbound, BUT ONLY through Federal Union Inc., a non-profit educational association. Avoid delay — **ORDER HERE NOW:**

Complete your library of Clarence K. Streit's works

UNION NOW by Clarence K. Streit (Harper & Brothers, 1939, clothbound, Book-of-the-Month shorter version.) This is the *original proposal* for a Federal Union of the Free. After Hitler had conquered Western Europe, except Britain, there appeared:

UNION NOW WITH BRITAIN by Clarence K. Streit. (Harper & Brothers, 1941, clothbound, Book-of-the-Month edition.) Much of its material is still pertinent today . . . and is a grim reminder that if we delay planning for union now in peacetime, we may again be precipitated into emergency thinking on union, should another war break out.

★

If you think the original **UNION NOW** is dated, listen to Erwin D. Canham, editor of the *Christian Science Monitor*. Recently he wrote in the *American Scholar*: **"I think UNION NOW (Harper, 1939) by Clarence K. Streit is the most undeservedly neglected book of the past quarter-century. This book may be one of the turning points in history . . . the clearest and most compelling statement of the urgent need of Western unity if civilization is to survive."**

Help Unite the Free

An Elmo Roper survey in 1953 showed that about 6,000,000 Americans believe in a union of democratic nations. It also reported that only 2 per cent of them belong to any organization working for this, and that 84 per cent confess they are doing or giving nothing whatever to achieve this, not even talking or writing letters about it to their friends. The millions who favor Union of the Free do not seem to realize how strong their common cause would be and how rapidly it would advance if they all worked together for it.

The Federal Union Organization

. . . originated when public-spirited readers of *Union Now* began joining together, immediately after its publication in 1939, to achieve its purpose. It was incorporated in 1940 as a non-profit membership association, "to promote education in the basic principles of federal union as exemplified in the Constitution of the U. S., with a view to attaining world order by a Federal Union of the Democratic Peoples." Anyone favoring such educational work is invited to join. Membership does *not* commit you to details, but makes your name count for the basic principles of individual freedom and federal union which this pamphlet sets forth, and helps provide the means to spread them.

The officers of Federal Union are: president, Clarence Streit; chairman of the board, Lester B. Vernon, manufacturer; vice-presidents, Melvin Ryder, publisher, and Nicholas Doman, attorney; secretary, Janice Holland, artist; treasurer, F. Joseph Donohue, attorney. **Dues and gifts to Federal Union are deductible from taxable income.**

Freedom & Union Magazine

. . . is published by Federal Union for the general public. Edited by Clarence Streit, it is indispensable to anyone who would follow progress in this field. On its 10th anniversary, in 1956, General Marshall, General Gruenther, General Norstad, Lord Ismay, Clare Boothe Luce, Arthur Krock, Erwin Canham, Senators Humphrey, Mundt, Neuberger, Alexander Smith and many other distinguished readers testified to the "stimulating" and "creative" character of this unique monthly, devoted to liberty, union, peace and the growth of the free Atlantic Community.

The Atlantic Union Committee

. . . was incorporated in 1949 to supplement the educational work of Federal Union with action in Congress, aimed particularly at passage of a resolution for a convention of delegates from NATO democracies to explore the possibility of their forming a Union. Its founder-president was the late Justice Owen J. Roberts. Its president is Elmo Roper; vice-president, W. L. Clayton, former Under Secretary of State; secretary, Lithgow Osborne, former ambassador to Norway; treasurer, John Q. Robinson, insurance executive; executive committee chairman, Gerald B. Henry, manufacturer. Its Council includes more than 600 nationally known leaders. To obtain free information about the organization or to join this association, write to its executive secretary, Justin Blackwelder, 1028 Connecticut Ave., Washington 6, D. C.

OF FREEDOM AND UNION NOW

By

Clarence K. Streit

In response to popular demand, the publishers here offer an independent pamphlet edition of Chapter XIII from Clarence K. Streit's famous book, *Union Now*. This chapter sets forth the basic philosophy of the Union Now idea.

Harper & Brothers

UNION NOW

By

Clarence K. Streit

This is the book responsible for one of the most extraordinary developments of public interest in support of a political idea that has been seen in our generation. One outgrowth of the author's idea has been the formation in the U. S. A. of Federal Union, Inc., an organization which, in less than a year, spread through every state in this country. The Union Now idea has been featured in *Life, Collier's, Time, Fortune* and many others. It is being discussed from pulpits and lecture platforms, by radio, and in innumerable bulletins and pamphlets. According to the Gallup poll, it won 2,000,000 supporters in less than a year.

Clarence Streit proposes that the democracies unite to form a common government for their people—organized on the broad lines of the American Constitution. Such a union would have a common citizenship, defense force, customs, money and communications system. It would guarantee each democracy the right to govern its home affairs as it pleased.

The Union Now idea has been endorsed by prominent men and women everywhere. The book was selected by *Current History* as one of the ten best non-fiction books of 1939 by John Dewey, Henry Seidel Canby, Carl Van Doren, Amy Loveman, Burton Rascoe, Dorothy Thompson, and John W. Withers. *The Nation, The New Republic, Time Magazine,* and reviewers for daily newspapers throughout the country have included *Union Now* in their selections of outstanding books.

"I hold it to be the most important book for international democracy written in this generation."—*Dorothy Thompson.*

"You are dead right. Union is the only satisfactory, maybe, the only possible way out. . . . I for one am positively grateful to you. . . . Count on me to help you all I can."—*Wickham Steed, former editor, The Times, London.*

"Your book gives me more faith than I have ever had before in the possibility of realizing this ideal in a measurable time."—*Dr. Frank Aydelotte, Director, Institute for Advanced Study.*

"Ought to be read by every thinking person. Deserves the same kind of reception as that given to the Federalist."—*Manley Hudson, Judge, World Court.*

OF FREEDOM AND UNION NOW

By

Clarence K. Streit

One's-self I sing, a simple separate person,
Yet utter the word Democratic, the word En-Masse.

Of physiognomy from top to toe I sing,
Not Physiognomy alone nor brain alone is worthy
for the Muse,
I say the Form complete is worthier far,
The Female equally with the Male I sing.

Of Life immense in passion, pulse, and power,
Cheerful, for freest action form'd under the laws
divine,
The Modern Man I sing.

Whitman, opening Leaves of Grass, 1867

Out of the trouble and tragedy of this present time may emerge a moral and intellectual revival; a religious revival, of a simplicity and scope to draw together men of alien races . . . into one common and sustained way of living for the world's service. We cannot foretell the scope and power of such a revival; we cannot even produce evidence of its onset. The beginnings of such things are never conspicuous. Great movements of the racial soul come at first "like a thief in the night," and then suddenly are discovered to be powerful and world-wide. Religious emotion . . . may presently blow through life again like a great wind, bursting the doors and flinging open the shutters of the individual life, and making many things possible and easy that in these present days of exhaustion seem almost too difficult to desire.—H. G. Wells, *Outline of History.*

In the story told in these pages I can point to no time which appears so fraught with disaster to the human race as a whole as the present, the moment at which I am bringing this book to a close. . . . We have now reached a stage in the growth of civilization which cannot go further, and is doomed to go back, until we discover the means of passing from the national to the international state. . . . Human nature has made immeasurable strides since our Lord showed in His own person how divine it can be. But it cannot advance further till men learn to think of the scheme of human relations which He conceived as one to be brought from the realm of dreams to the earth in which they live, to be made incarnate in the flesh and blood of a living society. That is the world situation, as I see it, today.—Lionel Curtis, closing in 1936 his monumental "Attempt to Show How the Past [from ancient times on through] has Led to the Present Position in World Affairs," in his work, *"The Commonwealth of God."*

Of Freedom and Union Now

If you would be freer than all that has been before, come listen to me . . .

I swear I begin to see the meaning of these things . . .

I swear nothing is good to me now that ignores individuals,
The American compact is altogether with individuals,
The only government is that which makes minute of individuals,
